## The Cause of Forest Extension.

IT WAS a brilliant and, it is to be hoped, an effective plea which Senator Depew made the other day at Washington in advocacy of the bill appropriating \$10,000,000 for the purchase of 2,000,000 acres of land for a national forest in Virginia, North Carolina, South Carolina, Georgia, Alabama, and Tennessee. In the course of his speech Mr. Depew dwelt upon the magnificent work done by several foreign governments in forest preservation, and notably by Germany, where twenty-six per cent. of the land is in forests, of which the government owns two-thirds. Italy has recently waked up to the importance of re-foresting her denuded mountain slopes in the interests of her farming population and the water supply of her cities, and is preparing to expend \$12,000,000 for this purpose, which will restore the trees to 500,000 acres. France also has appropriated \$28,000,000 for a like purpose.

In our own country, as Mr. Depew pointed out, much gratifying progress has been made in forestry in recent years by the national government and by several States, New York, thanks to Governor Black's initiative, and Pennsylvania leading in this respect. Forty-one national forest preserves have already been set aside in the West aggregating nearly 46,000,000 acres. But only twenty per cent. of our territory has a forest growth, a proportion much less than Germany, and much remains to be done to save and perpetuate this valuable asset of our national wealth. As Mr. Depew very clearly showed, the work to be done in the region covered by this national forestry bill can only be done adequately and effectively by the general government, because it extends into many States and relates to the interests and general welfare of the whole country.

In this connection note should be made of the extremely gratifying and effective service rendered to the cause of tree-planting by the Forestry Bureau at Washington, some details of which are set forth in a little pamphlet prepared by Assistant Superintendent William L. Hall and recently issued by the bureau. Particular reference is made in this publication to forestry extension in the middle West. The area of planted timber in this section already, at the time this pamphlet was written, aggregated many hundred thousand acres. Some of this is on the decline, some at its best, and some increasing in value each year. "To the last class belong most of the plantations made for profit. Notable among these are the large catalpa plantations of central and eastern Kansas." There have been numerous requests made to the forestry division for help in extending these plantations. In most cases they are small, covering no more than five or ten acres, or as much as a farmer can conveniently spare from tillage.

Another important agency in forest extension is the railroads of the country, and some of the great trunk lines of the West have already taken up this work vigorously. Most of the railroads, it is argued, hold lands that are well adapted to forest trees, and by planting tracts of sufficient size to meet their demands they will greatly reduce their future expenses. The secretary of the International Society of Arboriculture, Mr. John P. Brown, of Indiana, has been delegated by several roads to prosecute this work. During the present year he has been superintending the planting of a tract with 110,000 trees not far from New Orleans for the Illinois Central Railroad, and another tract with 21,000 at Kankakee, Ill. The Kansas, Fort Scott and Memphis road has planted 2,500,000, and a number of the other lines in the West are going into the enterprise on a still larger scale.

There is good reason, therefore, for the hope that by the combined efforts of all these agencies, the Federal government, the States, railroad corporations and public-spirited individuals, a large and valuable work will be done in preserving and developing our forest lands and thus adding immensely not only to the wealth of the country, but immeasurably to its beauty, fertility, and healthfulness.

## The Reason for the Summer Vacation.

WHATEVER CHANGES society may yet make in the distribution of time, it is safe to say that they will not greatly affect the summer vacation. That interval of leisure, once regarded as a privilege of the wealthy, is now deemed a necessity, to be provided for as systematically as are other wants of life. Wisely used, its utility

is undeniable. Men grow weary of incessant and unchanging occupation, as weary as Hegel was of over-erudition and common sense. They have learned that the chase of the dollar and the acquisition of knowledge are not all there is in living. What they want is to recover their real selves, some relief from endless detail, some arrest of hurry.

Every one admits this necessity, at least up to the moment when the question of where to go and what to do when one gets there becomes immediate. Prior to that time the problem can be considered in the abstract, and so is easy and delightful. It is pleasant to talk of the resorts by mountain, lake and sea, and of the rest that abides there; of comfortable hostleries amid the brooding silence of the hills, where the linen is fragrant with rose-leaves, and cream and jam are always in evidence. But when the question becomes pressing, it is apt to assume a different phase, especially to that large class of plain people with exhausted vitality and limited means. Then it is the discomforts, the overturn of settled habits, and the exorbitant charges that loom large in the mind.

The idea of a vacation at home thus takes on unwelcome attraction. And with occasional trips to near-by retreats, there is a good deal to be said for it. Indeed, when one looks about it, it is wonderful how much variety and pleasure may be found in the place in which one has always lived without discovering anything worth looking at. But tastes and means and inclinations differ; and the majority of weary people want a more complete change than can be had in their own neighborhood. To an increasing number a change is only salutary when it is from one's home to the lakes and forests, or when the outlook is upon long reaches of river scenery, picturesque hills stretching away in the distance, the cool, deep woods and flower-lined lanes. And no vacation is more delightful, both in its unwelcome sense of freedom and the opportunity afforded to recover one's self.

With others the chief value of a vacation seems to lie in the rapidity and continuousness of the changes that can be crowded into it. They are in haste to "make the rounds." Leisure, to them, appears desirable only for purposes of distraction. With opportunity for an interval of serenity, they grow nervous lest it should not be filled to the full with activity. And the great number of holiday retreats tends to foster this evil. Many others apparently break away from ordinary occupations only to get a fresh appetite for them, and they fancy that they can best obtain it by doing something as far as possible removed from their usual employments, but something which, nevertheless, dissipates the energies quite as much.

This is, of course, to defeat the true purpose of a holiday. That purpose is to provide a period of leisure for the recovery of our real selves by diminishing the strain of distracting engagements. What men and women want with a vacation is to find, not lose, themselves, and the best holiday is that in which place and activities are happily combined to this end.

## As to Wabblers and Wabbling.

PRESIDENT SCHURMAN, of Cornell, is clearly in no danger of suffering from the charge of being afraid of inconsistency, "that hobgoblin of little minds," for few men have ever executed a more rapid and complete "right about face" on any public question than he has performed on the subject of the proper policy in the Philippines. It is the natural and indelible right of every man to wabble, but if he wishes to retain the confidence and respect of his fellow-citizens he should bring forth good reasons for his wabbling, and this, it seems to us, President Schurman has failed to do. Shortly after his return from the islands two years ago he expressed his convictions in a public speech, as follows:

To liberty-loving Americans who are not informed of Philippine conditions, no policy is more seductive than that of turning over the Philippines to the Filipinos. Yet no policy could in fact be more fantastic. Who are the Filipinos? They are not a single nation; they are an aggregate of some fourscore peoples or tribes, speaking different languages, and representing all stages of civilization and barbarism. Among all the tribes the great majority of the people of education and property welcome the sovereignty of the United States. And how could you, without everlasting shame and dishonor, leave the Filipinos, who have trusted you, to the ruthless butcheries of the avenging Tagalogs?

Now President Schurman is just as firmly convinced that we should give the Filipinos "what they want," which means, of course, that we should surrender the islands and allow the people to govern themselves. But if Filipino character and the conditions on the islands have undergone as complete a change in two years as President Schurman's views have done, we have failed to see any evidence of it, and he certainly does not produce any. As to his present attitude, and that of other individuals who hold the same views, it may be said that while no particular harm to public interests arises from their shifting and variant opinions and counsels, the government fortunately can follow no such vacillatory and tortuous course in its policy with the islands, nor has sound reason appeared why it should.

In a recent Boston speech, President Schurman has endeavored to square the Monroe doctrine with his views on the Philippines, with the result of placing a construction upon that much-abused and misunderstood declaration more at odds with its real and original intent than almost anything it has been made to bear before. We are held by this doctrine, according to Dr. Schurman's facile reasoning, to restrain our lines of territorial advancement within the bounds of the American continent and to "voluntarily renounce for ourselves the policy of annexations in Europe, Asia, Africa, or Australia." The

ergo of this is, of course, that we should back out of the Philippines as fast as steam and electricity can take us. But it seems to us that President Schurman has read a meaning into the Monroe doctrine which a calm and unprejudiced study of its language will not sustain; that in his zeal to find a cover in this famous document for a doctrine of his own devising he has stretched that unhappy instrument to the cracking point.

President Roosevelt is entirely right in saying that the flag will "stay put" in the Philippines, and in that declaration we believe that he voices the overwhelming sentiment of the American people. Wabbling and scuttling are weaknesses of which even the wisest and best of men may occasionally be guilty with no great damage to themselves or to any one else, but a great nation cannot indulge in such folly without discrediting itself in the eyes of all the world and doing vast and irreparable injury to interests committed to its charge.

## The Plain Truth.

IN HIS commencement address at Johns Hopkins, Dr. Elgin R. Gould, city chamberlain of New York, made a clear and concise statement of existing conditions in the metropolis, including an explanation of the apparent slowness of reform in the police department. Progress under Mayor Low, he said, has been delayed by two causes—by corruption and inefficiency in the police force concerning which it was difficult to get corroborative evidence, and by the charter, which requires that when places are abolished former incumbents must remain on the lists and be eligible for certification to appointment during a year. Under this provision many Tammany office-holders have managed to retain their places and are seriously interfering with the progress of reform. For these and other reasons Dr. Gould declared that judgment upon the new administration ought to be suspended for a while longer at least. He prophesied that from now on a distinct improvement in conditions will occur. All intelligent and reasonable persons will agree with Dr. Gould that sweeping criticism of Mayor Low and his administration at this time is grossly unfair and unjust. As for the difficulties spoken of in the way of reform, one of these would be obviated by a State constabulary and the other eventually by the practical application of the power of dismissal. It is a serious question whether permanent reform in the police department or anywhere else in the city government can be secured without the adoption of these remedies.

THE ARGUMENT in favor of a liberal and progressive policy toward our shipping interests received valuable and substantial support in a recent *Herald* interview with Mr. Charles H. Cramp, the famous shipbuilder. Mr. Cramp dwelt upon the giant strides which Germany is making in the development of her merchant marine and drew a suggestive contrast between the energy and enterprise displayed in this direction by the Germans and the supineness and self-complacency of the English, who are now agitated and alarmed over the decline of their commercial supremacy. The remarkable growth of the German shipbuilding industry is attributed largely to the influence of Emperor William, who, it is said, has exerted to the utmost both his personal influence and his imperial power to promote these interests in his country. It is pointed out that no longer ago than 1887 Germany had almost no facilities for building first-class ocean steamships, whereas that country now stands among the foremost shipbuilding nations of the world, so far as size, power, and general importance of ships are concerned. And what Germany has done America can do if this important industry is given the same generous support and encouragement from the government that it receives in the Fatherland. We have no Emperor William to throw his personal influence and authority into the service, but we have a representative body of men at Washington who can lead the way, if they will, and we have a President who has already pledged himself to the enlargement of our merchant marine and who will gladly endorse any wise measure designed to further that end.

IN NOTHING has Governor Odell more greatly surprised his friends since his election than in the felicity of his utterances whenever he has been called upon to speak on public occasions. As a speaker he is sententious, concise, and suggestive. One of the best of his short addresses was made at the recent Cornell commencement. Governor Odell has always been a stalwart, believing in his party and holding steadfastly to its principles. As chief executive of the State, he has not permitted party considerations to stand in the way of the best public service, however, and in his recent speech at Cornell he emphasized his attitude by defending men of affairs from the sneers of those who carelessly throw away the right of franchise, who are neither independents nor party men, but who, to quote the language of the Governor, "in reality lack the ability to judge through their own failure to perform." The Governor said that the ill-founded criticisms of such men "have often made it impossible for able and intelligent men to properly discharge their duties as citizens of this great republic." And he might have added that this same sort of ill-founded criticism has often stood in the way of the accomplishment of reform in municipal as well as in State affairs. There is a heap of common sense in a single additional sentence from Governor Odell's admirable remarks, which we quote, and the application of which will readily be appreciated, for it constitutes a little sermon all in itself. He said: "Trade, education, and politics are equally dependent, and, without the intelligent application of the rules of all three, government of the people for the people and by the people would be a failure."

## PEOPLE TALKED ABOUT

BORN THREE days after the birth of Queen Victoria, Mrs. Julia Ward Howe is to-day very active in the intellectual and social world of Boston, and one of the most remarkable examples of mental and physical vigor extant. It is not unusual for her to deliver three or four addresses a week, and no woman in Boston can equal her as toast-mistress at a dinner or as an after-dinner speaker. She rarely fails to attend a meeting of the Boston Authors Club, of which she is president, and she still discharges with great fidelity her varied duties as president of the New England Woman's Club, the oldest and one of the largest women's clubs in America. She is president of a number of other clubs, and it is not unusual for her to attend two or three meetings of different kinds in a single day, while she is frequently seen at evening meetings. Mrs. Howe celebrated her eighty-third birthday on the 27th of May, and a few days later she sat for the photograph illustrating this sketch. She keeps open house each birthday, and welcomes with equal kindness and cordiality the humblest as well as the most distinguished of her hosts of friends. No one denies her the distinction of being the "first lady" in the city of Boston, and audiences almost invariably rise when she enters or leaves a room. Her interest in everything that counts for the growing good of the world is as keen as it has always been, and no woman in America has to her credit a longer list of good deeds or a record of greater usefulness in the world she has so long adorned and benefited by her presence. America honors itself in honoring this good and gracious lady, whom so many Bostonians love to call our "American Queen."

JULIA WARD HOWE,  
Boston's most famous woman.  
Copyright, 1902, by J. E. Parry.

ALTHOUGH RUSSELL SAGE, the famous financier, will be eighty-six years of age on August 4th next, and has recently had a severe turn of illness, he has expressed his determination to continue at his business the same as before. It was some five years ago that Mr. Sage was asked why he did not retire and take a rest and enjoy what he had made. His reply then was doubtless what it would be now if he were asked the same question: "I don't know why. I don't know that I could stop if I would. I fear I should not live long if I did so. I believe I like work better than I do play. My chief happiness to-day is in my work, and I suppose my machinery will go on at this same rate as long as I live."

A GROUP of such fresh, young, and happy faces as those appearing in the accompanying portrait is a pleasant sight to look upon and interesting to a degree, no matter who they may be or what their relationship. But a special interest attaches to this particular bevy of youngsters when it is known that they are children of the present Prince and Princess of Wales, formerly the Duke and Duchess of York, and therefore all heirs, direct or prospective, to the English crown. The names of these youthful scions of the house of Hanover are Prince Albert Frederick, Princess Victoria Alexandra, Prince Henry and Prince Edward Albert, and their ages, respectively,

A GROUP OF ROYAL LITTLE PEOPLE,  
Children of the Prince of Wales.

are seven, five, two, and eight years. It was only a year or so ago, it will be remembered, that these four small people were left for nearly a twelvemonth under the care of their royal grandparents, King Edward and Queen Alexandra, while their parents made a tour of the world.

GENERAL SHERMAN could say the most pleasing and tactful things and yet no one could be more sarcastic. He was attending a large reception at Fort Leavenworth once when a youth approached him and said, familiarly: "What a great bore these things must be to you, general?" "What's that?" asked General Sherman quickly. "I say," repeated the other, "it must be such a bore to you, meeting a lot of people you don't know and making them feel that you do remember them." "Yes, yes," replied the general, "now, for instance, I don't know who the devil you are."

WHILE PORTUGAL is one of the lesser Powers of Europe and is apparently growing of less consequence to the world as time goes on, it can boast to-day one of the loveliest Queens that ever shared a throne, and that is not a little to say. Queen Amalie is not only beautiful but eminent in works of kindness and charity, which is better still. It was only a year or so ago that the Queen herself saved a poor fisherman from drowning at her summer home on the coast of Portugal, and that at the peril of her own life. Her Majesty, who is now in her thirty-sixth

QUEEN AMALIE OF PORTUGAL,  
Beautiful and popular.

year, was born at Twickenham, England, during the exile of her parents, the Comte and Comtesse de Paris, and she married at Lisbon, May 22d, 1886, the then Prince Royal, Duke of Braganza. She is the only princess in Europe who has taken the degree of "M.D." She has two sons, to whose education and general training she gives her personal and most devoted attention.

THE PRESENT Shah of Persia has established a reputation for reformatory and progressive ideas far in excess of any of his predecessors on the Persian throne. So strong, in fact, are his progressive tendencies, that it is said that the Shah once felt called upon to cut off the heads of several devout Mohammedan subjects who rose to remark that they thought his Majesty was going too fast. However this may be, it is considered pretty certain that should Ali Mohammed Mirza, the present crown prince of Persia, live to succeed his father, the rate of progress will be much greater than it is now. One reason for this is that the crown prince, or Valiahd, has received a European education and is quite Occidental in his tastes and ambitions. He is Governor-General of Azerbaijan, by inheritance, and in that capacity has shown many of the qualities of a good ruler. The Valiahd is said to resemble his father in many ways. He has the same kindly and courteous manner, which endears him to all who have the privilege of coming into contact with him. At the same time he seems to have inherited from his grandfather, Naser-ed-Deen Shah, the firmness of character and strong constitution which distinguished the Shah, who was so well known in Europe.

ALI MOHAMMED MIRZA,  
Heir-apparent to the throne of Persia.

THE CHRISTIANIA correspondent of the London Chronicle has paid a visit to Dr. Ibsen, whom he found reading his "Little Eyolf." His hair and whiskers are white as snow. His face is perhaps a little thinner than it used to be, but his color is healthy, and his dark-blue eyes are as beautiful as ever. "He has splendid eyes. The left one seems to be larger than the other, and when he looks at you you feel as if he is searching your soul through and through." Dr. Ibsen has for the last two years been failing in health. About two and a half years ago he had a slight apoplectic stroke, which obliged him to keep indoors. He does not write any more.

THE LATE Cecil Rhodes is said to have been a woman hater, a charge which is hardly borne out by one of the current anecdotes about him. One day, it is said, when he was showing some visitors the splendid grounds of Groot Schuur, the party approached a summer-house which had been erected early in the last century by one of the Dutch Governors of the colony. "Hush," said Mr. Rhodes in a whisper, "hush," and motioning his companions back he advanced on tiptoe, listened, and then called out, "All right, you can come on. The coast is clear."

He explained that he had discovered this summer-house to be a favorite resort of loving couples, and that he always shrank from disturbing them. "I like," he said, "to think that they can escape from the ugly, noisy back streets of Capetown and find here a fitting spot for the telling of the old, old story."

MANY OF the graduates from the military academy at West Point have been able, after years of effort, to achieve distinction, but it rarely happens that a youth just entering the institution has already made his mark as a soldier and won a reputation which is national. Cadet Calvin Pearl Titus is one of these fortunate individuals, and his decoration by President Roosevelt with a medal for bravery was a striking feature of the recent centennial celebration at the nation's war college. The President called Titus from the ranks while the cadets were being reviewed, and in the presence of a distinguished assemblage and with words of praise pinned the medal on his breast. It was an unusual honor for a young man not yet twenty-three years old, but it was fully merited. Titus as an enlisted man was in charge of the band of the Fourteenth Regiment which formed a part of the expedition which went to the relief of the besieged legations at Peking in August, 1900. He was the first man to scale the wall at the taking of the city and to raise there the United States flag. Though averse to scenes of bloodshed, Titus was noted while in the army for his boldness, and his appointment to a cadetship was in recognition of his gallant services. He is a very religious man, having formerly been an active member of the Salvation Army, and is intelligent, sensible, and modest.

CADET CALVIN PEARL TITUS,  
Decorated for bravery at Peking.

PROBABLY THE oldest person who has ever taken a ride in an automobile is Mrs. Eva De Voe, who, on June 7th, at her home in East Syracuse, N. Y., celebrated the one hundredth anniversary of her birth. Mrs. De Voe is remarkably young for a centenarian and when a Syracuse Herald reporter arrived in a horseless wagon to secure from her a birthday interview she herself proposed the ride. The scribe, jubilant over the "beat" he was about to score, promptly assented and soon Mrs. De Voe was dashing around the streets in the "machine" at race-horse speed, to the wonder of all beholders. She showed scarcely any timidity but expressed gratification with her unwonted experience and suggested that on her next birthday the reporter visit her and give her a jaunt in a flying machine. She spoke of the automobile as one of the many mechanical triumphs she had witnessed during her long life. At Mrs. De Voe's little centennial celebration five generations of her descendants were represented, some of those present being more than sixty years old. She has a daughter in California who is seventy-two years of age. Mrs. De Voe, who enjoys life thoroughly, believes, as do her friends, that her earthly existence will be prolonged for at least several years to come. She is more active than are many women of half her years. She rises daily before 6 a. m., busies herself much in house and garden, threads a needle without glasses, reads a good deal, and her intellectual faculties are still bright and keen. Her appreciation of new things and her delight in them account, perhaps, for her "youth" at a hundred years; and it shows that those who would not grow old must not neglect to keep pace with the world's progress, to know and be interested in what is going on.

MRS. EVA DE VOE,  
First centenarian to ride in an automobile.

# A Hero of Five Wars—General A. R. Chaffee

By Sydney Adamson

IN GENERAL CHAFFEE the United States possesses a soldier, a patriot, and a man. When the stirring events which thrilled the national pulse to fever in 1898, and carried the stars and stripes into Asia to remain, shall have drifted farther into the past, and history with clearer vision shall mark the names worthy of enduring fame, Adna R. Chaffee will stand high on the roll of honor.

As a soldier General Chaffee was born in the Civil War. He joined the ranks as a private in the Sixth Cavalry on the 22d of July, 1861. From that day to the present hour his record shows a steady progress that has brought him to the rank of major-general, third on the list for the lieutenant-general's command of the whole army. To the lay mind the army register may be dry reading, but what schoolboy could read Chaffee's record without a glow of pride? First a trooper, then a sergeant, and a first sergeant. This brings him to 1863, when he was made a second lieutenant. This was in March, and by July he had won the brevet rank of first lieutenant for gallant and meritorious services in the battle of Gettysburg. In February, 1865, he was a first lieutenant and the very next month won a brevet captaincy in the battle of Dinwiddie Court House, Va. In October, 1867, he first drew the pay of a regular captain. True to his previous record we find him brevetted a major in March of the following year. This time the "service for which brevetted," reads: "Gallant and efficient services in an engagement with Comanche Indians at Point Creek, Tex."

During the long period from the close of the Civil War until the outbreak of the recent war with Spain the army was small, and in spite of the continual Indian fighting lineal promotion was slow—deadly slow—to the poor captain or lieutenant who served his sixteen or twenty years with never a step upward. Chaffee was no exception to the rule, and for twenty years, from 1867 to 1888, he remained a captain. There must have been many a long, dreary day out on the Western desert, where, had a spirit of the plains whispered to Chaffee: "One day you will command a brigade in the tropics and defeat the troops of an infant King; later, you will lead an American

column over the burning plains of China, amidst the armies of the world, to the relief of Peking, and again you, a major-general in the regular army, will command a division of sixty thousand men and control an archipelago containing eight million Asiatics"—well, I can imagine the Captain Chaffee of those days pulling himself together and taking a good stiff finger of rye to drive such fantastic pipe dreams forever from his brain. Yet the spirit would have spoken truly, for just these things have come to pass, and in their enacting revealed the character of the man and given the nation its opportunity to create the general.

In the clearing away of the smoke when Spain had been fairly beaten, it was cheering to read the tributes to Chaffee and Lawton and Ludlow. There was enough of scandal and mismanagement, from Alger at home to Shafter in the field, to create anger amidst rejoicing. But for every jark in office two true men came to light, and the world of Europe learned it as well as the people at home. This little paragraph, taken from "The Regulars at El Caney," by Colonel Arthur Lee, of the British army, exhibits the qualities that won those brevets and inspires every one who has been in the field with Chaffee with admiration for him as a soldier: "The situation was a trying one for the nerves of the oldest soldier and some of the younger hands fell back from the firing line and crept toward the road. In a moment the general pounced upon them, inquiring their destination in low, unhoneyed accents, and then, taking them persuasively by the elbow, led them back to the extreme front, and, having deposited them in the extreme front, stood over them while he distributed a few last words of pungent and sulphurous advice. Throughout the day he set the most conspicuous example to his men, and that he escaped unhurt was a miracle. One bullet clipped a button off his coat, another passed under his shoulder-strap, but neither touched him, and there must be some truth in the old adage that fortune favors the brave."

At the conclusion of the Spanish-American war General Chaffee, then a lieutenant-colonel in the regular army, but who had been acting as a major-general of volunteers, was promoted to a colonelcy in the Eighth Cavalry. The

government had learned his value, and when, in 1900, the situation of the American minister and all of the legation staff in Peking demanded the presence of American troops in China for their relief, it was everybody's good fortune that Chaffee was the man selected. We who spent those weary days in China after the allies had captured Tien-Tsin waiting, waiting for reinforcements, for food supplies, for ammunition, for more artillery, ready to march, and sick with the thought of what might have happened to our friends, prisoners, ninety miles away across the burning plains—we alone can tell how much is due to Chaffee's arrival and instant determination that the column should march, ready or not ready. General Yamaguchi, commanding the Japanese, agreed with Chaffee, and the world knows the story of what followed.

But all this is of Chaffee the soldier and never a word of Chaffee the man. In Peking, when the dead were buried and the troops settled in camp, the cold northern winter drove us indoors to mess dinners and jolly evenings. I chanced to be a guest at one particular mess in the Tartar city when a banquet was given, at which both General Chaffee and Mr. Conger, the minister, were present. That evening, over the wine, General Chaffee made a speech full of good-fellowship for the junior officers present, and bringing very near the old Indian fighting days when they were all out on the plains together and nobody was bigger than a captain. Toward the end of his speech, simply and without affectation he referred to his absent family and sent the thoughts of every man miles across the seas. One sentence revealed the man as the nation should know him: "After my country, my family is all that is dearest to me on earth." With his record as a soldier before you and that last sentence to reveal the man I might lay aside my pen. But there is one word more. Where General Otis and General MacArthur failed to do their whole duty in the Philippines General Chaffee has succeeded in fully doing his. That the Democrats see in his success the end of their chance to make the Philippines a successful party issue is shown in their savage attacks upon him and the army he commands. Believe me, there is no American living unto whom the nation's honor might be intrusted for safer keeping.

## Chicago's Banner Hotel.

NEW YORKERS and other Eastern people will be delighted with the reception and the surprises that await them in the recently opened European hotel on the lake front, The Stratford.

The property was recently purchased by Mr. Bryant H. Barber, of Polo, Ill., a former school-mate of mine. He ranks foremost in banking and financial circles in this State, and has been fortunate enough to lease the hotel to an experienced hotel man and caterer, well-known in hotel and restaurant circles in New York and Ashbury Park, and later as manager of Kinsley's restaurant in Chicago. I refer to Mr. George B. Weaver, whose reign at Kinsley's has made him locally popular, while it contributed materially to the success previously gained by H. M. Kinsley and Baumann, who also own the Holland House in New York.

The Stratford, located on the corner of Michigan and Jackson Boulevards, is luxuriously furnished with the best furniture, carpets and furnishings, all of modern design, and the decorations are unlike anything to be found in the West; more in keeping with the latest and most approved methods in vogue in New York City. Coupled with this is Mr. Weaver's knowledge of the management of leading Eastern hotels. He was also formerly managing director of the hotel purveying firm of Beinecke & Company in New York.

Over \$200,000 has been expended in furnishing this commodious hotel, which is adjacent to the new Illinois Theatre and to Wabash Avenue and State Street, which means that it is conveniently located to the greatest retail

dry-goods store in the world—Marshall Field & Company's emporium—and to the general shopping, theatrical, musical, and art centres in Chicago. The Dutch room, the palm room, and the empire room, the latter used for afternoon teas and by the gentlemen for the enjoyment of after-dinner coffee and cigars, together with the private dining rooms, all supplement the magnificent service and appointments of the main restaurant. The treatment of the entire exterior of the hotel is unique and original.

The Parisian *table d'hôte* dinners served Sunday evenings have been a pronounced success with members of Chicago's "four hundred" from the time they were introduced by Mr. Weaver. The spacious parlors and all the rooms fronting on the lake command an excellent view of both Lake Michigan and Chicago's famous Michigan Boulevard driveway. One hundred and twenty-five bath-rooms join the two hundred and fifty living rooms in the hotel, the three lower floors of which are furnished in solid mahogany, the upper floors being furnished in oak and cherry.

Knowing, Bryant Barber from boyhood up to the present time, and having watched with pride his rapid rise as a banker and business man, and having enjoyed the cuisine and the comforts of the Stratford during my sojourn in Chicago, I will add my personal and unsolicited indorsement to numerous other tributes paid to Mr. Barber and his associate, Mr. Weaver. They own and operate a high-class hostelry, one that will no doubt be made as famous by New Yorkers visiting Chicago as the Holland House has been made famous by Chicago people who visit New York.

## Venezuela's Eighth Civil War.

VENEZUELA, a land which seems to be experiencing more trouble and unrest than any other on the globe, having had eight revolutions in the past two years, is again being devastated by a fierce civil war. The state of affairs caused by the revolution is so critical that the government at Washington has sent the cruisers *Cincinnati* and *Topaka* to La Guayra, the port of Caracas, the capital, to look after American interests. The leader of the latest revolt is General M. Antonio Matos, who seeks to overthrow the regular government of President Castro. That the movement will result in Castro's downfall is the general expectation, as Matos has won several notable victories. Near the town of Carupano some time ago his troops defeated the government forces under General Escalante with a loss to the latter of 1,600 men. A few days afterward the revolutionists attacked and at the end of twenty-four hours' fighting captured Carupano, the centre of the cocoa trade. The slaughter was fearful and the houses of a number of foreigners were among those sacked.

The aspect of the streets after the battle was horrible in the extreme. They were strewn with dead and wounded, women were fleeing in every direction, children were calling on their mothers, wounded persons were emerging from their dwellings and imploring assistance, and the debris of battered buildings littered the thoroughfares. More recently the revolutionists have captured La Vela de Coro, a seaport, after hard fighting, as well as a number of other towns. The war is being waged with all the bitterness characteristic of civil strife.

## THE MOST EXCITING ROWING EVENT OF THE YEAR.

SWEEPING TRIUMPH OF CORNELL'S STRONG AND STURDY CREWS IN THE RACES AT Poughkeepsie, June 21st.

# The South Seeks the East

LIKE BYRON, Hon. William S. McAllister, the author of the Mississippi Legislature's resolution calling for an alliance between the Democracy of the South and of the Eastern States, woke up one morning and found himself famous. His pronunciamento, which declares for the immediate abandonment of the league between the South and the radical Democracy of the West, as represented by Bryan, has stirred the country as no party manifesto of this sort has stirred it since Clement L. Vallandigham, a generation ago, sounded the new Democratic departure. The personality of the Democratic party's new Moses is of great interest to the whole country, Republicans, Populists, and Democrats, at this moment.

Mr. McAllister was born on his father's farm, near Canton, Madison County, Mississippi, on December 25th, 1863. His father was born in Abbeville district, South Carolina, on the plantation adjoining that of John C. Calhoun, and his grandfather and Calhoun were life-long friends. His mother was born in York district, in the same State, and is related to the late Wade Hampton and a cousin to Preston S. Brooks, who made the physical assault on Charles Sumner in 1856. On his father's side Mr. McAllister is a lineal descendant of the McAllister Highland clan, which figured in Scottish history and in Walter Scott's novels. He is also a near relative of the late Ward McAllister of New York, and of the McAllisters of Georgia and Tennessee. The Civil War ruined his father, and young McAllister had to begin work on the farm when nine years of age. His entire attendance at school amounted to only about sixteen months. He was ambitious, however, for social and political distinction, studied hard at home, was admitted to the Bar in Canton, Miss., when nineteen years of age, practiced law several years, then was compelled by failing health to get a more active occupation, became a traveling newspaper correspondent, and was thus connected with several of the South's most prominent journals.

It was at this time that Mr. McAllister became active in politics. He was the principal factor in heading off

HON. WILLIAM S. McALLISTER, THE LEADER OF A NEW DEMOCRATIC DEPARTURE WHICH IS FULL OF HOPE.

the Farmers' Alliance and People's party movement in the South in 1891 and 1892, which threatened to sweep through that section, and was general director of the Southern Educational Bureau under the Democratic National Committee in the Cleveland campaign of 1892. This got him into close association with many of the leading men of the North and East, and afforded him the opportunity, to use his own words, "to study those social systems and economic agencies which have made that

section great, rich, and powerful. Then it was that I conceived the idea of a social and political alliance between the South and the Northeast."

In 1894 he fought the free-silver movement in his State, and has continued his hostility to that and other features of Bryanism down to the present time, and in 1896 he induced the Mississippi Legislature to indorse William C. Whitney, of New York, for President. He ran as the gold-standard Democratic candidate for the Legislature in his county in 1899 and was overwhelmingly elected, his own town of Canton giving him a virtually unanimous vote; in that body he has been one of the leaders of the progressive element of his party and he has carried through almost every measure which he has championed, his latest and best known achievement having been the resolutions to cut the connection between the South and the Western Democratic extremists, and to form a league with the North and East.

When, under the inspiration of Clement L. Vallandigham, an able, adroit, and influential Democratic leader, the Ohio State convention in 1871 called on the national Democracy to stop fighting the Civil War amendments and the general reconstruction policy which the Republicans had enacted, and to deal with the issues of the time, his counsel was resented at first. It was accepted eventually, however, and thus the Democracy was put in a position to win the House of Representatives in 1874 and to hold it until 1880, and prepared the way for the victory under Cleveland in 1884. Now, as in the Civil War times, the Democracy has been on the losing side. The policies which it has championed have been repudiated by the country. But that party has not been hit so often or so hard now as it was then. It is more robust and aggressive than it was at that time. The South is in a position to be more assertive and influential than it was a third of a century ago. There are resemblances and antitheses between the Democratic situation in 1902 and in 1871 which make McAllister's call for a new departure for his party of absorbing interest to every thinking person in the United States.

## Is There a Beef Trust?

A CATTLEMAN'S VIGOROUS PROTEST AGAINST A POPULAR OUTCRY

By Will C. Barnes

VAL VERDE RANCH, Dorsey, N. M., June 21st.

IT HAS become the fashion in these days of combines and prosperity to charge everything to a "trust." If certain prices are high, "charge it to the trust!" If low still the trust, until the hysterical American people are really becoming as senseless and unreasonable in their terror at the word "trust" as a herd of stampeding steers, who, having once started to run, never stop to look around and find out what they are running for or from, but plunge madly ahead to — they know not what.

It is true, beef is and has been high. But to say that any man or combination of men is responsible for it is absolutely untrue and silly. If any person or cause is to be charged with it, it properly belongs at the door of the Great Ruler of the Universe, who, in the year 1901, sent over this Western land a drought as devastating and far-reaching as any within the recollection of man. Almost the entire country west of the Mississippi was covered by it, and as a result the feeding of cattle for market, with corn and other grains mounting skyward, every day became a serious proposition.

To illustrate, I will give the case of a friend, an old experienced cattle handler and feeder. In May, 1901, he bought two thousand steers and placed them on feed in central Kansas, expecting to crowd them for the fall market. In July and August the drought came and the corn crop in the great corn-raising States went glimmering. He had gone too far in his feeding to stop and turn the steers out to grass—even had there been any grass to turn them—so he decided to keep on feeding and come out even by the rise in fat cattle, which everybody predicted. Feed went up every week. Corn reached eighty-five cents per bushel; hay, cotton-seed hulls, and other forage, went up proportionately, but he kept pluckily at it. In January and February he marketed the steers, getting for them all the way from six to seven cents per pound, which was a most tremendously high price. His steers averaged over twelve hundred pounds, gross weight, and yet when he had sold the last one and balanced his books he had lost an average of \$9.65 per head on the whole two thousand steers, or about \$20,000 on the deal.

And this is no isolated case. I think I can safely say that every cattle feeder who has marketed steers since January 1st, 1902, has done so at a decided loss, and this loss is due not to any trust or manipulation of the market, but simply to the unusually high prices of feed. The past year has been the most unsatisfactory one to all parties handling cattle that has ever been known. The far Western raiser of feeder cattle, who depends on the farmers and feeders of the corn-raising States for a market, was forced to carry over his steers, as Kansas, Nebraska, Missouri, and Iowa bought very few. The feeders in those States, who, like my friend, got caught and had to feed, lost money, and now this senseless and unreasonable outbreak against a bogey man in the shape of a beef trust threatens to make the year 1902 equally unprofitable.

When a great metropolitan newspaper like the New

York World gives itself credit in its editorial columns for having started an anti-beef-eating crusade to break up the trust, it is time for thinking men to stop and consider how blindly they are following such mischievous leadership. For does any one for a moment believe that such a movement as the World has started against beef-eating will injure very materially Messrs. Swift, Armour, et al.? No, indeed; but the farmers and cattle raisers of the entire United States will, and do now, feel keenly the cruel effects of such a widespread delusion.

Why not a "potato trust," for the humble tuber is about four times as expensive as ever before? Yet any well-posted man knows that last year's potato crop was almost a total failure in the United States. Hence, high prices. As a matter of fact, I am satisfied that the great packers and beef sellers of the United States made much more money in March, 1901, when the average price of beef in the great markets was \$5.50 per hundred pounds than they did in March, 1902, when the average price was \$6.66 per hundred.

If people would stop to think a moment they would see that the men who constitute what the press is pleased to call "the beef trust" are keen, far-sighted business men, and surely they know well enough that higher prices lessen consumption and increase the use of other food products in place of beef. Why, therefore, should they arbitrarily raise the price of beef, when, if they knew anything at all, they knew it would bring on a bowl from the consumers. The rise in beef "on the hoof" has been due entirely to natural causes. When the feeder bought corn at twenty-five and thirty cents per bushel he made money on his steers at five cents per pound. The packers figure a certain profit, and as the price gradually rose through the increased cost of fattening the animal until it had passed the seven-cent mark, the packer naturally had to raise the price to the butcher or lose money. And yet the feeder lost more money at seven cents than he made at five cents. The packer certainly lost proportionately, for he didn't put up prices until forced to do so by the rapidly increasing cost of beef "on the hoof," and the local butcher hesitated to raise his prices lest his customers protested.

As to the beef trust controlling the markets, I think that charge can easily be refuted by any shipper who has been on the Chicago or Kansas City market during these last five or six months with anything in the way of fat steers, for they have been snapped up by the buyers for the great packing houses under the very keenest sort of rivalry. In 1892 and 1893, when we were losing our cattle all over this Western country through drought conditions, the market was fairly deluged with cattle; prices went down and down, until it seemed as if the bottom would never be reached. Everybody cried "trust," "Big Four," and charged the great packers with hammering down the prices so as to squeeze the raisers. And yet, when I look back and recall the tens of thousands of lean, hungry, half-starved cattle that we Western cattle raisers, with total loss staring us in the face if we kept them on our ranges, loaded into the cars and dumped

on the markets of Chicago and Kansas City, the wonder to me is that they took them at any price.

And what has been the result of all this fuss and accusation? Tens of thousands of people, following the lead of such wiseacres as edit many of the sensational papers, have quit eating beef "to break up the beef trust." Hence the lessened consumption causes the packers to buy less beef. "Aha!" cries the astute newspaper man, "we are pinching the trust." Prices fall because the poor feeder, being between the devil and the deep sea, with high-priced feed on one hand and a falling market on the other, is forced to sell; and the packers can say truly, "We don't want your beef, for everybody has quit eating beef." So he has to take less and lose more.

And who is the loser by all this? The packer? Oh, no; for he figures his regular profit, be beef high or low. The one man who is suffering by reason of this agitation is the farmer and cattle raiser. The crusade against the supposed trust has cost the trust nothing, but has and will cost the farmers, the cattle feeders and raisers of the United States, untold millions, and is bringing about a condition of uncertainty and unrest in the cattle raising and feeding industry of the United States that will take it years to recover from.

### Pressed Hard.

COFFEE'S WEIGHT ON OLD AGE.

WHEN prominent men realize the injurious effects of coffee and the change in health that Postum can bring, they are glad to lend their testimony for the benefit of others.

Mr. C. C. Wright, superintendent of public schools in North Carolina, says: "My mother, since her early childhood, was an inveterate coffee drinker and had been troubled with her heart for a number of years and complained of that 'weak all over' feeling and sick stomach."

"Some time ago, I was making an official visit to a distant part of the country and took dinner with one of the merchants of the place. I noticed a somewhat peculiar flavor in the coffee, and asked him concerning it. He replied that it was Postum Food Coffee. I was so pleased with it that after the meal was over I bought a package to carry home with me, and had wife prepare some for the next meal; the whole family were so well pleased with it that we discontinued coffee and used Postum entirely."

"I had really been at times very anxious concerning my mother's condition, but we noticed that after using Postum for a short time she felt so much better than she did prior to its use, and had little trouble with her heart and no sick stomach; that the headaches were not so frequent, and her general condition much improved. This continued until she was as well and hearty as the rest of us."

"I know Postum has benefited myself and the other members of the family, but not in so marked a degree as in the case of my mother, as she was a victim of long standing."

BARRELS AND CASES OF PINEAPPLES AS THEY ARE UNLOADED FROM THE VESSELS IN NEW YORK.—*Phelan*

## Pineapples Arriving by the Million

By T. Dorr

IT IS A fact significant both of its commercial enterprise and of its prosperity that New York City consumes more and a greater variety of fruit in proportion to its population than does any other community on the globe. To its markets are shipped the fruits of all lands and climes, and they find there a ready sale. It rejoices the fruiterers that the demand in the metropolis for these bounties of nature is yearly increasing. Both as a luxury and as an aid to health the use of fruit is continually extending.

Each fruit, whether domestic or foreign, arrives here and predominates in its proper season. Just now the pineapple season is at its height. Pineapples are brought to this city in greater or lesser quantities during ten months of the year. The heaviest shipments usually take place in April and May, but drought delayed the growth and maturing of the crop of 1902 and so May and June became the heavy months of this year. The fruit comes from several localities, but Cuba is the principal producer. The crop in that island this year is estimated at nearly 200,000 barrels, or a total of about 14,000,000 pines. Florida is expected to furnish about half that number, and the Bahamas about 3,600,000, making a total of nearly 25,000,000 pines to be marketed in the United States. The season for Florida pines doesn't open until June 15th or 20th, so that it does not ordinarily interfere with the Cuban trade, and most of the product of the Bahamas is sent in sailing vessels to Baltimore, where it is wanted for canning purposes. Porto Rico, it is stated, cuts no great figure in the matter of pineapples. The present season is said to be only a fair one for pineapples in Cuba. In the Bahamas it is complained that the crop, though of good quality, is forty per cent. short of the average and only eighty per cent. of last year's value.

The greater part of the supply at this port comes from Cuba, and the steamers of the Ward Line, running from Havana to New York, have been for the past few weeks bringing large cargoes of this fruit, delivering them here in three days from Havana. One vessel recently transported 24,000 barrels and crates, which seems to be the season's record, and others have brought as high as 20,000, the highest total being considerably over 1,000,000 pines. As indicative of the brisk demand for the fruit, it may be mentioned that a Front Street firm which had 7,500 packages consigned to it on one boat sold them all at auction in twenty minutes.

The barrels and crates containing the pineapples are unloaded from the vessel direct to the dock and are hand-trucked to available places and piled up. A cargo of 20,000 packages taken out of the steamer *Havana* made a bulk on the dock "nearly as high as a house" and covered a broad area. From such a mountain of delicious fruit was wafted a refreshing fragrance which charged the entire surrounding atmosphere. The packages come consigned to different firms in the fruit trade, and as soon as a vessel

arrives the consignees have men on hand to see to them. Sales are made by the importers at auction, usually in the fruit auction rooms, but such sales have been known to occur on the dock. As fast as sales are made, which is almost immediately, trucks go to the dock and bear away the fruit to stores in the city or to railroad stations or steamboat piers for transfer to outside places.

The scene at the dock when a pineapple cargo is being handled is a busy and interesting one. Tier on tier of barrels pierced with auger-holes to insure ventilation of the contents rises pyramidally beside fully as high an aggregation of flat, open crates. In the latter each pine is wrapped, in Florida-orange fashion, in stout paper of various colors. The fruit is graded according to size, the quality being about uniform throughout, although some specimens are riper and therefore more luscious, if not more juicy, than others. The crates contain forty-two, thirty-six, or twenty-four pines each; the barrels from sixty to a hundred or more, the average being about seventy. The dockmen, white and black, attack the big piles skillfully, and load the trucks, which arrive and depart steadily and swiftly, until the huge cargo, in a few hours, melts away from the dock and is scattered to many destinations. Sometimes the wrenching away of a barrel from the foot of a pile starts a movement all up the front and a small avalanche of barrels rushes down. No accidents, however, have been reported this season from this cause. Occasionally a crate breaks open, more or less accidentally, and then, if the fruit happens to be a little damaged, a feast is in order, which is especially enjoyed by the colored workers.

Mr. Willis A. Hutcheson, vice-president of the A. G. Hutcheson Company, who makes annual trips to Cuba to inspect the pineapple plantations, says that the cultivation of pineapples on the island is limited almost entirely to the vicinity of Havana and some forty miles of the outlying country. The pineapple plants, he states, are only two or three feet high, are grown in rows a short distance apart, and as each plant bears only one pine per season vast tracts have to be utilized in the production of a good-sized crop. The plant is a bearer for only three seasons, so that the plantations have to be frequently renewed.

The plants are propagated by means of slips and shoots. As the hot sun is injurious to the young plants, banana trees are set throughout the field to provide the necessary shade. The leaves of the plants are cactus-like and care is required to avoid being torn by them as one passes between the rows. The fruit, also, has to be handled cautiously by those who cut it from the plant. The pines when gathered on the plantations are carted to Havana and disposed of to dealers, placed in storehouses, and from there shipped to New York.

The fruit can be grown at a moderate profit when the producer receives for it fifteen cents per dozen. The producers have been getting twenty cents per dozen this

year, so that they are doing pretty well. Mr. Hutcheson claims that the pineapples produced in Cuba surpass those of any other country in juiciness and flavor, and accounts for this by saying that the soil of Cuba is inexhaustibly rich and fertile, while the soils of the Bahamas and Florida are light and thin and need continual fertilizing.

The pineapple industry in Cuba and elsewhere gives employment to a large and growing number of people. Americans have taken hold of it with characteristic energy and success, and a fine future is predicted for it. In the Bahamas the industry is broadening so rapidly and the call for new plants from Cuba and Florida is so extensive that the colonial legislature has imposed an export duty on them. Considerable canning of the fruit is done in the Bahamas, but this part of the business is threatened with a set-back by the apparent intention of the American customs authorities to so construe the law as to increase the duty on the canned fruit ten per cent.

So greatly have the production of pineapples and the facilities for shipping them increased during the past decade or two that there has been a corresponding reduction in the price to the consumer. Americans have never been obliged to pay the fancy figure of \$1.00 to \$1.50 per pine which has been paid in England, where the fruit is regarded as a rare delicacy, but the price was formerly much higher here than at present. Pineapples retail in New York City at fifteen to forty cents each, and at times for less. The wholesale price at recent auctions was \$1.75 to \$2.90 per crate and 4¢ to 10¢ cents per pine by the barrel.

The pineapple is advancing in public favor not only because of its table qualities, which are familiar to all, but also because of its medicinal value. Extracts from the fruit now have a regular place in the *materia medica*. The juice is a promoter of digestion, a remedy for diphtheria, bronchitis, and lung troubles, and even for the tape-worm. About half the total importations of pineapples into this country are used by confectioners for making glace, by manufacturers and druggists for extracts, and by canners for preserving. A Detroit chemist has also succeeded in obtaining a champagne-like wine from the fruit, but in that respect the grape seems still to be holding its own.

### A Panorama of the World's Life.

LESLIE'S WEEKLY was there, as it is everywhere, when the volcano burst forth with its rain of death. The current number is full of pictures taken on the spot. At a glance the whole thing is realized in all its magnificent horror, in the pages of this weekly panorama of the world's life.—*From the Universalist Leader, Boston, June 14th.*

# "Tap-day"—Yale's Peculiar Institution

By Herbert M. Sedgwick

IF THE plan announced by Treasurer Morris F. Tyler is carried out and "tap-day" is abolished, the most picturesque of Yale customs will disappear. Professor Tyler has said that the university authorities may decline to allow the use of the campus for the exercises again and, although President Hadley says that no official action has been taken, the fact that the utterance was made to a leading member of a senior society has aroused alarm among the alumni.

"Tap-day" is the occasion on which hopes of securing the most highly coveted honor at Yale are crowned. The "taps" or "slaps" are the selections for the senior societies, Skull and Bones, Scroll and Key, and Wolf's Head. They are given on the campus, in front of the famous college fence. No announcement is made anywhere that there will be "tap-day" exercises at any time, but it has become college tradition that they will take place at five o'clock in the afternoon of the third Wednesday of May.

Absolute quiet rather than noise proclaims the fact that the exercises are about to begin. Every squad of students deserts the campus, while at the fence are silently gathering a group which includes undergraduates, a few alumni, even a fair-sized faculty delegation, and on the outskirts cluster brilliant knots of chaperons and society girls, whose hearts are beating only a little slower than those of their friends, the juniors, in the midst of the crowded, swaying throng at the fence, who hope to be "slapped."

At the sound of the stroke of five from the Battell Chapel chimes, three soberly dressed and expressionless seniors cross the campus to the fence from the society

REEVE SCHLEY, NEW YORK, FOLLOWED BY N. C. BRAINARD, HARTFORD, WHO HAS "SLAPPED" HIM FOR THE "WOLF'S HEAD" SOCIETY.—Sedgwick.

halls. They wander through the crowd, which, dense and sweltering, makes a path before them, looking here and there for the man they want. There is intense silence in the crowd. Every action of each senior is closely observed. The juniors who have ambitions, are breathless in suspense. The seniors undoubtedly appreciate this and are therefore painfully deliberate. At last the lucky junior is found and one of the seniors gives him, with open palm, a resounding thump between the shoulders.

"Go to your room, sir!" shouts the senior.

The junior gasps as he realizes that his loftiest undergraduate ambition has been attained. Sometimes he is so overcome with joy that his knees knock together as he starts across the campus to his room. He has been known to faint. Followed by the senior who slapped him and hardly hearing in his ecstasy the shouts of his applauding classmates, he hustles to his dormitory apartments. What happens there is known only by tradition, but it is supposed to be a formal notification to the junior to present himself the following week for initiation at the house of the society to which the senior belongs.

There are fifteen members of each of the three societies and each selects a member from the junior class by slapping him. The forty-five elections are given in just an hour. The college societies have a mutual pledge not to notify in any way a candidate of his election except by "tapping." Instances are on record of juniors to refuse to budge, thus declining their election. These are rare and occur when a prominent student who wishes for an election to a different society has faith that he will get it. Often he is "slapped" for one society after he has refused an election to another.

## The Outlook for the College Graduate.

IT MAY be assumed that every one of the season's graduates will set out upon active life with a determination to win success, the desirability of which furnishes the keynote of most commencement addresses. What constitutes success, however, in the absence of any absolute standard, is not easily defined. In the ordinary acceptance, it seems to mean the attainment of natural objects, like wealth, place and power, desire for which is most common among men. The definition is imperfect, of course, because it leaves morality out of the count, and because, were all men acutely involved in the competition for these objects, the world would lapse into anarchy.

But, limited as such success must be, there are no cut-and-dried rules for winning it. Determined purpose and strength of will are essential, but character, worth, and knowledge are not indispensable. In many men popularly accounted successful, the latter endowments have been conspicuously absent. In fact, it often seems that the best assurance of success depends upon a surplus of brute energy, rather than upon the possession of the higher qualities of mind and soul. Happily, it is the few who strive for place and power. With the mass of mankind, content with their present position is the rule, the Oriental world, for example, accepting the existing constitution of society as of divine appointment. Even the Anglo-Saxon views with something like contempt the strife of the unduly pushing and ambitious.

So much cannot be said, however, of the accumulation of capital, which, with most men, largely measures success. The aim may not be a great fortune, but only an assured competence and security for the future. But the failure to secure it is by so much a failure of the fullest success. Of the two roads to wealth—business and the professions—the former offers, to the majority, the quickest and largest returns. Although the percentage of profits has diminished within the past twenty years, the number and magnitude of transactions and the rapidity with which they are made has greatly increased, owing to the growing demand and enlarged facilities of trans-

## A Fourth of July Wooing

WE stood among the roses sweet  
With fragrance and with dew,  
And watched the flaming rockets rise  
In skies of darkest blue.  
I gently pressed her little hand,  
And growing yet more bold,  
I dared to leave a bashful kiss  
Upon her locks of gold.

TWO bright balloons above the trees  
Went sailing fast and far,  
Bound through the glory of the night  
Toward a distant star.  
"If side by side they go," I said,  
"Until they disappear,  
Oh, will you take it for a sign  
And marry me, my dear?"

THEY twinkled upward into space,  
Twin points of ruby light,  
And, still together, o'er the clouds  
Were slowly lost to sight.  
I turned and clasped her to my heart—  
"And thus we, too," I cried,  
"Will journey hand in hand through life;"  
And so I won my bride.

MINNA IRVING.

portation. In these respects the business man has a decided advantage, the limit of time determining the number of clients the professional man may have, and competition and custom correspondingly curtailing his fees.

The smaller rewards are not likely to prevent a large number of the year's graduates from entering the ranks of the professions. Many will be attracted thither by the hope of service to their fellows, and still more by preference and the opportunity afforded for adequate money-getting. If the necessary fortune is not placed too high, both purposes may be attained; but it is hard to serve two masters, and the highest service must necessarily involve a good deal of indifference to accumulations. The fact remains, too, that the ambitious man is never satisfied, that he is constantly longing for something that will be difficult to attain. In this dissatisfaction there is unhappiness. Moreover, although the road to fortune is broader and better traveled than it used to be, there are, after all, relatively few who win great wealth in either business or the professions, because the capacity of the average young man does not enable him to do anything better than some one else can do it. What he has ample capacity for, however, is goodness, the quality of heart that enables him to be true in all the relations of life, and in winning that he may achieve a far greater success than any we have been writing about.

# A Woman's Extensive Dramatic Undertaking

AMELIA BINGHAM'S PLAN TO CONTROL FIVE COMPANIES NEXT SEASON

By Lillian Egerton Barret

AMELIA BINGHAM  
As "Kazinka," in "A Modern Magdalen,"  
at the Bijou Theatre.

THE NEW YORK public is to have at an early day a successor to the late Augustin Daly and a stock company which would have been his ideal had he lived. The new aspirant for this honor is Miss Amelia Bingham, the actress-manager, who has recently made a success in Haddon Chambers's play, "A Modern Magdalen," at the Bijou Theatre, and who will have under her control next season five companies, two in "The Climbers," two

to do. It must be admitted that there are not many artists who will give to others as much as they take for themselves; not many whose attitude toward each other is sufficiently broad and sympathetic to produce the best results of which each is capable. There is to-day, Miss Bingham believes, greater harmony between the members of the profession, a higher tone in their professional relations, than there was in the old days; still, her ideal places the drama and actors upon the highest artistic plane, above any sensational or commercial basis.

There is something more than dollars and cents to aim for in the dramatic profession, according to Miss Bingham's idea. She says, modestly: "For years I have made my living on the stage, but now I want to do much more. I want my company as an organization to be a benefit to the workers in it, to the public, and to the profession as a whole. There is so much more satisfaction in hearing, 'What a fine performance!' 'What a splendid production!' than mere compliments to one's self, with an apology for the rest of the company. The public of to-day undoubtedly enjoys much more an excellent company in a complete, all-round fine performance than a star who shines by contrast with a lot of poor actors. So much has been given in the plays and productions in the last few years that the public has become sated with mediocrity and demands the highest order of excellence. The day of the one-part play is over, and on the stage, as in books, the delineation of each character must be intelligent and logical."

Miss Bingham has said that the actress who feels any degree of triumph in playing opposite inferior actors is to her like the beautifully gowned woman who enters a room in which there are only shabbily dressed people. She is one of the actresses who feel keenly the stimulus of spirited competition, of talent pitted against talent, and the meaning to her, if, after the curtain has fallen, she still receives the tribute of praise for her personal portrayal, is worth something. The new company will present such problem plays of the best sort as Miss Bingham is able to secure. The day of the society drama, except as it tells a story of deep human interest, and of the gown play, is undoubtedly past, which Miss Bingham

and every other manager knows, and the repertoire of the new stock company will present dramas of life, dealing with the problems of vital interest, and, whether classical or modern, will have this definite purpose. The tale that shows but the pretty side of life and ends happily for all, Miss Bingham believes, is trite, and fails to touch the better educated audiences of to-day. What they demand is a drama that keeps measure with life as it is, in which people love and suffer and struggle and win or lose.

The questions and problems of human relations have become such familiar matters that people have lost interest in mere child's play and pretty pictures, and want to see the game of life played to the end and played by actors intelligent enough to make the illusion complete. These are Miss Bingham's own theories, and her play and players will be selected with this end in view. With "The Climbers" Miss Bingham brought into vogue a certain phase of the society drama, and now the market is overstocked and playwrights' desks are piled with society plays and adaptations, most of which are superficial and offer little to a *biase* public. The idyllic definition of art, viz., the true, the beautiful, and the good, is to be the standard of this new company, and every play will be produced with the highest ethical and artistic aim, with the earnest purpose for moral and intellectual uplifting. The new stock company will differ from Mr. Daly's in that it will not necessarily keep the same people always in its cast. There is a great mutual pleasure to the actors in being always together, and an equal pleasure to the public, who become attached to the personnel of a company, but Miss Bingham believes better results will be obtained by having the right people cast for the right parts; to be able to find for each character in the play the man or woman who must have been in the author's mind as his original conception. Miss Bingham says, "I should love to have the same people with me always, but I mean to have, at any sacrifice, the greatest company ever organized, and to know that when any one comes to see the Amelia Bingham Company, no matter in what play, he will be getting his money's worth."

## The Finest Club-house for Boys in the World

MADE POSSIBLE BY A THOUGHTFUL MILLIONAIRE

By Tom Thorne

RIGHT IN the heart of the tenement district of New York stands the finest club-house for boys in the United States. And a boy may become a member without the payment of a cent.

The club was founded twenty-five years ago by young college graduates, most of them from Yale, but the new club-house, a massive brick building, five stories high, at the corner of Avenue A and Tenth Street, was made possible by the liberality of Mr. E. H. Harriman, the railroad magnate. The ground on which the house is built, the structure itself and its equipment, cost in all nearly \$200,000. This money was advanced by Mr. Harriman and the doors of the new club-house have been thrown open to its many young members.

Since its opening the house has been submerged by the youth of the east-side tenements. Every night 1,500 of them fill its rooms. The result is a congestion, interfering even with the working of the club's machinery. And this popularity of the place shows whether or not Mr. Harriman and his associates have provided a practical philanthropy.

The Boys' Club is founded on the fact of nature that boys love physical activity—that this instinct for activity is a natural provision for the development of their bodies. And, taking advantage of this fact, the Boys' Club is using athletics as a practical stepping-stone in the progress of the youth of the poorest section of New York. Boys are gregarious. Naturally they form themselves into "gangs." The impulse and motive of the gang is the impulse and motive of each individual. So the club for which this fine home has been provided takes advantage, too, of this gregarious tendency, and instead of belonging to a "gang" the boys are members of a club, and the common motive and impulse is toward a life that will be practically and actually better than that into which they were born.

The club-house itself is a refining influence. It is of clean yellow brick with stone entrances. At the main door are columns with lamp-posts, like the Fifth Avenue clubs. Within, the floors are of tile. The stairways are of marble with railings of brass. There is brilliant light, and everywhere absolute cleanliness and good taste. The superintendent, Mr. Francis H. Tabor, is a graduate of Cambridge University, England.

In the basement of the building are the offices, the carpenter shops, where boys are taught the rudiments of the trade, the storage rooms, the shower baths, with lockers and a dressing-room, free to the boys. On the first floor is a vast room for the use of the smallest of those who visit the club. It is filled with small tables, children's size, with chairs to match. Every night this room is crowded with small boys, who play all sorts of games—dominoes and the like. The same room is also the auditorium, and is provided with a movable stage. On the second floor is a billiard room with billiard and pool tables for the older members, and there are also

a lecture room and a smaller room for whist and other pastimes of the members. The spacious library, with its many volumes of standard books, its furnishings of carpet and tables, comfortable chairs and window seats, is on the third floor. There is, too, a small natural history museum on the third floor, and five rooms for the smaller clubs, the "inner circles," as they might be called, of the Boys' Club. On the fourth floor is a very large gymnasium with parallel and horizontal bars, traveling rings, and other apparatus. The gymnasium extends into the fifth floor, thus giving it a doubly high ceiling. There are dressing rooms adjoining the gymnasium, and on the same floor a singing room and a place for the art class. On the top floor are the apartments of the superintendent, and the entire roof is a playground, surrounded by a high fence. Here the boys may play at handball, football, and other games in the open air. And all this for the poorest boys in New York City!

The boys who enter the club for the first time find their way usually into the large general play-room on the first floor. From that, as they express their tastes, they go into other departments. There is a gymnasium with its physical instructor, who shows these young club men how to develop their bodies. There is always danger of injury to boys, arising from an excess of gymnasium work. The instructor is there to look out for that.

Some of these east-side children show a remarkable aptitude for drawing. A teacher with thorough equipment for instruction is at their service. Others love music, and a musical instructor for them is provided. This love of music is more common among the German boys than among those of any other nationality. But too frequently their life in the streets, where they must shout to make themselves heard above the din of the city, has made the voices of these east-side children harsh and unmusical. There are exceptions, and one of these is a little German boy with a voice so sweet and rare that the superintendent has made a prophecy. The public will know about this boy some day, he says.

But after one has been shown and told all about these delightful advantages for the lads the comment is very apt to be this: "The club is all very nice and pleasant, but how is it to help the boys earn a living—something which they must start out early to do?" The answer is that last year more than 100 members of the Boys' Club obtained good positions in the city.

It must be remembered that the club has a great many influential friends. Through these men many places are open to those who are fit to fill them. And the club opens the way for this. Boys taken out of the street could not hold positions in offices at once. The club, through its refining influence, the lessons which it teaches in morals and in general conduct, the ambition which it inspires, becomes a training school. And as vacancies occur in the offices or business houses of the club's friends, a

notice is sent to Superintendent Tabor and he recommends a lad for the position. Thus there is a constant and ever-present reward for those who improve their opportunities.

Mr. Harriman frequently visits the club-house at night and is informed of all the details of its operation. The board of trustees includes a number of other prominent men, among them Sherman Evarts, Herbert L. Griggs, Henry Stanford Brooks, William B. Anderson, S. Reading Bertron, Philip T. Dodge, Loyall Farragut, Russell A. Griffin, Lewis S. Haslam, Otto H. Kahn, Wallace Percy Knapp, Alvin W. Kreeh, Allan McCulloh, Thomas Weyman Porter, W. W. Skiddy, Henry Osborn Taylor, and Percy Rockefeller.

### Fourth of July in a Country Town.

IN NO part of the Union is the Fourth of July celebrated with more patriotism and zeal than in the rural districts. At daybreak the farmers and their families, dressed in their "Sunday best," begin to drive into the town. The younger element immediately and with vim join the ranks of the village noise-makers. The older persons visit their friends and acquaintances, or stroll about the streets. In the course of the morning, a brass band arrives, and after a parade followed by a jolly procession, halts near the spot from which a balloon ascension is to take place. There is no gas for inflating purposes procurable, but the ingenuity of the villagers is equal to the emergency. A covered ditch or tunnel is prepared, and over one end of this is hung the mouth of the balloon while at the other end is built, with kerosene, a fire, the hot air from which is carried by the draught through the tunnel and enters and swells out the big bag. A gaping crowd, while the hand makes music, watches the process of inflation and then, when all is ready, the daring aeronaut shoots skyward amid the wild cheers of the thrilled spectators. Sometimes he returns to earth by means of a parachute, and then the thrill is repeated. Cannon are scarce in most village places, but the town blacksmith ingeniously rigs up a substitute in the shape of two anvils placed one on top of the other, the hole in one anvil being filled with powder and the other being used as a weight to increase the force of the discharge and the loudness of the report. The fuse or train of powder leading to the charge is touched off by the smith with a long rod of iron, red-hot at the free end. After the air-ship performance is over the band gives a concert in a stand erected on the village green, and in the afternoon the racket-sated citizens gather about the stand, where they listen to more music by the band and to sprend-angle speeches by local orators. In the evening there is a display of fireworks, which is fine for the region, and later the weary, but gratified, "out-of-towners" hasten homeward.

## Job Farley's "Set Piece"

A Fourth-of-July Story . . . By Morris Wade

ONE TOPIC of conversation never grew old to Job Farley. He bronched it with fresh and eager enthusiasm long after his friends had wearied of it and when some of them made it a point to get beyond reach of his voice when there were preliminary remarks giving proof of the fact that Job was about to introduce his favorite topic. This topic was a certain Fourth of July Job had once spent in Brighton, a large town a hundred miles from Job's home. Never before nor since had Job been so far from his home, for he was of a strongly domestic temperament and a common saying of his was: "I like to be in my own bed at night."

The one thing more than another that had made the Brighton Fourth of July ever memorable in the mind of Job was the fact that the celebration had closed with a display of fireworks far surpassing anything Job had ever seen. The impression made upon his mind by this exhibition of fireworks had been strong and abiding.

"They had more'n a dozen set pieces," Job declared to his friends. "An' if you never saw a set piece in fireworks you don't know what fireworks really is. I'd heard o' set pieces before, but I'd never seen any, and a body has to see 'em to know what they are like. You kin imagine 'em all you're a mind to, but they must be seen to be dooly 'preciated. Well, they had one o' Gin'ral Washington on hossback that was a benter! I'll never forget that set piece if I live to be three hundred an' ten years old! It was the purtiest thing I ever laid eyes on an' the most pattered! I jess threw my old hat into the air an' yelled myself hoarse when Gin'ral Washington popped out there in red, white an' blue fireworks! If we ever have a celebration here in Elderville I hope to the land we kin have one set piece anyhow, an' that that set piece'll be Gin'ral Washington on hossback! It was wuth all it cost me to go to Brighton jess to see that one set piece! An' you'd say the same, gentlemen, if you'd 'a' been there an' seen it with me!"

It happened five years after Job had seen this never-to-be-forgotten "set piece" that a Fourth of July celebration was planned by the people in and near the little town of Elderville. When old Job Farley heard the glad tidings he at once began to talk about having a "set piece" with the display of fireworks in the evening, and he gave the committee having the matter in charge a detailed account of the beauty and splendor of the set piece he had seen in Brighton. But the committee shook their heads when they found that a "set piece" like the one Job had seen would cost at least sixty dollars, and the total amount subscribed for fireworks amounted to but seventy-five dollars.

"It wouldn't pay to put all of our money into one piece," said Hiram Rodd, the chairman of the committee. "We think it best to buy Roman candles and sky-rockets and things of that kind, that will last an hour or so."

Job yielded cheerfully to this decision on the part of the committee. But the "set piece" was still a splendid possibility. Things had gone very well with Job that year. A distant relative had died early in the spring and had left Job three thousand dollars in cash. Then he had sold the timber on fifteen acres of woodland for fifteen hundred dollars more, and a sudden rise in the price of potatoes early in the spring made it possible for Job to sell at a large profit five hundred bushels that he had "wintered over." Indeed, things had gone so well with Job that he said to himself, as he faced homeward after hearing the decision of the committee:

"There'll be a set piece to the celebration, all the same. Yes, an' it'll be a figger o' Washington, that's what it'll be! An', what's more, I'll pay for it my own self! I'll let 'em know jess how pattered I am! It'll tickle me awfully to see how the eyes o' some o' the Elderville folks will bulge when they see that set piece! I'll go right home an' write a letter to my cousin in Brighton an' tell him to order a set piece for me. He'll know jess where to order it, for he was on the committee that had charge o' the fireworks the Fourth that I saw that set piece in Brighton. I'll tell him to order the exact mate to that. Yes, sir, ladies an' gentlemen, there'll be a set piece o' good old George himself at our celebration, an' there won't be any one there who'll yell any louder than I will when the Gin'ral blazes out so beautiful in red, white an' blue fire on a hoss in the same colors. I think I hear the people a-yellin' even now. It'll be something for the children o' Elderville to remember all their born days an' to hand down to their predecessors, that's what it will!"

The next time Job went to Elderville he informed the

committee of his proposed contribution to the fireworks to be displayed at the forthcoming celebration. The committee thanked him most heartily, and the next issue of the Elderville Weekly Trumpet contained a long article in reference to the patriotism and generosity of "our old friend and subscriber for many years, Mr. Job Farley." It was, moreover, printed on the yellow-and-red posters that the display of fireworks would culminate in a "Magnificent Set Piece Representing General George Washington Seated on His War Horse, this Splendid Addition to the Fireworks Being the Personal Gift of Our Large-hearted and Patriotic Fellow Citizen, Mr. Job Farley."

Job viewed these handbills with swelling pride. He had an extra hundred of them printed, that the circulation of them might be still more extended, and he pasted a dozen of them on his barn on the end next to the road. His pleasure and vanity over having become in some sense a public character found further expression in the following information painted on a board and nailed below the handbills:

"The Mr. Job Farley Referred To on the Above Bills Resides Here."

This added quite as much to the complacency of Job as to the merriment of those who drove by the barn and read the unusual notice.

Job found it convenient to spend much of his time working near the barn, that passers-by might have the privilege of seeing the man "referred to on the above bills," and he thus received almost the full value of his expenditure even before the arrival of the "set piece."

In due time Job received a letter from his cousin and also one from a dealer in fireworks in Brighton stating that the "set piece" was on the way to Elderville. It arrived two days before the Fourth. Job and a large part of the male population of the town were on hand when the freight train bearing the precious "set piece" reached the town, and there was no lack of assistance in removing it from the car. It was advised by some of the committee that the "set piece" be allowed to remain in the freight depot until the day of the celebration, but Job did not take kindly to this suggestion.

"No, gentlemen," he said, "it cost too much an' it is too important a part o' the celebration fer me to run any reeks with it. I'll feel a good deal safer if I have it out to my place in my corn-barn that's empty now. I'll have it on hand an' set up in good season for the celebration."

As the vaunted "set piece" was Job's private property there was no appeal from this decision, and the framework containing the "biggest part o' the Elderville Fourth," as Job called it, was loaded on to his hay-wagon and he set out for home with it followed to the outskirts of the village by a large part of the juvenile population.

Job lived but two and a half miles from the town, and he ought to have reached home in a short time. No doubt he would have done so had not old Bill, his "off" horse, chosen this inopportune time to indulge in his occasional privilege of balking. His determination to be thus obstreperous seemed to come to him as a sudden and happy inspiration to be immediately acted upon. He had been jogging along as steadily and apparently as happily as old Ned, his partner in harness. Job, with his pipe in his mouth, as was always the case when he was driving, was sitting on a board across the hayrack happy in self-contemplation of his own importance in the forthcoming celebration.

"I reckon folks will 'preciate the celebration more an' more when they see Gin'ral Washington bu'stin' out in all colors large as life an' prob'ly a good deal purtier than he was in life," said Job to himself as he began the ascent of a long stretch of hill road. "I'll bet there'll be no end o' whoopin' an' yellin', an' like enough they'll cheer me as well as Gin'ral Washington. Well, I dunno but what they'd orter. It ain't ev'ry one that 'd put out all the money I've put out fer Gin'ral Washington. It ain't ev'ry one that would—giddup there, Bill! What ails ye to stop so all of a sudden? Tarnation! I bet a purty sum that hoss is a-goin' to balk!"

That was just what old Bill was going to do. Indeed, it was what he had already done, as Job realized when old Bill responded to a cut of the whip by simply laying back his ears, shaking his head, kicking at the dashboard, and declining to move forward a single step.

"Consarn ye!" exclaimed Job. "What in time ails ye to go to balkin' when ye are drawin' the most important load ye ever drew in your life? Don't ye know that ye are drawin' Gin'ral George Washington himself? Well, ye be, so come along now an' quit yer foolin' an' git out o' this! Giddup! Giddup!"

But old Bill did not "giddup." He tossed his head again, gave the dashboard another kick, and braced him-

self in determined resistance when his mate started forward.

"G'lang, ye mizzable critter!" exclaimed Job. "I tell ye this ain't no time fer ye to cut up this way! It looks show'ry out there in the west, an' if it should fall to rainin' an' Gin'ral Washington should get wet he'd never go off the way he'd orter! Just consider that, will ye? You mosey on now an' git him home an' do your balkin' some other day! You hear me? Git out o' this now right forthwith an' faster!"

He plied the whip, but without the desired result. Old Bill would not "mosey on."

"I kin tell from the way he starts out that he is in fer one o' his long balks!" groaned Job. "But he's got to go on! Something has got to start him up, an' that right airy! Them clouds are growin' bigger an' blacker ev'ry minnit! I ain't goin' to have Gin'ral Washington washed away in a rain storm after all I paid fer him! I'll git down an' cut a hick'ry thick as my wrist an' wear it out on that Bill critter but what I'll make him stir his stumps! I'll larn him how to go to balkin' when he's drawin' Gin'ral George Washington! A marcful man is marcful to his beast, but there's exceptions to all rules, an' I'll wear out a hick'ry on that Bill hoss if he don't stir his stumps mighty quick!"

He climbed down from the rack, took his pipe from his mouth, and laid it on the framework containing "Gin'ral" Washington. Then he stepped toward a clump of underbrush by the roadside with his open knife in his hand in search of the "hick'ry" with which to make old Bill "stir his stumps." He had gone but a few steps when he heard a peculiar gizzing, buzzing sound behind him. He turned around and saw a little flame of blue smoke coming up from a crack in the frame near his pipe. The next instant there was a loud, whirling, crackling sound, and sparks began to fly from every part of the frame. "Gin'ral" Washington had "gone off!"

Old Bill suddenly pricked up his ears, twisted his neck and looked back over his shoulder, and he too went off before Job could recover from his amazement. Down the road raced the frightened horses with "Gin'ral" Washington "going off" with increased noise and smoke and flame. Job started in wild pursuit, but he saw the distance between him and the fleeing horses fast increasing. Half a mile down the road Job came to the frame burning by the roadside. "Gin'ral" Washington had gone up in smoke!

Job was something of a philosopher, and as he looked at the smoking wreck before him he said:

"Well, mebbe it's all fer the best. There's turrible accidents happens from fireworks nowadays, an' mebbe if the Gin'ral had went off with a big crowd around him somebody would 'a' got hurt. Lem Bates had a cousin who got his eye put out by a spark from some fireworks goin' into it. Gin'ral Washington had better 'a' gone off the way he did than to have put out somebody's eye or mangled them in some other way. I reckon mebbe it's all fer the best, but I wish that I had my money back in my pocket an' that Gin'ral Washington was back in Brighton. He started old Bill up anyhow, plague take the old rascal! If I served him right I'd larrup him good when I git home—drat him!"

### Proper Food

BETTER THAN OCEAN BREEZES.

It makes a lot of difference in hot weather, the kind of food one eats.

You can keep the body cool if you breakfast on Grape-Nuts, for in its pre-digested form it presents the least resistance to the digestive organs and contains as much nutriment as heavy body heating food such as meat, potatoes, etc.

Grape-Nuts is probably entitled to the claim to be the most perfectly adapted food for human needs now extant. The meat eater and vegetarian are alike charmed with its crisp taste, the delicate flavor of the grape-sugar, and the nourishment to body and brain, while the housewife is attracted by its being thoroughly cooked at the factory and obtained from the grocery ready for instant use with the addition of cream, making it a cool, delicious dish, requiring no hot stove and cross cook on a hot morning.

When Grape-Nuts and Postum Food Coffee constitute the summer breakfast with the addition of a little fruit, it is not necessary to seek the ocean breezes for comfort, for external heat is unnoticed when internal coolness from proper food is felt. The recipe book in each package of Grape-Nuts gives dozens of delicious dishes.

"OLD BOWEN'S LEGACY," A THRILLING STORY; "BELSHAZZAR," MOST REMARKABLE NOVEL OF THE YEAR

IF MR. EDWIN A. DIX had never written any other book than this fascinating and powerful tale of New England life, "Old Bowen's Legacy" (The Century Company), that alone would suffice to place him in the front rank of living American novelists. It is a brilliant piece of work in every sense of the term, brilliant in its conception and not less so in its execution. Pure love, filial devotion, revengeful hate, greed, selfishness, and the regenerative influence of lofty and noble example are the chief elements entering into the composition of the story and the drama of life played out in its pages. It is a stirring tale, although the scene is laid entirely in a little country village and the characters, for the most part, are simple country folk. It is realistic in the better sense of that much abused term, and altogether wholesome in tone, although it does not fail to depict certain harsh and forbidding features of human nature. Its philosophy, while not at all obtrusive, is optimistic and inspiring, the emphasis being placed upon the great truth that the world and the people in it are not so bad as some have painted them; that we get out of life, after all, about what we put in it; that our neighbors and fellow-men generally deal with us as well as we deserve and often a great deal better.

The chief characters of the story are Simeon Bowen, a miserly old fellow who, in spite of unusual success in money-getting, has neither given nor received much good in the world; Garrett Coe, a crabbed, selfish, and morose farmer, his patient and long-suffering wife, his pretty daughter Vinie, and her young lover; a strolling juggler and several tradesmen and professional gentlemen of the little village of Felton, where the scene is laid. Bowen, the miser, who is unmarried and heirless, is persuaded in his last illness, by the lawyer who has been summoned to draw his will, to make some tardy amends for his mis-spent life by leaving all his money in the hands of three prominent and upright citizens of the village, to be given at their discretion to the object or the person where "it will do the most good." This is the "legacy" which gives the title rôle to the story. Who among the characters we have named receives it is a matter which we will leave to the readers of the book the pleasure of finding out for themselves. We will only venture to say that it goes to the very person who at the outset of the story would seem to be the most unlikely of all to deserve it.

Garrett Coe, his wife and daughter, are three personages whose characters are drawn in bold and striking lines. The man Coe is a husband of a type far too common in his class and calling, a peevish, fretful fellow, a chronic grumbler, whose unfeeling and brutal treatment of his faithful wife at last drives that poor woman to desperation, and her eyes being suddenly opened, after twenty-five years of slavery, to what she believes to be his true character, she leaves him, determined never to return, taking with her a young son. The daughter Vinie, goaded by her father's harshness, soon follows her mother, and with her goes the only remaining boy. Thus left to himself in his lonely and deserted home, Coe passes a miserable and unhappy year, during which he begins to see himself as others see him, and in the end is brought to acknowledge the meanness of his past life and thus to become a new and better man, and, with his restored family, a true husband and a kind father. How this evolution is accomplished, and who and what are all the agencies contributing to it, is what the story tells, and in a way that fascinates the reader's interest from the beginning to the end.

Edwin Asa Dix, the author of "Old Bowen's Legacy," is about forty years of age and was born, and formerly lived, in Newark, N. J. He was graduated in 1881 at Princeton, where he took the highest honors in his class, winning the first place of scholarship and being made Latin salutatorian and a fellow in history. He is a lawyer by profession, though he has not practiced for a number of years. He was at one time literary editor of *The Churchman*. Mr. Dix has lived in different parts of this country, has visited Europe many times, and has made a tour around the world.

Special arrangements have been made by *LESLIE'S WEEKLY* whereby its readers may obtain a handsome copy of this remarkable novel, with *LESLIE'S WEEKLY* for three months for \$1.50, postpaid. All that is necessary to secure it is to cut out and send to *LESLIE'S WEEKLY* the following coupon with the sum mentioned, or, if you do not wish to mutilate your paper, copy this form and send it in.

EDWIN A. DIX, AUTHOR OF "OLD BOWEN'S LEGACY."  
Hollinger

WILLIAM STEARNS DAVIS, A SUCCESSFUL AUTHOR AT  
TWENTY-FIVE.—Heck.

NO NOVEL is more powerful, none describes with greater force the strongest human passions, the fundamental elements of life, none stirs the reader's feelings and sympathies more deeply than the "Scarlet Letter," by Nathaniel Hawthorne. Undoubtedly there is no stronger, truer delineation of the agony which, as much as joy, becomes a part of the course of human love. *LESLIE'S WEEKLY* continues its offer for a fine cloth-bound volume of the "Scarlet Letter," postpaid, for thirty cents. If you wish to obtain the book, fill out the following coupon and send it to us with thirty cents in coin.

please send to my address No. 1 of Leslie's  
Home Library Series.  
Yours truly,

OUR SUMMER LIBRARY.

NOTE.—In the next issue of this paper we shall have a Summer Library to offer to our readers under remarkably advantageous terms, the Library being made of three of the choicest and most popular books of the year.

NO PERIOD in human history and no personages who have figured in the annals of our race furnish the ideal elements of a drama of the highest and most intense sort for stirring tragedy and picturesque romance in such range and completeness as the period embracing the reign of the later Babylonish kings, the mighty but ill-fated Nebuchadnezzar and his successor, the still mightier and more ill-fated Belshazzar, whose short-lived triumph and fearful downfall are described with such wonderful power and startling vividness in the fifteenth chapter of the Book of Daniel. Babylon was then at the height of its glory, a city famous throughout the known world for its great dimensions, its enormous walls, its gorgeous palaces, its beautiful hanging gardens, and its colossal temples and other edifices, the ruins of which, as they are now brought up to light by the archaeologist, are wondrous beyond description.

It is this Babylon, Babylon the Great, the city whose very name has become a synonym for magnificence, for wild, gorgeous and unbridled revelry, for the extreme of despotic cruelty and sensual indulgence—it is this Babylon, Queen of the ancient world, which Mr. William Stearns Davis, the author of "A Friend to Caesar," has chosen as the scene of his latest and greatest romance.

The narrative moves on through scenes of dazzling splendor, of gorgeous feasts and revelries, through bloody tumults and thrilling adventures with cruel beasts and still more cruel men, until the climax is reached in the wonderful feast in Belshazzar's palace, where, surrounded by a brilliant retinue of courtiers, slaves, and dancing girls, the imperious monarch celebrates his apparent triumph and the achievement of all his cruel desires in an orgy such as even Babylon in all its shameful history had never seen before. But just as the prize seems within his grasp, before the startled eyes of the King and his companions appears the mysterious hand tracing the fateful words on the wall, to be interpreted by the prophet Daniel, dragged in from prison for the purpose, and to be followed by a swift and awful fulfillment before the night is over. This last and most fearful picture in this drama of ancient days is drawn by the author with the hand of a master, with such vivid coloring, such fidelity to life, in such bold and striking lines, that once read it can never be effaced from the memory.

The whole story is steeped in Orientalism of the ancient and true Babylonish type, the author evidently having made a careful and minute study of the general history and traditions of the city of Belshazzar, as well as of the Scriptural narrative of the time, which, in certain particulars, he has followed closely and wisely. A more fascinating story it would be difficult to conceive. The publishers on their part have fully matched the story, so far as typographical art and the skill of the illustrator and decorator can do it, and in these respects the volume leaves nothing to be desired. In eight full-page pictures the artist Ziegler has set forth as many strong situations in the story, full of the spirit of the tale and as striking in their way as the narrative itself.

In all probability Mr. William Stearns Davis, the author of the successful and popular novels, "A Friend to Caesar," "God Wills It," and the recent "Belshazzar" (Doubleday, Page & Co.), the finest of all, would repudiate the idea that he is a precocity, and yet a man who has scored so many literary triumphs before he has reached the age of twenty-five may surely stand as an example of an early and remarkable development of genius. For seven years out of the twenty-five Mr. Davis was regarded as a confirmed invalid, unable to pursue regular study or to do work of any kind. During those years, when regular study was impossible, Mr. Davis diverted himself by reading historical works and those on the private life of ancient peoples. His favorite historians are Gibbon and Motley. Recovering his health young Davis entered Harvard College in 1897, and was graduated with high honors in 1900, having done four years' work in three.

We have made arrangements whereby we are able to offer a copy of "Belshazzar," the remarkable story above described, together with *LESLIE'S WEEKLY* for three months, for \$1.50. The regular retail price of the novel alone is \$1.50, and the subscription price of *LESLIE'S WEEKLY* for three months is \$1.00, a total of \$2.50, if taken separately. All that is necessary to take advantage of our offer and secure a copy of "Belshazzar" and *LESLIE'S WEEKLY* for three months is to copy in writing or cut out and send to the publishers the following coupon with the sum mentioned.

## In the World of Sports

LONGFELLOW'S GRANDSON WINS THE SUBURBAN—COLLEGE BASEBALL—ROWING

THAT FIFTY THOUSAND persons should at one time go to a race-track is another substantial bit of evidence of the great popularity of that sport this year. That is the estimated number of those who attended the Suburban, the opening of Sheephead Bay, and saw Gold Heels capture the stakes in a thrilling, record-breaking contest. The size of the crowd can be best understood by comparison. It was as though practically every man, woman and child in Erie, Penn., for instance, had gone to the track and had left that prosperous city tenantless. The race will be one of the memorable ones in the history of the turf. Many wondered that the popular favorite captured the stakes. People had become accustomed to seeing some outsider in the betting win the classics on the big days on the turf. The Metropolitan and Brooklyn handicaps were each won by animals having practically no following, and nobody would have been surprised to have seen some horse with liberal odds quoted against him finish in front in the Suburban. Those who have followed the game for years predicted truly. When the earlier handicaps are run the horses have not had time to run into condition and surprises naturally result. By the time the Suburban has been run, the owners, trainers, and public have had time to get a pretty good line on the thoroughbreds and can consequently bet more intelligently. For that same reason the high-class animals are likely to run closer to form during the remainder of the season. Gold Heels is a worthy member of a famous family. He is son of The Bard, who is known to all the followers of the turf, and the grandson of Longfellow, one of the world's grandest thoroughbreds.

WHY YALE BEAT TIGERS.—I had the pleasure of seeing the final ball game in New York between Yale and Princeton, and, while surprised at the result with others

who pretend to understand baseball thoroughly, the victory was deserved. Princeton, with all her prestige, did not play up to her individual strength. It was simply another case of Yale nerve, pluck, and determination, and it won against a superior team. It is the first time that Yale has won the championship in four years. Most of the players will be in college next season, which makes it pretty certain that New Haven will have a hard team to

tive about the condition of their crews added to the interest by creating a greater uncertainty as to the outcome. To all lovers of sport there is an increasing regret that Yale and Harvard do not enter the Poughkeepsie race, for that would greatly enhance the rivalry among the colleges and the interest in the contest. It is to be hoped that this can be brought about. It would make the Poughkeepsie race perhaps the most interesting athletic event of the whole year to the people of the entire country. Cornell's sweeping victory in the regatta, being first in all three races, was not so much of a surprise as the poor showing of Pennsylvania. The Quakers were fourth in the 'varsity, second in the four-oar race, and last in the freshman contest.

GEORGE E. STACKHOUSE.

### An Odd Golf Game.

THE Midlothian Golf Club, of Chicago, to which many millionaires belong, played a game of golf under peculiar conditions one day last month. These conditions were the clothes in which the players presented themselves. The attire was varied and fantastic. Many of the men wore coaching hats with their golf costumes and others appeared in high hats of ancient 'vintages.' One of the features was an impromptu band which sounded like a clown orchestra in a circus. The members of the club were divided into two teams—the 'Cottagers' vs. the 'Club-house.' The former won by a score of 14 to 13, and the 'Club-house' team paid for the dinner. The club is one of the wealthiest golf organizations in the United States and operates its own railroad.

### For Nervous Exhaustion

USE HORSFORD'S ACID PHOSPHATE.

DR. A. L. TURNER, Bloomsburg Sanitarium, Philadelphia, Pa., says: "As an adjunct to the recuperative powers of the nervous system, I know of nothing equal to it."

## Strangling a Free Press in Manila

By Sydney Adamson

THE LAST mail from the Philippines brought a copy of the Manila *Freedom*, with a marked editorial entitled "A Few Hard Facts." It began with a quotation from my article, "Decided Action at Last in the Philippines," which appeared in *LESLIE'S WEEKLY* of February 13th, this year. A circular letter accompanied the newspaper, signed by Edward F. O'Brien, the editor. It states that he, as well as Fred L. Dorr, proprietor, and A. R. Dorr, general manager, have had brought against them by the Philippine civil commission suits for scurrilous libel and sedition, under the Philippine sedition law, on account of this particular editorial.

The Manila press has had a rather checkered career. Under General Otis it hardly breathed, so firmly did the mailed fist keep it by the throat. Toward the end of General MacArthur's reign it began to pluck up courage, and with the advent of the civil commission the American newspaper men of Manila dreamed that the freedom of Park Row was at hand. The habit of non-criticism acquired during the period of martial law was hard to throw off, and the first attempts at revolt were manifested by copying stronger articles from the press of the United States. In 1900 the Manila *Times* copied an article from my pen which appeared in *LESLIE'S WEEKLY*. I had pointed out a number of strong measures needed to end the war. The Manila *Times* praised the article and pointed out how many of the suggestions had been adopted.

The first big sensation, however, was the

publication of a long article, by Señor Valdez, in *Mian*, a Spanish paper in Manila, making a list of personal charges against Benito Legarda and Pardo de Tavera, the two (then) recently appointed half-caste Filipino civil commissioners. Valdez was tried for libel and sentenced to a fine of 800 pesos. As the Manila *Freedom* points out, he was convicted under a Spanish law which, in effect, declares that "the greater the truth the greater the libel."

No attempt has been made to disprove the statements made by Valdez, who, on the other hand, has been denied the opportunity of proving them all, which he claims is fully within his power. There was an undercurrent of criticism in Manila at that time which seemed to suggest that Legarda and De Tavera dare not face the charges in open court, which puts the arbitrary action of the commission in the worst light.

The next sensation was the publication in full by the Manila *Times* of my article, "Civil Government in the Philippines Severely Criticized," appearing in *LESLIE'S WEEKLY* of September 14th, 1901. I well remember my ride on the Luneta that night. Dozens of people stopped me to shake hands and thank me for telling the truth about the situation. That article expressed what all felt and knew to be true, but which, at that date, no other pen had so strongly stated. In a number of ways it came to my ears that the civil commission had received a shock at the unanimous approval given by the Americans of Manila to sentiments so strongly condemning their

own acts. Evidently the commission made up its mind that if it were powerless to control my pen in the United States, it would make the copying of my articles in Manila papers a criminal offense. This surmise is, I fancy, not very far from correct, as there is nothing so strong and specific in the whole editorial in *Freedom* as the double quotation from my article. The rest is a running comment on the charges that I make, with further references to the case of Señor Valdez.

Why, if these utterances constitute "scurrilous libel and sedition," have I not been arrested in the United States and tried for these terrible crimes? Any one who will take the trouble to get the Manila *Freedom* for April 7th, 1902, will readily see that if the statements made in this editorial are untrue, the civil commission would have everything to gain by a searching public investigation. Should these statements, however, be proved true, as I am fully satisfied they can be, then the commission would stand convicted before the public of having raised to office two half-caste Spanish Filipinos, discredited by their own people, to be the first representatives of that people in the highest office in the islands, and of maliciously prosecuting, and of denying the right of fair trial (as we know it in America) to, first, Señor Valdez, of *Mian*, and, second, E. F. O'Brien and the two Dorr, of the Manila *Freedom*.

It is only fair to admit that a free press in Manila at the present hour would not be conducive to order, the suppression of rebellion, and the maintenance of political

tranquillity. In the civil censorship of that dozen or more half-disguised revolutionary sheetlets printed in Spanish and native tongues, which Major Allen of the constabulary conducts, the civil commission has our sympathy. But in the persecution of Spaniards or Americans who, in the cause of an all-round good government of the islands, dare to criticize the commission, and who, when it appoints blackguards to office, have the courage to say so, we have no sympathy. Were the American people really alive to the facts, we are sure they would add their condemnation.

### Peace Conference in Samar.

ONE OF the most important of the surrenders of insurgents in the Philippines was arranged at a conference held on the Gandara River, island of Samar, early in April, between General Jacob H. Smith, commanding the American forces, and the Filipino chief, Gueverra, the successor of General Luchan; for it ended the warfare in Samar. General Smith and twelve officers went unarmed to the place of conference, where two triumphal arches had been erected on a dock and where two hundred insurgent troops presented arms as the American officers landed. The latter were received by Gueverra and fourteen officers. A banquet in honor of the Americans followed the conference. Gueverra and his command gave themselves up to General Grant on April 27th.

## Midsummer Theatricals in New York

### VERY FREQUENT.

LY the performances of stock companies, where a change of bill occurs weekly, are far from being satisfactory, owing to the haste with which such productions are made. A notable exception to this condition is to be found in the work of the F. F. Proctor stock company, appearing at the various theatres bearing the name of that enterprising manager. Here especially careful preparation, under the direction of Mr. Frederick Bond, whose name is well known in theatrical circles, is given to all the plays presented by the different divisions of the large company.

These divisions alternate at the several theatres, and thus each is permitted to present its specialty for more than one week at a time, so that the players are given opportunity to become familiar with their parts and to get the best possible results. During the summer season, when most of the other theatres are closed, the work of this company is brought into no little prominence, and is a chief source of enjoyment to quite a portion of our play-going public. To strike a popular vein, comedies usually are presented, and are in most

cases plays which have recently scored successes in the higher-priced play-houses. The roster of players includes the names of many who are well known outside of stock work. Among these may be numbered Miss Adelaide Keim, who was formerly leading woman for E. H. Sothern, and who succeeded Vir-

ginia Harned as *Ophelia* in Mr. Sothern's production of "Hamlet." Miss Keim is the possessor of considerable beauty and charm of manner, and her ability is demonstrated in emotional roles. Comedy, on the other hand, is quite the key-note of the work of Miss Mabel Montgomery, who is pleasantly re-

membered as the widow in Hoyt's "A Trip to Chinatown." Among other favorites may be mentioned Miss Beatrice Morgan, recently a member of the company at Daly's, Miss Florence Leslie, Miss Cecylle Mayer, and Miss Adalina Raffetto. Aside from the work of the stock companies midsummer attractions consist of musical comedy, of which we have several good examples now running. "The Show Girl" at Wallack's is meeting with decided success and draws crowded houses. "The Wild Rose," "A Chinese Honey-moon," "The Chaperons," and "King Dodo" complete the list. The roof-gardens are now competing with the continuous vaudeville houses, and Manhattan Beach has recently opened with Frank Daniels in "Miss Simplicity" as the first attraction. Pain's spectacle of "The Burning of Rome" is also attracting large crowds to the last-named pleasure resort, and is one of the most ambitious things yet attempted in this line. It employs a large ballet, and specialties such as high diving and trick bicycle-riding are introduced.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *Leslie's Weekly*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always include a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *Leslie's Weekly* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *Leslie's Weekly*, 110 Fifth Avenue, New York.

**O**F COURSE the crop outlook is the main consideration just now, if we eliminate the uncertain element of the great coal strike and the general disposition in all manufacturing centres of the laboring masses to rebel against existing conditions, with or without reason. This reveals an ugly situation, and it is easy to see that after the recent widespread and in large part non-sensical outcry against the beef trust, the public mind is in an inflammable mood. It only needs a spark to start the fire. Thus far, at this writing, the great strike of the miners, involving more men than are to-day on the rolls of both the army and the navy of the United States, has been conducted as peacefully and orderly as might have been expected. But at the best the strike must be costly to both labor and capital; it must affect business in local centres, and be reflected in decreased earnings of coal and railway corporations particularly affected. The strike in Chicago has been rather unwholesome, too, and its cost must be, in the aggregate, very large.

Far-seeing financiers observe in existing conditions the presages of trouble in the approaching fall elections, and more probably in the next presidential contest. A change in the administration could not be brought about without a shock to Wall Street. We live in a season of political as well as of labor unrest. We have had four years of prosperity, of extravagance, and of luxurious living. That the pendulum must and will swing the other way is proved by the record of the past. Nobody disputes this. The only question is, when will it begin to move on its backward course? Some hopeful ones say, not until the next presidential election, two years hence, but nearly all agree that a material failure of the crops this year would hasten the ill-fated day. Hence the indisposition to take on new burdens until we have not

only garnered our wheat, rye, and oats in summer, but also until we have been assured that neither the drought of August nor the frosts of September can endanger our corn crop. I again advise my readers to keep out of the market, excepting as they may wish to speculate for quick profits, and to be satisfied to hold a handsome cash balance in the savings bank, ready to utilize it whenever a serious break occurs.

"P." Deposit: Answered by mail.  
"H." Albion: It is not an investment.  
"G." Montclair, N. Y.: Will make inquiries.  
"A. B. C." Buffalo, N. Y.: Highly speculative.  
"R." Hudson, N. Y.: Communication answered.

"Constant Reader," City: I do not advise regarding New York real estate.

"M." New York: Four dollars received. You are on my preferred list for one year.

"G." Cincinnati: Please give the full name of the mining company, and its home office.

"G." Brooklyn, N. Y.: (1) I cannot answer, but some report that it is the insiders. (2) I should say not.

"W. W." Cohoes, N. Y.: I have been deceived so often that I hesitate to advise until the concern makes a verified statement.

"P." Charleston, S. C.: If the officers of the company advise me correctly, it will be better to hold, for the present, at least.

"S. M." Chicago: (1) No rating. (2) Highly speculative, as all such propositions naturally must be. A savings bank is now a pretty good place in which to keep your money.

"M." Windham, Minn.: The stocks you speak of are highly speculative and have no investment quality. If you wished to dispose of them at any time, you would not find an open market.

"H. E. W." Chicago: I can only repeat what I have said before, that the officers of the company say there is no reason, to their knowledge, for the decline. This, I need not add, is hardly satisfactory to me.

"T. A. C." New York: (1) Insiders advise holding. I am perplexed by its conduct. (2) It would be very easy for the controlling interests of Pacific Mail to put it up. It is a favorite with some speculators whenever it reacts.

"O." Providence: Amalgamated is too much of a gamble to enable anybody to predict its future course. If you can afford it, I would even up the cost by buying at lower prices, so as to be in a position to unload without loss when the inevitable turn comes.

"S." Scranton, Penn.: (1) The stock you speak of is not dealt in on Wall Street or on any of the large exchanges and no quotations are available. (2) United States Rubber has had a pretty hard time of it; the preferred sold last year as low as 47 and as high as 85. It is a fair industrial speculation now.

"H. H." Philadelphia: Your margin is very slender. Unless the stock is protected better than it has been, it is liable to sell lower and wipe you out. If you are a speculator with nerve, you will be inclined to "stay put," in the hope that the first advance will let you out. My advice has constantly been against buying Steel common on a margin.

"Inquirer," Grand Isle, Neb.: (1) I do not advise the purchase of the ten-cent stock to which you allude. (2) Ontario and Western, and Missouri, Kansas and Texas common, on reactions, offer speculative opportunities. I prefer the former, however. Until crop conditions are better disclosed it would not be advisable to speculate heavily.

"G." Poughkeepsie, N. Y.: Watching the earnings of Central Georgia, I have thought well of the income bonds, if purchased on reactions. With monetary conditions as they are, however, it will be wiser to buy the firsts, from an investment standpoint, than the seconds or thirds, speculatively. Speculation at this juncture is hazardous.

"J." Ashland, Penn.: Four dollars received. You are on the preferred subscription list for one year. Tennessee Coal and Iron has occasioned spasms of great activity. When the next one occurs I would advise you to sell if you can do so without a loss. I think all the coal and iron properties have seen the height of their prosperity for the present.

"K." Rutland, Vt.: (1) The preferred shares of the Union Bag and Paper Company are regarded as a fair industrial investment. The earnings appear to be increasing, but we must accept the statements of the company for this. (2) The Erie, Pennsylvania, Collateral Trust four, around 95, are a very fair investment, much safer than most of the industrial preferred shares.

"M." Cincinnati: The clipping from the Mexican paper regarding the Telocua company is confirmed by parties in this city who are interested in the property. They tell me it is a legitimate and thoroughly honest enterprise and they have absolute faith in the future of the company. It has one of the finest electric lighting and power plants in the republic of Mexico.

"C." South Dakota: The president of the Colonial Catering Company apprises me that it is incorporated under the laws of Maine, with \$10,000 capital, par value of the shares \$1 each, and that it is on a good paying basis. He also says that the company is not offering shares for sale, that it has sufficient capital, but if it decides to open another store, the balance of its stock may be for sale.

"A. M." Islip, L. I.: The course of American Ice shares has been so erratic and the statements of its officers so misleading that I am at a loss how to advise. The next dividend on the preferred, I am again told, will be paid, and no future dividends on the common until they shall have been earned and a good surplus accumulated. If this policy had been pursued at the outset, the public would have been more honestly treated.

"E." Argyle, New York: (1) Of course it is speculative. All such enterprises must be. (2) The Industrial Savings and Loan Company has some good men connected with it and makes an excellent report of its condition. All these associations, however, depend for permanent success on the conservatism and integrity of their management. If the management is good and faithful, from year to year, there is no reason why such a company should not succeed.

"B." Louisville, Ky.: (1) Baltimore and Ohio common sold last year as low as 82 and as high as 114. There is about \$76,000,000 of the common and about \$80,000,000 preferred ahead of it. For a 4 per cent. stock it looks high enough, though, considering the security of dividend-paying shares, a clique could advance it very readily by operations in Wall Street. I would take a good profit at this time in almost anything. (2) Evansville and Terre Haute preferred is worth keeping.

"T. M." Cincinnati: (1) Lead common has been more active and steady of late, and a rise has been promised. Of course it represents only water. (2) Having advised the purchase of Kansas City Southern common, around 18 and 20, I do not feel like urging it around 30, though it looks as if an effort is being made to push it still

higher. (3) Texas Pacific will sell lower, if the rest of the market drops this summer, but it is a good speculation on reactions.

"Hilton," Fall River, Mass.: (1) I am advised by an officer of the American Ice Company that the earnings are very large and that the next dividend on the preferred is assured. At the same time, the weakness in the stock is suspicious. There does not seem to be much liquidation in it, for I am unable to find that any large holder is selling out, but I was so greatly deceived regarding the common that I am not inclined to advise the purchase of the preferred, cheap as it appears to be. (2) I think the Collateral Trust bonds are reasonable and safe.

"G. H. C." Chicago: The head note explains the meaning of my preferred list. At this time I am not advising purchases of anything, but on reactions, Wabash Debenture 10s, Texas Pacific, Toledo, St. Louis and Western, and Reading, offer speculative opportunities. A great many believe that General Carriage script, assessment paid, selling at this writing around 5, will become speculatively active shortly. Its promoters are making great promises for it, but have not disclosed their plans. Its cheapness commends it to speculators who are not afraid to take a chance now and then.

"J. S." Topeka, Kan.: (1) Not an investment; purely speculative. It all depends upon the continuance of prosperous conditions. Usually the stocks of private corporations like this are not regarded favorably, because when one wishes to dispose of them in a hurry he cannot find a market outside of the few who may be interested in the concern and know all about it. (2) Wood, Harmon & Co.'s property at Rugby, Brooklyn, is advantageously located. How great a profit investment in it will yield must depend of course upon the future growth of New York. With the expansion of rapid-transit facilities, that growth must eventually be enormous.

"Subscriber," Hamilton, O.: (1) I based my statements regarding American Ice on the official reports of the company and on the personal assurances of its officials that the dividends paid were earned. I have no doubt that deliberate deception was practiced on me and on every one else who confided in the concern, and I have only to regret that I was a victim of mistaken confidence. The company is a close corporation and it is impossible to obtain information excepting at headquarters. I am not inclined to believe anything that may emanate from this source hereafter. I hesitate to advise the sacrifice of any one's stock, but I certainly would not regard it as an investment until the management reports its earnings honestly and regularly. (2) The parties are not rated.

"S. F." New York: Two dollars received. You are on my preferred list for six months. The course of American Ice common, Linseed and Salt common, and of many other industrial common shares, which rose while dividends were being paid and fell sharply when they were passed, shows what would happen to United States Steel common in case the earnings should not justify the continuance of dividends. I am told that the earnings are large enough to continue dividend payments, but no thoughtful man thinks that the stock is permanently on a 4 per cent. basis. Unless it has better support than it has received of late, a further decline is inevitable, but the Morgan interests have the power, if they choose to employ it, to put the stock higher, and unless they have closed out their large holdings, this is what they are likely to do. I would get out, however, at the first favorable opportunity. (2) In this uncertain market, I do not advise purchases.

"W. A. S." Albany, N. Y.: National Biscuit preferred is a good investment as long as it controls the bulk of the trade. Opposition factories are springing up and the business is one not requiring an enormous amount of capital. The National Biscuit is managed with great care and is one of the few industrials that advertises its goods skillfully and attractively. The common is so highly speculative that I hesitate to advise its purchase. American Ice common uniformly paid its dividends of 4 per cent. per annum, but all of a sudden it was discovered that the dividends paid were not earned. This has been the history of other industrial commons. I do not say it will be that of Biscuit, however, but it may. (2) Union Bag and Paper preferred, according to the annual report of its earnings, is a fair industrial investment. I should not regard it, however, as quite as good as the Royal Baking Powder preferred, for the latter is a closer monopoly. The Royal's common shares are very seldom sold and the dividends are according to the earnings. No stamp.

"Delaware," Four dollars received. You are on the preferred list for one year. (1) Reading has looked high since it started to rise recently, considering the fact that it is not a dividend-payer, but it is a great anthracite property, perhaps the greatest, and strong parties have been accumulating it, even at higher prices. (2) St. Paul has become an investment stock, and while its price looks high so much of it has been taken out of the market for investment purposes that it would be dangerous to sell short. (3) A comprehensive plan for the development of its shares more valuable, though its enormous capitalization gives the common little intrinsic value. Speculatively, Erie common is well regarded. (4) If you have read this column, you will have observed that I advised the purchase of St. Louis and San Francisco common when it was less than half the present price. It has now reached a pretty good level, but with good crops, better prices are promised. I still believe that nearly every stock on the list is higher than it ought to be, and am not advising purchases.

## Hints to Money-makers.

Continued from preceding page.

"Subscriber," Logansport, Ind.: Will endeavor to get information.

"C. Z., New York: I find no trace of the mining company to which you refer.

"Cleveland, O.: Am making inquiries. The figures have not been fully disclosed.

"M., Fair Haven, Mass.: One dollar received. You are on my preferred subscription list for three months.

"G., Seneca Falls, N. Y.: I would myself think the change advisable, excepting from the fact that I have lost confidence in the statement of the company last mentioned.

"F., Hoboken, N. J.: No transactions in the bonds appear to be recorded and they are not on sale at any of our leading banking houses. It will be necessary to have further information.

"S., Sandusky: The Mount Shasta Gold Mining Corporation has a capitalization of \$20,000,000, which looks extravagant for such a proposition as the prospectus outlines. I am not favorably impressed by it.

"J. S. S., New York: (1) I will ask for information regarding Olalla. No recent report has reached me. (2) You ought to be a subscriber, if only for three months, to entitle you to a place on my preferred list.

"A., High Bridge, N. J.: It is impossible to tell. If the officers are to be believed, your diagnosis of the situation is right. They certainly are very explicit in their statements that the company is doing well.

"K. K., Syracuse: The Empire State Oil Company has recently been incorporated under the laws of South Dakota with a capital of \$800,000. Its officers include ex-Mayor Maguire, of Syracuse, Mayor Fiske, of Mt. Vernon, N. Y., and a number of other men rather prominently identified with Democratic politics. The company has oil lands in Texas and Louisiana, but I am unable to ascertain whether these lands are producing or not. It is a speculative enterprise.

### Hints to Money-makers.

Continued from preceding page.

"L." Newark, N. J.: It is quietly reported that the Pennsylvania Railroad has acquired, at a large price, a thousand acres of the Hackensack Meadows. I am not able to fully confirm this statement, but if it be true it would be unwise to sacrifice your Hackensack Meadow stock. Why not even up at prevailing low prices?

"J. A. C." Meriden, Conn.: While the labor situation continues to be so troubled, I would not be in haste to buy Union Pacific or anything else. I regard Union Pacific common as an excellent speculative investment, but think still better of the convertible bonds from the investment standpoint. The directors can be called to meet at any time. I am told that the dividend will not be increased unless crop conditions warrant it. We shall not know what the corn crop will be until toward the middle of September. Your name is on the preferred list for one year.

"K." Piedmont, W. Va.: Four dollars received. You are on my preferred list for one year. (1) Missouri Pacific, considering its earnings, is selling much lower than other stocks of a similar character. I should not sell it until I had a good profit. I advised the purchase of Missouri Pacific when it was selling around 50 and 60, and that was not long ago. It is still a purchase on reactions. (2) I am informed that very prominent interests have identified themselves with Colorado Fuel and Iron, and that their purpose is to advance the stock. The convertible bonds, ahead of the stock, are a safer investment and speculation. (3) I cannot explain it on any theory consistent with the statements the officers made to me.

"S." Binghamton, N. Y.: The litigation which has interfered with the retirement of \$200,000,000 of United States Steel preferred, under the Morgan plan, may result in a situation analogous to that which has side-tracked the Morgan-Hill Northern Securities scheme. I need not add that this is not conducive to the success of the steel trust plan for relieving its financial situation.

"J." New Jersey: Thanks for your complimentary words. (1) With so little you can hardly do much in the field of investment and you certainly ought not to speculate. It would pay you to put it in the form of a fifteen or twenty year endowment policy, which would have an investment value increasing from year to year. I am not an expert in life insurance, but one who is makes this suggestion.

"E." Cleveland, O.: (1) To be entitled to a place on my preferred list, you must be a subscriber at full rates at the home office. (2) I cannot conscientiously recommend either one of the very cheap stocks you mention or the so-called "banking firm." (3) Prodigious efforts have been made to advance United States Steel, and these will no doubt be continued, but if you have a profit in your Steel common I advise you to take it. The production of steel and iron in Canada is being marvellously developed, largely by American capital, and we must expect opposition from that source as well as from the low-priced product of Germany and England. We hear a good deal about the steel trust controlling the iron-ore beds of the United States, but we forget that Canada has enormous undeveloped coal fields and beds of iron ore and that the Canadian government is paying a generous bounty for the development of its iron and steel industries.  
June 26, 1902. JARPER.

## Her Sight Restored

Mrs. E. A. Warren, 306 Michigan Ave., Evanston, Ill., was almost blind for many years with Cataracts on both eyes. Dr. Oresal, Chicago's gifted oculist, restored her sight with his **DISINGUENT METHOD**. Without the Knife or in any way endangering the precious organ. All other causes of Blindness yield to this treatment. Dr. Oresal has cured thousands and never injured an eye. His illustrated book, many testimonials and advice are free. **Cross-Eyes Straightened**—a new method—without Knife or Pain. Effective in over 3,000 cases. Address: **Oresal, M. D., Suite 157, 52 Dearborn St., Chicago.**

**MYSELF CURED** I will gladly inform anyone addicted to **COCAINE, MORPHINE, OPIUM or LAUDANUM**, of a never-failing harmless Home Cure. Address **MRS. MARY S. BALDWIN, P. O. Box 1212, Chicago, Ill.**

**Blood Poison Cured Free**

The Remedy Is Sent Absolutely Free to Every Man or Woman Sending Name and Address.

A celebrated Indiana physician has discovered the most wonderful cure for Blood Poison ever known. It quickly cures all such indications as mucous patches in the mouth, sore throat, copper-colored spots, ulcers on the body, and in hundreds of cases where the hair and eyebrows had fallen out and the whole skin was a mass of boils, pimples and ulcers, this wonderful specific has completely changed the whole body into a clean, perfect condition of physical health.

William McGrath, 48 Guilford Street, Buffalo, N. Y., says: "I am a well man to-day where a year ago I was a total wreck. Several doctors had failed to cure me of blood poison. I was rid of my sores and my skin became smooth and natural in two weeks, and after completing the treatment there was not a sore or pimple on my body, and to-day I am absolutely well."

Every railroad running into Fort Wayne brings scores of sufferers seeking this new and marvelous cure, and to enable those who cannot travel to realize what a truly marvelous work the doctor is accomplishing, they will send free to every sufferer a free trial package of the remedy, so that everyone can cure themselves in the privacy of their own home. This is the only known treatment that cures this most terrible of all diseases. Address the State Medical Institute, 3306 Elektron Building, Fort Wayne, Ind. Do not hesitate to write at once, and the free trial package will be sent sealed in a plain package.

### Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *LESLIE'S WEEKLY*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.]

A CORRESPONDENT inquires if "The Hermit" believes that none of the fraternal beneficiary associations do any good. I reply that many of these associations have done a great deal of good in their time and some are doing good still. I do not object to their benefit systems nor the social organizations which they exploit. My criticism has been directed solely toward their life-insurance claims. It has been assumed by many that satisfactory life insurance can be obtained from beneficial associations conducted on the assessment plan, and at cheaper rates than old-line companies offer. I admit that insurance in the benefit orders is cheaper than straight life in an old-line company, but I have said and still insist that the cheaper insurance is less secure than that for which more money is charged, and that the cheapest, in this matter at least, is never the best. I have also pointed out that experience has shown that the assessments in the fraternal orders must be increased as the ages of the members increase and the death rate grows higher, while in an old-line company the rate is fixed at the outset and cannot be changed, excepting for the benefit of the policy-holder, so that the longer he lives the greater the value of his policy. These are the facts and they are indisputable.

"W." Leipsic, O.: The New York Life.

"G." La Grange, Tenn.: Letter received. Hope it will be satisfactory.

"Reader," Philmont, N. Y.: I answer inquiries only concerning life insurance matters.

"C." Pittsburg: I do not regard the company to which you refer as either the safest or the best.

"T. J. C." New York: Better apply at the company's office and see exactly what they will do. I would not drop the policy unless you are insurable elsewhere.

"K." Stockton, Mo.: A 20-year endowment, in either of the two companies you mention, will cost you about the same and yield almost identical results. Both are among the strongest companies in existence.

"N. B. M." Brooklyn: (1) I do not regard it as favorable as the policy offered you by the New York Life. (2) I would not sacrifice the latter. Eventually the returns should be fully as good as those the Metropolitan guarantees.

"P." Bowling Green, Ky.: It has had a good deal of trouble, but seems to be now in better shape, and I would continue the policy for the short time it must run. The state insurance department has made a favorable report, recently.

"M." Brattleboro, Vt.: Your policy is your contract and you must abide by its terms, what ever they may be. The Berkshire Life is one of the oldest insurance companies, but not one of the largest. It seems to be carefully managed and makes an excellent report. At your age, it would be best to continue your policy as it stands.

"Subscriber," Baltimore: If you had read this column regularly you would have observed my frequent comments on the Mutual Reserve. It was formerly conducted on the assessment plan and the result was no end of trouble. It is now conducted as an old-line company and the report of the insurance department of New York regarding its condition is favorable. I infer from what you state that you are not now insurable elsewhere at reasonable rates.

"B." Omaha, Neb.: The report of the actuary of the Connecticut Insurance Department, on the Royal Arcanum of Boston, shows that on November 30th it had over 2,000 members (representing over \$5,000,000 of insurance), aged from seventy to eighty-three years. It will be seen that the risk from the increasing death rate in these old fraternal associations constantly grows and only an influx of new members or an increase of assessments can meet the requirements of the situation. I do not believe in assessment insurance of any kind.

*The Hermit.*

Your business cares will vanish if you always call for *Cook's Imperial Extra Dry* when you drink Champagne.

**Advice to Mothers:** Mrs. Whislow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

The Sohmer Piano ranks among the best for excellence of tone, durability, and finish.

For several years the advertisements of the Mead Cycle Company have appeared in the columns of *LESLIE'S WEEKLY*. Every year the business of this company has grown, until now it exceeds 50,000 bicycles sold through mail orders all over the world each year. The Mead Cycle Company keeps its factories running all winter, storing up wheels of the finest quality, and is always ready in the spring and summer to fill orders promptly at prices which are lower than any manufacturer selling on the old plan, through local dealers, can deliver a wheel of even inferior quality. The Mead Cycle Company can ship any wheel at any price the same day the order is received. Readers of this paper can be assured of prompt and honorable treatment. When writing for catalogues and prices mention *LESLIE'S WEEKLY* and address Mead Cycle Company, Dept. R 265, Chicago.

## Poor Beer vs. Pure Beer

Both cost you alike, yet one costs the maker twice as much as the other. One is good and good for you; the other is harmful. Let us tell your where the difference lies.

### POOR BEER

is easy to brew.

The materials are cheap. The brewing may be done under any sort of surroundings. Cleanliness is not important, for the users never see it brewed.

Any water will do. No air is too impure for the cooling.

No filtering, no sterilizing; almost no ageing, for ageing ties up money.

What is the use of expense and care when there is no reputation to defend?—

When few people who drink it know even the name of the maker.

### PURE BEER

calls for the best materials—the best money can buy.

The brewery must be as clean as your kitchen; the utensils as clean.

The cooling must be done in filtered air, in a plate glass room.

The product must be aged for months, until thoroughly fermented, else biliousness results.

The beer must be filtered, then sterilized in the bottle.

You're always welcome to that brewery, the owners are proud of it.

And the size of it proves the eventual success of worth.

To maintain its standard, we double the necessary cost of our brewing. Don't you prefer a pure beer, a good beer, a healthful beer, when it costs no more than common?

Ask for the brewery bottling.

**Schlitz**

The Beer That Made Milwaukee Famous

### A Tradition.

In the prologue chapter of a book written by Dumas, "The Queen's Necklace," he describes a banquet, perhaps the most notable in history, given by Cardinal Richelieu, at which Europe's celebrities sat down. Among them was a distinguished neercourier and soothsayer, who was asked by the Cardinal to forecast the fortunes and fates of those present, and he did so. Taking a glass of amber-colored cordial, he gazed long therein, as in a mirror, and then foretold in some marvelous and mysterious way his predictions, which were all realized to the letter, as subsequent developments proved. The liqueur into which he gazed was undoubtedly Chartreuse, as the Cardinal, a far-famed connoisseur, could not have omitted it from his table without offense, and through all the long years since it has been the favorite cordial of polite society throughout the civilized world.

**BLOOD POISON**

Primary, Secondary or Tertiary Blood Poison

Permanently Cured. You can be treated at home under same guaranty. If you have taken mercury, iodine, potash, and still have aches and pains, Mucous Patches in Mouth, Sore Throat, Pimples, Copper Colored Spots, Ulcers on any part of the body, Hair or Eyebrows falling out, write

## GREAT WESTERN CHAMPAGNE

The New York Com-  
mercial Journal says:  
"There is one merit to  
American champagne  
which should find it es-  
pecially favor as compared  
with the French. It  
makes and carries its  
own honest flavor, where-  
as the French champagne  
has NO flavor until it is  
adorned through the me-  
dium of other liquors at  
the end of the fermenting  
process. In other words,  
the French flavor is  
made, the American is  
born."

Hence the popu-  
larity of "Great  
Western," the  
gold medal winner  
at the Paris Expo-  
sition.

## An Empire's Joy Eclipsed.

LESS THAN a year ago the American nation was suddenly plunged into the gloom of a terrible sorrow through the blow of an assassin. Into a day of sunshine, over a clear, calm and happy sky, came a shadow, deep, dark and portentous, turning a people's joy into mourning and wringing their hearts with unutterable grief. A chief magistrate who, through his wise statesmanship, his great-heartedness, and his high and noble conduct in both public and private life, had won the universal respect of Christendom and the undying love of his people, fell a victim to a cruel and inexplicable fate. Under such a cloud, alike sudden and unforeseen, alike dark and portentous, have the people of the mighty and wide-reaching British empire been called upon to pass.

The two tragical occurrences—the death of our beloved President and the calamity that has befallen the equally beloved King of Great Britain—have many similarities and also some striking differences. The latter event may be truly called “a caprice of destiny”; the former the caprice of an assassin; one occurred on the very eve of the most gorgeous, the most joyful, the most wondrous festival day in modern English history, the other at the height of the most beautiful and spectacular world's fair ever held on the American continent. Both the stricken men were about the same age and apparently in the noon of life of manly strength and vigor, with the promise of years of enlarged activity and increased usefulness. Both had gained a sure and abiding place in the affections of their people, the one as a chosen representative of a great republic, the other as the accepted ruler of a mighty empire; two nations speaking the same language, boasting the same glorious literature and joined together in indissoluble ties by a thousand common interests, laws, traditions, customs, and sympathies.

And thus it was that the sudden shock that came to England was in a large and true sense the sorrow of America. As they, the people of our kindred nation across the sea, were quickly responsive in our hour of bereavement, so did our hearts go out in sympathy for them in the day of their calamity. Common afflictions draw men and nations closer together than common joys. Human sorrow is the greatest of all pacificators, the chiefest and most powerful solvent of all animosities, jealousies, and antagonisms. It leaps all bounds; it levels all barriers; it bridges all chasms and depths though they be ocean-wide.

It is impossible to conceive of a situation more pathetic than that which faced the man stricken down at the very hour when he was about to grasp the sceptre and wear the crown of one of the mightiest empires that the world has known; to sit in the chair of Edward the Confessor, wear the coronet of Alfred the Great, and be girt with the sword of William the Conqueror. One more round of that sun that never ceases to shine on the domains of Britain, and the day of days would have come, the proudest, gladdest, most auspicious day in the annals of “Merrie England.” An event upon which the hearts and minds of millions had been dwelling with joyful anticipations for many months and years was just at its dawning—and then the swift change, the bolt from the clear sky, the end of festivity, the beginning of grief and anxiety. Not a crown of power but a coronet of suffering for the head of a king; not a sceptre of world-wide rule, but a feeble, faltering staff of weakness and disease. Surely all the world cannot fail to heed the lesson of this tragic event; cannot fail to learn anew that

“The glories of all blood and state,  
Are shadows and not substantial things.”

## Fighting for a Million Dollars.

IT IS fortunate for the city of New York that it has a mayor and a comptroller who stand for something more than sentiment, and who are prepared to keep the pledges made by the advocates of municipal reform last fall in favor of reduced public expenditures and lower taxes. It is no secret that the enormously expensive subway contract, let by the city during the Tammany régime, is expected to be extremely profitable to the contractors who, under the most favorable circumstances, secured it. The fact that a very close corporation controls this contract and that the shares in the enterprise are at a heavy premium proves that there is plenty of money in it, but the contractors seem to be eager for

more. Perhaps they ought not to be blamed, because selfishness is expected to be one of the chief characteristics of the public contractor at all times and on all occasions.

At the last meeting of the rapid-transit commissioners an issue was raised, however, by Mayor Low and Comptroller Grout on one side, and the rapid-transit commissioners, Messrs. Orr, Smith, Langdon, and Starin on the other, regarding the outcome of which there should be no question. The rapid-transit four defeated by their united votes Mayor Low and the comptroller, at the outset, but the end is not yet, for \$1,000,000 of the city's money is involved in the contest, and both the mayor and the comptroller declare that they will not permit this enormous sum to be diverted from the city treasury into the coffers of the subway construction company without a bitter fight. It is two against four, but the two will have public opinion on their side, and the two hold the keys to the treasury and to the situation.

The high character of the rapid-transit commissioners makes it inconceivable how such a difference could arise between them and the chief executive and financial officers of our city, and the difference is more incomprehensible when the cause is analyzed. The question is simply as to who shall pay for the terra cotta conduits or ducts which line the exterior walls of the subway. If they belong to the regular work of construction, the same as the remainder of the work, the city is responsible; but if they are a part of the equipment, the contracting company must pay. These conduits were intended to carry wires for the transmission of light and power in the tunnel. Obviously only a few would be needed for this purpose. It is now disclosed that the contractors are building one hundred and forty conduits, seventy on each side of the subway, with the evident purpose of renting them to electric light, telephone, and telegraph companies, for the benefit of the contractors. It needs no argument to show that this is the purpose—there can scarcely be any other—and the city, therefore, should not pay for their construction, as the income from them will go to the contractors and not to the corporation.

There may be some excuse for the unanimous vote of the rapid-transit commissioners, in opposition to this view, but we have not thus far seen it. Mayor Low and Comptroller Grout may depend upon it that their hands will be upheld by the community, and we believe, if necessary, by the Governor of the State. That they have taken their stand so promptly and so boldly shows that they appreciate the importance of the case. Their attitude in this and in many other matters during the past six months justifies the confidence which the people have imposed, not only in the integrity of the mayor and his chief advisers, but also in their stubborn courage and unswerving devotion to the interests of the taxpayers.

## A Wasteful Industrial War.

THE GREAT coal strike drags on into weeks and months with no apparent gain to either side in the contest for the present and no promise of it for the future, but with losses inevitable, positive, and enormous to all concerned, which includes practically the people of the entire country. The loss of wages to the miners already foots up in the millions; the loss of the mine owners is much greater, and as for the loss to the people at large, directly and indirectly, through a failure of the coal supply and the suspension of business, the amount is beyond all computation. In brief, this coal strike, like most other troubles of the kind, is a losing affair all around, a miserable, bungling, unfortunate business for every one involved in it directly or remotely.

As a method of adjusting differences between men, the strike, the boycott, and the lockout are all as crude and barbaric and as indefensible in the court of reason and true justice as the burning of cities and the slaughter of men in warfare, and fully as unworthy of an enlightened and civilized age. If war with bayonets and cannon may be properly characterized as “hell,” these wasteful and desolating conflicts in the industrial world, bringing suffering and misery as they do to thousands of innocent and helpless people, are hardly less infernal in their origin, nature, and results. Humanity has been benefited undoubtedly by many wars in the past, frightful as the price paid for every gain has been. The upward pathway of the race to freedom and equality has been marked at every step by blood, agony, and tears, and these things are precious and to be desired even though they cost so dear.

But there is hope that the world is finding out a better, saner way to adjust its differences, a way more consonant with the attributes of beings endowed with reason and a sense of justice and compassion than the old, cruel way of butchery and mutual destruction. So it may be hoped also that the day is not far distant when human genius, inspired by motives of love and justice for all, will devise some method of settling disputes in the labor world that does not involve the paralysis of vast industries, the fierce and bitter clash of opposing elements among workmen themselves, and consequent woe and misery for multitudes of people which no after gain in wages, or any other concession won by the struggle, can begin to repay. When that happy and peaceful time comes, as it will some day, the world will look back upon these industrial conflicts, as it will upon other battle-fields, with pity and wonder that men could ever have been guilty of such unutterable folly and wrong.

In the immediate case at hand the miners declare they will not yield until their demands are complied with or they are starved into submission. The ultimatum of the operators is “no concession, no compromise, no arbitration.” Obviously the public has a most vital stake in

such a conflict, and sooner or later must interfere for its own protection. Its interests are paramount to those of the parties themselves, and its losses and suffering must be infinitely greater. Whatever the legal rights or liabilities of either side to the controversy, the public has rights and interests which both must consider. Public opinion, based upon public necessities, will sooner or later compel a settlement, not by making men work against their will—this cannot be done—but by allowing others to step in and take their places. On the other hand, nothing justifies the operators in taking the position they now hold—that there is nothing in the relations between the mine owners and the miners which admits of adjustment through negotiation.

In brief, as a first step toward the solution of the problem there must be a recognition of the fact that the public interest in this and similar struggles is paramount to that of either employers or workmen, and that the community—which in the long run must foot the bill—has a right to protect itself against either or both parties to the controversy.

## The Plain Truth.

IT IS a noteworthy fact that the railroad corporations in this country were the first to set the excellent example among large employers of labor of establishing a pension system for employees incapacitated by age or physical inability for further service. The Pennsylvania road has had such a system in operation for several years, and now the Reading Railway Company has announced a similar plan. All employees not appointed by the board of directors to executive positions, who have reached the age of seventy years, will be retired, and if they have been in the employ of the company for thirty years they will be pensioned. All employees over sixty-five years old, who have been in the service for thirty years, and who have become incapacitated, will be retired and pensioned. People who have become affected by the demagogic talk about the greed and inhumanity of capitalists should make note of this.

A STRAW showing pretty clearly the way the political winds are blowing was the action of the recent Democratic State Convention in Kansas, in adopting a platform denouncing trusts, advocating the election of a board of railroad commissioners by the people, declaring for the public ownership of street-car franchises and other utilities, and eliminating the free-silver issue. If the Democracy throughout the country gets down close to popular issues like these it will have something better than a fighting chance in 1904. Unless great wisdom, scrupulous economy, and prompt responsiveness to popular wishes and needs mark the course of the present administration from now on, the Republican party will not be continued in power another four years. It must put itself right on Cuban reciprocity, ship subsidies, the irrigation question, and the public control of natural sources of public revenue, or it will be put out of action entirely.

IF THE commencement season just past has not been unparalleled in the matter of munificent gifts for educational purposes in this country, the volume of such benefactions has certainly been large enough to bring unwonted joy and gratitude to the hearts of many college presidents and others who have been striving with noble and sincere purpose to enlarge the scope and usefulness of their several institutions. Cornell University is richer by \$500,000 than it was a few weeks ago, and Bryn Mawr by nearly the same amount. Mount Holyoke rejoices in a gift of \$40,000, Rutgers in \$50,000, the University of Pennsylvania in \$300,000, and Chicago University in \$1,000,000 or more. To all these and other institutions thus happily remembered, hearty congratulations are extended and best wishes for a prosperous and successful future. America has reason to be proud, not only of her public school system, which extends its benefits to all, but for her ever-increasing and expanding group of higher schools of learning, which, thanks to generous endowments, are every year becoming more accessible to young men and women of limited means, but large ambitions for knowledge.

THE NEBRASKA political disturber, whose everlasting assurance is only comparable with his magnificent pretensions, again rushes into print, by the help of the Associated Press and the bamboozled newspapers, to advertise himself and his weekly magazine by denouncing ex-President Cleveland, both as President and politician. The Nebraska Populist-Democrat, whom we do not propose to advertise further in these columns without charge, sees in the harmonizing efforts of President Cleveland, Senator Hill, and other distinguished Democrats in the East and West, the omens of his own everlasting oblivion. The Nebraska spouter realizes that his only hope is in enriching himself through his nondescript magazine, as, since his double defeat for the presidency, he is no longer a drawing card on the lecture platform and no longer in demand as a magazine and newspaper writer at anything but ordinary space rates. If it be necessary to get down into the mire to make himself an object of interest, he is ready to wallow. No matter how dirty the pool, if it covers him, he will dip into it if he can attract an applauding crowd. Democratic harmony is the last thing in the world that he wants. As a breeder of disharmony he has achieved his only success in life. This creature of circumstances ought to be on the payroll of the Republican managers. His antics bring more comfort to the latter than they can possibly give to sincere Democrats of any name or nature.

## PEOPLE TALKED ABOUT

SOME WEEKS ago the press dispatches from Birmingham announced that a Southern gentleman of moderate means had donated \$500

**BELTON GILREATH,**  
A Southern philanthropist who does great good.

to a prominent negro school in the South. The contributor's name was withheld. Later on, the generous donor was found to be Mr. Belton Gilreath, a mine operator. This step, which will inspire similar action by hundreds of other Southern men, means as much for negro education in the South as the Ogden Educational campaign does for the whole South. Mr. Gilreath is earnestly interested in the welfare of the masses. He goes into the religious meetings of his employes, talks and prays with them, teaches them to work, to economize, and to place themselves above want. He aids them in building and maintaining their schools and churches at his various mines, often giving half the entire cost of a building. He is loved by his men, and they regard him as a true Christian, seeking to lift them up as he climbs himself. No strikes have ever occurred at his mines. Mr. Gilreath is a true type of the Southerner who has come down from the aristocratic slaveholding class of ante-bellum days. His parents, on both sides, were slaveholders, and it is among this class in the South that the negro finds the most sympathy and the greatest help, according to the statement of that well-known colored educator, President W. H. Council, of the Agricultural and Mechanical College for Negroes, at Normal, Ala.

LONDON WILL entertain many distinguished foreigners this month, but King Lewenika, the paramount chief of Barotseland, will surely be the strangest of them all. He is described as being an enlightened potentate, with "quite English ideas." One of his ideas hardly seems so English as it might be. He has a great state barge which is rowed by eighty rowers, all men of rank. The prime minister himself has to ply the oar as one of the eighty. For this sport he has to divest himself of his European clothes and take his place with seventy-nine others clad like himself with tiger-skins round their loins and lions' manes on their heads.

NOT FAR from the city of Dublin, Ireland, lies Outlands, one of the loveliest country homes in the Emerald Isle, the property of

**MRS. NEVILLE CHAMBERLAIN,**  
A brilliant social leader in the Irish capital.

Colonel Chamberlain, one of his Majesty's most loyal and gallant officers and the veteran of many hard-fought fields. Here at Outlands, in the intervals when he is not on duty at the front, Colonel Chamberlain dispenses a gracious hospitality to a host of friends, being assisted in these functions by his gifted and lovely wife. Mrs. Chamberlain was the eldest daughter of the late Major-General A. C. Hay, and therefore comes of good fighting stock. At the time of her marriage to the distinguished soldier whose name she bears, he had already acted as aide-de-camp to Lord Roberts, and she was still a bride when he went through the Boer campaign. Mrs. Chamberlain has shared to the full the anxieties and triumphs which have fallen to the lot of all soldiers' wives during the last few years, for, as Lord Roberts's first aide-de-camp and private secretary, her husband took part in the most thrilling moments of the momentous South African struggle, now happily brought to an end.

NOT IN years has the Republican party in Congress had such a sharp line of division running through it as that caused by the Cuban reciprocity bill. The cleavage thus made has separated some of the most prominent men in the party, men who have hitherto stood solidly together in support of Republican measures and policies. What effect this division and the feeling it has engendered will have upon the immediate future of the party time alone can tell. On the one hand, there have been Republicans who have favored reciprocity from the beginning, believing with President Roosevelt that only by the adoption of such a measure could the United States fulfill all its obligations to the new republic and start it upon a happy, prosperous, and successful career. The acknowledged leader of this wing of the party has been the veteran Senator from Rhode Island, Mr. Aldrich. During his twenty-one years of continuous service in Congress, Senator Aldrich has been an able and successful leader in many legislative and parliamentary con-

flicts, but never one more trying than that through which he has just passed. As for the leadership of the so-called "insurgents," that distinction is openly claimed by Senator Elkins, of West Virginia. On June 18th, Senator Elkins issued an announcement in which he declared that under his leadership the "long-fought battle over Cuban reciprocity had come to an end, and in his favor." In defense of his policy of opposition the Senator said that he "did not believe in paying \$600,000 a year for five years of the people's money by way of reduction of the tariff, when the people of Cuba or the Cuban government would not in all probability get a dollar of these funds." The Senator further declared that he had not made war upon the sugar trust "simply trying to help Cuba," and that in case of annexation, which he believes to be inevitable within a brief period, he was "not frightened by the cry of free trade with Cuba injuring American industries." Since his entry into the Senate in 1895 Mr. Elkins has worked in accord with his party in all great issues, and has done not a little valuable and endur-

**SENATOR ALDRICH AND SENATOR ELKINS,**  
Opposing Republican leaders.

ing service to the nation. In the present case no one questions his sincerity nor his integrity, although they may have doubts as to his judgment.

EMORY COLLEGE, Oxford, Ga., the oldest college in the State, and one of the oldest in the country, has conferred on the author of "Uncle Remus" the degree of doctor of literature. This is the first time in its history that this college has bestowed this honor, and the question may arise, Why have they made this exception? Undoubtedly because Mr. Joel Chandler Harris holds a unique position. He is one writer who, so far from bidding for popularity or fame, has positively refused to depart in the slightest degree from the regimen of simple, individual, and home life. The one-story cottage at West End (Atlanta, Ga.), almost submerged in beautiful shrubbery and fragrant old-fashioned flowers, suggests, at first view, "Brer Rabbit" and "Brer Fox," and their quaint history, and one has only to cross the threshold to feel the influence of the Emersonian spirit—"the grandeur of sincere simplicity"—the example of developing life force. Of Mr. Harris's family, his oldest son, Julian, twenty-seven years of age, occupies the position held twelve years ago by Henry W. Grady, managing editor of the *Atlanta Constitution*, and what is far more significant in the eyes of Mr. Harris, Sr., he is the father of one of the favorite grandchildren, Charles Collier Harris, the one grandchild who can boast the red hair and ruddy cheeks of his grandfather. The third son, an able young journalist, is Evelyn Harris, city editor of the *Constitution*. The quiet persistence and devotion to self-selected work—characteristics of the father—are those that have placed the sons where they are. Mrs. Harris, of French extraction, is a woman of personal beauty and gracious manner. She loves the home life as much as does Mr. Harris, and has been, at all times and under all circumstances, an inspiration as well as a comrade. Institutions great and small have, of recent years, scattered their "degrees" with so free a

**DR. JOEL CHANDLER HARRIS,**  
The popular writer of fables.—Photograph by C. A. Volberg.

hand that the ceremony had come to partake of the comic nature. In the midst of all this bathos and bid for notoriety, it is refreshing to find a college honoring itself by bestowing a degree upon one who represents so much that is fine and noble—one who represents fineness and nobility so simply.

PROBABLY THE oldest man on record to be regularly ordained to the ministry of any church is Mr. George F. Brigham, of Sharon, Wis., who has just received that distinction in his seventy-fifth year. Mr. Brigham was never a student of divinity in the conventional sense, his preparation for the sacred office being obtained while he was engaged in the most prosaic of secular duties. For thirty-five years he had been simply station master and express agent at Sharon, but in that obscure post he was noted as a faithful and upright employé, and locally he became a distinct religious force. Being a devout Episcopalian, he gathered a little company, to which on Sundays he read the church service, started a Sunday-school, and at length set out to build a house of worship. In order to raise funds for this purpose he and his associates raised flower-seeds, which they sold, orders eventually coming to them from all parts of the country. After several years a chapel was built and consecrated and Mr. Brigham was made deacon. But he did not aim higher until his retirement from secular business three years ago. Now he has been installed as rector of his flock, and as he is still hale and strong, he looks forward to at least ten years of active work as a pastor.

**MR. GEORGE F. BRIGHAM,**  
Ordained as rector in his seventy-fifth year.

IF "PEACE hath her victories as well as war" so also does peace have its heroes, men fully as worthy the plaudits of the world and immortal renown in song and story as the Winkelrieds and Leonidas of martial history. Among such brave souls of this later day Professor Heilprin should be classed. His action in ascending the top of the crater of Mont Pelée required a degree of courage that is given only to men who lead forlorn hopes, to fanatics, and to men of science. An eruption would have blotted him out of existence and burned him to a crisp. As it was, the crater threw out ugly hints; it spouted mud at him, and he was covered with cinders. Thirty thousand people had been destroyed in a blast, and here was one puny man looking down into the jaws of the "inferno," and calmly taking notes. As a hero of science the professor deserves the fullest recognition, and will hardly fail to receive it.

IF PHYSIOGNOMY counts for anything in the determination of character the young man whose portrait is given herewith would surely seem to be marked out for a notable career. For shrewdness, force, and sagacity of an unusual degree speak out in the lines and contour of this young face. It will need all these elements of character, and others besides, to enable Mr. Reginald Vanderbilt—for it is he—to meet and successfully discharge all the responsibilities falling upon him as one of the heirs of the Vanderbilt millions and an inheritor also of the vast and complicated business interests in the hands of that famous family of financiers and capitalists. Young Vanderbilt begins active life with the inestimable advantage of rare intellectual attainments gained as a student at Yale University. A few weeks ago, while he was yet a student, Mr. Vanderbilt figured to some extent in the newspapers for the alleged offense of over-speeding his automobile in a Rhode Island town. He had recently purchased a fine farm near Middletown in that State and was in the habit of going to and fro between New Haven and that place on his automobile. It was on one of these trips that the alleged offense was committed. Nothing seems to have come of the charge, however, which might easily have arisen through an excess of official zeal.

**REGINALD VANDERBILT,**  
A scion of a notable house.

IT WOULD be a difficult task, if not an impossible one, to persuade any half-dozen men casually brought together, into unanimity of opinion concerning the greatest man who ever lived. Most of them would agree, no doubt, with Lord Brougham, that Julius Caesar was "the greatest man of ancient times," but how many of the six would accept Professor Gardiner's estimate of Cromwell as "the greatest Englishman of all time"? Each of them, we may be reasonably sure, would accept Shakespeare as the greatest poet, yet Lord Lytton once spoke of Milton as "the greatest poet of our country." And where will be found two men out of Scotland to agree with Charles Mackay when he says of Burns, that he was "the greatest poet—next perhaps to King David of the Jews—whom any age has produced"?

# H. R. H. the Prince of Wales, Heir to the Throne

By Ralph D. Blumenfeld

LONDON, June 24th.

THE ANNOUNCEMENT to-day of the grave illness of King Edward VII., his submission to an operation and the indefinite postponement of the much-heralded coronation ceremonies, have created anxiety, as well as disappointment, all over England. In view of a possibly fatal termination of the monarch's malady, the thoughts of everybody are turning to the Prince of Wales, whose accession to the throne would at once follow the demise of his royal sire. One result of the King's death would have an American bearing. That sad event would, of course, prevent the prince from complying with the New York Chamber of Commerce's invitation, which he is reported to have accepted, to follow the example of Prince Henry of Prussia and to visit the United States this year. If, however, the King should recover, as all hope, and the prince goes to America, as he is most anxious to do, it will probably be in September, when the great heat is over. Like Prince Henry of Prussia he will leave his wife behind.

The visit would afford the American people an opportunity of comparing the two imperial princes and, I think, the comparison would not result unfavorably either to one or the other. The two have much in common. They are both sailors, above all things. Both are frank, outspoken, simple in manner and habit, and eminently practical. They have been brought up in the profession which, above all things, makes men self-reliant and strong, and both are noted for their common sense and amiability. The German prince, by virtue of his subordinate position in the royal family, continues in his naval career, while the Prince of Wales, as heir to the throne of Great Britain and Ireland, has done his last turn as a responsible commander on board a ship of war. To him the beloved profession is closed, for all practical purposes, though I cannot doubt that if he were to be offered the choice of the perpetual command of a British cruiser as against the possession of the British crown his inclinations would lean toward the former.

I take the liberty of extracting from the peerage list the dignities and titles to which the Prince of Wales is obliged to subscribe. The brevity of the peerage list commends itself to the busy reader, while a thorough understanding of the details of his many names goes far to explain the nature of the irksome duties of an heir apparent. The list is as follows:

His Royal Highness, Prince George Frederick Ernest Albert, Prince of Wales, heir apparent to the Crown (created Prince of Wales and Earl of Chester November 9th, 1901; Duke of Cornwall, in peerage of England, 1337; Earl of Dublin, U. K., 1850; Duke of York, Earl of Inverness and Baron Killarney, U. K., 1892; Duke of Rothesay, Earl of Carrick, Baron of Renfrew, Lord of the Isles, and Great Steward or Seneschal of Scotland, in peerage of Scotland, 1469; Duke of Saxe-Coburg and Prince of Saxe-Coburg and Gotha; K. G., K. T., P. C., G. C. M. G., G. C. V. O., Rear-Admiral in the Navy, Personal Nav., A. D. C. to the King, Colonel-in-Chief of Royal Marine Forces and the Royal Fusiliers, Hon. Colonel of the King's Colonials, Chancellor of the University of Wales and the Cape, Grand Prior of the Order of St. John of Jerusalem, Master of Trinity House, President of the Royal Academy of Music, and a Bencher of Lincoln's Inn; born at Marlborough House, June 3d, 1865; married (at St. James's Palace, July 6th, 1893) his second cousin once removed, Princess Victoria Mary of Teck (née H. S. H. Victoria Mary Augusta Louise Olga Pauline Claudine Agnes; born May 26th, 1867). Residences: York House, Marlborough House, St. James's; York Cottage, Sandringham; and Craigowan, Ballater, Aberdeenshire.

Thus the peerage, showing the weight of titles and

dignities. To his friends and intimates the prince is not His Royal Highness, the Prince of Wales, but merely "Sprats," a nickname dating back to his early days on the training ship *Britannia*, when orders were given that his rank was not to protect him against the boyish pranks and appellations of his comrades. He was entered on the books of the *Britannia* in June, 1887, as a cadet, where, in company with his elder brother, the late Duke of Clarence, he was treated in exactly the same way as any other cadet preparing seriously for the navy as a profession. After two years of cadet life the two princes were transferred to the cruiser *Bacchante*, on which they made a grand tour of the world, occupying over two years. They sailed over forty-five thousand miles. It was a splendid educational process for a future monarch and it added immensely to Prince George's store of information regarding many lands. West and south sailed the good ship to the Mediterranean, Teneriffe, the West Indies, the Bermudas, Vigo, Ferrol, St. Vincent, the River Plate, the Falkland Islands, the Cape of Good Hope, Australia, and the Fiji Islands. Then to the Far East, Japan, China, the Straits Settlements, Ceylon, Egypt, Palestine, and back again to the Mediterranean and home, a delightful, instructive, and thoroughly enjoyable trip.

On his return the young prince was regularly inducted into the navy as a lieutenant. His was to be a working career, as befits the second son of a King or brother of a ruler of peoples. To the second in line are denied many of the brilliant opportunities which come only to the wearers of crowns, but to him also is vouchsafed a life more or less free from the thousand and one petty annoyances and worries to which Kings are subjected. But the death of the elder brother, in January, 1892, cut short Prince George's prospects as a minor light in the royal sphere and brought him out into the glare of publicity as a future King of Great Britain. By this time he had risen, as princes do, to a position in the navy entitling him to the command of smaller vessels, such as the *Thrush*, which he had held for some time on the North Atlantic station. He acquitted himself with some credit, though he was not considered a particularly brilliant or dashing officer. He was steady, reliable, dogged, a typical Hanoverian like his forefather, the famous Prince of Wales, who, while he was a British post captain, never uttered a command in pure English and who is remembered best in the navy by his favorite command: "Mr. Lefden and Prown, please bipe the grew on deck to gwarders."

The death of Prince "Eddy" cut short the prince's career in the navy as an active officer. True, he continued to rise and became first a post captain and finally a rear-admiral, but the only command he has held since then was a temporary one on board the *Crescent*, a first-class cruiser, and this was merely to qualify him for the higher rank which he received shortly afterward. Then came the marriage with Princess May, who, it will be remembered, had been engaged to his brother shortly before his death. It had always been the wish of the late Queen that her grandson should marry an English princess and the betrothal with Princess May was immensely popular with the public at large. When the Duke of Clarence died, the disappointment at losing Princess May for the succession to the throne as Queen-consort was extremely keen and the news of her engagement to the younger brother was consequently highly popular. They were married in 1893 and the marriage has been blessed with four children, the eldest of whom, Prince Edward of Wales, being perhaps the most popular and most widely talked-of child in the British realms.

The Prince of Wales is not popular in the same sense

as was his father when he occupied the same exalted post. In the first place, he is not so well known. He has not been so much in the public eye. For forty years the present King has been before the public in some capacity or other, generally in one that appealed to the people's sense of humor, sport, or patriotism. The father was ever a man about town; the son is a home-staying, rather shy, retiring country gentleman. He abhors crowds and is frightened of acclamation or demonstration, which may, to a certain extent, account for his abstention from the funeral of President McKinley last year—the right time for him to have visited the United States. If ever a prince made a tactical and political mistake it was the refusal of the then Duke of Cornwall to cross the border from Canada to pay the last respects of royalty to the remains of the great republic's martyred President. It is said that he was anxious to do so, but that a careful and not always wise cabinet at home, fearing anarchists, gave him strict orders to remain on British soil. But I cannot help thinking that if he had gone to the United States at that time his visit would certainly have taken the gilt off Prince Henry's gingerbread, whereas now if he goes to America the visit will be looked upon as an unoriginal attempt at copying the successful onslaught of his German cousin. So he came home again and the papers were "tipped" to say that not once during his recent world's tour had the heir to the throne stepped off British ground.

There is no doubt that the tour broadened his point of view and emboldened him to say things to British manufacturers which they would not have accepted without protest from any other personage. It was this timid, frightened-looking prince, who, bracing himself for the task, stood up in the ancient Guildhall of London and, facing half a thousand of the greatest and most powerful men in the land, said in a clear, full voice, that sounded like a trumpet call: "Wake up, England, you have been asleep too long!" It was a great speech, great, not because it was delivered by a royal prince, but because it was crammed with solid, sound common sense; not literary, not polished, and not delivered in academic style, but there was something indefinably grand and vigorous in it which will long make it remembered as one of the most forceful utterances of the time.

That speech was the only flash of royal power we have yet had from the heir to the crown. It showed that, be it by great effort or merely slight endeavor, he has that in him which demands attention. For the rest, he does not trouble himself much about public opinion or popularity. He prefers the collection of postage stamps to anything else. He seldom goes to the theatre, and is rarely seen in public except when it is absolutely necessary. He is a little man, slight, stolid looking, and yet nervous. In his naval uniform he shows himself to the best advantage, for there alone he seems to be at all comfortable. On a horse he is simply lost, as are most sailors, and his principal occupation at present seems to be the opening of bazars and hospitals, that curse to which all royal personages are subjected. He takes a keen interest in all affairs of state, as befits a future ruler of the great empire, and he is a most omnivorous reader of blue books and parliamentary papers. Some day he will be King, and in this rôle his simple, unassuming, retiring manner will not help him to gain the noisy popularity of the mob. They will not follow his carriage with huzzahs whenever he goes out to take the air, but I do not think I am far from right when I say that he will probably prove to be one of the wisest, most careful, and most conscientious of Britain's long line of good, bad, and indifferent rulers.

## Enormous Fatalities From Earthquakes.

AT A FAIR estimate probably not less than 40,000 persons lost their lives during the recent volcanic disturbances in the Lesser Antilles, a fearful total considered by itself, yet small in the comparison with the numbers destroyed in other catastrophes of the same kind in years past. With the possible exception of the terrible floods in certain Chinese rivers which have occasionally overwhelmed and swept away a hundred thousand persons at a time, no action of natural forces has been responsible for such enormous losses of human life as volcanic eruptions and their attendant horrors on land and sea. The earthquakes in Sicily in 1693, and in Calabria in 1783, are each said to have been fatal to 80,000 persons, the one laying in ruins fifty, and the other 300, towns and villages. Upon the 4th of February, 1797, the earthquake of Riobamba killed 120,000 persons in the upper districts of the equator.

The first and fatal shock which destroyed the city of Lisbon in 1755 lasted only five seconds, and this earthquake, which extended far out to sea and lifted the waters out of their bed, was fatal to 60,000 persons. In the year 526 a terrible earthquake shook Italy killed 120,000 persons, and in the same year more than 200,000 were killed, during a shock lasting only a few seconds, at Antioch and several neighboring cities. In Japan, and the archipelago in the neighboring sea, shocks of earthquake have often destroyed and depopulated whole regions which were before studded with opulent cities and rich with crops.

An earthquake in the Straits of Sunda, in 1883, accompanying an eruption of the volcano of Krakatoa, caused a fearful loss of life. Although the precise number of vic-

tims is not known, it cannot have been less than 50,000, and probably was as many as 60,000. In the island of Java alone more than 15,000 persons perished, and 10,000 at Tjeringen. Although the population of the north of Bantam, which suffered so severely, had decreased in the previous years, it still amounted to half a million at the time of the 1883 earthquake, so that it is not astonishing that at first the total number of victims should have been estimated at 80,000, and even more.

The tradition of terrible inundations following upon earthquakes had long been handed down among the Greeks, and in the nineteenth century before Christ the whole population of Attica was drowned by the inundation which followed an earthquake.

Terrible as the catastrophe has been which has just befallen the beautiful islands of the Lesser Antilles, it has been attended with far less disturbance of the waters in the adjacent seas than might have been expected from the violence of the volcanic forces in Martinique and St. Vincent. Eruptions of this kind have often been followed by enormous tidal waves to add to the horrors of the scene. In some cases where eruptions have occurred near the sea the waters have been violently agitated for hundreds and sometimes thousands of miles away, the ocean-bed sinking in some instances and in others being raised into new islands and additions to the solid land. The terrible wave produced by the subterranean commotion which destroyed the Sound Strait in August (26-28), 1883, after having inundated the coast of Java and Sumatra, submerging whole islands and making thousands of victims, pursued its impetuous course across the Indian Ocean, in the shape of an immense

bore-wave. This wave reached the coasts of the Mauritius and the island of Reunion, 3,500 miles away, in a few hours after it started.

Our new possession in the West Indies, St. Thomas, was visited by a disaster of this sort on November 18th, 1867, following some severe earthquake shocks. When these shocks were first felt in the port at St. Thomas, the vessels at anchor there began to swing about, the anchor chains snapped off, masts were broken, and then came an enormous wave sweeping in from the sea, a literal mountain of water, more than ten miles in length and from three to four hundred feet high. Just as this huge wave struck the shore of St. Thomas another violent earthquake shock occurred. This lifted up the waters as if by an invisible hand, and with the rapidity of lightning they rushed out of the port, carrying with them in their abysmal depths the men-of-war and a great many merchant vessels. All this was the work of a few minutes only. The mighty wave continued to recede, and moving toward the south inundated the island of St. Croix, with a host of other islands and islets, notably the island of Saba, which disappeared entirely beneath the floods, steep as its coast line was. Although the wave had already traveled more than one hundred and twenty miles it was still a hundred feet high when it swept over this island.

## In Substitute Feeding

For infants, physicians agree that cow's milk is the basis for all beginnings. What is required, then, is the best possible milk product. Borden's Eagle Brand Condensed Milk is ideal, pure, sterile, and guarded against contamination.

# A Reminiscence of U. S. Grant From His Widow . . . By T. Williams

PHOTOGRAPH OF GENERAL GRANT TAKEN IMMEDIATELY AFTER THE FALL OF VICKSBURG AND NOW IN POSSESSION OF HIS WIDOW.

THE RECENT discovery of an unpublished picture of the late General U. S. Grant, markedly unlike any of those familiar to the public, was an event worthy of more than passing notice. The famous warrior and statesman's portraits usually show him full-face, or nearly so, with a complete beard. Here was a profile, with the beard on the chin wanting and with a totally different expression of countenance from

small copies of this picture, and expressed a desire to procure a large one.

In the course of the interview Mrs. Grant recalled the fact that another profile picture of General Grant had been taken as early as 1862, when the general, as she phrased it, was "still a young man." Mrs. Grant said, in a reminiscent way:

"After the fall of Vicksburg Congress voted to General Grant a large gold medal of honor, in recognition of his services in opening the Mississippi River to unimpeded traffic once more. On this medal it was decided to stamp his picture. Whether the photographer was sent to the field to meet the general or whether the general sat before the camera during a flying visit to Washington, I do not clearly remember. But the picture was secured and the medal now bears it. This medal is in the Smithsonian Institution at Washington. It was given to the museum, along with General Grant's swords and other valuable things, by the late Mr. William H. Vanderbilt, into whose possession they came after the general's financial reverses."

chin was also submitted to the inspection of ex-Postmaster-General Thomas L. James, now president of the Lincoln National Bank. General James, who was intimately acquainted with General Grant, recognized the likeness at once, and said: "This picture differs from any other that I know of, but that is certainly General Grant as I saw him in Washington. The picture is unusual, but it is a good likeness of the great commander, as well as a most interesting one."

PHOTOGRAPH OF GENERAL GRANT TAKEN FOR A MEDAL AWARDED BY CONGRESS FOR HIS VICTORY AT VICKSBURG.

that stern visage commonly portrayed. The unusual picture was shown to Mrs. Grant, widow of the great general, when she was in New York, recently. It recalled to her mind reminiscences of her husband which are most interesting, for the rare photograph was made at her own request and after continued protests from her distinguished husband.

Mrs. Grant was found at her pleasant apartments in the Fifth Avenue Hotel. While not in chronic ill health, she had been more or less indisposed, and her strength at the time did not permit a long conversation. The venerable lady was seated in an easy chair and she extended a courteous greeting to the visitor. To all appearance she carried her years well. Feebleness of body there may have been, but the face did not betray the full age, and the brown eyes still had a trace of their early brightness. Mrs. Grant conversed with something of an effort, but her voice was clear and her faculties were keen.

When first shown the photograph, Mrs. Grant, who used no eyeglasses, held it close to her face, examined it, and almost immediately exclaimed: "Oh, it's a horrible picture." Her words seemed to intimate that the portrait was not a bona-fide one, but she quickly admitted its authenticity and thus described the circumstances under which it came into being:

"It was taken for me during General Grant's second term as President. It was not intended, as some might suppose, for a government medal or for any other public use. My friend, Mrs. John A. Logan, had had a fine cameo picture of her husband made in Italy on stone. She was about to go there and told me that if I would furnish her a profile picture of General Grant she would have it reproduced in a cameo for me. So I asked the general to have such a picture taken. He objected. It would be a good deal of trouble to do so, he said. I told him, 'Why, Ulysses, it is an easy thing to do and it will take but very little time.' I wondered why he regarded it as such a task, when all he had to do was to go and pose for a minute or two.

"He delayed going to the photographer's, but in response to my repeated urging he went, and eventually sat for the picture you have here. But he had misunderstood my request. I had wished to have his profile with the beard full, as usual. He thought that I wanted the actual lines of his face, and so he had had the whiskers shaved from his chin. It was his dislike of being shaved that had made my request seem hard to comply with. I was disappointed with the picture, and did not use it for the purpose I had had in view. I waited for his beard to grow and then the kind of picture I wanted was taken. But this is a correct picture of the general as he looked at that time, with a shaven chin."

As she was talking and scrutinizing it, Mrs. Grant evidently had become inclined to think better of the picture. She called attention to the lines of the mouth as indicative of her late husband's power of will, and agreed with the opinion of her visitor that the picture revealed in an unusual degree the kindness that lay behind General Grant's firmness and reserve. If in other portraits the grim warrior or the resolute statesman was depicted, here, it was suggested, was disclosed the private man himself, firm as a rock, indeed, but benevolent and warm of heart. To this Mrs. Grant assented, and appeared now to realize that at the cost of disappointment to herself the picture had proved a boon to the admirers of General Grant who are fond of studying each phase of his great character. She told me that she had only some

GENERAL U. S. GRANT—A RARE PHOTOGRAPH TAKEN DURING HIS SECOND ADMINISTRATION, AT HIS WIFE'S REQUEST.—Copyright, 1902, by Prince, Washington.

The visitor having remarked that these treasured relics of the general would be held by the nation in safe and reverent keeping, Mrs. Grant's eyes took on a far-away and pathetic look. "Yes," she answered, "they will be kept safely," but there was a wistfulness in her tone that seemed to convey the wish that she herself had those precious articles in her charge. For a moment afterward she was silent, and then she said, as if speaking to herself: "The dear fellow. He was a great general, but he did not know how to accumulate money." The visitor suggested that General Grant's mind had been engaged with larger matters than mere money-making. Mrs. Grant replied: "Well, he didn't know how to make money, but he was a liberal giver."

Mrs. Grant then directed her companion to bring out a copy of the picture of the general taken forty years ago and presented it to me. This, also, is a striking portrait, but in strong contrast with the one first described. It represents the grim, indomitable, and successful soldier as he naturally appeared at the close of one of the hardest and most wonderful of all the world's military campaigns. These pictures show General Grant almost at two extremes.

The profile picture of the general with a beardless

## Chicago's Fashionable "Derby Day."

AN IMPORTANT annual event at Chicago at which, as at the horse show in New York City, sport and fashion mingle, is the American Derby, which brings out the members of society in hosts, besides a multitude of the genuine lovers of good racing. The fifteenth Derby, which was run at Washington Park on Saturday, June 21, was the most successful, everything considered, of them all, and was witnessed by nearly 50,000 spectators.

Hundreds of fine equipages were gathered on the grounds, the grand stand was crowded with people of wealth and fashion, and the display of feminine costumes on stand, lawn, and clubhouse piazzas is declared by a Chicago newspaper to have been simply "gorgeous."

In the big contest twelve horses of the first class competed, and after a magnificent fight, and amid the cheers of tens of thousands, Wyeth, owned by John A. Drake and ridden by Jockey Lyne, won easily, with Lucien Appleby second, Aladdin third, and Otis fourth. The distance was one and one-half miles, and the time 2:40 1-5. The race was worth over \$20,000 to the winner, and it is estimated that \$1,000,000 changed hands on the result. The leaders in the race were all Western horses, the best Eastern nag, Heno, owned by Clarence H. Mackay, coming in fifth, and Arsenal, the winner of the Metropolitan, being eleventh at the finish.

One of the celebrities at the track who attracted much attention was Colonel Sam Bryant, of Kentucky, a famous turfman, who, although ill and dying, went all the way from his home to Chicago to see the race.

## Mesmerized.

A POISONOUS DRUG STILL FREELY USED.

MANY people are brought up to believe that coffee is a necessity of life, and the strong hold that the drug has on the system makes it hard to loosen its grip even when one realizes its injurious effects.

A lady in Baraboo writes: "I had used coffee for years; it seemed one of the necessities of life. A few months ago, my health, which had been slowly failing, became more impaired, and I knew that unless relief came from some source, I would soon be a physical wreck. I was weak and nervous, had such sick headaches, no ambition, and felt tired of life. My husband was also losing his health. He was troubled so much with indigestion that at times he could eat only a few mouthfuls of dry bread.

"We concluded that coffee was slowly poisoning us and stopped it and used hot water. We felt somewhat better, but it wasn't satisfactory. Finally, we saw Postum Coffee advertised, and bought a package. I followed directions for making carefully, allowing it to boil twenty minutes after it came to the boiling point, and added cream, which turned it to the loveliest rich looking and tasting drink I ever saw served at any table, and we have used Postum ever since. I gained five pounds in weight in as many weeks, and now feel well and strong in every respect. My headaches have gone, and I am a new woman. My husband's indigestion has left him, and he can now eat anything." Name given by Postum Co., Battle Creek, Mich.

## Southern Beauties Who Typify Flowers.

AN OLD and beautiful custom has been revived in the South by prominent society women, that of wearing a chosen flower, by which they become identified. The famous Mrs. Andrew Pickens, of South Carolina, was known as "The Lady of Violets," so named by the Czar of Russia, who on one occasion presented her with a coronet of these flowers, saying: "Madam, as a symbol of this, the sweetest of flowers, I crown you Lady of the Violets." This little incident ever afterward associated Mrs. Pickens with the flower of her adoption. The violet is also a favorite of ex-Empress Eugénie, and, because of the popularity which she gave to this flower in France, it became the emblem of the followers of the Third Napoleon, when he was in exile, and he was called "Père la Violets." To this day the violet is an emblem of the house of Bonaparte. So it appears this custom is not exclusively American.

Madame La Vert, a famous wit and beauty, was known as "The Southern Magnolia," and was the leader of a coterie of renowned women of the ante-bellum period in the South, who effected this flower's symbolism. The first to revive this custom was Mrs. Lee Dunlap Jordan, of Georgia. Her appearance at the recent Atlanta Horse Show, wearing a profusion of brilliantly-tinted orchids (which flower she now wears exclusively), was a distinct revival of this beautiful custom, and was a most pleasing diversion to the aesthetic eye. "The Orchid" is the name by which she is often known. As will be seen, other prominent women have adopted a flower typical of their style of beauty. In the social circle surely the twentieth century could not do better than copy the style of its predecessor in the designation of its beauties by "Le nom de fleur." G. O. S.

## Protecting Pure Food Products.

BESIDES SUPPRESSING the adulteration of food products, the authorities are often called upon to prevent a kindred fraud, namely, the proffering for sale of articles of food by new concerns under names which duplicate or closely resemble those of old and widely known concerns. It has come to pass that every successful food commodity is sought to be imitated by unscrupulous persons in some way. The impositions practiced are more frequent than most people suppose and the work is being done by using packages and business titles similar to those which have an extensive and honorable reputation. Naturally, the parties aggrieved seek to enjoin their imitators. In a case of this sort Judge Wallace, of the United States Circuit Court of Appeals, recently handed down a decision which strikes a blow at such practices. The decision affirms a decision of the lower court restraining William H. Baker, of Syracuse, from using the words "W. H. Baker" or "William H. Baker" on packages of chocolate, without the qualifying word "Syracuse." The suit was brought by a chocolate manufacturer of the same name in Winchester, Va., who some years ago was enjoined from simulating the packages and the firm name of Walter H. Baker & Co., who have for many years been making and selling a chocolate of uniform high quality. Judge Wallace declared that a manufacturer had a right to complain if a competitor was endeavoring to palm off his products by the use of misleading circulars or otherwise and was entitled to be redressed. This decision, in its general application, savors of sound common sense. It is only just that concerns which have built up big businesses by honest effort and at great expense should be protected in the fruits of their enterprise by the courts.

## Rare Public Spirit.

IN A DAY when junketing trips at the people's expense and extortionate bills for public service are so common it is refreshing to have such a report as that rendered by Messrs. Nissen, Otis, and their associates, who composed the New York State Commission to the Paris Exposition, showing that these public-spirited citizens not only paid their own expenses while abroad, but also the cost of installation, and, to cap it all, returned to the State treasury not less than \$5,000 of the amount appropriated.

## Outings.

AN INEXPENSIVE AND READY PREPARED LUNCHEON.

DURING the vacation, suppose you cook less and play more.

Grape-Nuts, the food that makes breakfast so easy to get all the year 'round, is the ideal food for that purpose.

Grape-Nuts is thoroughly cooked at the factory by food experts, and is always ready to serve with the addition of cream. You can save yourself the heat from cooking and the time and exertion necessary to prepare other food, by its use.

Its high nutrition gives strength and nourishment without the internal heat of meat and other heavy food, keeping the temperature of the body cool and comfortable; its delicious flavor pleases every palate.

Picnicker and camper as well as the housewife preparing the regular meals at home, can pass a pleasant and enjoyable summer by the use of this ready prepared and easily digested food and will miss the usual heavy and sluggish feeling generally felt in hot weather.

Many pleasant ways of changing the form of use found in recipe book in each package.

REVIVAL OF AN ANCIENT AND PICTURESQUE CUSTOM, BY WHICH EACH SOCIETY LEADER IS ASSOCIATED WITH A BEAUTIFUL BLOSSOM.

# Are the Police Responsible for Crime?

A Study by Professor Guy Morrison Walker

PROFESSOR GUY MORRISON WALKER.

THE INCREASE of crime, out of all proportion to the increase of population, has become so alarming as to demand an immediate investigation of its causes. Crimes are committed with such recklessness and with such daring that our people are filled with consternation, while the police seem to be dazed. Arrests are being made, of the innocent and the guilty alike, with no evidence to warrant the holding, much less the convicting, of those arrested, and criminals have been growing bolder and more defiant in spirit, until daylight robberies by unmasked men have

been perpetrated in the very hearts of most of our largest cities. influence; he is their guest, and drinks at the same bar with them. They bandy jests, but his equal theirs both in profanity and vulgarity. They have seen him chatting with the prostitute out plying her trade. They have seen him accepting and granting favors, and many of them know of instances when he has been conveniently deaf or blind and openly derelict in his duty.

These people know the policeman as a man, inactive, heavy, slow of foot, untrained, awkward with his club, and an indifferent shot. They have seen him weaken in the presence of danger and acknowledge a superior skill or strength, so they neither fear nor respect him; consequently they neither fear nor respect the law that he represents. It is impossible for those who have felt the force of the law, or those who live under the shadow of its penalties, not to identify the law with those who are entrusted with its enforcement, and having seen so many escapes these people know that it is an easy matter to escape the police, and, having escaped them, they think they have escaped the law.

We must not, however, be too severe with the men who are engaged in the rather thankless business of acting as our police, for while we must insist that its thanklessness is largely due to their own failure to dignify their profession, still it is little that we have done for the policeman himself. Most of us have been satisfied if we have been allowed to live in peace and sleep in quiet without being bothered with the means used to secure them for us, but we are now compelled to face the result of our indifference. Having required little of our police we have received little; and the fact that some characteristics of the policeman have come to be regarded as marks of a type is indicative of the low standard required in this service.

Above the average height and of rather more than average weight, the policeman is known by his florid cheek, the dash of red upon his nose, his eyes which see not and ears which hear not, the sharp convex taper to his waist, the slow and lumbering gait; and while there is usually a certain amount of muscular development, it is rather the type of the bar-room brawler than of the trained athlete. This type, recognized by all and notorious in caricature, is the one from which a large class of citizens have been taking their ideas of law, and the contempt which they feel for the type has extended to the law and the social order which it is supposed to represent.

The genesis of the present demoralization is a degenerate police, crime arrogant, law defied, citizens in arms. To reform the criminal classes we must first reform their guardians. It is not surprising that, with such examples before them, these classes have come to display such utter indifference to law, and to regard crime as almost a legitimate though hazardous trade. Surely it is time for us to dispense with these inducers to crime!

The daily papers teem with stories of escapes from arrest, assaults by and upon police, brutal clubbings, and all too frequently a police shooting. For most of this there is no excuse. Of course all our officers cannot be sprinters, but they could easily be kept in such a physical condition as would render the chances of escape by flight decidedly disheartening. A little running to secure wind enough to maintain a moderate speed for even a short time, and a little jumping to clear obstacles, would make criminal escapes by running few indeed. Policemen should be trained boxers and wrestlers. There is absolutely nothing else that gives a man that courage and confidence in himself which comes with such training; while the coolness, the ability to think and act quickly, and the accurate physical control which is so gained are absolutely indispensable to the police officer.

Most of the embarrassing situations in which officers find themselves are the result of the lack of this very training and development. They are easily thrown or knocked down by some smaller man who possesses such skill. A powerful policeman, weighing over two hundred pounds, had arrested a boy of seventeen, who weighed but little over half as much. The officer was jerking the boy along and giving him an occasional cuff for good measure. When they reached the street-crossing, the boy dodged under the policeman's arm, and, catching him on his hip with a well-known trick at wrestling, he threw the officer heavily in the street, and was away like a flash. The policeman sprang to his feet, threw his club after the disappearing boy, and then tried to draw his revolver, while the crowd hooted and jeered at his discomfiture.

It is the lack of such skill that makes officers so ready to resort to the use of their clubs. They are conscious of their weakness. I have witnessed several clubbings of men who, officers claimed, were resisting arrest, and in every instance the clubbing was the result of the personal cowardice of the officer making the arrest. He recognized a skill and courage superior to his own. Every man resents the stroke of the club, for he instinctively feels that the man who uses it is a coward and fears him; but he just as quickly recognizes the coolness and courage of the man who relies on his skill and he has a profound and wholesome respect for him. Were our officers so trained many bloody arrests would be avoided, while the moral effect upon the police themselves would be incalculable.

But policemen should also be taught the correct use of the club. Most of them handle it with the same grace and skill that the Irishman does his shillelagh, and have

no idea that it has any possibilities beyond such use. The officer who understands how to use his club can ward off almost any blow, he can prevent an assailant from closing in on him, and can defend himself from almost any attack. He can disarm without disabling, and his skill will enable him to so place his blows upon a resisting prisoner as to quickly bring him to submission without battering and bruising him up, as is the style to-day. A course in single-stick or broadsword exercise, followed by practice in the use of the club itself, would soon work wonders and many brutal exhibitions be done away with.

Many instances of police-shooting are cases in which the officers have had their clubs taken from them by their assailants. If policemen possessed even a superficial knowledge of the use of the club, few men would be able to take their weapons from them. If club-practice prevailed, then one of the chief sources of police-shooting would be removed. But if our police could shoot better they would shoot less, for if they knew that they could shoot straight when occasion required they would feel perfectly safe in delaying such action until the moment of actual peril. If confident of their ability to use their revolvers quickly and effectively when necessary, they would be less ready to bring them into play.

It is a small art to produce a revolver from pocket or holster, but it is certainly one in which every police officer should be versed; yet how often have we seen one tugging and pulling at his weapon while an escaped prisoner was flying down the street. It is really astonishing that almost no attention has been paid to such matters in this country, for they constitute the very essence of a police officer's training for his profession. No soldier would think of going into battle without understanding his weapon. No sensible man would trust himself in the hands of a surgeon who did not understand the use of his instruments. Yet we have gathered together these men who do not know how to defend themselves, armed them with clubs and revolvers whose use they do not understand, and trusted our lives and our property into their hands.

Such a system may almost be called an incentive to crime; and if we place no higher value upon our lives and our property than to trust them in such hands, it is not strange that they are not respected. The attempt to hold the criminal classes in control by mere brute force must always fail, for they only fear and respect a skill and a courage which they do not themselves possess. The recent increase of crime is the fault not of our law, but of its representatives, from whom our people have absorbed their ideas of law; and the remedy is not in a more severe penal system, but in the impartial enforcement of the one we now have. Our attention should be directed not to the law, but to those who are trusted with its enforcement.

Not only have our policemen failed to keep the criminal and depraved elements in subjection, but there have been an extraordinary number of crimes committed by policemen themselves. The number of such crimes has been out of all proportion to the comparatively small class responsible for them. This would indicate exceptional opportunities for the commission of crime, and that undoubtedly is the cause. Our police do not have enough to do; their time is not sufficiently occupied. Their hours off duty are too long, and to while them away they drift back to the ever-luring haunts of wickedness and mingle as citizens with those among whom they have so lately moved as guardians of the peace. This has been most strikingly exemplified in the recent race riots in New Orleans and New York. In both these cases police officers off duty were active participants in the demonstrations, and in several instances they were the actual leaders and inciters to mob violence.

Among these classes particularly does familiarity breed contempt, and it is to this familiarity between the police and those they are supposed to control that we must attribute the collapse or failure of our police system when tried by the extra stress of strikes or riots. It is too much to expect that they will drive or club, if resisted, a mob made up of those with whom they have a personal acquaintance. It is the absence of this personal element and the fact that they recognize in the mob nothing but an unlawful gathering that makes our militia so effective under similar conditions. Too much stress cannot be laid upon this point of non-familiarity or personal intimacy with those to be controlled. It is recognized in armies and navies as vital in governing the relations between officers and men, and it is of much greater importance that the police should, as far as possible, be kept from social or personal contact with those they are to watch and hold in subjection. If the police are not confined to regular barracks, they ought at least to be compelled to live as far as possible from the scene of their duties. The exercise and training just suggested would, if required, give our police ample work for their hours of idleness and do much to remove from them the opportunities and temptations to crime which come so easily to those who have nothing else to do.

Let our army of peace be composed of men trained to the service, men who appreciate the high character of their duties; but, above all, let them be Americans; for as kingly prerogatives suffer when exercised by unworthy hands, so have American laws and American principles been degraded by their enforcement at the hands of an alien police.

The perpetrators of these crimes have enjoyed such immunity from arrest and punishment that citizens have ceased to rely upon the police for protection, and have taken to arming themselves. Shop windows are full of sword-canes, dirks, bowie-knives, derringers, and revolvers, while the trade in them has been growing enormously. The practice of carrying concealed weapons, so provocative of bloody encounters, is again upon the increase. Apprehension has not been confined to the question of personal safety alone, for property is unsafe. Business houses have increased their corps of watchmen, financial institutions keep a larger number of guards on duty, and messengers with packages of value are shadowed by detectives wherever they go.

All this means a tremendous private expenditure for the purpose of securing that protection which our citizens are entitled to expect and to receive at the hands of the police. If the police are unable to furnish such protection, then we may well question the use of longer maintaining the present system at such an expense.

In spite of the precautions on the part of private citizens the crimes of lust and depravity are increasing. The powers that prey are daily growing more arrogant and showing a greater contempt for law. Such outbursts of criminality as have been witnessed in most of our large cities recently cannot have been fortuitous; they are rather the result of the mistaken idea of government that has possessed a certain class of our citizens. So widespread and so persistent are the evidences of this criminality as to warrant the belief that the contempt for law and its enforcement has reached alarming proportions. If the cause to which this degeneration and misconception of law are here ascribed seems at first somewhat novel, it is believed that upon consideration it will be found to be correct, and that the explanation here offered for the increasing indifference shown for the enforcement of law is founded in good reason.

The enforcement of law, especially in our cities, has for a long time been left almost entirely to local police. It has been their duty to preserve order, to protect the property and persons of citizens, and to keep the criminal elements under control. The police certainly cannot complain of the place that we have given them, for we have clothed them with uniforms, representing the dignity of the law; placed in their hands clubs, representing the might of the law; armed them with weapons for use in extremity, representing the severity of the law, and then sent them forth to maintain the law. Day after day have we paraded them up and down our streets as the representatives of the principle upon which our social fabric is founded. It is not surprising, then, that to the popular mind the policeman has become the embodiment of order, the physical manifestation of law.

It is hard to realize how large a place in the popular mind the policeman occupies as the representative of government. It is necessary to get out among the plain people, down among the "submerged third," and see how much their daily lives are regulated by the policeman on their beat. A large class of our citizens really govern their daily conduct according to the dictation of some police officer. Especially is this true of the keepers of public resorts, street-walkers, sporting men, and all that class who walk along the border line of open crime wondering with each day whether its setting sun will find them still free. Taught only in the school of experience, their conception of government is limited to police control, and their idea of law to a policeman's will. It is impossible for most of them to distinguish between the principle represented and the representative of the principle, so to their untrained comprehension the policeman is no longer the arm of the law, but he is the law itself.

To these people, then, the varying moods of the police become important factors in their every-day life, and each day those moods are quickly noted, and that day's conduct is gauged accordingly. They watch him on his round of duty, and many of them are on intimate personal terms with him. He is approachable and open to

# The Supreme Event in American History

HOW INDEPENDENCE WAS DECLARED ON JULY 4th, AND THE GREATEST NATION IN THE WORLD WAS BORN

IT WOULD be a vain repetition to enumerate here the causes which led up to the issuance of that famous and immortal document, that wonderful charter of human freedom, which set the bells ringing that early July day in 1776, and has kept them ringing ever since in wider, higher, and gladder strains, until to-day their joyful notes are heard in every land and clime. To tell the old, old story of the doings of King George and his advisers in what appears in the light of to-day as a blind, rash, and fatuous attempt to hold the allegiance of the American colonies, and at the same time make them pay smartly for the honor—all this is familiar to every American school-boy, or, if not, it ought to be. It is well to remember that at the time of the battle of Bunker Hill very few Americans looked forward to any such thing as separation from Great Britain. Up to 1776 the Americans had been fighting in defense of their rights as British subjects, and were at heart as true and loyal as any wise monarch could wish them to be. Washington himself said, "When I first took command of the Continental army, I abhorred the idea of independence," and right on the eve of the events at Concord and Lexington certain gallant and noble leaders of the colonists were heard to declare that any one who suggested separation from the mother country was worthy of a traitor's death.

But deeds were done in the name of English sovereignty which brought about a swift and startling change of sentiment. Public feeling in America had, indeed, been shaping itself, all unconsciously to the people, toward the issue of separation for years before, but hope and faith and loyal sentiment remained dominant and strong until the foolish and precipitate policy of the British government at last destroyed every chance for reconciliation and made further union impossible.

In October, 1774, the first General Congress of the colonies met in Carpenter's Hall, Philadelphia, to consider what course should be taken in regard to the obnoxious tax on tea, the closing of the port of Boston, and other acts of cruelty and oppression. The spirit of that Congress was unmistakable. It was perfectly calm, perfectly respectful, and yet staunchly loyal. It was here declared that since "they (the colonies) cannot be properly represented in the British Parliament, they are entitled to a free and exclusive power of legislation in their several provincial Legislatures." But in the face of this determined utterance this same Congress sent a petition to King George, imploring him, as "the loving father of your whole people," to redress their wrongs. They did not know it then, yet they might as well have petitioned the great stone face in the White Mountains of their own New

Hampshire. Not more obdurate and unyielding is that rocky battlement than was the purpose of the British monarch to have his will with his American subjects.

In the two years following that meeting in Carpenter's Hall many things occurred that served to widen the

determination that possessed the hearts of the people from Boston harbor to the Carolina coast. On the very day that the proclamation of King George reached Congress a pamphlet appeared in the streets of Philadelphia which seemed to put in words what was in the minds of all.

Its author's name was not then known, but it was Thomas Paine, and the pamphlet bore the simple title "Common Sense." In this it was defiantly declared that the time had come for a "final separation" from England, that the case must now be appealed to the arbitrament of the sword. These bold utterances were eagerly caught up, re-echoed, and approved with hearty acclaim and a spirit that left no doubt of its meaning and significance.

But Congress moved slowly to the final and irrevocable step. It was not until June that Richard Henry Lee, of Virginia, stood up in his place in the little assembly room in the heart of the Quaker City and offered this resolution: "Resolved, That these United Colonies are, and of right ought to be, free and independent." Then Massachusetts, the home of the sturdy Puritans, found a fit representative in John Adams to second the resolution of the Virginia cavalier. A committee of five was then immediately appointed, consisting of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston, noble men and patriots all, with power to draw up a declaration embodying the resolution offered by Lee. This committee practically delegated its powers to one of its own members, that member being Thomas Jefferson. He did the work, and how well he did it all the world knows. The spirit of the Lee resolution was in

INDEPENDENCE HALL, PHILADELPHIA, AS IT IS TO-DAY.—REV.

breach and alienate more and more the feeling and sympathies of the Americans for the motherland. War actually began, and Concord, Lexington, and Fort Mifflin had already attested the skill, the bravery, and the good generalship of the colonists, but they were fighting in defense only of their rights as British subjects and not for independence. Then came the last straw, the crowning act of insult and oppression that broke the thread of allegiance at once and forever. That act was the proclamation of the King, which reached Congress in Philadelphia in January, 1776. In that paper England was called upon for troops to put down "the rebellion" in America. That was the only answer made to the loyalist demand for right and justice in the petition of 1774.

The delegates at Philadelphia saw at once that the die had been cast and it was now truly independence or an odious tyranny worse than death. It only remained for inspired lips to give voice to the thought and

it and a great deal of spirit besides. To Jefferson, the Virginian, was chiefly due the shaping into words of the very breath of freedom, that declaration of the rights of man which has justly been declared to be the "most divine utterance that has fallen from the lips of men since the Sermon on the Mount." Lee's resolution was adopted and the committee appointed on July 26th. Two days later, and the Declaration of Independence was ready for signatures. First on the paper came the name of John Hancock in such bold characters that "the King of England could read without spectacles." Then the patriots of Philadelphia rang the "Liberty Bell" in the Old State House till that "messenger of the upper air" cracked with the joy of it. Then was ushered in a new era in the world's history, a brighter, nobler, grander day, which is not yet ended, nor shall be until all mankind in all lands under the sun are in the enjoyment of equal rights, and liberty full and untrammelled is the heritage of members of the race.

PRINCESS OF WALES, ENGLAND'S NEXT QUEEN.

EDWARD ALBERT, THE NEXT PRINCE OF WALES.  
THE EIGHT-YEAR-OLD SON OF PRINCE GEORGE, AND GRANDSON OF KING EDWARD VII.

# My Strange Post-graduate Course

By G. E. Wall

AT THE last moment of the general exodus following commencement finalities, I decided to wait for the 9:20 express. I felt strangely fagged out after the year's work—or the week's play—and the soothe of a sleeping-berth for the first half of my journey flashed upon me as most inviting. I caught sight of North on a car platform, and tried to acquaint him with my sudden decision, but he was talking like a megaphone to right and left and heard no sound save his own dashings. I meant to ask him to drop in at father's on his way home—we lived in adjoining blocks in Westropolis—and say I'd be along in a few hours; but, amid whistle and clang, good-byes and yells, the train swept away without my message.

No matter! I would send a dispatch just before my start. This would anticipate any news North might have carried.

I strolled back through the college grounds. They were as voiceless as a Mesopotamian palace. Not a living thing crossed my path. Doors stood open in the various buildings, but all tools of energy had been dropped as abruptly as those of the mysterious copper-workers, who, if appearances are to be trusted, had been called away in the long ago to an imperative and eternal dinner. By the time I had traversed several empty halls and climbed two stairways that had developed since morning a sinister creak, I felt exceedingly dismal. Then, too, something—the fierce sunshine, probably—had set my head into a whirl. The room I entered—my erstwhile "den"—was dismantled save for a few permanent furnishings and two specimens of graphic art—a bust of Plato and a full-grown poster-girl. These exponents of extremes in philosophy I had willed to my successor Sheppard, with an injunction to steer his general actions midway between their divergent social views.

How stuffy the room had grown! Ah, yes. The janitor had evidently made a window-closing round, thinking, of course, that everybody had gone for the summer. I threw up a window, drew a couch close beside it, and lay down. There seemed to be no reason why I should not yield to the lassitude I had been fighting for weeks, since train-time was six hours distant. I would take an hour or so to sleep off my head-ache, after which I would send the home dispatch, call upon—well, call at Professor Sanserit's (that call had been in my mind when I resolved to stay over), and dine at Burnett's on my way to the station.

But sleep was slow in coming. My head went round as if it were set upon the axis of the earth. I tried to hold it by gazing steadily before me. I could see a lizard sunning itself on a ledge near by, a troop of boys playing ball in the meadowy distance, and a white-sanded road stretching northward. At last my eyelids wavered, whereupon the lizard turned into an eagle, the boys into a forest, the whiteness of the road into snow, through which—up and down in endless iteration—red-coats galloped jauntily, to be ever and anon victoriously surprised by resolute figures in blue and buff—and then everything faded into a blank dream.

A continuous sound aroused me—a chatter of birds in the maples near by. Clearly I had slept an unreasonable time. I started up—to fall back powerless. What had happened? I was burning up. It must be fever!

A heavy clang, followed by a sharp click, came up the stairways and knocked at my door. I understood. The janitor had closed the building for the night.

For the night! My brain reeled with a sudden thought. I remembered that I had heard the man say that he would not "go through" our hall for two weeks at least, probably not for a month—that it was well down the list, and that he had all summer in which to do refurbishing.

And no one knew where I was! Would no one know until—?

I crushed the question fiercely. I would be better by morning—able to help myself. But I must have water. It was to be had—thank Heaven!—a few feet away.

I started up resolutely—and then I seemed to fall over a precipice into blackness of darkness.

Hours after—it seemed that centuries must have passed, so far had I fallen—I climbed back to semi-consciousness. I saw the morning star mount and return, the dawn blush and bloom, the sun come up in crimson and gold, but I saw everything through a mist. I heard cock-crowing, the barking of a dog, the song of a robin, the clatter of wheels, but the sounds all seemed to belong to

"IT WAS THE POSTER-GIRL WHOM I HAD ABANDONED."—Drawn by Ralph Taylor Shultz.

another world. And coming and going through everything, a dim but blessed vision, was my mother's face.

Suddenly, hurrying along the avenue, about to pass under my window, appeared the janitor. The sight threw me into a frenzy of gladness. Despite his humble office, the man was something of a linguist. I shouted, in wild glee: "Janitor—janitoris—janitori—janitorem—janitor—janitore!" Surely such a call would attract his attention.

He marched on, whistling fiendishly.

I poured down upon his head fragments of Homer and Xenophon, I hurled after him light French idioms and heavy German verbs. I explained in forcible English that my head was a cyclone, my body a conflagration—but he held on his way as deaf, apparently, as a museum of statues.

My gibberings had probably not crossed the window-ledge.

The day wore on in a battle of furious fancies. Now a mocking figure—it was the poster-girl whom I had abandoned—led me up millions of stairways and locked me in a room with walls so thick that through them no one but Death could hear a call. And then I climbed over battlements, dropped down into a moat, swam ashore, mounted a waiting steed, and fled away into blackness. But they brought me back—the vindictive poster-girl and her medieval allies—and left me in a donjon dungeon to die of despair.

Besiegers came. I could hear the storming of the barbican, the making of a breach; I recognized Professor Sanserit's voice in the *mélée*; and then fell an awful silence.

I was in the Arctic regions, wrestling with North through a night of winter months—wrestling like forty thousand brothers against death. No sound—not so much as the springing of a blade of grass! Then, suddenly, across the white waste came an alarm—the quick, deep baying of dogs; and, in a moment, up through the inky pall of the sky, up to the zenith, with crackle and gleam, shot peaks and pillars of superb fire—and again the blackness of darkness fell upon me.

In semi-lucid intervals I planned escape. I would make a rope of the counterpane, and let myself down from the window. But the hands lying beside me were too heavy to lift.

A pigeon alighted on the window-sill, and stood preening itself and gazing intimately at me. If only I had paper and pencil (I said), and some crumbs—!

Crumbs! Merciful heavens! If I had crumbs (I interrupted myself) I would not waste them upon a bird.

The boys were playing ball again in the meadowy distance. I would hang a banner—a newspaper—a towel—on the outward wall as a signal to their sharp young eyes. But ah, my leaden hands!

I saw the boys go home—to their mothers—to bountiful dinners. And then I seemed to go home too. My mother looked at me with a pride that made me blush with guilt and glow with virtue. My father—keen, practical, truthful man that he was—examined my diploma and handed it back without a word. I preferred this polite silence to the question I knew was in his mind: "My son, do you think you know a tenth as much as the signers of this document swear you do?" The children were boisterous and delightful. And then, as we all sat down to a glorious feast, everything vanished as by wicked magic, leaving me in tenfold torture to hunger and thirst.

All estimate of time failed me. I could hear, now and then, the striking of a deep-toned clock, but I seemed to need my tongue to count the strokes, and it was too parched and thick for action.

Moonlight streamed into the room, fell upon the shoulders of Plato, made a silvery pallium for him and brought him to the foot of my couch. He looked long and deductively at me, and then spoke, in placid English:

"You may think, O young man, that I look like a stare-case, but know for a certainty that no idle curiosity moves me. I am here in the interests of the republic. You are doubtless aware that my philosophy recommends the killing off (as privately and painlessly as possible) of all members of the state who are weak or sickly. You are not physically promising, and it is not meet that you should burden society any longer."

Here he laid his hand upon a chair as if about to wield it over my skull—when flame circled before my eyes, followed by a rush of darkness.

I seemed to have been killed.

And then, through twilight air, I went floating down a soothing river, between shadowy banks, through a long aisle lighted with diamond glints from pillars and arched roof, to drive ashore like a boat.

I had reached heaven, but not happiness. A vast loneliness oppressed me. I ventured to hint of my dissatisfaction, whereupon I was seized by an invisible force and sent with cannon-ball speed down a pneumatic tube to a Tophet which proved to be the planet Mercury. I went nimbly to work computing the sun's parallax; but the heat burned up my table of logarithms and turned me into steam.

I heard thunderings and saw lightnings. I was on earth again. Rain was beating through the open window upon my face. Refreshed, I sank into a blank sleep.

After a time a persistent sound entered my ears—steps—steps—steps! They seemed to be coming through miles and years—but they were coming. Steps—steps—steps! I blessed them in half-consciousness. But they were so long in coming I could not wait for them, and I lapsed away again to find myself the sole passenger on a railway train plunging through space utterly black save for the glare from a row of blood-red swollen moons, which, a few feet apart, and a little above the horizon, hung against the northern sky.

I awoke from insane dreams to feel cooling bandages about my head, and to see, flitting around me, dim figures. A commanding and vaguely familiar form stood at the foot of my bed. I studied it in weak trepidation to discover, after a time, that it was not Plato, but a man quite as philosophic and far more humane—our president. And kneeling beside me, clinging to my hand as if to hold me back, love and anguish in her eyes, was my blessed mother! In my transport, I tried to shout her name. I must have framed it—in a whisper, at least—for I heard a quick, sobbing cry of thanksgiving, and felt hot tears on my hand.

At this point a figure, which seemed to be preparing me something to eat at a table near by, darted forward, dropped an exhilarating spoonful of something down my throat, and said, firmly:

"He'll pull through, madam. All he needs now is nourishment and nursing. Go and lie down for an hour's rest. The next room has been made ready for you. Go—it's a positive command!"

Here a blue-striped nymph laid my head across a fresh curve of the Arctic Circle, and somewhere in the delicious

# Breezy Books for Vacation Time

"A WOMAN TENDERFOOT," "A JOURNEY TO NATURE," AND "THE MAKING OF A COUNTRY HOME."

IN A RECENT article on this page in regard to the best books for summer reading, it was remarked that the ideal literature for this purpose was that of a light, joyous, and entertaining sort, imposing no burdensome tax upon the sympathies nor the intellectual faculties, and leaving only a pleasant flavor behind. The three volumes here considered seem to meet these ideal requirements most completely. All three are written in a joyous vein, are entertaining in a rare degree, and full of the spirit of the woods and fields. To read them is to be brought face to face with Nature in her happiest and most attractive moods and to have her charms set forth and her mysteries interpreted by those who have studied them long and wisely and who write *con amore*. All three books, including that of Mrs. Thompson-Seton, have all the charm of the best fiction, while at the same time they depict life in its natural forms, colors, and habitudes.

**A WOMAN TENDERFOOT.**—In this volume Mrs. Thompson-Seton, following literally in the footsteps of her distinguished husband, the artist-author of "The Lives of the Hunted" and other popular books—gives us a view of life on the plains, ranches, and mountain regions of the far West as they appear through a woman's eyes—a woman, too, who has eyes to see, a heart to feel, and wit to describe all that is good and beautiful in the world around her. Thus we are brought into close and sympathetic relations with the wild creatures of the forest, from the graceful antelope to the lordly elk, learn how it feels to be lost in the mountains, to ascend a mountain peak above the clouds amid stinging frosts and blinding snows, and how to ride a bucking horse and get run away with. We are also treated to a chapter of useful and practical advice for women who go hunting with their husbands, with all needful information about camps and camping outfits suitable for women, with numerous important details which would occur to none but a woman. We observe, here, for example, that Mrs. Thompson-Seton advises her sisters to ride astride, because this method conduces to the comfort of the rider and also to that of the horse. She quotes the saying of an old mountaineer who refuses to allow any horses he prizes to be saddled with those "gold-darned women fripperies." Short skirts are also advised, aluminum plates made double for hot water, eiderdown sleeping-bags for mountain camping, and a brown linen case for toilet necessities. The writer passes "over the guns" with the bare mention that she uses "a 30.30 Winchester smokeless."

But for the most part, the volume is made up of lively descriptions of the adventures and experiences of several seasons spent among the deer, the coyotes, the wolves, and the bears of the Rockies. In three years of such wanderings "I have lived," says the writer, "on jerked beef and alkali water and bathed in dark-eyed pools, nestling among vast pines, where none but the four-footed had been before. I have been sung asleep a hundred times by the coyotes' evening lullaby, have felt the spell of their wild nightly cry, long and mourning, coming just as the darkness has fully come, lasting but a few seconds, and then heard no more till the night gives place to the fresh street of dawn. I have pored in the morning over the big, round footprints of a mountain lion, where he had sneaked, in hours of darkness, past my saddle-pillowed head. I have hunted much, and killed a little, the wary, the beautiful, the fleet-footed big game. I have driven a four-in-hand over corduroy roads and ridden horseback over the vast pathless wilds of the continent's backbone. I have learned to know and feel some, at least, of the secrets of the wild ones. In short, though I am still a woman and may be tender, I am a woman tenderfoot no longer."

The volume is beautifully bound, printed on wide-margined paper, and profusely and exquisitely illustrated with marginal drawings and full-page engravings, after the manner which has given such an irresistible charm to the books of Mr. Ernest Thompson-Seton himself.

**J. P. MOWBRAY'S BOOKS.**—If what some writer has aptly but somewhat awkwardly termed the "back to nature tendencies" of the day were not already fairly started on their way before Mr. J. P. Mowbray's books appeared, they would certainly have been developed and set in lively motion by these delightful and winsome sketches. They combine the best features of nature studies with nature stories in such proportions that the combination becomes irresistible. Humor of the rarest and most exquisite kind, together with true sympathy and feeling and a style characterized by grace, simplicity, and ease, make the writings of Mr. Mowbray entertaining to a degree rarely known in modern literature.

The first of the two volumes, "A Journey to Nature," has to do with the life of a New York business man who, being driven into the country perforce because of illness, "comes to his own," so to speak, and drawing near to Nature's heart for the first time learns for himself what a loving and tender mother she is, and how wondrously beautiful is the work of her hands. These revelations have added charm from being woven together with a thread of delicate romance, and around the actual lives and experiences of real men and women. The author touches with wonderful freshness and charm upon the old-time delights of country living, from the time the

daffodils bloom in the spring to the nutting scenes of Indian summer. Here, for instance, is a passage picked up at random in the chapter on Haying Time:

The absolute unstrungness of shelling peas was new to me. I should not hesitate now, as an expert, to say to any master mind wearied with the problem of existence to try—shelling peas. To be relieved from the duty of circumventing Smith, and killing Brown, and saving your scalp from Jones, and saying smart things to madam, and being continually on the lookout that somebody does not hit you in the back of the neck unawares, gives a certain voluptuous spontaneity to existence. Freedom to go barefoot if I feel like it, and eat with my knife if the impulse took me. Safe from that demonic cry of "Ah, there!" never startled by a "halloo." All the social handbags gone and with them most of the lies which they engender.

Mr. Mowbray's second book, "The Making of a Country Home," has all the indefinable charm of the first, so far as the outlook on nature is concerned, the pervading humor and the sympathetic touch, while it is more of a story than the other, and more closely woven. It has to do chiefly with the fortunes and experiences of John Dennison and his wife Lucy, who, having come somewhat suddenly to the conviction that "canned life" in a city flat is not the happiest mode of existence, move into the country not too far away from town and there work out the problem of how to get the maximum amount of sweetness and light out of life at a minimum of expense and worry in a manner as satisfactory to themselves and to the baby as it must surely be to any one who reads how it was done. Although the story is written with an obvious purpose, it is so engaging in its quality, so joyous, so witty and full of human interest, that one is impelled to read it through without thinking of the purpose, good and true as that is.

Both of these volumes are handsomely printed and decorated with the most exquisite taste. All three of the books herewith described are published by Doubleday, Page & Co., New York.

## An Extraordinary Offer of Choice Reading.

THE regular price for the three books above named and LESLIE'S WEEKLY for three months is as follows:

A Woman Tenderfoot .....	\$2.50
The Making of a Country Home.....	1.50
A Journey to Nature.....	1.50
LESLIE'S WEEKLY (3 months).....	1.00
Total.....	\$6.00

But we offer all three books and LESLIE'S WEEKLY in addition for three months for ONLY \$4.00, thus making it possible to secure these three valuable and popular works and the WEEKLY besides, for three months, for less than the regular price of the books alone. Any one who desires to avail himself of this extraordinary offer can do so simply by cutting out or copying in writing the following coupon and mailing it with the sum mentioned (\$4.00) to the publishers of LESLIE'S WEEKLY.

### Leslie's Summer Library

No. 4

Publishers Leslie's Weekly,  
110 Fifth Avenue, New York.

Dear Sirs:—

Inclosed find \$4. for which please send me the three books, "A Woman Tenderfoot," "A Journey to Nature," and "The Making of a Country Home," and also Leslie's Weekly for three months.

Yours truly,

Leslie's Weekly continues its offer, published last week, by which a three months' subscription to the paper with a copy of either "Old Bowen's Legacy," by Edwin A. Dix, or "Belshazzar," by William Stearns Davis, may be obtained for \$1.50. The retail price of these books is \$1.50 and the cost of three months' subscription to LESLIE'S is \$1.00, a total of \$2.50, if they are taken separately.

**MR. ELLIOTT FLOWER** probably did not write his "Policeman Flynn" (The Century Company) from purely philanthropic motives, but we shall number him among the true-blue philanthropists for all that; for, if he who makes two blades of grass to grow where before there was one may be justly accounted a benefactor of the race, what honors and benedictions should we not shower upon the head of him who opens up along the dry and dusty way of life a real fountain of laughter whereat we may all find refreshment of spirit and forgetfulness of care and sorrow. Such a source of joy have we found in Mr. Flower's stories of the haps and mishaps, the wonderful adventures and strategical achievements of the redoubtable and irrepressible Flynn, who is a philosopher, as well as a guardian of the peace, whose cheery and un-

failing optimism and unerring sense of humor can transform a scrimmage with a billy-goat or a set-to with a gang of street rowdies into an occasion for joy rather than for tears or profanity. A volume of pure, genuine, and undiluted fun is as rare as true poetry, and Mr. Flower's book has come just in time to save us from believing that we were to have no more of that kind.

SINCE THE announcement of Robert Bridges's book of poems, "Bramble Brae" (Scribner), there have been many inquiries as to the exact meaning of the title and its applicability to a collection of poems. Now "brae" is Scotch for hillside, in particular an open grassy slope. A "bramble brae" is, therefore, a hill slope overgrown with brambles. The bramble braes of Scotland have every sort of growth upon them—grasses, brambles, heather, vines, wild flowers of many sorts. So it is that the title is typical of "Droch's" collection, which is exceedingly varied in character, comprising poems of depth, power, and gravity, as well as the airiest of poetic conceptions done with the lightest touch. There are verses to think over, verses to smile over, and all sorts between.

A FEW NEW and good "bulls" of the most famous of all Irish bull-makers, Sir Boyle Roche, appear in a recent volume, "Studies in Irish History," published by Longmans, Green & Co. Deprecating in a parliamentary debate a charge of inequality in the commercial relations between Great Britain and Ireland, Sir Boyle observed that "he is an enemy to both kingdoms who wishes to diminish the brotherly affection of the two sister countries." The petition of the citizens of Belfast in favor of the Roman Catholics he described as "an airy fabric based upon a sandy foundation." In the discussions on the Union he observed that, "whatever clamor might be raised by interested men against a legislative union, he would venture to prophesy that the country would arrive at that state that when the Day of Judgment would come, the people of Ireland would call out and implore for a Union." His readiness to give up "not only a part, but, if necessary, even the whole of our constitution to preserve the remainder" is worthy of the most advanced disciples of a Tory Democracy. To Junius he referred as "an anonymous writer named Junius." In deprecating the excesses of the French Revolution he conjured up a gruesome picture of the unbridled fury of the mob. "Here, perhaps, sir, the murderous 'marshal law' men (Marseillais) would break in, cut us to mince-meat, and throw our bleeding heads on that table to stare us in the face."

THE BOOK on our great Civil War which thousands have been hoping and waiting for these many years has at last appeared. It bears the title "The Memorial War Book," and is based entirely on the historical records and personal narratives of the men who served in the great conflict, and it therefore has a fidelity to life, a vividness of coloring, and a thrilling and picturesque element not found in any other narrative of the war. The author is none other than Major George F. Williams, whose "Lights and Shadows of Army Life" and "Bullet and Shell" are generally credited with being among the most remarkable and fascinating books of army life ever written. Major Williams is specially qualified for this work by his long and intimate experience in actual warfare, not only during the Rebellion, but in the Franco-Mexican war and other conflicts in various parts of the globe. In addition to the charm of the narrative itself, "The Memorial War Book" has the unique merit of giving for the first time a complete pictorial representation of the scenes, battles, and incidents of the Civil War, including portraits of the leaders and commanders of both the Federal and Confederate armies and navies, all these being presented in a series of nearly two thousand magnificent engravings, reproduced largely from photographs taken by the United States government photographers, M. B. Brady and Alexander Gardner, being the only original photographs taken during the war of the Rebellion. The work is, in brief, a series of personal reminiscences of stirring adventures and life-like descriptions of campaigns and battles, as the soldier saw them, rather than a history, with sufficient memoranda of the events attending the progress of the struggle to give the reader an understanding of their relative importance. All technicalities are avoided, and the heroic deeds of Federal and Confederate soldiers described as the men themselves would describe them. The work is an education in itself, so far as the record of the greatest and most momentous conflict of the nineteenth century is concerned. The volume is issued by the Judge Company, 110 Fifth Avenue, New York, the price of the work, including a year's subscription to either *Judge* or LESLIE'S WEEKLY, being five dollars.

### Making New York City Beautiful.

IT IS gratifying to note that for the first time in its history a systematic, organized, and intelligent effort is to be made, with municipal co-operation, to beautify the city of New York. That the work is to be done in accordance with true artistic principles and along lines commensurate with the resources, as well as the needs, of the metropolis, is assured from the fact that it will be carried on under the direction of the Fine Arts Federation, a body made up of leading American artists, architects, and designers. The movement thus begun should have the hearty encouragement of every citizen of the metropolis who has the highest good of the community at heart.

It is Edmund Burke who says somewhere that in order "to make us love our country, our country ought to be lovely." The saying is equally true applied to a municipality. Nothing would be more conducive to a larger growth of civic pride in New York, or any other city, than efforts to render the surroundings of the people not only more comfortable and healthful, but more beautiful. Genuine love for the city and loyalty to pure and honest government are certain to be of slow development, if they appear at all, in a tenement quarter wholly given over to bare brick walls, hot pavements, squalid alleys, and weary, monotonous streets. The influence that a bit of greenery and a little space hestrewn with flowers may have upon the people of such a quarter has been shown in the changed character of the tenement homes fronting on what is now known as Mulberry Bend Park, in lower New York, only a few years ago the centre of one of the dirtiest and most forlorn neighborhoods in the city. Since the trees, the birds, and the flowers came into the square at the Bend, nearly every tenement facing that way has been painted anew, repaired and otherwise made more cheery and attractive, and more significant still, pretty little flower gardens have appeared in many of the windows overlooking the square, as if in emulation of the new beauty and brightness which appear outside.

For those who would consider this matter, as all others, from the viewpoint of material advantage only, it may be urged with truth that the adornment of a city with parks, statues, art galleries, noble specimens of architecture and other things which appeal to the aesthetic sense, in the end may add largely to a city's wealth and material prosperity. How this may be was shown by a writer in *The World's Work* some months ago, who declared that the beauty which Paris had taken to itself by such adornments as those we have mentioned was worth to the Parisians about \$200,000,000 a year. Paris enters for the world, it was said, and its main stock in trade is its beauty, which it keeps on increasing, and the treasures of its works of art. Poor impoverished Italy, where would she be to-day if it were not for the beauty of her cities, much of it created four or five hundred years ago, on which now she is gathering a dividend of \$90,000,000 annually?

### A Dull Day in New York.

I'VE just got back from visitin' my youngest darter Nell—

She's married, an' been livin' in New York fer quite a spell.

Her husband has an office in a sixteen-story block, Which seems a poor location fer a feller handlin' stock!

He took me round with him a bit, an' seemin'ly there was

A million people on the streets, which puzzled me because

I thought I'd find things quiet-like an' peaceful in a way

For there ain't a thing a-doin' in the city, so they say.

THE trolley-cars whizzed by me till I almos' lost my head,

The noise of bells an' whistles 'peared enough t' raise the dead,

A dozen times at crossin's I was elbowed in the crush, Fer ev'ryone a-walkin' seemed as though was in a rush.

A big blue-coated feller didn't do a thing, I swan!

But stand an' wave his club an' keep the crowd a-movin' on—

I dodged around five minutes 'tween a trolley an' a dray,

Yet there ain't a thing a-doin' in the city, so they say.

I SOMEHOW got the idee things would quiet down at dark,

But folks rushed helter-skelter to a concert in the park;

While off t' quiet suburbs busy men began t' scoot,

An' a dozen dramas opened with an operay to boot.

The river wharfs were crowded an' the ferrys loaded down,

The streets were jammed with people comin', goin' out o' town,

A bigger crowd swept by me than in Jonesville circus-day,

Yet there ain't a thing a-doin' in the city, so they say!

ROY FARRELL GREENE.

Within the past few years an extensive movement has been on foot in Belgium, having for its aim the decoration of Belgian cities according to the highest forms of modern art, and the results already achieved have attracted the attention of the world. The work is carried on under the direction of a national society, having as its declared objects the clothing in an artistic form of all that progress has made useful in public life and the restoration to art of its one-time social mission "by applying it to the modern idea in all the departments controlled by the public authorities." In this line the society proposes that street fountains, electric-light poles, street signs, flag-staffs and newspaper stands shall be constructed after artistic models, with the view of adding to the beauty of the streets and not to their ugliness. To stimulate private enterprise in the same direction, prizes are offered for the most artistic house-fronts, garden-walls and other features of private property.

From Belgium the movement is spreading over Europe, and societies similar to the parent organization in Brussels have been formed in Paris and several Italian cities to foster and develop municipal art. How our own city of Washington has been improved and embellished in recent years under the direction of a committee appointed by Congress, has been described in recent papers in *The Century*. By their efforts our Federal capital has already become one of the loveliest and most attractive cities in the world.

But the natural surroundings of Brussels, Paris, and Washington are not so beautiful as those of New York, and it only needs a modicum of expense and effort, put forth intelligently and systematically, to draw this beauty into every department of the city's life. Fortunately the metropolis now has a body of municipal officers who will be thoroughly appreciative and quickly responsive to efforts of this kind.

### Fast Time on the Pacific Run.

THE REMARKABLE record of forty-six miles in forty minutes recently made by the fast mail between Fremont and Omaha on the Union Pacific road is a striking testimony, in its way, of the progressive and far-sighted policy which has characterized the management of the Union Pacific system in recent years. At an expenditure of something like \$20,000,000 the company has straightened out many curves and largely reduced the distance and the grades. When first built, these Pacific roads could stand only very easy runs. By a wise and economical expenditure they are now able to make as good time as the fastest of the old lines in the East.

# In the World of Sports

MRS. E. A. MANICE,  
Who defeated Miss Hecker, golf champion.

member of the Baltusrol Golf Club, of Short Hills, N. J., though in the summer season she is usually identified with the play at Lenox and Pittsfield. In the national golf championship last year she was defeated by Miss Hecker in the semi-final round—a situation that was exactly reversed in the Metropolitan tournament a week ago. As Miss Hecker is the present national champion the victory has encouraged Mrs. Manice's friends to believe that it is merely a stepping-stone to higher honors. In the final round Mrs. Manice defeated Miss Helen Hernandez, a member of the Essex County Club. Mrs. Manice's husband takes great interest in her golf contests. In the game in which she defeated Miss Hecker Mr. Manice caddied for his wife, coaching and encouraging her.

**UNSATISFACTORY ROWING SITUATION.**—Now that the great rowing contests of the season have been decided the situation is as complicated as it usually is at this time of the year. So long as Yale and Harvard have their little sculling matinee all by themselves at New London the present conditions will exist. Why should not the victors at New London and Poughkeepsie come together and settle the question of supremacy on the water? I have talked with some of the leading college rowing authorities regarding the subject, and while all admit that there is no real reason why the respective winners should not meet, none of them shows a disposition to make any suggestion which might in the end bring the victorious teams together. Until this is done, no matter which crew wins at New London the great body of American sportsmen will give the preference to the hardy crew of Cornell, which is always ready to meet all comers. While Cornell has not played as important a part in other sports as she has in aquatic contests, there is a general impression that the Ithacans promise to be more prominent in all branches of sport than heretofore. The Cornell lads have been playing good football for several years and promise to improve in this robust game. Nobody who knows anything about the methods of the Cornell coach, Courtney, will try for an instant to take from the veteran rowing adviser any of the laurels he has won so honestly. But all of Courtney's cleverness and foresight could not turn out a winning crew without the muscle and bone and the enthusiasm over rowing which is always found in a Cornell crew.

**THE GREAT CHICAGO DERBY.**—After the failure of the plans of W. C. Whitney in England, where he has spent so much money trying to win English racing classics with American-bred animals, a clever man would have been surprised to see such astute horsemen as A. Featherstone, Clarence H. Mackay, John E. Madden, and others take the course they did recently in their effort to capture the Chicago racing event, the American Derby. Heno, Pentecost, and Arsenal were hustled West and were made favorites for the Derby. Thousands of dollars were wagered with the bookmakers on their chances.

MRS. E. A. MANICE, who won the championship of the Women's Metropolitan Golf Association last week at the Essex County Country Club, of Orange, defeating Miss Hecker, the champion, is a player of whom great things are expected. Mrs. Manice is a

Not one of the Eastern flyers finished in the money. A thoroughbred is a pretty high-strung thing and he must become accustomed to his surroundings like a human being. Climatic changes, water, and a thousand other things have their effect upon him. Traveling professional ball players illustrate this point better, possibly, than anything else will do. Start a team on a long trip away from home, say an Eastern team on a three weeks' trip through the West, or vice versa, and then watch the result of the games during the first and second half of that trip. A team will always play the better baseball in the second half. Then why should the great horsemen of the country demand of their animals more than trained human athletes are expected to accomplish? The track at Chicago may have had something to do with the downfall of the Eastern cracks, but the worries of quick transportation and climatic changes had more to do with it. The Western horsemen have been cleverer in the past. When they send their thoroughbreds East it is generally after the season is well advanced and then they generally go to Saratoga. The animals become acclimated in this way at the Springs, and when they are seen later on the metropolitan tracks about New York they are in condition to do themselves and their sires credit. The result of the American Derby does not necessarily indicate that the Western thoroughbreds are faster than those in the East. The contrary is probably true, for purses in the East are practically double what they are in the West.

**YALE'S WORTHY BASEBALL RECORD.**—The splendid

so essential in a winning baseball team. It is the same with professionals, the New York team, for instance. Team work in that club has been an unknown quantity since "Johnny" Ward gave up the reins of management several years ago. The policy of the club ever since has been to applaud individual effort. The result is obvious. Professional players get a salary for their work, and as soon as they see that individual efforts are counted and the collective success of the team forgotten, then they try to play individual baseball, and no team ever did or ever will win a pennant when these conditions exist. So Yale owes her success in baseball entirely to team work and Princeton her unexpected failure to lack of it.

**CENTURY RIDING CRAZE.**—The bicycle century riding craze has broken out afresh this year and distance "plugging" promises to be more popular, at least, than most people expected. In a recent rain storm on Long Island—and the storm lasted all day—over two hundred bicyclists finished the century. Two of them were women. I saw Captain Stauback, who was in charge of the run, on the following day, and he said that at least forty chains were broken on the run and that at least two dozen tires were punctured. He admitted that every one who finished suffered for it, accounted for by the fact that they started out with the idea of winning a century medal and that they would not stop so long as they had the strength and power to go on. Some of the participants traveled several hundred miles on railroad trains to take part in the century. Most of these medals, so eagerly sought after, cost anything from twenty to thirty cents each. One man after finishing the century crossed over to New York and then took the ferry to Jersey City, where he expected to take a train for his home. He was a pitiful sight, drenched to the skin, with face covered and hair matted with mud, sand, and little pieces of macadam. He put his wheel in the baggage car and went back into one of the coaches ready to sink down from exhaustion into one of the seats. Just as his tired muscles were about to relax the conductor approached him and, laying his hand on his shoulders, said: "Here, you will have to go into the baggage car and stand up. I can't afford to have the company's property ruined."

**YACHTING NEWS.**—While there will be no international yachting features this year, outside of the contests for the Seawanhaka Challenge Cup with the "Canucks," a big season is anticipated by the yachting clubs in the East. Already there is great activity in yachting circles. The members of the New York Yacht Club look forward to the most interesting season in years outside of the cup years. The club members will put several new boats in commission and a big attendance is expected at the annual cruise in August. The daily run from port to port is sure to be interesting. The race for the Astor Cup of Newport will bring out the fastest boats in this country, this contest being one of the features of the season. The yachts will go around the Cape to Marblehead this year for the first time in about ten years to race for the prizes offered by the Eastern Yacht Club. The race for the Seawanhaka Challenge Cup with the Canadians will take place in August at Lake St. Louis, near Montreal. The "Canucks" have held the cup for four years.

G. E. S.

THE "ELECTRA," PROMINENT AMONG THIS YEAR'S RACING YACHTS.—OWNED BY THEODORE HAVEMETER, JR.—W. J. Tubbs, Bristol, R. I.

victory of the baseball team of Old Eli was the surprise of the season. Early in the year there was practically no enthusiasm at all at New Haven and when the squad started South for preliminary practice such a far-seeing man as "Mike" Murphy, the famous trainer, shook his head when asked about the chances of the team. Murphy looked at Captain Guernsey, the only veteran on the nine, and said: "If we had a few more like him we might have a chance." Even the coaches at Yale had no hope for the team, and when the first game was played with Princeton and won by Yale, there was not a Yale dollar in sight to back the Blue. Princeton's victory at Princeton was anticipated, but when the teams went to New York to fight out the deciding battle on neutral grounds, the Yale men still failed to see a chance for their team, with the result that Princeton money went begging at as large odds as 3 to 1. There is no doubt that the Princeton team was superior individually to Yale's youngsters. It is also a fact that the Tigers failed to do team work,

## Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jaeger," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

SOME ONE asks me, Is it possible for prices of railroad shares ever to go back to the low level when Wabash, Union Pacific, Northern Pacific, Texas Pacific, Atchafalpa, Erie, and Reading, not to mention many others, were, as far as the common shares were concerned, hardly worth quoting? It was not so very long ago that this abnormally low plane of prices was established, and, since the tremendous rise in the market, we have become used to hearing people say that the country is too prosperous ever to permit another such recession. I do not agree with this statement. I see abundant signs of trouble on the political horizon. The reaction against the trusts, coupled with what appears to be a rising sentiment in favor of a lower tariff, is stimulating the same unrestful spirit which, in the past, has led to the granger, the greenback, the populist, and the anti-monopoly movements. I venture the prediction that the leading issues in the presidential campaign of 1904 will be the trusts and the tariff. They will be associated as a single issue, and protection will be charged with responsibility for the trusts. Instead of the full dinner pail as the Republican cry, we shall have the empty dinner pail as the Democratic campaign cry.

The hostile spirit to the railroads and all other great corporations, now being shown by the legislatures in many Southern and Western States, the declaration of the platforms of both parties, especially of the Democratic party, against the trusts and the tariff, all show the tendency of the times. If the alignment is clear and strong, as it may possibly be when the national conventions of the two great parties are held, and if, on one side, we find a decisive, unequivocal declaration against trusts and "tariff protected combinations," as they are erroneously called, and, on the other side, a half-hearted, indecisive, and equivocal declaration against the trusts, and a firm and decisive adherence to a high protective tariff, we shall have such a fierce presidential contest as we have not had since the days of Samuel J. Tilden.

It is not my purpose to discuss politics, excepting so far as political conditions may affect the financial situation. The success of McKinley, at the last election, meant everything to Wall Street. The overthrow of the Republican party would not be a minor event. An attack all along the line against the trusts and the railroads, an upsetting of our financial policy, a general readjustment of the tariff on the basis of a reduction of the tax, would all seriously unsettle business conditions and invite a long period of depression not unlike that of 1893. It is for this reason that I have advised those who have satisfactory profits in the stock market to sell and put away the cash in some safe depository and await new opportunities to buy the securities back on a lower level. The man who has the sagacity and foresight to sell at the proper time is a greater man, in my judgment, than the man who knows the proper time to buy. But he who has the gift to know when to buy and when to sell deserves to be numbered with the few real "Napoleons of finance."

"C." Meadville, Penn.: The Texas oil fields are not doing as well, and neither of the companies to which you refer commends itself to me.

"Flatbush," N. Y.: The Olympic Mining Company is capitalized at \$50,000,000, and has a number of claims in Alaska, where some development work has been done. Its enormous capital does not commend the stock to me.

"H." Portland, Me.: (1) Of the list you give at this time, I think Reading, from the speculative standpoint, will give you the best results. (2) The revelation in the Steel Trust suit, that J. P. Morgan & Co. purchased \$80,000,000 of preferred Steel at 94, in anticipation of the bond issue, indicates that the insiders will do their best to hold up and increase the prices of the steel shares. I would not advise you to sacrifice your holdings.

"Subscriber," Legation, Ind.: The president of the Barlow Company says the North Star Mine "is the name given to the tunnel" on one of its properties, and adds that by fall the company expects to have a 100-ton concentration mill in operation. The literature he sends me, however, describes the North Star as a mine, but the description indicates that it is a prospect rather than a developed property. It looks highly speculative.

"A." Harrisburg: Your inquiries are perfectly natural, but they might be applied to some other corporations which have successfully floated. Many believe that the next great industrial revival in this country must occur in our shipyards,

and that ultimately this will be encouraged by the passage of a ship subsidy bill. In that event the stock of the Fire River Ship and Engine Company ought to have increased value.

"Carolina," Columbia, S. C.: I do not advise the sacrifice of New York, Ontario and Western shares. The settlement of the coal strike would no doubt strengthen the anthracite stocks. The coal roads are in a strong combination and, unless there is a general smash in the market, coalers will be held up as vigorously as anything on the list. As to the outcome of the strike, that must be a matter of opinion. Usually such strikes end, after a little bloodshed, in the defeat of the strikers.

"H." Holyoke, Mass.: (1) Keep your money in a savings bank and, when a substantial break comes, buy any first-class dividend-payer. Pennsylvania is always good. (2) The Joseph Ladue Mining Company simply wants good management to make the property worth something. The representatives of the stockholders, now acting on the board of directors, are trying very hard to bring this about. Whether they will succeed or not remains to be seen. (3) Purely a speculation. (4) Have nothing to do with any of the ten-dollar schemes, unless you want to gamble with every chance against you. (5) If you insist on an immediate investment, you will be safe in purchasing the Kansas City Southern 3 per cent. bonds, now selling around 70.

"S." Chicago, O.: Four dollars received. You are on my preferred list for one year. (1) The concern you mention has been in more or less trouble. The newspapers have had a number of references to the matter. (2) I do not regard United States Steel common as an investment. It will probably share the fate some day of American Ice common, which, for years, paid 4 per cent. per annum, the same as Steel common, and which was advanced to nearly \$50 a share on these payments. United States Steel may be handled by more honest and competent men, but they are in business not for their health, but for their pockets, all the same. (3) At present writing, it would be well to keep out of the market. On reactions, you can buy Wabash Debenture Rs, Texas Pacific, and Reading, for a turn. (4) Announcement not yet made.

"S." Buffalo, N. Y.: I thoroughly agree with you that the managers of the American Ice Company deserve the reputation of honest men for making misleading statements to the public as well as to their friends. Not two weeks ago, one of the most prominent organizers of the concern assured me that the July dividend on the preferred would be paid. The directors now have virtually passed it. The only commendable thing about their explanation is the statement that they deem it wise to accumulate a surplus, so that bills may be discounted and the company put in easy financial condition before the resumption of dividends. With a hot summer, I have no doubt the dividends on the preferred would be more than earned. As they are cumulative, they will have to be paid if earned, unless more underhanded work is attempted. It would seem about time for the stockholders to get together and demand their rights from this arrogant and impudent concern.

Continued on page 46.

THERE is as wide a difference between my proposition of the Yuma Consolidated Mine and Milling Co. and the average proposition of an advertised mine as between daylight and darkness. The Yuma pays 10 per cent. now—in all human probability will never pay less—and I believe will pay twice as per cent. in twelve months. I would like to tell you the whole story by mail. CHARLES C. WOODWORTH, 69 Wall Street, New York.

## The Clock That Keeps Wound

THERE are ten clock factories in the United States. Each year they make 10,000,000 of the old, time-worn, unreliable, ever-stopping, spring-driven, key-wound, fast or slow running clocks, and millions of profit in making them. These clocks are one hundred years behind time. It costs little to make these high-priced clocks, and as the makers had a monopoly they reaped little for public satisfaction.

But things are different now. The Clock Without the Key—the clock that needs no winding—the clock that is right, goes right, and stays right—and the price is right—was gradually perfected until it was a complete time-balancing success, and at once gained public approval.

This clock wonder is appropriately called the

### "KEYLESS CLOCK"

and is made only by

### The United States Clock Company of New York

It is protected by the strongest kind of patents in the United States and Europe. It goes for one whole year without attention and it keeps time—the best of time. It's a beautiful clock—a novel clock—a safe clock—an economical clock.

The "KEYLESS CLOCK" is made for public buildings, business purposes, home use. For anyone, everywhere, for everywhere and anywhere.

The four manufacturing departments are in Crown Street and Beecroft Street, New York. The general offices and exhibition rooms are at 46 and 48 Broome Street. Come see the clock.

The "KEYLESS CLOCK" is not sold at clock stores, but only at the offices of THE UNITED STATES CLOCK COMPANY, which are being established everywhere.

Good, reliable men, with limited capital, can secure territorial rights to represent the greatest of money makers. If you know a good man, tell him you know of a good thing; come and see the wonder clock or send for prospectus and catalogue.

"Keyless Clock" SHARES are now \$7.50 each

Par value \$10.00, full paid and non-assessable.

The stock of the "KEYLESS CLOCK" Company sells as rapidly as the clock. If you want an investment that is absolutely safe, steadily profitable, sure to increase in value, send your subscription. Sell Telephone stock went from nothing to \$4,000. UNITED STATES CLOCK stock will be a better investment in the very near future.

More orders at 10 per cent. profit are now on hand than the four departments can turn out. REMEMBER: This is not a scheme or project, but an established, profitably running company, with factories in full operation, goods in great and growing demand, no debts, mortgages, or other obligations, and with a big deposit and surplus in two National banks in New York.

Don't put off until to-morrow what you should do to-day—WRITE, OR CALL. Address  
A. E. Siegel, Secretary, The United States Electric Clock Company  
407 Broome Street, New York

## IMMENSE AMALGAMATION

TWENTY COPPER, GOLD AND SILVER  
MINES CONSOLIDATED UNDER THE  
MANAGEMENT OF THE

## Globe-Boston Copper Mining Company

This Company, composed of the leading business men of New York, Chicago, and Leavenworth, Kansas, after years of hard work, was enabled to complete the consolidation which gives it the ownership and control of this vast property, located in the very heart of the Globe-Arizona mineral belt. Every one of these twenty mines contains from one to three fissure veins from which large quantities of rich ore have been shipped. The Company has spent a great deal of money on the property and has brought it to a state where large profits are merely a matter of a reasonable length of time. The ore bodies are rapidly being opened up at a great depth and the Company is preparing to erect smelters for the treatment of its ores.

Absolutely the best opportunity ever offered the public is now presented in the Stock of this Company, 50,000 shares of which are offered for public subscription at 40c. per share. The right is reserved of allotment should this amount be over-subscribed.

# Life-insurance Suggestions.

I SPOKE last week of the social advantages which the fraternal orders give and that it was perhaps their most attractive feature. The fact that many of these orders have been compelled to go out of existence because of failure of their insurance system, or the lack of system, has been an important factor in educating the people regarding the correct principles of life insurance. I have received hundreds of letters from those who have regretted their membership in assessment insurance bodies and who, after their expensive experience, turned with hope and satisfaction to the old-line companies for permanent, secure insurance. The misfortune of the situation is that many members of fraternal associations fail to discover the inequality and inexpediency of the assessment plan until it is too late in life for them to obtain reasonable insurance on the safe, old-line plan. The money spent for assessment insurance has therefore been actually wasted, whenever a society has gone to the wall. If it had been spent for life insurance in an old-line company, it would have had a constantly increasing value, from year to year. That is one of the chief attractions of the well-established old-line system. A policy has a value which grows with age. A membership in an assessment association becomes a heavier burden as time rolls on. As a well-known insurance expert says: "Insurance is about the last thing that a man should trifle with."

"B." Keenansville: I do not believe in either the plan or the strength of the fraternal association to which you allude. You cannot afford to speculate in life insurance.

"P." Salem, Mass.: You are right in your conclusions, but you should bear in mind that if you have any dependents they will get the benefit of the face of the policy in case of your death.

"F." Prescott, Ariz.: The state insurance department has made a favorable report on the condition of the company, and, in view of the length of time your policy has run, possibly nothing is left but to continue it. Everything depends upon the insurable condition of the policy-holder and his expectation of life.

# Keyless Clocks to the Front Again.

LARGER REVENUES FOR THE U. S. ELECTRIC CLOCK COMPANY.

The danger in almost every walk of life caused by the inaccuracy of the key-wound, spring-driven clock, was the cause that the Western Union Telegraph Company, about twenty years ago, introduced and popularized an electric-controlled clock.

These clocks are regulated from a central office by a direct wire connection once each twenty-four hours. The peculiar mechanism of these clocks does not permit of accurate running, and it is reported that some of them vary as much as three to five minutes per day. Any one can take note of this by watching one of these electric clocks at noon time, when it will be apparent that as the hands approach the twelve-o'clock time, the minute-hand will, at the exact moment of high noon, make a jump to the twelve-o'clock point. And then regulated as the clock is to the exact minute of noon-day, the running will continue for another day.

But to every sensible and thinking person this method must at once appear simply as a makeshift. Instead of regulating and correcting the error each day, it would be better to operate a clock that is as nearly correct as human ingenuity can make it.

The advantage of the Keyless Clock is that it has no spring to go wrong. It requires no winding from year's beginning to year's end. Contraction and expansion of metal through changes of temperature do not affect the running of this clock.

The Keyless Clock does not need a system of wiring or connection with a central station to keep it going and to set it right. Thus this clock can be placed anywhere and everywhere.

The United States Electric Clock Company, No. 407 Broome Street, New York, the proprietor and manufacturers of this wonderful piece of mechanism—exceedingly simple, but wonderfully effective—intend to compete with the service of the electric-wire regulated clock by issuing the Keyless Clock for the same purpose and in similar places. Their charge will be about one-half that which is now charged by the telegraph company, and we are informed, that this moderate charge will still leave the company a handsome profit. The manager of the Keyless Clock Company is sanguine in his expectations for the future, making his estimates, as he says, on the successes of the past, which gives him good ground to predict that not less than 30,000 clocks can be rented inside of one year on the above basis at a profit of only four dollars a year on each clock, but the service probably will be much greater. The company would have the handsome addition of not less than \$120,000 to add to its profits.

## Hints to Money-makers.

Continued from page 44.

"R. F. D." New Brunswick, N. J.: Will make inquiries about the Ohio Rubber Plantation Company.

"L." Brooklyn: I hesitate to advise selling at a loss, at least until the developments of the situation are more clearly revealed.

"G." Montclair, N. J.: The second mortgage income bonds of the Findlay, Fort Wayne and Western Railroad appear to have no value. The road was incorporated in 1894, with a bonded indebtedness of \$1,200,000 First Mortgage Fives and \$800,000 Second Income Fives. On neither of these has interest ever been paid and the bonds are therefore in default. No price is placed upon them by bankers or brokers.

"S. S." New York: My own judgment is against the sacrifice of the shares, and it is only based on what insiders have told and which they have asserted to be the truth. The president of the American Ice Company recently said that the tangible assets of the concern were worth the present selling price of the preferred, and pointed out that the assets included valuable real estate in New York City, Philadelphia, Baltimore, and elsewhere. The statement of the assets should be published, to reassure the public.

"B." Bethlehem: I can only repeat what I said before about American Ice, that the company is blamable for permitting the circulation of exaggerated statements of its earnings and for paying unearned dividends on the common shares. The statement is now made that the actual assets are worth the present selling price of the preferred. The books not being open to public investigation I cannot speak of my own knowledge. On general principles I do not believe in dealing with those who are not absolutely on the square in all respects.

(2) Opposition to the Pressed Steel Car Company is materializing and the patents on which the latter places so much value appear to be contested.

"J. N. K." Fair Haven, Mass.: One dollar received. You are on my preferred list for three months. (1) I would not sacrifice my Amalgamated Copper. There is reason to believe that some of the insiders are willing to pick it up at lower prices, in anticipation of an ultimate agreement between conflicting interests. (2) Pennsylvania Railroad shares are no doubt a good investment, but, with the rest of the market, they should sell lower before the close of the year. (3) I think well of Southern Pacific, if bought on declines, and if held for eventualities. (4) Wabash B debentures are entitled to 6 per cent, and are ahead of the preferred and common shares, and therefore offer a safer opportunity for speculative investment than the stock.

Continued on page 47.

## My Strange Post-graduate Course.

Continued from page 38.

dream-state that followed I heard two voices, faint but distinct.

"Who could have foreseen this distressing occurrence?" The tone was scholarly and shocked.

"No one, of course," was the reassuring answer. "Generally speaking, a student after starting home wouldn't return to his quarters for even his head if he'd forgotten it. The affair just shows that the unlikely is likely to happen. To me, the case stands thus: A young man who has been walking about with a fever for ten days or more, and has been further burdened with speeches, diplomas, and social functions, hasn't pulled himself together for the first train out. He goes down to the station to see the boys off (let us say), then comes back to finish up something—and breaks down suddenly."

"And locked in, helpless," said the shocked voice, "his presence unsuspected, he would have died—at our doors—if his mother hadn't come to his rescue."

"Exactly," rejoined the second voice, cheerfully. "Wonderful thing, this mother-instinct! Here's the case: Boy didn't come home on the first train, or send a dispatch. Fellow-student from the same town could give no explanation. Boy known to be fond of home and lavish of telegrams. Mother uneasy. Went, with packed hand-bag, to meet the next train. No boy. Boarded the passing flyer. Counted the hours and prayed. Drove like an arrow to the boy's building. Demanded the key. Climbed straight to the boy's bed. Saved him."

Presently the cheerful voice stood over me, as I lay between sleeping and waking, to go on softly:

"I'll warrant that in the stress of the last few hours the poor fellow has reviewed his entire stock of acquired ideas, and added to them some original investigations. But such a post-graduate course ought to be made—as you say it will be henceforth—impossible. Not every lad has, as in Rayburn's case, a splendid constitution—and an inspired mother."

# Pabst beer is always pure

Brewed from carefully selected barley and hops—never permitted to leave the brewery until properly aged.

## Hints to Money-makers.

Continued from preceding page.

"W. J. S." Chicago: Not unless you want to speculate.  
"A." Poughkeepsie, N. Y.: You are on my preferred list for one year.  
"A. R." New York: It would look as if you had a case for an attorney. You certainly have been shamefully used.  
"T." Augusta, Ga.: Unless you have more than a mere prospect on your oil lands, it would be difficult to enlist capital in the enterprise. I will communicate with you by letter.  
"D." Batavia: I agree with you that the matter submitted is largely "stuff." It is a mining speculation, pure and simple, heavily capitalized and with little apparently to show for the money put in. Inviting, but risky.  
"E. W. R." Brooklyn: I regard nearly every stock on the list as too high, but am not advising short sales, because it is dangerous to speculate on the short side of the market when the financial situation is so largely in the hands of pools and cliques.  
"P." Cleveland: Many thoughtful men believe that the next great development of American industries is to be in the shipping line, and for that

reason the proposition of the Fore River Ship and Engine Company has been very favorably received.  
"J. C." Jersey City: Those who are interested in the reorganization of the distilling company advise that the stock be deposited. The reorganization plan certainly proposes to squeeze out an enormous bulk of water, greatly to its benefit. Some of our ablest financiers are managing the reorganization.  
"O." Jersey City: Members of the Consolidated Exchange who do a very large business include A. M. Lamar, with offices at 60 Broadway and Forty-second Street; J. L. McLean & Co., 25 Broad Street and 640 Madison Avenue; and Jacob Berry & Co., 44 Broadway. Among the members of the Stock Exchange who deal in small lots are Harrison & Wyckoff, 71 Broadway.  
"W. B." Groton, N. Y.: As I have said before, the earnings of American Can, as last reported, did not indicate a flourishing condition of the company. The shares are now selling at far less than the prices at which they were dealt out by the promoters. Prosperous conditions and a good earning season would help the company out. At present prices, the preferred looks like a fair speculation. Market conditions are not such as to make purchases of anything inviting.  
July 3, 1902. JASPER.

The Aspinwall, Lenox, Mass.

THE ASPINWALL, in Lenox, Mass., said to be the finest summer hotel in America, was formally opened Saturday, June 21st. Mr. O. D. Seavey, president of the company which built and will operate the hotel, will remain in personal charge. Mr. Seavey is known as one of the most popular hotel men in the country and has had charge of the Ponce de Leon and Magnolia hotels in Florida, and operates the Hotel Champlain summers.

The Aspinwall is situated on the highest hill of the many flanking the beautiful Lenox, and the main floor is 1,640 feet above tidewater, one hundred miles to the south. From the roof one's vision travels

to the Catskills on the west, to the Vermont line on the northeast, and covers a range almost as great as from the summit of Mt. Washington.

The hotel is appointed with the most modern furnishings and has 250 guest rooms, each with bath. There are no preferred rooms, for all are furnished alike, all have the prettiest of pretty views from the windows, and all are outside rooms. The help are all lodged and fed in separate buildings, the rooms of which are furnished in a style quite beyond any comforts hitherto afforded employees of summer hotels. The Aspinwall will keep its doors open to the public until late in October.

London, England.

# WILLIAMS' SHAVING SOAP

## FOR PUBLIC SAFETY

### WHAT PRES. REEDY SAYS:

"The Master Barbers' Association of the State of New York was organized with the specific object in view of promoting the interests of the Barbers in this State, and for the PROTECTION, SAFETY and WELFARE of the public in general. We certainly cannot do the above, unless we use in our business the BEST material and supplies obtainable, among which I certainly class Williams' Shaving Soap. After an experience in this business covering a period of twenty-two years, I can honestly say, that Williams' is the best shaving soap. To all barbers, who believe in the PROTECTION and SAFETY of the public in general, I would say, use none but Williams' Shaving Soap."

GEO. E. REEDY,  
President Master Barbers' Association,  
State of New York.

### Moral:

Barbers who consider the safety and welfare of their patrons, use Williams' Shaving Soap.

## The Situation.

IT IS time to ask, in all seriousness, whether the death of William McKinley marked the apogee of the Republican party. While we are drifting apart on a question of trade with Cuba the Democracy is getting together. While such rock-ribbed Republican States as Vermont, Ohio, and Pennsylvania are being torn by clashing factions, the Democratic leaders are falling into line in solid ranks and preparing for the contest of 1904.

Is our leadership lost? Less than a year has elapsed since the pitiful death of the lamented McKinley, and we find a third of the Republican membership of the Senate, representing a dozen States, nearly all Republican, in opposition to the administration. And over what? A perplexing tariff question! This is not a new question for the Republican party to handle. It was far more difficult for William McKinley to adjust it for all the country than it is for the present administration to settle it for the little republic of Cuba. William McKinley settled it, as he did every other question in his time that perplexed and tried his party, by conciliating, by harmonizing, by making concessions, and, whenever necessary, by compromising.

It took time to win the battle for protection. The campaign involved years of hard struggle and strenuous contest, but when the splendid victory was won, when the magnificent prosperity, following the adoption of a protective tariff, came and thus fulfilled the dazzling predictions of William McKinley, the nation began to realize the power and foresight of one of the greatest of all American statesmen. Protection having accomplished its work in the development of our industries until we had become the world's competitors, President McKinley next indorsed a plan for international reciprocity and proclaimed it with his dying utterance at Buffalo. He did not speak of reciprocity with Cuba, with France, or England, but of a worldwide reciprocity; of treaties with every nation that want what we produce, and that make what we are in the market to buy. That was the reciprocity of William McKinley. His master mind realized the difficulty of bringing it about, but no single defeat ever daunted him, no temporary set-back caused him dismay.

Defeat only showed the pathway more clearly and spurred him on to reach the goal. Let the President and his advisers take a lesson from the experience of William McKinley and plan for reciprocal trade relations on such a broad basis that no American industry can complain. Let the battle be won as the fight for protection was won, by a campaign of education and a careful and conscientious development of the policy of enlightened selfishness, as Senator Beveridge has suggested. "The period of exclusiveness is past," as McKinley well said. We must either find new and wider markets abroad or prepare to pay the heavy penalty of over-production—silent workshops, labor unemployed, and capital a burden. Such a situation breeds depression and panic.

The ardent protection sentiment of some has been tried by the Trust developments of the past few years, and many believe that some of our protected industries should be strong enough by this time to stand alone. The task of the administration is therefore difficult. It is now being put to the crucial test of the highest statesmanship. It must be tactful, resourceful, conscientious, unambitious, and always conciliatory. The unfortunate break in a Republican Senate following manifestations of dissatisfaction in the House, is not a trifling matter, and the growing unrest of the masses is in marked contrast with the confidence and hope they felt while they followed the banner of William McKinley.

It needs no prophetic eye to realize that the Republican party is facing a crisis. How shall it be met? It is not a question of 1904; it is a question of 1902. Political changes in this country are sometimes very abrupt. The party that enters a presidential campaign with broken ranks, disorganization, and disaffection, is beaten before the contest begins. The Republican party never has lacked for leaders in emergencies. It has never had to search for principles to put in its platform. It has succeeded because of its saving patriotism and its sound principles. In late years it has profited by the wretched mistakes of

its opponents, but with the Democracy united and reasserting the most popular of its old-fashioned ideas of a constitutional government and a tariff for revenue only, a close and exciting contest becomes inevitable. If—not because of a lack of its own patriotism and principle, but because of overconfidence in its strength and a mistaken belief in the weakness of the enemy—the Republican party should fall by the wayside, where will the historian of our new century politics put the blame?

## The Citizens We Need.

AMONG OTHER treasures of classic times preserved in an alcove of the Metropolitan Museum of Art, in New York, is a statue of a human figure which is inspiring to look upon. It is that of a man in the prime of years and strength, a magnificently developed form, a frame speaking of perfect health and the joy of life at full tide, as clearly as marble chiseled by the hand of master can be made to speak. But the supreme charm of this creation in stone lies not in its wonderful physical beauty, its corded muscles, rounded limbs, and symmetrical proportions, but in the fact that the sculptor has succeeded, by virtue of that gift which we call genius, in making you feel that it is a being with a soul that stands before you, and not merely a splendid brute in human form. This idea is conveyed partly in the pose of the figure—for the face of the man has an upward look and an expression which seems to tell of thoughts of heaven, so full of purity is it, of ardent faith and hope.

Such a figure might well be taken as a type of the ideal American citizen, of the kind of citizens that our nation now and ever needs, if it is ever to fulfill the high purposes to which Providence has assigned it. Surely if there is any station into which a human being may be born, or to which he may be called, requiring an all-around manhood—the strength to do, coming from physical health and perfection, the wisdom to plan and execute derived from a cultured mind, and the character that has its source alone in religious faith and devotion—if anywhere on this earthly footstool or at any time in human history men of such threefold fibre are needed, those on whom rest the manifold duties, responsibilities, and obligations of American citizenship are such men.

Such men as these are needed in every American community to-day, with the upward look, alert and resourceful in business, but men of iron integrity, a virtuous fibre of herculean stoutness, and a love for truth, honesty, and purity as impregnable as Gibraltar. Such men, here and everywhere throughout the land, can alone insure us the government we need, can alone insure, by their votes as citizens or their conduct as public officials, that measure of righteousness in public life, that degree of law, order and security which we seek and which we must have, to be happy, contented, and prosperous.

It is well on the occasion of our national anniversary to read the solemn words of the illustrious Washington. They are as true now as when they were uttered in his farewell message, that morality divorced from religion is a vain hope, a broken reed. It is the culture of the soul which gives to human character the supreme touch, the crowning grace of all, the inward light that leads and inspires to all true and lofty endeavor, the gift that abides through all temptation and trial, and keeps the soul fast-bound forever to truth, honor, and purity. It is of such that Lowell speaks:

"Upward the soul forever turns her eyes;  
The next hour always shames the hour before.  
One beauty, at its highest, prophesies  
That by whose side it shall seem mean and poor,  
No godlike thing knows aught of less and less,  
But widens to the boundless Perfectness."

## New Issues in 1904.

THERE IS a reasonable certainty that several new issues will be at the front in the presidential canvass of 1904. The tariff, which was mentioned but seldom in either 1896 or 1900, is likely to come up for discussion two years hence, both in its reciprocity feature and in the direction of lower duties. The Republicans will probably give prominence to the former, while the Democrats are committed to the latter, though they lost sight of it in the two most recent national campaigns.

There is a chance, too, that the Republicans will bring forward the abolition of the greenbacks as supplementary to their attempt at present to make the silver dollars redeemable in gold. According to the view of many Republicans, the gold standard will never be placed on a permanent and scientific basis until not only the silver dollars are made exchangeable into gold, just like all other forms of currency, but until the greenbacks are swept away.

Then there is the question of the disposition to be made of the Philippines. This will bring up the expansion issue in its broadest phase. The Democrats, or many of them, favor the abandonment of the Philippines at an early day. The Republicans are committed to their retention. On this issue there is the possibility of a division between the parties. The trusts form another question which may figure with prominence two years hence. Irrigation, too, at the nation's expense, may be brought to the front, as the residents of most of the States west of the Mississippi desire. Cuba, also, may furnish an issue of very big proportions, if annexation does not take place before that time. Nobody can tell yet just how the parties would divide on Cuban annexation. The logic of the situation, however, is likely to commit the Republicans to annexation, while the Democrats, under the lead of those who are talking against annexation, would be forced to antagonize the Republicans on that line, as Senator Elkins predicts.

Many new issues stand a chance to be before the country in the canvass of 1904, irrespective altogether of the personality of President Roosevelt, who is likely to be his party's standard-bearer in that year, unless he makes greater mistakes than any that have thus far been charged against him.

## The Plain Truth.

AS ELEVATED and noble as it was just and true, was the conception of modern journalism conveyed in the recent address by Mr. Herbert F. Gunnison, of the Brooklyn Daily Eagle, before the Sphinx Club of New York. Mr. Gunnison's special topic was the value of quality in newspaper circulation, his contention being that high quality, based on honesty, intelligence, dignity, and legitimate enterprise, makes a paper far more valuable to both its readers and advertisers than a circulation swollen to prodigious and abnormal proportions by fake advertisements, lurid type, crooked morals, and cheap sensationalism. Mr. Gunnison summed up the whole matter in a nutshell when he said that the quality of a paper and the character and standing of the people who read it are factors of far more importance than the question of how many papers are printed. It is not so much the number of papers that go out of the press-rooms which should be carefully examined, as the fact where those papers go and who are the people who read them. "Are papers hastily read and thrown away? Are they purchased to help pass away a few moments' ride on a car, or are they delivered in the homes to be carefully read by each member of the family? Are they read as we would read a handbill, or are they read for information and instruction, to become the source of our knowledge of contemporaneous life?" It is precisely because it meets the conditions here laid down that *LESLIE'S WEEKLY* is far more valuable as an advertising medium than daily papers with a larger circulation. The *WEEKLY* has ten actual readers where the daily has one, and while the former is preserved for re-reading and for reference, the latter perishes with the day and is forgotten.

THAT THE American people are gradually but surely coming to their own in the national legislature, as well as in the States and municipalities of the country, has been made evident by several events during the recent session of Congress. Hitherto the leaders of the respective parties, especially in the House, have exercised autocratic power, their sanction of a measure being practically equivalent to its passage when their followers were in a majority, and their disapproval having the same effect in the opposite direction. So commanding had this authority on the part of a few so-called leaders become by long usage and tradition that, right or wrong, few of the individual members dared to question it or set up their views against it, especially when it came to an open vote on the floor. How different the feeling now is and what a spirit of independence has grown up have been shown in several striking instances during the recent session, and notably in the action on the Cuban reciprocity and the naval appropriation bills. Both of these measures had the backing of the Republican organization in the House, including Speaker Henderson and his lieutenants, and, for this reason, both were supposed to be beyond reach of defeat. But the result showed that there were men enough in the dominant party who dared to follow their convictions on this subject, rather than their party leaders, and the bills were defeated. Without regard to the merits of these particular measures or the motives which inspired the revolt, the action was significant of a growing spirit of independence in political thinking and acting that augurs better things for the American people. Leaders there must and always should be in every sphere of human endeavor, strong men for guidance and wise men for counsel, but autocrats and dictators have no place anywhere in a democratic government.

ONE AMONG several important lessons to be derived from the awful story of confessed crime related by Jane Toppan, the Boston woman, is the need of exercising great care in the selection of nurses for sick, feeble, and helpless people. By the very conditions and circumstances under which their service is rendered, such persons can do an infinite amount of mischief and positive injury with the slightest possible chance of detection. In the case of infants, imbecile people, and persons reduced to general helplessness by disease, maltreatment of the worst sort may be secretly practiced with little or no danger of exposure and no retaliation from the victims. Injuries occurring to such unfortunates when discovered can easily be explained away as the result of natural causes. In this way it was possible for the Toppan woman, according to her own confession, to murder no less than thirty-one persons by the administration of slow poison, and that without detection in a single case. The opportunities for crime in this instance were largely increased by the fact that the woman was a professional nurse and therefore instructed in the giving of medicines. Cases frequently come to light where patients in hospitals and asylums are subjected to the most brutal treatment by nurses and attendants, although absolute proof of criminal conduct is generally difficult to obtain. All this, as we have said, emphasizes the need of exercising extreme caution in the selection of attendants for persons whose condition is such as to render them easy victims of outrage and abuse. It is also important to observe, in this connection, that nursing the sick has in recent years assumed the dignity of a regular profession and is more and more valued as an auxiliary in all surgical and medical practice. The responsibilities devolving upon it are such that its standards of efficiency and trustworthiness should be no lower than the medical profession itself.

## PEOPLE TALKED ABOUT

IN A season devoted to social festivities on a scale of magnificence unequalled in the history of London society, it is much to say that an American woman has set the pace in splendid and luxurious affairs of this sort, yet such seems to be the case if we may judge from recent accounts of a dinner party given by Mrs. Bradley Martin in Chesterfield gardens. Among Mrs. Martin's guests on this occasion were such representatives of the American contingent in the English nobility as the Duchesses of Marlborough and Manchester, and also such scions of

royalty as the Prince and Princess Christian, the Duchesses of Wellington, Roxburghe, and St. Albans, Prince Mynar, and the Countesses of Cork and Ancester. The Countess of Craven assisted her mother to receive.

IT WILL be universally conceded that honest desert and genuine merit have met with a fitting, if not an adequate, reward in the promotion of Captain Charles E. Clark to be a rear-admiral of the United States Navy. No honor of this kind, nor indeed any gift or distinction within the power of the nation to confer, can fully repay this gallant and veteran seaman for the illustrious service he has rendered to the American people during the forty years of his active connection with the navy. He served through the entire period of the Civil War and was a participant in the famous engagements at Mobile Bay and Fort Morgan. He became a commander in 1881 and a captain in 1896. Through all these years he served the nation faithfully and well and rose steadily in rank.

CHARLES E. CLARK, U. S. N.,  
Recently promoted to the rank  
of rear-admiral.

But Captain Clark's chief title to fame rests upon his brilliant and remarkable feat in bringing the *Oregon* around from San Francisco to Cuba in good time to take a conspicuous and successful part in the finishing act off Santiago. No single event in the Spanish-American war furnished so superb an illustration of the splendid training and discipline and the wonderful degree of skill and efficiency attained by the men of our navy, and also the high quality of our fighting ships, as that voyage of the *Oregon* around Cape Horn. That it was accomplished without an hour's delay or a single mishap and at a speed unprecedented in naval history was an achievement due largely to the wisdom, the coolness, the daring, the masterly control, the superb seamanship of Captain Charles E. Clark. To have done such a deed in such a way was the work of a truly great and brilliant man, a man who justly deserves to be held forever in grateful memory by the American people. It is only to be regretted that proper recognition of this most modest of heroes was so long deferred.

A GOOD MANY people besides those included among the strictly religious folk will be interested to know that the venerable Dr. Theodore L. Cuyler is busily engaged during the present summer in writing his autobiography, which he hopes to have ready for the publishers early in the fall. He is dictating the work to a stenographer, a method of literary procedure hitherto unknown to the good doctor, and one which he finds it somewhat difficult to accustom himself to after fifty or sixty years of steady work with his own pen. Editors generally, in England as well as America, are familiar with Dr. Cuyler's manuscript, which never varies in being delightfully clear and legible and which is always eagerly accepted, although the doctor has never conformed to the

DR. THEODORE L. CUYLER,  
The distinguished theologian  
of Brooklyn.

standing rule about writing on only one side of the paper. As to the forthcoming autobiography, it is gratifying to know also that it is not to be a volume of ponderous size, the doctor reasoning very wisely that people in these days do not read nine-hundred-page books, no matter much who writes them. But if any one might be strongly tempted to voluminous work of this kind it would surely be Dr. Cuyler, who has been on terms of intimacy with about all the famous people who have figured in the history of England and America for the past seventy-five years, and who has himself been a prominent actor in nearly all the great movements of the same period. That

his fund of reminiscences will be rich and entertaining to a rare degree goes without saying.

AMONG OTHER tid-bits which we may venture to extract from the feast which Miss Hamm serves up to her readers in her recent volume on "Eminent Actors in Their Homes" we may include a descriptive note of the ornate New York home, in West Sixty-ninth Street, of Sothorn and his brilliant wife, who, upon the boards, is known still by her maiden name of Virginia Harned. In front of the windows, we are told, is "graceful Venetian ironwork fashioned after the finest designs of the Renaissance. The curious lines of each grillage form a space which has been utilized by the owners for a miniature garden, where evergreens add color to the house front. Japanese dwarf plants suggest travel in the antipodes, and swaying vines recall Tennyson's description of the 'Land of the Lotus-Eaters.'" If the mansion is such a poem in stone as to its exterior decorations and architectural effects, one can faintly imagine what exquisite and idyllic creations open to view in the halls, boudoirs, libraries, and art galleries, which go to make up the interior, which are always, in the evening, flooded with electric light, shining through incandescent bulbs covered with shades which modify "the light just enough to suggest the rose blush of the dawn or the fiery glories of the sunset."

FIVE IMPERIAL jade seals of the Chinese imperial government and twelve sacred tablets of jade from the imperial temple at Peking were seized recently by officers of the customs service at San Francisco. The seals and ten of the tablets were part of the baggage of First Lieutenant John B. Schoeffel, of the Ninth Infantry, and the other tablets were the property of A. Hesse, a civilian, who returned on the transport *Sherman*. The seizure of the jade is regarded as one of the most important in the history of the custom-house, as the two men expected to get it through without duty, since it was not on the manifest of the ship nor declared as part of the

LIEUTENANT SCHOEFFEL,  
Whose Chinese loot was seized by customs officers.

baggage. Lieutenant Schoeffel returned on the *Hancock*. He was with his company, M, of the Ninth Infantry, and took part in the advance on and capture of Peking by the allied forces in 1900. Schoeffel says that he purchased the jade from a Chinese, who sold it to him for \$50. Schoeffel has had it in Manila with him for about two years. It is also said that Schoeffel secured some bullion from one of the Chinese banks. The lieutenant was apparently the most unconcerned man in the crowd when the seizure was made, and went on coolly superintending the examination of the company baggage. The Chinese government has offered large rewards for certain articles which disappeared from Peking during the foreign occupation, and for these articles foreign governments have been asked to watch. The sacred tablets from the imperial temple were considered the most important of these. Each tablet is the history of the reign of one Emperor, and they are of enormous value, both from the standpoint of age and sentiment. They have never been duplicated. Both the tablets and the seals are of the purest jade, flawless and highly polished. The carving is evidently the work of an artist. The seals are heavy, about five inches square and two inches thick, and have elaborate handles in the form of dragons with five toes, which indicate that they belong to the imperial family. The tablets are about a foot long by four inches in width and a half inch thick. The seals have fine silk cords of yellow attached to them and the tablets are protected by silk mats of yellow—more evidence of their imperial character. The jade is in safe keeping pending an order from the Treasury Department and will probably be returned to Schoeffel. Mrs. Schoeffel recently took a trip to Japan, and it is probable that the family possessions have been coming into the country gradually for some time.

IN HIS book, "All the Russias," Mr. Henry Horman gives an interesting description of the bedroom of Czar Alexander II., which is kept exactly as it was on the morning he left it. He was brought back an hour after he left it, bleeding to death from injuries inflicted by the assassin's bomb. As the room was, so it remains. The half-smoked cigarette lies upon the ash-tray in a glass tube. A little revolver lies before the mirror.

Upon each of the tables and upon several chairs is a loosely-folded clean handkerchief, for it was the Czar's wish to have one of these always within reach of his hand. There lie all his toilet articles—a few plain bottles and brushes. It is all modest beyond belief, and the brushes are half worn.

AMONG THE group of beautiful and accomplished women whose presence would have added a charm to the coronation ceremonies in London this month, none excels in beauty or accomplishments Lady Moyra Cavendish, one of the daughters of the late Duke of St. Albans, and a niece by marriage of the Duke of Devonshire. Lady Moyra spent her early childhood in the most brilliant and interesting political society, for her father was at one time a noted politician. She was just twenty when she married Mr. Richard Cavendish, the second son of the late Lord Edward Cavendish. Lady Moyra, who through her mother has Irish blood in her veins, is never happier than when spending a holiday in Ireland, and is regarded as a leader in the most exclusive social circles of Dublin.

LADY MOYRA CAVENDISH,  
A lovely leader of exclusive Irish  
society.

IT IS safe to say that the international conference of commerce and industry, which is to meet in August at Ostend, Belgium, will have no member more intelligent or wide-awake than the Hon. Frank A. Vanderlip, vice-president of the City National Bank, of New York, who has just been appointed a delegate to that body. Mr. Vanderlip's knowledge and experience eminently qualify him to represent this country at such a gathering. His career as a financial editor, as Assistant Secretary of the Treasury, and as a bank official, and his exhaustive study of financial and commercial conditions here and abroad, as well as his native ability, have fitted him to grasp with ease the questions that are to be discussed at the conference. Mr. Vanderlip is only about thirty-eight years of age and his rise from the lot of a poor farmer boy to the rank of a leading financier is one of the most striking illustrations of what brains and energy can achieve under our free institutions. Such men seem to refute the complaint of the social pessimists that the conditions of life and success are growing harder from year to year, and their example should be a great encouragement to all youths of ability and ambition.

HON. FRANK A. VANDERLIP,  
Delegate to an international  
conference.

PROFESSOR PEARSON, the biologist, has renewed the investigation into the question of the relation between size of head and intellectual preponderance. If the working man has a smaller head on the average than the professional man, Professor Pearson points out that the difference is due to better nutrition. A series of researches of wide extent resulted in the conclusion that very brilliant men may have a head slightly larger than the average, but Professor Pearson adds that the increase is so small that it cannot form any element in our judgment of ability.

WHILE IT does not appear that Lord Tennyson, the greatest of modern English poets, has left any immediate successor to his violet crown, either among the members of his own family or any one else, he has, in the person of his eldest son, the present Lord Tennyson, a highly creditable representative, a man of sterling integrity and not a little literary genius. For three years past Lord Tennyson has been Governor of South Australia and has shown such excellent judgment and executive ability in the administration of that office that on the recent resignation of Lord Hopetoun as Governor-General of the Australian commonwealth he was called temporarily to fill the chair thus left vacant. Lord Tennyson is only fifty years of age. He was named Hallam by his father, in memory of that beloved companion of the poet who was made the subject of "In Memoriam," the noblest and greatest elegiac poem ever written. Hallam was educated at Marlborough, Trinity College, Cambridge, and for several years served his father as private secretary. He has himself written several books, the best known of these being his "Memoir" of the poet laureate, issued in 1897, a charming volume and a model work of its class. His political career is probably far from being ended, and higher positions and greater fame may await him. He may be cited by some future Galton as a fine example of inherited intellectual force.

LOED TENNYSON, K. C. M. G.,  
Son of the poet, temporary Governor-General of Australia.

# Business Training for College Graduates

A NOVEL AND PRACTICAL EDUCATIONAL DEPARTURE

By Harry Beardsley

JAMES H. HYDE,  
Vice-president of the Equitable Life  
Assurance Society.

COLLEGE IS over, "school is out," and the young men of the country are confronted with the most serious practical question of the world—how to make a living. Many of them have no very definite ideas on the subject. They wish for fame and wealth, but have only a vague impression of how they are going to attain either. They have planned in a large way to be "professional" men or "business" men.

A. Dana, have decided that they want to be great journalists. Others have been told how this man or that struggled to the top and now controls millions of money and thousands of men. They have heard that Andrew Carnegie once swept out the office when the janitor was too busy. They have read that Charles M. Schwab was a mechanic and that he now receives the largest salary paid to any man in the world, and that when he goes abroad he is the confidential guest of kings and emperors, who seek his company and spend more time with him than with their titled guests. All these things are very alluring to the young man, and he feels that he would like to follow in the footsteps of those who have so signally succeeded.

But all that is in the dim distance. The question is, who is going to give the young man just out of school or college a job? What is to be his first work? And to him who has worked his way through the channels of education and is pressed by the necessity of self-support, the question of money and how much he is to get are vital and immediate.

In a most unique, practical, and beneficial way—beneficial to itself and to a good many young men—the Equitable Life Assurance Society of New York has taken advantage of this situation just at this time, and has opened what is called a "school of life insurance"—a plan by which young college men are given a chance to go into the company's employ after a month of training. It is like a post-graduate course, preparing the men who have finished college to go to work in the "field," for the life insurance company, to solicit business. The idea is that of Mr. James H. Hyde and Mr. Gage E. Tarbell, respectively first and second vice-presidents of the Equitable. They organized this post-graduate school by writing, toward the close of the college year, to the presidents of the twenty-five foremost universities and colleges in the United States, this letter:

DEAR SIR:—It is our intention, on or about July 1st, or very soon after the close of the present year of the leading colleges and universities, to start a class of instruction in life insurance, and it is our desire to have this class as largely as possible composed of young men who have worked their way through college, in whole or in part, or of men who are especially recommended to us as desirable by reason of their work during their college course. We would be very glad to have a few of the members of this class come to us from your university.

It is our purpose to pay the necessary expense of the members of this class during the course of instruction, which will probably last from thirty to sixty days, and at the end of that time we propose to try to furnish to such of the members as show an adaptability to our work situations in connection with our various general agencies, where they can receive a guaranteed income, with the opportunity, through industry and perseverance, of making the income several times the amount. We feel that there is no business or profession to-day that furnishes young men with a greater opportunity for advancement or a more honorable career than that of life insurance. We have several thousand men in our employ and the number is constantly increasing, and we especially want to start in the business young men whose education, character, and determination will fit them for responsible positions and be of assistance to us in carrying on our great work. To such men the opportunity that we can offer is a grand one. We are writing especially to ascertain if you would be interested in this project, and if you believe you could furnish us from your great university a few men of the type that we desire.

The responses were immediate and satisfactory, so that when the school opened in the library of the Assurance Company building, July 1st, the room was filled by more than one hundred young men. They were nearly all students who had worked their way through college and were willing to work their way through life, and the officers of the company concluded that its ranks could not be supplied with new blood from better stock. The course of instruction is practical. Talks are given by the company's representatives, who are fitted by experience to tell just how the best work should be done. The young men are put to work at once. They are sent out in New York City and elsewhere to solicit insurance, the fundamental work. At once they acquire practical experience. In the class-room they tell what the difficulties are, and then their instructors describe the best means to overcome them. The general business of life insurance is taught also, so that the student will understand all branches of the business. The school is a source of inspiration and enthusiasm, as the opening session showed. The college men, many of them from Harvard, Yale, Princeton, Dartmouth, and other Eastern universities, clapped their hands vigorously when James W. Alexander, president of the Equitable, was introduced. He said:

"It is a serious thing for a young man who has just finished college to determine a worthy walk in life. He feels that he does not want to exhaust any of the energy of his youth in a pursuit which he does not intend to make his life's work. Perhaps the thought occurred to some of you that it was a sort of a 'come down' to become an insurance man. But I presume that you men who have come here have determined to go into the field of practical business. There is none which offers as good an opportunity as life insurance for an earnest and industrious man with high ambition to achieve something worthy. The opportunities for making money are wonderful, and a man who goes into it need not neglect the development of his finer tastes and his desire for doing something great and good. You don't have to give up educational things. Keep in touch with your literary and educational associations, and with your alma mater.

"I talk from experience, because I am a graduate of Princeton. I always go to college football and baseball and other games that I can, and I am a member of the Princeton board of trustees. Any man of good character, fair intelligence and industry, can accomplish great results in this field, making himself useful and of some account in the world. In this business there will be found many things that will be irksome to a man who is over-sensitive. But the best things are the difficult things to do. Any one can accomplish that which is easy. You must be prepared to sacrifice yourself in that sense, because in entering the 'field' in life insurance you are going into the most difficult side of it, but it is the side which will

give you the best training and enable you to accomplish the greatest results. Now I am going to turn you over to Mr. Tarbell, who is himself a college man, who is in charge of this school of insurance, and who is also in charge of this department of our business."

President Alexander commended the second vice-president of his company very highly, and when the latter rose to address the school, the young students, whose enthusiasm had been growing, gave vent to it by a ringing round of applause. Mr. Tarbell gave some general facts about life insurance. The thirty-seven companies in New York State, he said, had five billion dollars of outstanding insurance written on the lives of fewer than one million people, leaving, he pointed out, a large number who had not yet taken out insurance. He spoke enthusiastically of the business and communicated his enthusiasm to the school, so that the first step in their education was accomplished, for they were already proud of the institution with which they had become associated and interested in the work which it was doing. The next step will be the actual soliciting of insurance, and it is there that the great test will come. He who succeeds best will be promoted, for good men are always needed in the best positions.

As a practical plan to educate young men in the serious business of life, this school of the Equitable is unique and interesting, but it is only one expression of a general tendency along the same line. Another development of a similar movement has come to notice in the Massachusetts School of Technology at Boston. When it opens in the fall, its course will include a school in "insurance engineering." In this department will be taught methods of construction of buildings, so that the present great losses by fire will be reduced to a minimum. The best means for extinguishing fires will be ascertained. For these purposes an acre of land will be secured in the vicinity of Boston, with buildings and apparatus for experiments of all sorts in the testing of materials and in the putting out of fires. It is expected that every year this school of insurance engineering will send out young men thus practically equipped to meet practical problems.

## The Extortionate Cabmen.

THE RECENT spirited and effective campaign which the New York Tribune has been waging against the present cab system in this city has an interest extending far beyond the bounds of the metropolis, since the evils aimed at prevail to a greater or less extent in all American cities. In other years the Niagara harkman stood as a type of all that is most odious and reprehensible in this direction, but the unenviable distinction enjoyed by the vociferous sharpers at that famous resort has extended to the same calling almost everywhere. The occupation of the cabbies is, in fact, regarded with a degree of settled suspicion and distrust by the vast majority of people, owing to the prevalent impression that these Jehus of the pave, as a rule, are given to petty extortion and much shabby trickery, and sometimes to practices worse than these when conditions are favorable. Many persons habitually refrain from patronizing cabs who would often do so were it not for the prejudice thus created, and the dread they have either of being imposed upon or of stirring up a storm of profanity and possible violence by any protests they may make. There is probably as large a proportion of honest and worthy men engaged in this useful business as in most others, but the good and the bad suffer together for the reasons we have stated.

## Building a Railway Under the Sea

CONSTRUCTION OF THE TUNNEL OF THE BOSTON ELEVATED ROAD UNDER BOSTON HARBOR

By Harrison Pierce

DURING THE past century, ferry-boats, which formerly were merely small craft, have been developed into huge steam-driven railway stations. The ferry-boats of New York, for example, have been made models of power, speed, and safety, carrying through the harbor trainloads of sleeping passengers who are unconscious of their embarkation, yet in New York itself the edict has gone forth—the age of ferries is past and the age of tunnels has come to take its place. The East River tunnels are soon to be accomplished facts and tunnels under the North River are not far in the future, yet the first tunnel for railway traffic under tidewater in an open harbor is now being built by the city of Boston to connect its subway and elevated system with Noddle Island.

The tunnel is being constructed for the use of the Boston Elevated Road, which comprehends practically the whole transportation system of the city, and will provide a double track for cars, which will be operated by electricity. The section of the tunnel under the free water of the harbor is to be something over half a mile in length, and, including approaches, it is estimated that the whole work will cost about \$2,000,000. The upper surface of the tunnel will be sixty feet below mean high water and will be not less than twenty-two feet below the bottom of the present channel, which will allow a possible draught of over fifty feet at mean low water—or enough for the heaviest imaginable commerce. The exterior diameter of the tunnel is about two feet greater than that of the Black-wall tunnel under the Thames at London, and its interior diameter is respectively fifteen and twenty per cent. greater than the diameters of the St. Clair tunnel at Port Huron, Mich., and the tunnel under the Hudson River.

The method of construction adopted is entirely novel for submarine work. Two parallel drifts are run ahead of the tunnel, in which the side walls are built. Resting on these side walls is a steel shield, semicircular in form to fit the arch of the tunnel, which is forced into the blue clay of the heading by sixteen hydraulic jacks, exerting a combined force of over twelve hundred tons. The tunnel receives its exact shape and size by the cutting edge of the shield, under which a monolithic concrete arch is constructed. The hydraulic jacks are an interesting feature of the work, since each of them has a capacity of seventy-five tons, although, as a rule, they are only called on to exert a pressure of from twelve to fifteen tons. It is natural to ask what there is in the tunnel for them to push against—how, in

other words, do they get the necessary foothold, as one may call it? The problem was a puzzling one, but it was solved by a suggestion made by Mr. Walton I. Ains, of New York, in conversation with Chief Engineer H. A. Carson, some five years before the tunnel was begun. As the shield is pushed along, thirty inches at a time, it is followed by a ring of concrete in which are set, at regular intervals, from one side of the arch to the other, sixteen cast-iron rods. Each set of rods is the length of one forward move of the shield, and is left embedded in the arch of the tunnel. The rods, being fitted end to end, furnish ample purchase for any pressure required to move the shield.

To prevent an inrush of water or the caving in of the excavation from other causes, an air pressure of twenty-five pounds per square inch above normal is maintained in the tunnel by means of powerful air-compressors. This air pressure, together with the heat from the drying cement, has kept the temperature of the tunnel at about seventy-four degrees. The rapid expansion of the high-pressure air, moreover, used for running the jack-pumps, hoisting engines, and the rest has caused a constant fog-like haze, which makes photographic work extremely difficult. Since, fortunately, there is no appreciable amount of the explosive gas which is usually found in such tunnels, however, photographs have been taken by means of calcium lights, which, it is believed, are the first successful submarine tunnel pictures ever obtained under like conditions. Even with a battery of the most powerful lights the photographic view is limited by the haze, just as an optical view is insuperably limited under water, though the tunnel view has a somewhat broader scope. When these difficulties are taken into considera-

tion the views of the East Boston tunnel presented in this number of *LESLIE'S WEEKLY* have a certain interest beyond what would naturally attach itself to a novel exploit in submarine engineering.

### How a Railroad Conquers a River.

THE ILLUSTRATIONS given on another page show what is confidently believed to be the last stage of a protracted fight between a railroad company and a river for the possession of a strip of land. The railroad is the Chicago and Alton, the river is the Missouri, the location near Cambridge, Mo., and the work and methods are so far in advance of anything else of the kind that a set of the photographs has been requested by the Massachusetts Institute of Technology for use in the class-room.

Heretofore the river has had a little the better of the fight, and the road-bed has consequently suffered. The government erected a breakwater there that was capable of withstanding any kind of a frontal attack, but the river persisted in flanking it. It was not a broad sweep, but swirling eddies that did the damage. The eddying water simply lifted out the filling, crept in behind the piling, and reached out for the road-bed, of which it occasionally took generous slices. After various unsuccessful experiments, made with a view to stopping this, it was decided that the bank would have to be all of one piece; it would have to be woven together. The river could carry it away only on the installment plan; it was not capable of doing a wholesale business. So the revetment work was tried on a most thorough, elaborate, and improved plan.

The illustrations show fairly well what this is. After planing away the bank to make a gradual slope, a huge mat is woven and sunk. As this is all one piece for the entire 8,250 feet of bank to be protected, it will be readily understood that, so long as any of it holds, all of it will hold, and, of course, it is securely anchored. On this mat a layer of stone is placed, and then another mat is sunk; another layer of stone follows and another mat, and so on until there comes a layer of extra large stone carefully fitted in, the last mat, and then the top dressing. It takes a very strong and enterprising eddy to dislodge the stone that lies between carefully woven mats. The bank, in effect, becomes one compact whole that is tough and stable. There are no loose pieces that can be reached.

### A Great Future for Alaska.

THE EXPLOITATION of the vast territory of Alaska promises to be one of the great features of American business activity during the current quarter century. Formerly derided as mostly a waste of snow and ice, Alaska is becoming more and more noted for its enormously rich natural resources, which make the \$7,000,000 paid for it to Russia by the United States seem the merest trifle in comparison with its value. Capitalists are already testing the expediency of investment and the possibilities of enterprise in this practically new field. One of the probable and most important steps toward the development of the extensive domain is disclosed in a letter to the *Utica Observer* from ex-Postmaster-General Thomas L. James, president of the Lincoln National Bank, of this city, who contributes frequently and ably to the columns of that able and interesting journal over the pen name "Occasional." General James states that it is understood in New York that Mr. James J. Hill, president of the Great Northern Railway, is "seriously considering the commercial practicability of the construction of the Trans-Alaskan Railroad." This road, if built, will extend from Cook's Inlet to Cape Nome, a distance of 600 miles, and will pass through a region of no mean agricultural worth, it being well adapted for the production of potatoes and hardy grains; while the Cape Nome district is expected to be a permanent producer of gold in large quantities.

General James in his article refers to the proposed trip to Alaska of the Hon. Frederick W. Seward, with a party made up chiefly of mining capitalists, and including ex-United States Senator Warner Miller, of Herkimer, N. Y. Mr. Seward is the son of the late famous Secretary of State William H. Seward, and was formerly Assistant Secretary of State. He visited Alaska with his father when the latter retired from office, and he is as confident of the future of Alaska as was the far-seeing secretary, who negotiated for its purchase. Mr. Seward is said by General James to have been deeply impressed with the mineral deposits, the fisheries, the forests, and the grazing and agricultural land of the Territory. Mr. Seward agrees with Senator Jones, of Nevada, a mining expert, that the mother lode of the gold mines of this continent is somewhere in Alaska and will yet be discovered, which will mean a vast addition to the gold supply. But without reference to that, Mr. Seward looks for a tremendous

development of the Territory before long. He has interested himself in a project to establish speedy communication between Cape Nome and Seattle by means of wireless telegraphy. He even, in his enthusiasm, dispels the terrors of winter in Alaska, declaring that the climate of the region through which the railroad is to pass does not differ greatly from that of upper Maine. Evidently Alaska will yet be one of our greatest States.

PROPOSED NEW BROADWAY TABERNALE—A NOVEL NEW YORK CHURCH BUILDING.

### A Novelty in Church Architecture.

THE GROWING tendency against the erection of expensive church buildings adapted merely for use on a single day of the week is illustrated in the case of the structure about to be built for the congregation of the Broadway Tabernacle of New York. The old edifice having been sold, a new and unique one—a combination of church and office building—is to be reared at the corner of Broadway and Fifty-sixth Street. The new Tabernacle will cost between \$320,000 and \$400,000, and will have an endowment fund of \$400,000. A sketch made by the architects, J. Stewart Burney and Henry Otis Chapman, shows how the church will appear when finished. The structure will have a relatively low front on Broadway, but at the rear it will rise to the height of ten stories. In this part the offices, all of which will be used by the organizations of the church, are to be located.

The main auditorium will seat 1,500 persons. Beneath it will be a lecture-room with a seating capacity of 600 and a banquet-room in which 300 guests can be served. In the rear of the main auditorium will be a chapel named after the late famous pastor of the church, the Rev. Dr. William M. Taylor. Above this chapel will be the part occupied as offices. One floor will be given up to the Sunday-school, and another will provide quarters for the activities of the women connected with the church. The third floor will be taken up by administrative offices and the studies of the pastor and his assistants. Above this will be the young men's floor, with club and assembly rooms. On the next floor the apartments of the sexton and his family will be located, and the top floor will be devoted to a church library and museum. The style of the new Tabernacle will be late Gothic and the materials of the exterior will be light brick and terra cotta. Pending its construction, the Rev. Dr. Charles E. Jefferson and his flock are holding religious services in Mendelssohn Hall, on Forty-fourth Street.

### Baby's Diary.

A unique and handsome publication wherein to record the important events in baby's life has just been issued by Borden's Condensed Milk Co., 71 Hudson St., New York. It is not given away, but is sent on receipt of ten cents.

### The Little Railroad Folder.

THE average person who picks up a railroad-time folder does not realize the enormous amount of work which the preparation of such a publication involves, though it is given away free in every hotel and at every railroad office. The big Burlington system, for instance, has a general time folder made up from sixteen different divisions operating time tables. The folder contains 2,000 names of towns, gives the schedules of over 500 trains, and whenever there is a change in time 60,000 figures have to be carefully checked and corrected.

# "Honey" Parker's Incomplete Romance

By John M. Oskison

**HONORIUS F. PARKER**, horse rustler for Colonel Clarke, ex-corporal in Captain Drake's company of Rough Riders from the Indian Territory, squatted against the wheel of the round-up wagon an hour before dark, talking to "Abe the Cook." It was the fall round-up, and "Honey's" war experiences were more than a year gone. He had come only a month before straight from a New York hospital to take the light job of horse herding while his pallid face was browning and his weakened body was steaming up once more to full working pressure.

Abe the Cook put his hand negligently across the rim of the wagon wheel and gazed into the west; but whether at the sinking sun, now a dull copper disk in a sky of haze, or at the faint dust cloud that arose from a score of galloping horsemen, Honey neither knew nor cared. Abe bethought him of something—he pulled a thirty-foot length of new rope from the wagon and dumped it at the horse rustler's side.

"There ye are, Honey," he explained; "tie me a hondu in this."

"What the dickens—you got sore fingers?" Honey inquired sarcastically. Abe temporized:

"Oh, go on, Honey! I got to build bread now. The boys'll be in here a-straddle o' me 'fore I gets the skillet warm."

"Hub!" Honey expressed a huge incredulity. "Trouble with you, Abe, is that you couldn't tie a hondu if you tried. You're a nice kind of a cornfield canary to bring out with a bunch of real punchers! I'll bet you a pint of whiskey the boys won't be here in less than an hour."

"What they kickin' up all that dust about, then?" The cook didn't like being alone, and argument would keep the horse rustler with him.

"Shucks! they're goin' across to Cobb's bunch to make another 'cut.' If you build that bread now, by the time the boys get here you couldn't drive a spike through it!"

Abe's professional pride was hurt. "That's goin' to be finer bread than you been in the habit o' eatin'!" he flung back. The cook held the rope's end close to Honey's idle fingers, temptingly. When the horse rustler took the lariat and began to unravel the strands Abe asked, tentatively:

"Say, Honey, what kind o' chuck did ye get in Cuby? We all was a-hearin' that you an' the colonel was messin' together on champagne an' hot tamales!" Honey looked up, an aggressive light in his eyes.

"You all was hearin' a lot of old woman talk, I reckon. What you long-legged, knock-kneed biscuit slingers don't know about the colonel would fill two or three books, I reckon. Huh! Why, you elod-hoppin' canary, the colonel got me into the best hospital in New York! Hadn't been for that I'd 'a—now, look here, Abe, you just let up on 'me and the colonel.' They ain't many things I cut out of the jokin' herd, but that's sure one of the few."

"W'y, Honey!" cut in Abe, a note of complaint in his voice, "they ain't a man west o' the Arkansas line but what'd 'a' been proud to take your place, an' follered the colonel to hell or some other summer resort!" The cook lifted the Dutch oven from its niche in the grub-box and settled it roughly on the fire of blazing sticks.

"I wasn't thinkin' about the chuck in Cuba," Honey ventured at length, with a conciliatory glance toward the cook. "But, say, Abe, you ought to 'a' seen the hag and hominy we got in that New York hospital when the women come in to visit us!"

"Oh, go on, Honey! they sure didn't give ye hominy, did they?" It was hard to discover whether Abe's question was altogether ingenuous. Honey answered readily:

"That's only a kind of figger of speech, as the feller says. I can recall, just as distinct as the last drink I had, that first woman visitor that comes into the ward with one of these picnic baskets on her arm. Wherever she spots one of us 'rookies' she sets the basket down with a thump and then puts up a pair of goggles on the end of a kind of quirt handle, and, beamin' through 'em, says:

"Oh! how do you do? You were a rough rider, were you not? I'm always so glad to meet one of you! Were you hurt—er—engaged at San Juan or at Las Guasimas?" That's just a sample kind of talk, Abe. I hears two or three like it before she gets to me, and when she comes as far as 'engaged,' I kind of snickers and says:

"Oh! no, ma'am, I wasn't never engaged!" Then I pretends I just seen what she was drivin' at, and I says, solemn like:

"Ma'am, I was wo'nded just as I got to the top of Kettle Hill, as I was standin' ready to help the colonel across a wide trench the enemy didn't fill up with the dead." I couldn't keep a straight face through that, and begins to grin like a monkey. But she held her nerve all right, Abe, and says to me without crackin' a smile:

"I'm pleased to meet a brave man, Mr. Parker. I heard of you from Mr. Bradley." She points up to where old 'Cotton Eye' Bradley was layin', grinnin' over at me. Think of Cotton Eye masqueradin' as 'Mr. Bradley,' Abe! In the grip of memory, Honey dangled the rope-end idly and stared across the prairie. The cook asked, after a time, encouragingly:

"What did she offer to give you out o' the basket, Honey?"

"She springs the grapes first, and I says I'm much obliged, but I'm afraid to eat 'em on account of appendicitis—one of them New York diseases, Abe—then she tries oranges. Well, I grins and says they don't give us finger bowls in this ward. She seen the point, and then she digs up jelly and a kind of custard froze in a box. I says sweet stuff is forbid by the doctor—that's all baby food, Abe! After that she brings out a great big yellow thing that she calls a grape fruit. I says they ain't nothin' I like better than grape fruit, but my stomach, I says, is awful weak and I wouldn't dare to eat it."

The horse rustler's pause was for effect. He watched the cook narrowly.

"What did ye get out of it, Honey?" came the expected question.

"Did you ever drink any champagne, Abe?" Honey's reply was oracular. Abe answered, innocently:

"I think I did once—time I was in Saint Looney with cattle. I know I drunk mighty near ever' thing on the bill 'fore I went broke—" Honey cut in impatiently:

"Well, I had a bigger thirst than usual then, bein' kept away from the ragin' serpent of drink for three weeks, and it just sot o' sneaks into my head that here's a chance to satisfy an old cravin' for champagne and drink this prosperous girl's health in that sparklin' wine all at the same time."

"Ye didn't have any nerve at all!" The cook did not mean what he said, and Honey knew it.

"Well, now, you look here," justified the horse rustler, "you ain't seen her! She was sure a thoroughbred, Abe—you could see that with one eye. One of these tall, firm-steppin' kind she was, just a little over the votin' age, interested in all kinds of charities and society rackets. Kind of wavy black hair she had, and eyes that make a sentimental cuss like me jump sideways every time! And, as I says, it gets into me that I wants to drink her health in champagne, so I says:

"I can't hardly eat anything, but the doctor orders some kind of wine that he says is good for me, and I'm all out. If I could—" I stops there, because I didn't have nerve to go on."

"Hub!" The cook could express briefly a complete incredulity. Honey amended:

"Well, I wants to make it look like she thinks of it instead of me. Anyhow, she cuts in and says: 'I didn't know the doctors allowed wine.'

"Not generally," I says, "but in cases like mine, and on the quiet, they gives it. Mine is all drunk up," I says. "I drunk it when I got to coughin' so." Then I waits a while, and remarks, casual like: 'If it ain't too much trouble, I wish you'd take two dollars out of my purse here, and get me a pint.' I didn't have more than fifty cents to my name, but I reaches for the purse on a bluff. Well, she took the bait easy and said:

"Now, you just keep your money, and I'll see that you get the wine. What kind is it?"

"I can't just recall the name now," I says. I thinks it's a pretty good idea not to know too much. "It's kind of white and clear and fizzy and a mite sour, too," I says. "You see, sweet things don't agree with me."

"Champagne, is it?" she asks me.

"Yes," says I. "I can't remember very well since I got shot."

"I'll not forget the wine," she says, startin' off smilin'.

"Good-bye, Mr. Parker."

"Everybody calls me Honey," I says, grinnin' and explainin' about my name. "And I wouldn't let anybody else see the wine," I says. "I don't think the other fellows is allowed to drink."

The horse rustler punctuated his tale with a sigh. Abe waited a long time, then inquired casually:

"Did ye sure get the champagne, Honey?"

"Why, of course, Abe! A quart instead of a pint, I had what the doctor calls a 'relapse' afterward. But the blamed stuff tasted so mild and refreshin' that I didn't know when I had enough."

"Did ye ever know?" the cook inquired. Honey gave the intrepid questioner a look of pained surprise, ignoring the sarcasm. Then he fell into a long reverie, sighing at the end and speaking slowly, as if to himself:

"Funniest part of that to me was how that girl come to pick me out of that whole brandin' pen full of rough riders, and do every thing in the world she could for me."

I reckon, maybe, it was because I got to be such an old-timer in the hospital before my wo'nd got well. But, anyway, the more I'd work her the better she'd seem to like it! Of course, between times, I gives her tales of the 'wild West and the lone prairie-e, which she swallows down so easy that I got tired lyin' to her. Then I begins to pump her about New York and the beauties of that seacoast town. She says to me once that she don't like the New York men, on account of their dissipatin'."

Honey subsided again, and waited for the significance of his last remark to penetrate.

"W'y, Honey!" broke out the cook at last, holding the red-hot oven lid suspended at the end of an iron hook; "ye son of a gun, ye didn't go an' fall into love, did ye?" Abe was a faithful reader of the "Duchess."

"Well, no!" responded Honey, quickly, recognizing the cook's source of inspiration. But Abe pursued the subject relentlessly:

"Nothin' never said between you about bein' forever true, an' undyin' love that lasts—that lasts till—the sun gets cold?" The cook replaced the lid of the oven as he struggled with his query. The scent of a genuine romance was in his nostrils, and he faced the horse rustler accusingly. Honey replied, with spirit:

"Not a word, Abe! She used to bring over the old lady, her mother, to the hospital and sit by my bed for an hour at a stretch, after the other 'rookies' was shipped off to the prairie. She'd ask me all sorts of tenderfoot questions about the range, and wanted to know how women stood the life out here. She didn't seem to catch on to the lay of the land very easy. She asked me if I'd ever been to school much, and if it wasn't fine 'to live the wild, free life, unrestrained by social conventions'—the very words she used, Abe, because I swore I'd remember 'em, they come so near knockin' me off the bed. Once she went on to say how much she admired the 'big, sincere, fightin' men'; and I sure rubbed it in thick about bein' a blue-blooded cow-puncher, only lackin' polish to be right up amongst the swells. Of course I didn't say anything like that, but I just looked and let out these long breaths—what they calls sighs in books—and, I tell you, Abe, they sure work!"

"What d'ye think was the matter that she didn't fall into love?" Abe demanded suddenly.

"Think she'd 'a' fell into love with me anyway!" flung back Honey with spirit. "Why, she was the sure society article, and she'd 'a' got a dook or a prince, or somethin' like that, if she'd 'a' wanted somebody!" The "Duchess's" heroines were clearly pictured in the horse rustler's mind. "But she wasn't huntin' a mate, Abe. Lord, she could 'a' had fifty by just turnin' her head!"

"What else did she do?" queried the cook, stirring vigorously at a huge pan of dough.

"When I got so I could go out of the hospital," narrated Honey truthfully, "she used to come over with her mother in a cab, and drive me all around Central Park, and along up the river where the boats go millin' around." There was a fine hesitation in Honey's manner, yet it was with a secret pleasure that he continued:

"Once she took me home with her and made me stay to dinner to meet her old man. She lives up on Madison Avenue. Of course you don't know where that is, Abe—not any more than you know, I bet, when we eat dinner." The interpolation seemed to Abe uncalled for.

"I reckon ye eat at twelve o'clock if the cook was sober," came the evidently sarcastic reply.

"That's where you're off." The horse rustler grinned. "I think you ought to go into society a little, Abe. Honest, we didn't eat till seven o'clock, and I bet we didn't get through before half-past eight!"

"Oh, go on, Honey! Nobody could eat that long."

"I reckon he would if he used all the forks they give him," protested Honey. "I reckon I'd 'a' made a fool of myself right if she hadn't sat close to me and led out prompt on them fork deals. None of the folks seemed to notice I wasn't used to seven o'clock dinners and four forks; and when her older brother, that leases Wall Street for a horse pasture, gives me a cigar and talks to me about 'ranch life and the hunting trail,' like a nice tenderfoot always does, I sure gets stuck on the whole outfit!"

"Her old lady propped me up with cushions and things, and asked me if I had any sisters, and how my mother was, and such truck. I had to round up a family history on the spot, but it went all right."

"Did ye go again?" demanded Abe, after the silence had stretched out to an uncomfortable length. The cook

shoveled some hot coals on to the oven lid as he spoke. Honey answered slowly:

"Oh, yes; lots of times. She used to make me come over nearly every day on some excuse or other, and wanted me to take her brother's room when I could leave the hospital, and stay with them until I was good and well. But it was too blamed quiet and unexciting for me, and so I lit out just as soon as I got able to travel." Honey had the air of one whose tale is ended. But Abe felt that it was incomplete, and questioned, hopefully:

"Why didn't ye pick out a good chance, an' swear to the moon ye loved her, Honey? Ye could 'a' had some fine love-makin', I expect." Abe sighed over the lost opportunity.

"Honest, Abe," responded Honey, "that thought never crossed my mind. She was just good to me, like a sure thoroughbred—more like a mother, you might say—lookin' after what I liked to eat and where I liked to go. She took me down to the Stock Exchange, and the fish tank, and over the Brooklyn Bridge. She had all kinds of sense that way. We had a bully time once at the Wild West Show!

"I met all kinds of fellows, too, friends of hers. First, I put it up that I was an intimate friend of the colonel, and I found out they was all ready to swear by him. Why! some of them college fellows was in the ranks with us 'rookies,' and seemed like I met all of them. They wanted me to go out and drink with 'em. But, somehow, bein' with her a lot, I reckon I didn't want to drink so heavy, and I could see that drinkin' hurt those other fellows. Now, drinkin' is all right, Abe, when it don't hinder your work, but—"

"What did she say when ye left?" Abe broke in, scornful of Honey's views on intemperance. Honey answered:

"Well, she just drove me down to the train, never sayin' a blamed word! My transportation money was all I had, and that didn't call for any sleepin' on the trip. She found that out some way, and made me take a Pullman berth she'd bought. Then she sat there in the car for ten minutes holdin' onto my hand, because when she started to say good-bye she'd forgot to turn it loose."

"Jest held yer hand?" asked Abe incredulously. Honey answered, truthfully:

"WY, HONEY! YE DIDN'T GO AN' FALL IN LOVE, DID YE?"—Drawn by Ralph Taylor Shultz.

"That's right, Abe. She couldn't seem to find very much to talk about, though, and I couldn't think of anything to say. But, finally, I begins to try the thank-you racket. Not bein' used to that kind of a throw, though, I got all tangled up in the slack rope. You couldn't guess in a thousand years what happened next." The horse rustler shot a challenge from his eyes. Abe answered, eagerly:

to the camp in a smother of dust. Then he went to water his ponies at the little creek that ran by the cook wagon.

"Shucks! I don't know. I'll bet she'd like it on a ranch," mused the horse rustler when the night had fallen, as he lay under an oak tree, wrapped in his blanket, counting the stars that shone through a certain opening. "Blamed if I don't have to write to her some of these days."

Honey ended, threw the completed rope-end aside, and rose as the charging cowboys clattered up

### Heavier Taxes for Newport.

THE EXPENSES of some of America's wealthiest citizens who own splendid summer homes at Newport, R. I., the most fashionable summer resort in America, will be greatly increased this year by the raising of the assessed valuations of their property by the tax collectors who have jurisdiction over the district including these seaside places. The assessed valuation has not only been raised, but the rate of taxation has been increased from \$11 on each \$1,000 of the valuation to \$11.40. The most famous of all the summer homes, "The Breakers," belonging to Mrs. Cornelius Vanderbilt, is assessed at nearly one million dollars, so that the tax for the year will amount to about \$11,400, which is in itself a very neat little income. The "Marble House," belonging to Mrs. O. H. P. Belmont, and built of pure white marble, ranks next in value. It is assessed at \$800,000, so that the tax on it would be \$9,120. There are a score of others, all valued in the hundreds of thousands, which are more heavily taxed under the new assessment by the industrious tax collector of Newport.

It is anticipated that the social season at Newport will be more brilliant this season than for many years past. Already many of the handsome summer homes have been opened.

### Anecdotes of Cecil Rhodes.

AMONG THE many interesting anecdotes of the late Cecil Rhodes appearing in the English press, the following from the *St. James Budget* are specially quotable. We are told here that those who remember Rhodes when in his teens agree that he was not a bright boy. Something of a morose nature, unsocial and unboylike, he was fond of rambling walks by himself, and he did not care much for games. Backward at school and lazy with his lessons, he showed to the full that mental inertness which comes of physical lassitude rather than from idleness or stupidity. But despite all this he had none but friends among his father's parishioners, for with his quiet, shy ways was coupled a gentleness of heart which showed itself on many occasions. He was always fond of pets—ponies, dogs, guinea-pigs, rabbits, birds, anything tamable—a taste, indeed, which he had always retained.

Mr. Barney Barnato once offered to buy for his firm from Mr. Rhodes all the diamonds then on sale by the De Beers Company. Mr. Rhodes agreed, making only one stipulation—that the whole lot, some 220,000 carats, should be put in a bucket. This was done, and the sale completed, and they gazed at a sight which no one had ever looked at before—a bucketful of glistening gems. A photograph was taken, and the diamonds handed over. Then it was that Mr. Rhodes scored triumphantly.

### A Thought

LIFE is but growth, and he is truly dead  
Who finds no task for heart, nor hand, nor  
head;  
Who smooths no path for coming feet to tread,  
Because, perchance, his days of youth are fled!

FOR youth and age both have their store of  
joys—  
A store that neither time nor change alloys;  
And he who all his gifts for good employs  
Has wealth that neither moth nor rust destroys.  
M. A. B. KELLY.

Sorting and classifying diamonds take time, and in this lot there were one hundred and fifty varieties, the sorting of which took the purchasers six weeks. During that time the diamonds were out of the market, which Mr. Rhodes had all to himself, and he scored greatly over the transaction.

In 1894 Mr. Rhodes paid a visit to the Sultan of Turkey, and much speculation arose as to what the consultation was about. Some time afterward it transpired that the trip had been made to Constantinople solely and simply in the interest of Angora goats. As is well known, the

best Angora blood in the world is to be found in Asia Minor, and none of the animals can be captured without the special permission of the Sultan. Mr. Rhodes, however, in return for much lucre, secured for the Cape from the unspeakable Turk, some hundreds of these goats.

### David and Goliath.

A LITTLE SHOT PUT OLD KING COFFEE OUT OF BUSINESS.

WHEN medicine fails, they sometimes send sick people away to another climate for their health. Sometimes the climate does it, but more often they stumble on the proper food to take, and then get well.

A lady in San Diego tells of a friend who left her home each December, for the past two winters, to go to California for her health. She says: "Almost all of her time was spent in visiting the doctor and sitting in a big chair and watching the clock to note the time for her next dose of medicine. Nervousness was her principal trouble, and, with others of kindred nature, made life for her a burden."

"On the occasion of her last visit, I begged her to give up the use of coffee, and use Postum Coffee. She replied that she could not stop coffee. I said no more at the time, but the next morning at breakfast, I passed her a fragrant, steaming cup of Postum, making it as it should be made. After that, I had no more trouble, and my friend drank no more coffee. But the most surprising part of the experience was the change that soon came over her."

"We began to notice it in less than a week. In less than a month her nervousness had left her, and in three months she was a new woman in face, figure and health. I had not dared to hope for so much benefit, although I had been greatly benefited myself by Postum, but coffee to her system was simply poisonous, and I believe this is the case with many others. She returned to her home in December, and was married within less than two months after. She never fails to give credit to Postum for her health or thanks to me for teaching her to make it properly, and well she may, for Postum has done for her what travel, doctors and medicine failed to do." Name given by Postum Co., Battle Creek, Mich.

## Refuge for Immigrant Girls

A FINNISH GIRL ON HER ARRIVAL IN AMERICA.

THE MATTER of caring for the hundreds of thousands of immigrants who yearly crowd to our shores has engaged the earnest attention, not only of the government, but also of various benevolent and religious bodies. The latter have done much good work in behalf of the incoming aliens and are planning additional benefits. One of the latest sugges-

tions along this line was made in an address before the Congregational Home Missionary Society, at its recent meeting in Syracuse, by the Rev. Dr. L. H. Cobb, secretary of the Congregational Church Building Society. Dr. Cobb urged that for the protection and right influencing of immigrants there should be erected at each of the principal ports of entry a commodious parish house designed to accommodate families for a day or a week, as circumstances might demand, with a chapel for religious services on Sunday and at other times carried on in the principal languages of the peoples who come to us.

Doubts are expressed by practical workers of the feasibility of a scheme so comprehensive as Dr. Cobb's, but the idea which he had in mind is being realized in sections by institutions already existing. One of the most efficient and important of these is the Immigrant Girls' Home, conducted at No. 9 State Street, Borough of Manhattan, under the auspices of the Woman's Home Missionary Society of the Methodist Episcopal Church. The object of this institution is to provide a pleasant and safe temporary home and rest for women and girls waiting for friends or seeking employment in families.

The home was founded nearly fifteen years ago, and in its early days was in charge of Mrs. Helen A. Mathews, who, by reason of her personal qualities and her sincere piety, was particularly well adapted for an undertaking of this kind. Under her administration the home was firmly established and grew in usefulness. Failing health, however, in time compelled her retirement, and she was succeeded by Miss Alma E. Mathews, who has been a most active and successful worker in this benevolent enterprise. Miss Mathews is the missionary of the establishment. She makes daily trips to Ellis Island in search of immigrant girls who need help and guidance. Miss Josephine Corbin, deaconess, is the superintendent, and Mrs. E. J. Dalrymple the matron of the home. All three women evince tactful intelligence, ready sympathy, and a broad Christian spirit, and so are thoroughly fitted for their respective duties and command the respect and affection of their wards. The home was formerly located at No. 17 State Street, where it occupied at first only one floor. Later it acquired another floor, and finally the demands upon it were so enlarged that it was necessary to secure an entire building for the proper transaction of its business. The five-story and basement brick structure in which it is now housed was once, when Battery Park was the fashionable quarter of New York, a dwelling of some pretensions, though it looks modest enough in these times of greatly increased wealth and show.

The house is roomy and it suffices usually for current needs, but at times its capacity is sorely taxed. It is

plainly but comfortably furnished, and it is kept scrupulously neat and clean. During the year ending September 30th, 1901, nearly 800 girls, coming from twenty-two countries, were transient dwellers at the home, and some 5,000 have been inmates of it since its work began. The home ministers almost exclusively to Protestant women, the Roman Catholic Church having a similar institution of its own near by. But while the home is managed by Methodists, it is practically undenominational in its workings, and has more than once given shelter and care to needy Roman Catholic girls. "We do not preach to our girls," said Miss Mathews recently. "We simply try to live rightly before them, to surround them with an atmosphere of cheerfulness and purity, pervaded with the religious spirit, to show that we are personally interested in them and love them, and thus we seek to influence them for good and to strengthen their desire to lead worthy lives."

The results of this policy in the careers of the girls after leaving this place of refuge prove that it has been eminently judicious. The home, with its kindly and uplifting influences, has been the means of keeping hundreds from going astray and of inducing many to retrace the path of indiscretion. How its work ignores the bounds of sects and creeds is illustrated by the special attention which has been given during the past four years to the Finnish girls, who are fleeing from their oppressed country in annually increasing numbers. These young women are of the Lutheran faith, but they are as heartily

money or because their friends do not come at once to meet them. They arrive at the home clad in the garb of their fatherland and weighted with miscellaneous bundles. They are admitted by the basement door and are led up stairs to the dormitories on the upper floors, where each is given comfortable quarters. The house itself is probably the finest which some of the girls have ever been in, but they are soon made to feel entirely at home.

They remain at the home until their relatives can be communicated with and somebody arrives to claim them, or money is sent to them to buy railroad tickets; or, in the cases of others, until situations can be procured for them. Some stay for only a single night, others are there for weeks. The young women are not fettered with iron-clad regulations. They enjoy the freedom and informality of a genuine home. They are well fed, and there is no ban placed on youthful good spirits. A good-sized and pleasant apartment is set aside for use by them as a sitting-room. It contains an organ, and it is here that the girls assemble for social intercourse, singing, and simple religious services. If the girls are able to do so, they are permitted to pay a nominal sum for their accommodations. If they cannot spare this they are lodged and boarded without cost to themselves. When tickets come for those who have long distances to travel, they do not always have cash enough to buy food on the journey. In that event the housekeeper puts up a substantial lunch, and frequently money is given them from the funds of the home. It is a pleasing fact that, in after days, when they have begun to earn their own living, the self-respecting guests of the home pay back the sums advanced to them, and sometimes make donations to help the cause.

The inmates of the home appreciate so deeply the comfort and security afforded them in time of exceptional need, and become so fond of their benefactors, that a large proportion of them keep in touch with it for years after they leave it. Those who find places in the city or vicinity make frequent visits to the home. Whenever they have troubles of any sort and want sympathy and advice they hasten to it and pour their tales of perplexity and woe into the ears of their old-time sponsors. When in poor health and unfit to work, although not cases for the hospital, they return to the home for rest and recuperation. Many interesting and touching incidents are related by the managers of the necessitous cases in which they have been angels of mercy, of the relief felt and the gratitude manifested by the dazed and homesick girls taken from the turmoil of the immigration station to the calm and peace of the State Street home, and of the lives made happier and better by contact with the wholesome influences of the place.

While the Immigrant Girls' Home is supported chiefly by the Woman's Home Missionary Society, donations from any other source are gladly accepted, and are applied in the wisest manner to the carrying on of the work. The current expenses of the institution are now about \$500

welcomed as if they belonged to the society's own denomination. They are very responsive to the kind treatment they receive. Usually they are bright and tractable, and they quickly learn to speak English and rapidly become Americanized in appearance. The contrast between one of them on her arrival and the same girl after she has been in the country for a short time is sometimes very marked.

Miss Mathews, as the recruiting officer of the home, goes every day, Sundays included, to Ellis Island. Her long experience enables her promptly to detect and get hold of the cases which require a good woman's oversight, and as the young women's pedigrees are taken in the registering department she selects those who she thinks should accompany her to the home. Sometimes she has piloted to its hospitable precincts in a single day as many as thirty lonesome, shrinking, unhelped girls. These girls are among those who are liable to detention at the island because they have little or no

## A SUMMER LIBRARY ESPECIALLY ARRANGED FOR BUSY PEOPLE

THE AVERAGE American worker, man or woman, in the factory, the store, the shop, or on the farm, is a person of superior intelligence, with hopes and ambitions for higher walks of life and learning. These workers are great readers and lovers of books. A good part of their leisure time is given up to reading such literature as they are able to reach. In the towns and cities they haunt the free libraries at evening and other spare hours, and in the country homes they burn the midnight oil while they pore in absorbed interest over some favorite volume. Their reading is generally confined largely to fiction. In this they find that forgetfulness of their surroundings, that sense of exhilaration, that mental stimulus, so welcome to all who must bear the burden and heat of the day in lines of every-day duties. To all such an entertaining book, a romance, a tale of love and adventure, is a source of unending delight, a relief from care and anxiety, a refuge from the turmoil and unrest of the work-a-day world. Having in mind the tastes and needs of these busy men and women, we have prepared for their use and advantage a list of the choicest and most entertaining novels available, any or all of which we are prepared to send, postage paid, to any address in the United States on the receipt of \$6.25, or the books can be had singly at thirty cents per copy. This busy people's library of fiction is made up of the following books:

1. John Halifax, Gentleman. By Dinah Mulock Craik.
2. The Mill on the Floss. By George Eliot.
3. Lorna Doone. By R. D. Blackmore.
4. Hunchback of Notre Dame. By Victor Hugo.
5. Handy Andy. By Samuel Lover.
6. The Egyptian Princess. By George Elens.
7. The Deerslayer. By Fenimore Cooper.
8. Quo Vadis. By Henry Sienkiewicz.
9. Won by Witting. By Edna Lyall.
10. The Three Guardsmen. By Alexandre Dumas.
11. Last Days of Pompeii. By Bulwer Lytton.
12. Beside the Bonnie Briar Bush. By Ian Macnaren.
13. In the Midst of Paris. By A. Daudet.
14. Cranford. By Mrs. Gaskell.
15. Abbé Constantin. By Ludovic Halevy.
16. Ardashir. By Marie Corelli.
17. Count of Monte Cristo. By A. Dumas.
18. Aunt Dinah. By Rosa N. Carey.
19. The Deemster. By Hall Caine.
20. Foul Play. By Charles Reade.
21. Far from the Madding Crowd. By Thomas Hardy.
22. Lady Audley's Secret. By M. E. Braddon.
23. The Minister's Wooing. By H. B. Stowe.
24. House of the Seven Gables. By Nathaniel Hawthorne.

DESPITE THE frequency of a new "Life of Napoleon," Sir John Seeley's "A Short History of Napoleon the

First" continues to be recommended by authorities for school and library use. The New York State Library's list of books selected for a model \$500 library for schools gives Seeley's "Napoleon" the preference, and the suggested list of books for a small library recommended by the State Library commissions of Wisconsin, Minnesota, Iowa, Nebraska, Idaho, and Delaware also select this popular biography, published by Little, Brown & Co., of Boston.

THE GENEROUS, spontaneous appreciation of an artist's truly great work by his peer has never been more conspicuously demonstrated than in Gilbert Parker's acknowledgment of Ralph Connor's latest book. Gilbert Parker, who thus far is considered better known as the writer of good stories than as a member of Parliament, recently took occasion to pay the following very handsome compliment to the author of "The Man from Glengarry": "I have seldom read anything that has given me a greater thrill than the history of the fight between Macdonald's gang and Murphy's gang on the Scotch River. Also, I have seldom been attracted to characters more than to the two Macdonalds—Macdonald Blain and Black Hugh." "The Man from Glengarry," since it was published by the Revell Company in November last, has been issued to the extent of 160,000, of which 120,000 were published in America, 30,000 in Canada, and 10,000 in Great Britain.

AN ILLUSTRATION of the familiar fact that the purely academic view of fiction is often at wide variance from the view taken by the reading public is instanced in the case of Mr. William Stearns Davis, author of "Belshazzar." While at Harvard College, Davis submitted a draft of his first book, "A Friend of Caesar," to a professor of English who had assigned a long-continued theme in a course on writing. The aspiring young man was politely told by the professor "not to offer him the draft of a dime novel, but to turn his attention to some light and graceful sketch of modern society, for which his training and environment to some extent fitted him." The result was that "A Friend of Caesar" was expanded into a book, written during odd moments at college, and sent to a good publisher—more in hopes of turning the tables on the unsympathetic professor than from great hopes of literary fame. The book was promptly accepted, and won reasonable success. It is only fair to say that the professor has, since then, made graceful apologies, and he and Mr. Davis are very good friends.

PROFESSOR JOHN GIFFORD, author of "Practical Forestry," published by D. Appleton & Co., has made his subject a life study. He is a young man (thirty-two), but has made himself master of a profession of increasing importance and one destined to become of still greater importance with the continued destruction of our forests. Professor Gifford was born in an unsettled part of southern New Jersey, literally in the woods, so that his taste is a natural rather than an acquired one. After graduating from Swarthmore College, he continued his studies at the University of Michigan, Johns Hopkins and Tulane universities. Going abroad, he entered the University of Munich, Bavaria, from the forestry department of which he received the degree of doctor of economics. For three years after his return he occupied the position of instructor in botany at Swarthmore College, Swarthmore, Penn. This was followed by three years devoted to travel in tropical America, and two years in practical forestry work in New Jersey under the direction of the Geological Survey.

WE ARE gratified to learn, through an authoritative source, that Dr. William Elliot Griffis, the well-known writer and authority on Dutch history and Oriental topics, who has been pastor of the First Congregational Church at Ithaca, N. Y., since 1893, will retire from the active ministry before the close of the present year and devote himself wholly to literature and the lecture field. Dr. Griffis has in view a work on the constitutional development of Japan, and also a standard history of the Netherlands, tasks for which he is eminently qualified by many years of special study and investigation. Dr. Griffis first went to Japan in 1870 to help organize the public schools of the empire, and remained there four years, the latter part of the time as a professor of physics in the Imperial University of Tokio. On his return to America he resumed his profession as a minister, being pastor first of a Dutch Reformed Church at Schenectady and later, for seven years, of the Shawmut Congregational Church of Boston. Dr. Griffis's first notable book, "The Mikado's Empire," appeared in 1876, since which time he has written twenty or more volumes, chiefly of a historical and biographical character, including lives of Matthew G. Perry and Verbeek of Japan, a history of Korea, and several works on Holland and its people. Dr. Griffis is also a frequent and popular contributor to the newspapers and periodicals of the day.

## Lincoln's Reminiscences of King Edward.

PROBABLY no man, in the long and famous list, ever proved a more acceptable minister to England from this country than did the Hon. Robert T. Lincoln, who held that office during the administration of the late President Harrison. If only as the son of the martyred President, Mr. Lincoln could have been sure of a cordial welcome at the court of St. James's. But his great personal qualities speedily impressed the English court and people and he gained a high standing and influence based on his own merits alone. A man of pronounced ability and thorough probity, a fine speaker and a courteous gentleman, Mr. Lincoln won deserved good opinions abroad, as he has at home, both as a public official and as a private citizen. It is of especial interest at this time that Mr. Lincoln, while in England, often met and had friendly relations with the Prince of Wales, now King Edward VII. Mr. Lincoln recently expressed his estimate of the King as he once knew him, and it will be found to be as interesting as it is full of praise.

"During my four years' residence in London," said Mr. Lincoln, "I became acquainted with the King, then Prince of Wales, and I met him often. As Prince of Wales he had practically nothing to do with the affairs of the government, and he was known to ambassadors and others in a social capacity purely. He was at that time a happy, clever man in every way. He knew about everybody and everything. He has traveled extensively and is exceedingly well informed.

"The King is well known personally all over England. He is a gentleman always. At social gatherings he usually attracts more attention than anybody else. He is genial and a bright conversationalist. One of his features is his smile. Though he is not what we would call democratic in the narrow sense, he is not reclusive.

"I would not say that King Edward is a statesman. Members of the royal family may not be considered in that light. This is not for the reason that they do not

A RARE PHOTOGRAPH OF KING EDWARD VII.—TAKEN WITH HIS SISTER ALICE JUST BEFORE HE VISITED AMERICA IN 1890.—HE WAS TWENTY YEARS OLD.—Copyright, 1902, by Rockwood.

possess the ability, but because their position does not require them to be adepts in statecraft, nor is it expected that they shall participate actively in affairs of the government. To me King Edward always appeared to be a very strong man, mentally and physically. His life and age, however, are against him in his present illness.

"The heir apparent is of a different type from his father. I saw him often. He is of a quiet, reticent disposition. Queen Alexandra is probably well known personally to more persons in England than the King. She has appeared more in public than her royal consort, and is a highly cultivated woman.

"I remember the King when, as Prince of Wales, he visited the United States. I was then a student in Harvard. He visited the university. He and my father never met.

"While I was minister a little incident happened that showed the feeling he entertained toward anybody whom he had met favorably. Mr. James Spencer, now a resident of Milwaukee, owned a large farm near Dwight, Ill., in 1860. The farm was in the centre of a fine quail district, and it was there that the prince was taken to shoot the prize game. He stayed at Mr. Spencer's place. When I was in London Mr. Spencer visited me. I had my secretary, Mr. White, write a note to the prince's secretary telling him of Mr. Spencer's presence in London. The prince replied immediately and requested Mr. Spencer to visit him without delay."

## A Strengthening Tonic.

HORSFORD'S ACID PHOSPHATE. ESPECIALLY recommended for the relief of nervousness and exhaustion so common with the grip patient. Nourishes and strengthens the entire system by supplying the needed tonic and nerve food. Induces restful sleep.

TELEPHONE Service at your house will save many small annoyances. Rates in Manhattan from \$48 a year. N. Y. Telephone Co., 15 Dey St., 111 W. 38th St.

to New Yorkers, at the Casino.—*McIntosh.*

## Midsummer Amusements

THE STAY-AT-HOME public of New York and the great crowd of summer visitors, which even the dog-days cannot keep away, must be entertained, and they find plenty of enjoyment at the

first-class vaudeville houses like Proctor's, with their very excellent stock companies in the best dramas and comedies; at Keith's, with a variety bill that is always changing and always good; at the Eden Musée, with its waxworks and other unique features, and also at half a dozen other playhouses of more or less consequence. For those who want a regular theatrical treat there are other midsummer attractions worth mentioning. These include "The Wild Rose," at the Knickerbocker; "A Chinese Honeymoon," at the Casino; "The Chaperons," in the Cherry Blossom Grove, at the New York Theatre, and the new musical extravaganza, "The Defender," at the Herald Square. At the seaside, Manhattan Beach gives us Shannon's Band in the afternoon, and in the evening Pain's magnificent spectacular fireworks, entitled "Ancient Rome," followed by a first-class comic opera company, at the beach Casino. The roof gardens of New York are all in full blast with new attrac-

tions, light and life, and an abundance of fresh air. The amusement seeker, even in midsummer, will find plenty to enjoy while on a visit to the metropolis.

To gratify as many of the senses at once

as possible, to please the individual through sight and hearing, taste, smell, and touch all at once, is being accomplished more and more frequently in New York. And no contrivance of human art and skill performs this feat in a way more complete than a summer garden. The demand for this form of entertainment has brought about the result that summer gardens have blossomed out in all parts of the city. The latest of these is the Circle Auditorium, Sixtieth Street and Broadway, where the Kaltenborn concerts have opened. The music is furnished by an orchestra of forty-five pieces, and Franz Kaltenborn, who for three seasons led an orchestra in the St. Nicholas Garden, is the conductor. The programmes are varied. The old masters contribute the best that they have produced; the new masters, too, are on the list. The price of admission, being fifty cents, brings the concerts in the class of performances called "popular." It is a pleasant place to drop in to be entertained.

WILLIAM PRUETTE AND MISS AIMEE ANGELES,  
Who contribute largely to the fun of "A Chinese Honeymoon," costumed for their roles of  
Admiral Ho Lung and Miss.  
*Gilbert & Bacon.*

MISS BELLE HARPER,  
Who is to be one of the principals in "Sally in Our Alley," which will soon be brought out at the Broadway Theatre.—*McIntosh.*

MISS IRENE HOBSON,  
Cousin of the hero of the *Alvorada*, and a member  
of Miss Elise de Wolke's company next season.  
*Marceau.*

MISS ELIZABETH TYRES,  
One of the new stars of the coming season. She will  
be seen in "Gretna Green," a play by Miss  
Grace Furness.—*Marceau.*

MISS ELIZABETH KENNEDY,  
Who will star as "Mrs. Trentoni," Miss Ethel Barrymore's part in "Captain Jinks of the Horse Marines," this season.—*McIntosh.*

MISS GRACE HEYER,  
The successor of Mrs. Clara Bloodgood in the interesting part of Mrs. Lake in "The Way of the World."—*McIntosh.*

MISS PERCY HASWELL  
As Princess Angela in "A Royal Family," which is  
the vehicle used by Miss Haswell in entering stardom.—*Jeffrey.*

# In the World of Sports

## HARVARD'S ATHLETIC VICTORIES—THE BICYCLE CHAMPIONS

M. L. HURLEY,  
The fastest amateur  
bicyclist.

fall. If Harvard should win the football championship the crimson's cup of joy would be complete. Harvard's victories in the track and field and baseball championships were honors earned. I notice in some quarters a disposition to question Harvard's title to the baseball championship simply because the crimson was beaten by Princeton in the one incomplete game played at Princeton. While still of the opinion that the Tigers, all things considered, had the best all-around baseball team in the field this year, the men did not play up to their reputations and records, and for that reason, if for no other, they are not entitled to any further consideration. In baseball it is what a team does and not what it is possible for it to do that counts. The fact that Yale beat Princeton two out of three games and that Harvard then gave Yale the same sort of a drubbing will settle the championship question in the minds of all true sportsmen. And that final game between the sons of Old Eli and John Harvard at New York was one of the best contests played in years. There were good and bad plays, both of omission and commission; in fact, it was typical baseball all the way through. Clarkson, the Harvard twirler, is a counterpart of his famous brother, John, who will be remembered as one of the greatest of the professional pitchers of a dozen years ago. Walter showed the careful coaching of his brother and used the slow and tantalizing delivery made famous by John. Only at rare intervals did young Clarkson use much speed in his delivery, depending almost entirely upon a slow ball with a slight drop. It fooled the Yale batsmen completely for six innings, and when they began to gauge it successfully it was too late to turn the tide of battle. A colored man, Matthews, played in right field for Harvard, and did much to win the game with his fast base-running and good batting. Harvard has now shown colored men to advantage in football, track athletics, and baseball; in fact, Lewis, the old football player, was one of the best line men ever seen on the gridiron. It was also noticeable that, while the Harvard "rooters" had cheers and college songs for all of her other men who did good work, there were no cheers for Matthews, the colored man. Had any other of her players scored the winning run, as Matthews did, he would have been carried off the field upon the shoulders of the undergraduates. But the undergraduates were satisfied to crowd around the negro player at the conclusion of the game, patting him on the shoulder and saying, "Good boy!"

**TWO CYCLING WONDERS.**—While the cycle racing season is still young two men, one an amateur and the other a professional, have already demonstrated their superiority in their respective classes. Frank L. Kramer, the national professional champion, is probably the fastest unpaired rider in the world to-day. I have watched them all since the time of the famous Zimmerman, and am of the opinion that Kramer is a better man than Zimmerman ever was. Kramer has filled out wonderfully during the last year and he has the strength which he lacked when he was an amateur. M. L. Hurley, of the New York Athletic Club, is the fastest amateur seen since the time of Kramer and he has a great future before him. Hurley's great forte is his speed at the finish. He

frequently is so far behind on the last lap that he seems to have no chance at all, but he invariably wins by a small margin.

**AS TO WOMEN GOLFERS.**—Golfers generally will probably have noticed that less stress has been laid upon the recent New York championship victory, captured by Mrs. E. A. Manice, than was the case last year when Miss Genevieve Hecker won the national championship for women. While the experts admit that the victory won by Mrs. Manice was thorough, they hesitate when asked if she will be able to defend her Metropolitan title against Miss Hecker. Hearing so much of this sort of talk I determined to interview several of the well-known professional trainers and coaches. I found them pretty unanimous upon one point, and that was that one could not estimate the golfing abilities of a woman player with the same nicety and certainty that the playing strength of a man could be estimated. They say the women are more erratic and not so sure of repeating in a game. The women become excited, annoyed, and angry at little troubles which the average male expert meets without losing his temper and form. Among those who regularly bet upon their favorites in the big matches I have noticed that as a general thing the wagers made upon the women are nearly always small. The recent attempt to bring discredit upon the amateur status of Travis, the national champion, is not likely to amount to much. Travis is a business man in New York with an income sufficient to meet his every want. His intimate friends will tell you that he has done nothing in his golfing history to besmirch his title as an amateur and that he is not likely to do it. He is the American representative of a big Australian firm, and when he is busy he gives no attention to golf. There are seasons when he has plenty of time to spare, and as he is a true enthusiast he gives that idle time to golf. If by any chance—and there doesn't seem to be any—he should be declared a professional, I think that would be the last seen of Mr. Travis upon any golf field.

**WHY PING-PONG LINGERS.**—Surprise has been expressed in many quarters that the craze for ping-pong did not die out with the opening of the outdoor season. This fascinating little game is played almost as much to-day as it was during the indoor season. Tables have been placed on the lawns at most of the summer resorts and ping-pong parties are held daily. There is speed and positive science in the game, and there seems to be no good reason why its popularity should wane until something better is evolved from the brain of some sporting genius.

G. E. STACKHOUSE.

### Sporting Queries Answered.

J. A. S.—The record of the baseball games played under the present five-year agreement between Yale and Harvard resulted as follows: 1897, Harvard, 2; Yale, 0. 1898, Yale, 2; Harvard, 1. 1899, Harvard, 2; Yale, 1. 1900, Harvard, 2; Yale, 1. 1901, Harvard, 2; Yale, 0. 1902, Harvard, 6; Yale, 5.

FRANK L. KRAMER,  
The fastest bicycle rider who ever  
lived.

**M. A. C. LOUISVILLE.**—The amateur rules in golfing are particularly strict. A man could be declared a professional in making money in any way out of the game. The eligibility of a prominent writer was questioned recently, the claim being made that his real income came from his writing about the game.

**A. J. THIRIDAR, B. W. I.**—The *Bicycle World*, New York City. The average gear for racing men runs from 82 to 96, depending largely on the strength of the rider. The weight of the machine varies from 20 to 24 pounds, with the latter weight preferred for a rider weighing 164 pounds in training.

**M. M. B., New York.**—The college teams play under their own rules. This accounts partially for the fact that the college ball games take much more time to play than the professional contests.

## Refuge for Immigrant Girls.

Continued from page 62.

per month, or \$6,000 per year, an outlay of only about \$8 per annum for each immigrant aided, an exceedingly small per capita sum, all things considered. Thus it will be seen that economy rules and no money is wasted. More money, however, is likely to be needed in the future than in the past, as the work of the home may yet be extended in a desirable way. Miss Corbin, the superintendent, has evolved a plan for a training school, in which the non-English-speaking girls may be given a three months' course, at least, of instruction in colloquial English and practical housework after the American fashion, thus making the pupils far more capable and acceptable as servants. Miss Corbin estimates that this extension of the home's endeavors could be accomplished with a doubling of its present income. It is confidently expected that the requisite funds will yet be forthcoming, for no one can investigate the work herein outlined without finding it in every way approvable.

No less a person than Miss Helen Gould some time ago inspected the home and was so pleased with what she saw and learned that she sent her check to the managers for \$500. Her example of liberality may safely be followed by all who desire to aid a project which is as well managed as it is truly beneficial.

## Cool Bodies

MADE BY APPETIZING FOOD.

You can feel as "fit as a lord" in hot weather if you eat sensibly. If you aren't entirely happy in hot weather suppose you quit your way and try ours.

Take a cold sponge bath, dress leisurely and sit down to a breakfast of Grape-Nuts and cream, a little fruit and a cup of Postum Food Coffee. Don't fear, you won't starve; on the contrary, that "lordly feeling" will take possession of you by lunch time.

Grape-Nuts is a concentrated food and contains as much nourishment as bulky,

body-heating food like meat, potatoes, etc. Its crisp daintiness will appeal to your palate and the result is a very marked difference in the temperature of the body and the certainty of ease and perfect digestion.

Quit coffee; it unnaturally stimulates the brain and nerves, heating the body and causing an uneven temper; use Postum Food Coffee; has a charming flavor when properly made and does not affect the nervous system, but assists the brain to work with ease and clearness.

Experience and experiment in food and its application to the human body have brought out these facts. They can be made use of and add materially to the comfort of the user during the hot weather.

Look through the recipe book in each Grape-Nuts package for delicious puddings, entrées, salads, and desserts.

## THE CURIOUS COMMUNITY AT ECONOMY, PENN.

THE ODD BUILDINGS AND QUAIN PEOPLE OF A TOWN WHICH WILL BE INVADDED BY A LARGE NEW PLANT OF THE STEEL TRUST.

## Economy and Its Curious People.

NO PART of the rich and fertile Ohio valley is more beautiful to look upon than the very beginning of it, just below the junction of the Alleghany and Monongahela rivers and the ever-busy, prosperous, expansive city of Pittsburg, the home of iron kings, coal barons, and other members of that aristocracy of brains, character, and industrial enterprise of which Mr. Carnegie stands as a representative type. The valley below Pittsburg for twenty miles or more is the choice suburban district of the Iron City. Here, upon the gently rolling hills and the picturesque bluffs overlooking the Ohio, are many lordly mansions, the homes of the aforesaid aristocracy, with their spacious lawns, lovely gardens, tennis courts, and every other appointment which a cultured taste can suggest and wealth command. At Sewickley, the most delightful of these suburban villages and a centre of wealth and fashion, the valley suddenly widens into a noble stretch of rolling meadows, orchards, and vineyards, intersected with macadamized roads and lovely lanes and shaded byways, and with club-houses for lovers of golf and other outdoor sports dotted here and there upon the adjacent slopes.

Six miles farther down the Ohio, where the valley is broader still, lies the quaint little village of Economy, founded and occupied for many years by a sect of German pietists, a body of celibates, a thrifty, honest, industrious people, once flourishing, but now diminished in numbers to a feeble and lingering remnant. The village itself has an alien, other-world aspect as pronounced in its way as the accent of its older inhabitants, and if one should be dropped into the midst of it asleep he might well think when he opened his eyes that he had awakened in some pretty little hamlet of the fatherland itself. Economy, like many of its excellent people, is built "on the square," after the manner of a checker-board. All the houses are alike, their doors opening not from the street, but from inclosed gardens at the side. Nearly every house has a trellis over its front with clambering grape-vines, from the fruit of which, in its season, the Economites make a wine whose fame in former days went far beyond the valley.

The sect at Economy is known in religious annals as the Harmonites. It was founded by one Rapp, a German pietist, who came to this country with several followers in 1803. They located first about twenty-five miles north of Pittsburg, but afterward removed to Posey County, Ind., where they prospered and grew rich and strong. In 1825 a transfer was made to Economy, the present home, where for many years they continued to thrive and were happy and contented.

The Economites are celibates by profession and practice, and property is held in common. The membership was formerly recruited with orphan children brought from

Germany. The people have always been on good terms with their neighbors; no scandals have marred their history, and they have always borne the reputation of being a peaceable, industrious, and hospitable folk. Their place of worship is a large, plain structure in the centre of the village, where services are conducted in German and the music is led by the village band. The women and men sit apart and the heads of all remain covered. In recent days the community has been composed chiefly of farm laborers and other employes and dependents, none of whom have embraced the tenets of the society.

The Economites own, in their corporate capacity, several thousand acres of the most fertile farm land in the valley, and their orchards, meadows, and wide-stretching fields of wheat and corn are fair to look upon in the summer season, and great herds of fine, high-bred cattle "feeding upon the hills" add to the quiet beauty of the scene. In former years, under the shrewd management of the late Father Henrici, their last great leader and spiritual guide, the Economites accumulated a surplus from their factories and farm products which they invested in railroad stocks and other valuable holdings. Their wealth at one time was estimated in the millions, and an interesting and much-discussed question has been as to what disposition will be made of this wealth, and who will inherit it all, when the last of the Economites is laid away in the moundless cemetery in the village orchard, an event which cannot be far away as the course of time and nature runs.

Recently the site of Economy itself, as well as the valley land for several miles up toward Pittsburg, has been much exploited for manufacturing purposes, and at Leetsdale, just above Economy, a great iron firm has already erected a plant, and near at hand by the creek known as Big Sewickley a large tract of land was recently bought by another company, which proposes to erect a plant employing a thousand men. Latest of all comes the announcement that the United States Steel Company, the greatest and most powerful of all industrial corporations, is about to locate an enormous manufacturing plant at Economy, for bridge construction, large enough to give employment to 5,000 men. When this event comes to pass, all that is left of Economy as the home of the pious Rapp and his zealous adherents will doubtless be swallowed up in the smoke and roar of this gigantic industrial enterprise. Her quaint and picturesque dwellings may be occupied by the laborers, many of them foreigners, who will come with the great factory, and her odd people will be disturbed and scattered by the host of newcomers. The change may be a gain on the side of opportunities for labor and the productivity of wealth, but it will certainly be a loss in the elements that make for peace, quiet, and the picturesque phases of life in the upper Ohio valley.

## The Pacific Coast's Exposition.

THERE WILL be held in the city of Portland, Oregon, in 1905, a great fair, to last several months, to commemorate the centennial of the arrival of Lewis and Clark on the Pacific coast, after their journey from the mouth of the Missouri on the first and the greatest of the American government's expeditions of exploration. The historical and political consequences of that expedition were momentous. It furnished the United States with one of the earliest and one of the strongest of the claims by which it gained undisputed possession, in the treaty with England in 1846, of the vast empire on the western side of the Rocky Mountains, comprising the present States of Oregon, Washington, and Idaho, and parts of the States of Montana and Wyoming.

The citizens of Portland and of Oregon in general are proceeding in an energetic and intelligent way to get up a fair of which the Pacific coast and the whole country will be proud. The company which is to manage the fair has been incorporated, and has ex-Senator Henry W. Corbett as its president. The capital stock, originally set at \$300,000, was raised in two days, and then it was enlarged to \$500,000. The city of Portland is to provide the site and one or two buildings. Oregon's Legislature is to be asked for an appropriation for it of \$500,000. The Legislatures of Washington, Idaho, Montana, Wyoming, Utah, and British Columbia have endorsed the project, and assurances have been given that they will make liberal appropriations to it. California has manifested its interest in the idea, and is expected to contribute handsomely toward it. Congress will be asked to appropriate \$2,500,000.

It was with the Oregon Historical Society, whose president is Col. H. W. Scott, editor of the *Portland Oregonian*, that the idea of a great fair for the Lewis and Clark centennial originated. The project made an immediate appeal to all the people of that city and State, and has been received with favor by those of the entire section west of the continental divide, as well as by British Columbia. The St. Louis fair of 1904 will help the Portland enterprise, for many of the best exhibits from all parts of the world will, it is expected, be removed at the end of 1904 from the city on the Mississippi to the city on the Columbia.

The Lewis and Clark fair of 1905 will have exhibits from all parts of the world, but its especial purpose will be to display the growth, products, resources, and capabilities of the Pacific coast and Rocky Mountain region of the United States and of Canada, of those of the United States' possessions in Hawaii, the Philippines, and other parts of the great western ocean, as well as of the resources of China, India, and the rest of the great Asiatic countries. It will thus cover a field which has not been adequately touched by any of the other expositions—a field which is constantly and rapidly growing in importance.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *Leslie's Weekly*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *Leslie's Weekly* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *Leslie's Weekly*, 110 Fifth Avenue, New York.

I SEE no reason to change my belief that the market is high enough. It is a settled fact that we are not to have bumper crops this year. We know already that winter wheat is a disappointment, and the weather thus far has been so unfavorable to spring wheat, corn, and cotton, that it will be little less than a miracle if these crops are up to the average. Money is

tighter, and the best evidence that it is to continue to be so is found in the fact that the banks are not anxious to make loans for long periods and that on three and six months' loans they are still charging pretty stiff rates. Gold shipments are expected before long. Short crops mean diminished railroad earnings, and tight money means lower prices for all speculative securities that have been advanced to unreasonable figures.

"R." Deep River, Conn.: Impossible.  
"H." Charlotte, N. C.: Letter satisfactory.  
"H." Rochester, N. Y.: You should be a subscriber.  
"J. G. S." Hohenwald, Tenn.: Answer by letter.  
"M. H." New York City: Answered by letter.  
"J. B. M." Warren, Mass.: Answered by letter.  
"C." S. Dak.: Neither of the parties has a rating.  
"H. G. W." Chicago: I would not sacrifice at present.

"H." Rochester: Highly speculative and report unfavorable.  
"K." Lexington, Ky.: (1) I would ordinarily figure as you do. (2) Ditto.

"G." Mexico City: It has no rating, but does a large business, mainly speculative.  
"S. J. B." Louisville, Ky.: I was grossly deceived. Would not sacrifice at present.

"R." Shiremanstown, Penn.: I do not regard any of the stocks with favor, as an investment. Highly speculative.  
"H." Rochester, N. Y.: I am making inquiries regarding the Merchants-Bank Basket Machine Company.

"K." Bridgeport, Conn.: All the companies which you name are highly speculative. You take your chances.  
"D." Evansville, Ind.: It is purely a speculative concern and I believe the dividends are only temporarily declared.

"A. N." St. Joseph, Mo.: I will make inquiries regarding the New York and St. Louis Mining and Manufacturing Company.  
"B." Fremont, O.: I do not think anything of it as a permanent investment, and it is difficult to obtain the information you seek.

"J. G. S." Hohenwald, Tenn.: Queens County property, in the vicinity of the terminal of the new tunnel, offers good opportunities for real estate speculation.  
"E. K." Charleston, S. C.: The stock is not assessable. Its conduct has been surprising, considering the reports that were constantly made. I would not sacrifice it.

"J." Peoria, Ill.: I am told that you can obtain information concerning the Merchants and Traders' Oil Company by writing to the Corporate Agent Company, 66 Broadway, New York.  
"A. A." Brooklyn: Looks like a chance to even up. Am unable to get report, however.

Am afraid of United States Steel common, though everybody believes insiders must put it up.  
"P." Wilkesbarre, Penn.: The clipping which referred to the San Francisco bonds related to street railway bonds of San Francisco, not to those of the St. Louis and San Francisco Railway.

"J." Mapina, Mexico: Four dollars received. You are on my preferred list for one year. (1) The New York Tribune, every Monday morning, will give you the weekly range of prices. (2) All right.  
"H." Athens, Ga.: Considering your circumstances, it would be unwise to speculate, and you certainly would be running chances if you bought anything but investment securities. If you can get 4 per cent. for your money and know that it is safe, you should be satisfied.

"W." Kansas City, Mo.: The prospectus makes very extravagant promises. It ought to be easy for you to get at the United States Senator or the local banker who lends their names to the enterprise. Too often responsible parties do this sort of thing for irresponsible corporations.  
"Calvert." Baltimore: (1) If we should have a hot summer and a heavy demand for ice, the shares of the American Ice Company ought to sell higher in the fall. I place no dependence, however, on what the company may say. (2) I still believe in the Washburn B debentures for a long pull.

"F." Milford, Mass.: American Pneumatic Service stock can be bought on the Boston Exchange. The preferred sold last May as high as 37½, and has sold as low as 21. It can be bought of any broker in Boston. Its par value is \$100. The shares are not traded in on the New York Stock Exchange, and little is known about them here.

"S." Malone, N. Y.: I do not regard the stock as an investment, nor do its promoters. It is not a dividend-paying, is a new proposition, and the only promise is that if it makes money you will share in the profits. Men of fair business standing are connected with it, but you run your chances. Four dollars received. You are on my preferred list for one year.

"E." Cleveland: You should be a subscriber at the home office at full rates. The service is certainly worth it, even if you have to send the additional paper to a friend. (1) The stocks you mention are not dealt in on the New York Exchange and none is highly regarded as an investment. (2) They have no rating. (3) The proposition is simply speculative.

"Z." Rosemont, Penn.: I have no doubt that the Western operators who have been advancing the Grangers, one after another, will some time take up Chicago and Alton, unless the condition of the money market and the business outlook forbid. Therefore I would not sacrifice my shares. If the preferred advances it will certainly carry the common along with it.

"F." Parkersburg, Ia.: Amalgamated Copper is so much of a gamble and so closely managed by insiders that one can only be guided by his intuitions and by circumstantial evidence in buying or selling it. As a rule, it is usually safe to speculate in a stock which has had a tremendous decline and which has a real as well as a speculative value, and Amalgamated certainly has both.

"F." Minneapolis, Minn.: Four dollars received. You are on my preferred list for one year. (1) The Northern Pacific Prior Lien Four, due in 1907, and the Oregon Railroad and Navigation Consolidated Four, due in 1914, I regard as safe permanent investments. (2) The second. (3) I think they are. (4) Texas and Pacific First Consolidated Fives are equally as good and pay a little better.

"W." Cleveland: Glad you made a thousand dollars on my suggestion regarding Monos. Of the shares you mention, Missouri Pacific, on declines, seems to offer the best speculative opportunities. Better than any of them, however, are the Union Pacific Convertible bonds, exchangeable for common stock at any time before 1905. These bonds would suffer far less than the stock, in case of a break in the market. No stamp.

"W." Bridgeport, Conn.: (1) I would not sacrifice my American Ice preferred. One rumor has it that, having shaken out the Tammany officials who were large stockholders, and who are of no benefit to the concern now, some of the insiders are willing to pick up the shares at lower prices, in anticipation of a hot summer, which, it is hoped, will lead to the resumption of dividends on the preferred. (2) The stock is not assessable.

"B." Palm Beach, Fla.: (1) Glad you made a profit on my advice regarding Kansas City Southern. (2) In such a market, controlled as it is by cliques and combinations, it is impossible to advise regarding shares that might be advantageously sold short, but a year from now I think that most of the railroad shares will sell considerably lower than present prices. (3) You should have a profit in all of the securities you mention, but I would not wait for too large a one. (4) I have no broker to suggest.

"Regular." Memphis: (1) It is possible to make money by speculation, but, as a rule, speculation, in the end, always comes out losers. The investor who pays for what he buys, who picks up stocks when they are cheap and sells them when they are dear, will make money. Otherwise speculation is no better than gambling and it would be well to keep out of it. (2) I would not intrust my money to him or to any other man who offers to handle it for you for a part of your profits, while he will not stand any of your losses.

"L. K." New Orleans: (1) Better keep your bonds for the present. (2) Think well of Southern preferred and Missouri Pacific. Chicago and Alton preferred is more speculative, but many believe it is looked for an advance. (3) The Southern Pacific bonds, the Central of Georgia, and the St. Louis and Iron Mountains are a fair investment at present, especially the first named.

(4) Safe investments, bearing 5 per cent., are difficult to find. On reactions, they may be obtainable, but not at present.  
"W. A. S." Albany, N. Y.: Idle Royal Copper shares have declined in sympathy with all the other copper stocks. It was boomed during the great advance largely engineered in Boston, an advance which I predicted would culminate in a serious decline. Conflicting statements are made, even by experts, regarding the copper situation. The Amalgamated still holds the key to the situation, and a rise in it would no doubt help other standard shares, including Royal. As an investment, however, I do not regard the latter with favor.

"E. H." Philadelphia: I have already repeated the statement of the American Ice Company's officers that their assets are worth more than the present selling price of the preferred shares. Whether they meant they were worth more than the aggregate of the bonded debt, also, was not stated. After the misleading statements they have given out, publicly and privately, I take little stock in whatever they may say. If the shareholders who have suffered from these misrepresentations would unite, engage an attorney, and prosecute the officers for having paid dividends that were not earned, a lesson might be taught to those who have lined their own pockets by debauching and defrauding the public.

"Inquirer." Baltimore: (1) All New York bank and trust company stocks are very high. In any financial crisis they would no doubt be sacrificed at lower prices, but those you name are safe from the investment standpoint. (2) I should not call the Hope and Leone bonds "permanent investments." (3) Of the Seaboard stocks, my preference would be the preferred. It has had a considerable advance on the expectation of a combination favorable to it. (4) The Green Bay debentures have been advanced on the expectation of the absorption of the property by some strong line. This gives them speculative value. (5) The strategic value of Toledo, St. Louis and Western makes me regard both the common and preferred with favor.

"E. R. E." New York: One dollar received. You are on my preferred list for three months. (1) As I have said before, Leather common is highly speculative. The hope of a rise in the common shares is based on the expectation that by some skillful financial plan the preferred stock, with its large amount of accumulated dividends, can be retired by a bond issue, on such terms as to make the common more valuable. (2) Brooklyn Rapid Transit has never paid a dividend and never earned 1 per cent. on the stock. Its future lies in the hope that the rapid development of Brooklyn's suburbs and the increase of tunnel and bridge facilities may enable the road to handle a larger amount of business at a smaller ratio of expense.

"New Jersey." I am assured by Treasurer Barnes that the Ohio Company is an investment enterprise. He tells me that the earnings of the company were 7 per cent. last year; that there are 600 acres under cultivation, 120,000 rubber trees permanently transplanted, besides areas of other crops like cacao, coffee, corn, rice, and beans. The organization of the company grew out of the efforts of Maxwell Biddle, of the Middle Coach and Hearse Company, to engage in the crude rubber business as a private enterprise. He bought 40,000 acres, and 9,000 of these compose the Ohio tract. This is the choicest section of the acreage. These, of course, are the statements of the management, which I have no means of personally verifying. Their references seem to be good.

"H." Tar Heel, N. C.: One dollar received. You are on my preferred list for three months. (1) The Washburn is showing large earnings and its extension to the Atlantic coast is building it up with extraordinary rapidity, but if I wished to speculate in its securities I would buy the debenture B bonds, which are entitled to 8 per cent. interest before anything can be paid on either the preferred or common shares. Bear in mind that the shares have had a tremendous rise and that the earnings during the past six months show nothing for dividends on the preferred and common shares, and only 1 per cent. on the B debentures. (2) I would sell my Steel common whenever I could get out at a fair profit. I would not sacrifice at present. (3) Whenever Reading approaches 60, it seems to be absorbed in large quantities by strong buyers.

"S." Austin, Texas: If the United States Steel Corporation is making such enormous earnings and showing undivided profits for the past six months amounting to over \$20,000,000 why should it be necessary to borrow \$50,000,000 for improvements and pay \$10,000,000 for the proposed stock and bond conversion scheme? I repeat what I have said before, that this company does not begin to charge off for depreciation anything like what it ought to. (2) You are very foolish to leave your holdings in the name of your broker. You should have the stock put in your own name. As it is, your broker votes the shares for you, and if the stock has lovable value, he gets the benefit of that also. If financial trouble should happen to your broker it might be difficult for you to get your stock. Keep it in your own name, the same as you do your other property.

"S." Seters Falls, N. Y.: (1) I only know that the officers of the American Ice about the mere hint of a possible reorganization, but I have little confidence now in whatever they may say. (2) I am told that the bonds are finding a market and that over half the new issue was sold a fortnight ago. (3) The stockholders' rights cannot be taken away from them. The history of American Ice is no different from that of a large number of industrial, including the special pet of the so-called Standard Oil crowd, Amalgamated Copper. The great United States Steel Corporation may eventually have a similar experience. It is for this reason that I have hesitated to advise the purchase of industrial shares. My advice regarding American Ice was always qualified and I only repeated the statements of its officers. They have deceived me, and I have no further use for them.

"A." Delaware, O.: There is great danger in shorting Reading, Missouri Pacific, St. Paul, or any other shares, largely out of the market and in the hands of speculative cliques or investors. Ridiculously high prices are predicted for Reading and many think Missouri Pacific should sell as high as St. Paul. I am among those, however,

who recall the marvelous bull campaign which the late Jay Gould engineered in Missouri Pacific, when the stock was sent to figures way beyond the present prices, along with Washburn and other of its favorites. The hard times came and we all know what followed. If one had the pluck and the cash to sell the market short and keep short long enough, he would be a winner, but to trade on the short side now is quite as dangerous as to speculate on the long side, at the prevailing high range of prices. Many moneyed men are entirely out of the market and are holding their cash, waiting for good opportunities to go in on a break. A few veterans of the Street still believe that, barring untoward crop conditions, we are to have a higher market.

"C. B." Queensboro, N. Y.: (1) It is the impression that Glucose, or rather the new Corn Products company, which absorbed Glucose, is earning a great deal of money, but no report of the earnings is made public. There seems to be nothing to do, therefore, but to hold your stock and await developments. The company has very strong men at its head, but in these days it is not so much a matter of financial strength as of honest dealing that the public looks to. (2) Of the stocks you mention, the only dividend-payer is Union Pacific. (3) As to the dividends, I am unable to give you any assurance. Whether the failure to pay on the common was due to a lack of earnings, to a desire to accumulate a surplus, or to a disposition to speculate, the managers only know, and they refuse to tell. (4) Trading "on the curb" means trading by outside speculators, who stand on the curb near the Stock Exchange and deal in "outside" securities, which means shares not listed on the exchange. The Stock Exchange is regulated by rules. The curb has no written rules or regulations.

## IMMENSE AMALGAMATION

**TWENTY COPPER, GOLD AND SILVER  
MINES CONSOLIDATED UNDER THE  
MANAGEMENT OF THE**

## Globe-Boston Copper Mining Company

This Company, composed of the leading business men of New York, Chicago, and Leavenworth, Kansas, after years of hard work, was enabled to complete the consolidation which gives it the ownership and control of this vast property, located in the very heart of the Globe-Arizona mineral belt. Every one of these twenty mines contains from one to three future veins from which large quantities of rich ore have been shipped. The Company has spent a great deal of money on the property and has brought it to a state where large profits are merely a matter of a reasonable length of time. The ore bodies are rapidly being opened up at a great depth and the Company is preparing to erect smelters for the treatment of its ores.

Absolutely the best opportunity ever offered the public is now presented in the Stock of this Company, 50,000 shares of which are offered for public subscription at 50c. per share. The right is reserved of allotment should this amount be over-subscribed.

For further information address

**Blood Poison**  
**Cured Free**

The Remedy Is Sent Absolutely Free to Every Man or Woman Sending Name and Address.

A celebrated Indiana physician has discovered the most wonderful cure for Blood Poison ever known. It quickly cures all such indications as mucous patches in the mouth, sore throat, copper-colored spots, ulcerations on the body, and in hundreds of cases where the hair and eyebrows had fallen out and the whole skin was a mass of boils, pimples and ulcers, this wonderful specific has completely changed the whole body into a clean, perfect condition of physical health.

William McGrath, 48 Guilford Street, Buffalo, N. Y., says "I am a well man to-day where a year ago I was a total wreck. Several doctors had failed to cure me of blood poison. I was rid of my sores and my skin became smooth and natural in two weeks, and after completing the treatment there was not a sore or pimple on my body, and to-day I am absolutely well."

Every railroad running into Fort Wayne brings scores of sufferers seeking this new and marvelous cure, and to enable those who cannot travel to realize what a truly marvelous work the doctor is accomplishing, they will send free to every sufferer a free trial package of the remedy, so that everyone can cure themselves in the privacy of their own home. This is the only known treatment that cures this most terrible of all diseases. Address the State Medical Institute, 2306 Elektron Building, Fort Wayne, Ind. Do not hesitate to write at once, and the free trial package will be sent sealed in plain package.

## Hints to Money-makers.

Continued from preceding page.

"T." Augusta, Ga.: I do not know the party.  
"S." Providence, R. I.: I have sent your inquiry to the mailing department.  
"M." North Tonawanda, N. Y.: I do not regard them as in any sense an investment.  
"S." Newark, N. J.: All are highly speculative. I do not recommend them for investment.

"S." St. Louis: I would hold for the present, at least, until developments are more clearly understood.

"R." Mexico, N. Y.: Like all mining propositions, it is more or less speculative. I recommend investments.

"L." New Haven: The La Zocalpa Rubber Plantation Company is a California concern. I have asked for a statement.

"W." Kansas City, Kan.: (1) I do not think anything of it as an investment. Very little is known about it on Wall Street. (2) It is a speculation.

"N." New Haven, Conn.: Transactions on the "cure" are usually made through your regular brokers. They know with which curb dealers they can do business.

"M. G." Massachusetts: If you are seeking an absolutely safe investment it would be unwise to put your money in anything but a well-established dividend-payer. In other words, you ought to take no speculative chances, no matter how good they appear.

"Small Investor," Kan.: (1) I have explained, to the best of my ability, several times lately. (2) Ditto. (3) I feel so. (4) No. (5) The country is not "going to the dogs" because the managers of a few industrial securities deal either in highway robbery or petit-larceny schemes.

"Doubtful," Philadelphia: A number of similar Mexican propositions are on the market and seem to sell because "distance lends enchantment to the view." Most of the properties are capitalized on an enormously fictitious basis. I should want to be very familiar with the property and the managers before investing in it.

"F." Kingston, Canada: One dollar received. You are on my preferred list for three months. I have no definite information regarding the company excepting what I have given in these columns. It has come from the officers of the concern, who have not shown by results, however, that they were frank and straightforward.

"G." Brooklyn: The charge against John B. McKenzie, the discretionary pool broker, who was recently arrested, was made by a resident of St. Mary's O., who alleged that he was defrauded out of \$100 in a speculative deal. I have constantly advised my readers to keep out of these so-called discretionary pools. Their promoters make big promises. The bigger they are the more suspicious.

"W." Lodi, O.: The common stock of Dietrich, under the proposed plan of reorganization, will be convertible at the rate of 100 shares of old stock for 17 shares of the new company. The latter expects to be able to pay 4 per cent. per annum. At this rate, purchase of the common would not be a bad investment, but whether the expectations of the reorganizers can be met or not, I am not prepared to say.

"Banker," Toledo: The distribution by the Rock Island of new stock, at par, to the amount of 124 per cent. of present holdings, to stockholders of record, is in line with what a number of railroad systems have been doing of late. This has accounted for the large advance in several dividend-payers. Shrewd investors are selling their new acquisitions of shares at the top notch as soon as the apportionments are made.

"Speculator," Brooklyn, N. Y.: The new directorate of the Manhattan Transit Company, which is the reorganized General Carriage Company, includes a number of distinguished English financiers and several Americans who are largely identified with railroad interests. It is said that contracts already secured by this company promise to give it a profitable business. Around it, it has, therefore, been regarded as a fair speculation.

"H." Cleveland: I have given in this column all the information obtainable. Much that I thought was reliable has not proved to be so. The last statement is not worth anything, for it is misleading. I think it would pay to even up, but I base this judgment more on what I see and hear than what I know. (2) It would be impossible to name them, in view of the value that may be given at any time to some stocks by the carrying out of new combinations.

"Speculator," Chicago: (1) There is no life in Union Pacific because there is no life in any part of the market, excepting in the few stocks that chique manipulators from time to time. (2) Union Pacific I regard as cheap, compared with Canadian Pacific, but you must remember that the former is a reorganized property and it takes time to demonstrate continuous capacity to earn dividends. Speculatively, and as an investment, the Union Pacific Convertible 4s are better than either.

"L." Topeka, Kan.: (1) Chicago parties believe that purchases of American Strawboard Receipts will be profitable. Very little is done with them on the New York Exchange. (2) It is only claimed that Texas Pacific earned 3 per cent. last year on its outstanding capital. On this basis the stock would seem pretty high around 40. But the report that it is to be handsomely taken care of when the long-promised Gould combination is made, and the fact that some one seems to be picking it up on recessions, have given it strength and made it a purchase on reactions.

"Banker," Little Rock, Ark.: Investment bonds sold and recommended by Spencer Trask & Co., 27 Pine Street, New York, and which have merit, include the First Mortgage 5s of the St. Louis Merchants' Bridge Terminal Railway Company, yielding at present prices a little over 4 per cent.; the Chicago Great Western 4 per cent. Cumulative Debenture Gold stock, yielding about 4.3; the General Mortgage and Collateral Trust 5s of the Metropolitan Street Railway, netting 4.15; and the Montgomery Division First Mortgage 5s Mobile and Ohio Railroad, netting the same. I regard these with favor.

"Inquirer," Pittsburgh: It is absolutely sure that the United States Steel Trust will have strong and vigorous competition. The enormous Lackawanna steel plant at Buffalo, and the new plant at Pottsville, Penn., which, rumor has it, is being organized by one of the directors of the United States Steel Trust who has recently resigned, will enter the field of the great steel corporation prepared to fight for their part of the business. The outside steel interests, including Tennessee Coal and Iron, the Colorado Fuel and Iron Company, the Republic Steel, and others, must all be considered in this connection. Some of these properties may be absorbed by United States Steel, but most of them cannot be.

## Life-insurance Suggestions.

IT HAS well been said that it is easy for almost any one to make money but very difficult for most people to save it. This is the reason why I have so often advised those of my readers who have not encouraged thrifty habits to put some of their surplus earnings, from year to year, into an endowment policy, which, at the end of fifteen, twenty, or twenty-five years, would give back to them virtually all that they put in, and which, meanwhile, would provide for the payment of the face of the policy to the heirs of the insured, in case of death. This combination of insurance and investment, which is becoming more popular every year, especially in this country, offers the most convenient and satisfactory method of saving for those who save only under the compulsion of circumstances. It is said that only about a dozen men out of every hundred in this country, after the age of sixty years, accumulate sufficient means upon which to live for the balance of their lives. What is more pitiful than to see a man, after his period of usefulness has passed, left to struggle with adverse fate? What a blessing to such a man it would be if he could realize that, from his little savings, year by year, he had paid the premiums on an endowment policy which gave to him in a lump sum an amount that, in the form of an annuity, would provide for him for all the rest of his days.

"T." Memphis, Tenn.: My preference would be one of the New York companies.

"G. M." Philadelphia: Address the insurance commissioner of Connecticut, at Hartford, for a copy of his annual report.

"M." Quincy, Mass.: The Penn Mutual is one of the oldest and best established companies, and makes an excellent report of its condition and prospects.

"K." Corsicana, Texas: (1) The Pacific Mutual is an older and, in my judgment, a better company than the one in Philadelphia. (2) The Northwestern Mutual is a large and prosperous company. There is not much choice.

"W." Kansas City: The company you mention is not a very large one, but makes a good showing. My own belief is that you would be better satisfied with a policy in one of the strongest and best of the old-line companies. You can afford to pay the best rate, in the best company, for security is everything.

"W." Kansas City, Kan.: The statement shows that the company is a small one, and that it has just recently changed its plan of organization. I do not think very well of it, as compared with the great, sound, old-line insurance companies. (2) This is one of many similar attractive schemes, but strong men are at the head of it, and, properly managed, the plan ought to be successfully carried out.

"R." Omaha: I do not recommend insurance in the Royal Arcanum, or in any other of the fraternal assessment associations, for the simple reason that you, when becoming heavier, whenever assessments are raised—and assessments must obviously be increased as the death rate increases. In an old-line company, on the other hand, the burden never becomes heavier, but every year your policy has an increasing value, so that the older you grow the lighter your load and the better your prospects.

*The Hermit.*

## Niagara Falls and the Nickel Plate.

REST and Recreation! These two words mean much to busy toilers in America, especially at this time of year. Vacation time is here and thousands are undecided as to where they will spend the summer holidays.

This article is written for the benefit of the tired men, women, and children of America. Niagara Falls and the numerous summer resorts lying along the route of the Nickel Plate Road, where may be found rest and recreation of a varied character, are suggested as appropriate places for the hot summer months.

It seems almost incredible, but is true, nevertheless, that vast numbers of Americans have never visited Niagara Falls. Among the number may be counted thousands who live within halcyon distance, so to speak, of one of the natural wonders of the world. The countries of the Old World possess no such attraction, and it is a matter of great surprise to foreign visitors and tourists, who invariably visit the falls soon after arrival in the New World, to learn that there is even one American living who has not seen the mighty volume of water that constantly and incessantly rushes and tumbles, roaring and swirling, over the famous Horseshoe Falls into the Whirlpool below, and on in its mad flight to the gorge further down.

The pen, the brush, and the camera all portray, in a limited way, the greatness, the vastness, the grandeur, and the wonder of it all, but the inspiration and the education it furnishes can be felt and gained only by a personal visit to Niagara Falls. The first visit is generally followed by others, both in the summer and during the winter season.

Chautauque Lake has a fame all its own, as has Lake Erie, along the south shore of which the Chautauque Assembly, the great summer educational school, convenes yearly. Hundreds of families enjoy camp life on the shores of Lake Erie every summer, where the fishing, boating, and bathing sports abound, are easily obtained, and as freely indulged in. Summer hotels and cottages are plentiful, adjoining Lake Erie, in various cities, towns, and villages along the route of the railroad, as indicated in the handsome illustrated booklet, entitled "Summer Homes," copies of which are issued by the passenger department of the Nickel Plate, at Buffalo, N. Y., for free distribution to tourists and others desiring to spend a pleasant and healthful vacation.

The magnificent dining-car service of the Nickel Plate Road is fully in keeping with their excellent train service. Trainmen, porters, and waiters universally vie with each other in extending every courtesy to patrons of the road. The American club meals, served in the dining-cars, in point of economy are not equaled or excelled in New York City restaurants. The club meals range in price from thirty-five cents to one dollar for each person. Travelers may choose from fifteen different combinations for breakfast, for instance, or they can order à la carte from a separate bill. The food provided is the best, and the superior manner in which it is cooked and served causes general and favorable comment. Colored porters, in uniform, also serve meals to passengers in the day coaches.

COINS WHICH WERE REMOVED FROM A MAN'S STOMACH—A REMARKABLE SURGICAL OPERATION.

## A Silver-mine in a Man's Stomach

WE OFTEN hear of a man swallowing a fortune, in a figurative sense, in wild and riotous living, and out in the rural regions they sometimes apply to such gourmands the expressive phrase, "He has swallowed a farm, stones and all." Numerous cases are on record also where persons have concealed precious stones in their mouths and have sometimes swallowed them to evade the scrutiny of custom-house inspectors. Most wonderful of all, however, is the story related in the *London Lancet* of an Afghan, who actually swallowed all his movable property in the shape of fifty-nine Kabuli rupees, equal to about \$12 in American money, in order to avoid a tax-gatherer. The details are given at length in the *Lancet*, where the case is recorded, because of the great surgical interest attaching to the removal of the coins from the man's stomach, an operation which was successfully performed in a hospital at Peshawar.

The story of the concealment of the coins as told to the hospital officials by the Afghan is not without its humorous aspects. He said that he resided in a village in

Afghan territory several marches across the border, and that he was an ardent disciple of a mulla (holy man), who lived in the Peshawar district. He had been in the habit of making periodical visits to this mulla with the object of receiving religious instruction in the Mohammedan faith. Eight days before he arrived at Peshawar, he said that he was coming into British territory on a visit to his mulla. On arriving at a place called Dakhi, he found that all travelers were searched by the Amir of Kabul's order and that all property in their possession, including money, was taxed. He said that a tax of three per cent, was levied on all cash in the possession of travelers, and that in order to evade this tax he conceived the idea of swallowing all the money he had with him. While some of his companions were being searched he set to work to swallow, as fast as he could, a sum of sixty-five Kabuli rupees, which he had with him. He had nearly completed his wonderful feat, when the Amir's officials detected his game and rushed at him. He took to his heels and ran down the road, swallowing as fast as he could as he ran the remainder of the cash, but before he could finish his "meal" he was caught and six remaining rupees (some of which were in his mouth still) were seized by the officials and forfeited. As the patient had sixty-five rupees to start with and as six only remained when he was caught, he was satisfied that he had swallowed fifty-nine of the coins. He was, however, allowed to proceed on his journey.

Arriving at Peshawar, the fellow repaired at once to a British hospital surgeon located there and besought him to cut him open and restore his lost treasure. The silver had then been in his stomach eight days, but had caused him no special discomfort except a feeling of weight. The man was told that the operation would be difficult and dangerous, but he insisted upon it and it was finally performed. He was kept under chloroform for nearly an hour and a half before the coins were reached and removed from where they had lodged in the interior of the stomach. The man rallied from the operation with astonishing rapidity, and seemed never to realize the serious condition in which he had been placed. He was very indignant when told that only fifty-five rupees had been found inside him, for he contended that he had swallowed fifty-nine, but he afterward admitted that he might have dropped some when he was being chased by the Amir's official. The exact weight of these fifty-five Kabuli rupees was found to be 174 ounces.

"How you young women did chatter at your progressive-euchre party!" exclaimed the United States Senator.

"Yes," answered Miss Cayenne; "one might have thought we were trying to select a route for an isthmian canal!"

## Poor Beer vs. Pure Beer

Both cost you alike, yet one costs the maker twice as much as the other. One is good and good for you; the other is harmful. Let us tell your where the difference lies.

### POOR BEER

is easy to brew.

The materials are cheap. The brewing may be done under any sort of surroundings. Cleanliness is not important, for the users never see it brewed.

Any water will do. No air is too impure for the cooling.

No filtering, no sterilizing; almost no ageing, for ageing ties up money.

What is the use of expense and care when there is no reputation to defend?—

When few people who drink it know even the name of the maker.

### PURE BEER

calls for the best materials—the best money can buy.

The brewery must be as clean as your kitchen; the utensils as clean.

The cooling must be done in filtered air, in a plate glass room.

The product must be aged for months, until thoroughly fermented, else biliousness results.

The beer must be filtered, then sterilized in the bottle.

You're always welcome to that brewery, the owners are proud of it.

And the size of it proves the eventual success of worth.

To maintain its standard, we double the necessary cost of our brewing. Don't you prefer a pure beer, a good beer, a healthful beer, when it costs no more than common?

Ask for the brewery bottling.

## The Scottish Patriots' Medal

A SPECIAL coronation medal has just been issued by the Scottish Patriotic Association, which was organized early last year for the development of Scottish national life, the study of Scottish history, the encouragement of Scottish art and music, and the defense of Scottish national rights. In pursuance of the latter it issued circulars with regard to the misuse of the terms "England" and "English" in place of "Britain" and "British," and in formulating a public protest against the title assumed by the King, of "Edward VII.," as historically false, and misrepresenting Scotland's historic position in relation to England. The protest was adopted and signed

CORONATION MEDAL OF THE SCOTTISH PATRIOTIC ASSOCIATION.

at a great demonstration on the field of Bannockburn last June, and in due time was sent to the King, but like other appeals to the same quarter it has not altered his Majesty's determination to have himself crowned with the obnoxious numeral added to his name. The signed protests are all to be bound up in a colossal tome for preservation in Scotland. Those wishing sheets for signature are invited to apply to Mr. J. Stewart Bannatyne, 138 Cambridge Drive, Kelvin-side, Glasgow, one of the joint secretaries. The association has now issued its patriotic medal, which styles the King "Edward the First—not the Seventh—of Britain and the British Empire."

## Saved From Blindness

E. H. Reynolds, 422 42nd Place, Chicago, had his sight restored after years of blindness, by Dr. Oren O'Neal, Chicago's noted Oculist, and no knife was used. **THE ONEAL DISSOLVENT METHOD** cures Cataracts, Scums, Granulated Lids, Optic Nerve diseases—All Causes of Blindness—Without the Knife and positively without injury to the eye. ## PICTURES OF FAIR WOMEN.

A SERIES of Eight Striking Sketches of Heads of Beautiful Women, by J. Montgomery Flagg. Each sketch is most artistically reproduced in sepia on heavy plate paper, and is mounted on Melton gray board, size 15x19. The complete series of eight sells for \$5.00. Mr. Flagg's heads are all sketched from living models, and are more nearly typical of the beauty of the American girl than any other similar art collection heretofore published. The small illustrations shown herein are reproductions in miniature of the complete series.

## THE FLAGG "PICTURES OF FAIR WOMEN"

are limited to one thousand sets. Some of these were sold in advance of publication. The remainder are bound to go fast, now that the announcement is made definitely of their publication.

The price of the complete series of eight is \$5.00.

## \$3,000 for PHOTOGRAPHS

The past quarter century has seen the greatest advancement in photography; it has also included the development of our photographic lenses and shutters until now their number runs into the millions, used in every land and clime. In order to bring together a representative collection of work from this vast array of photographers we have instituted a competition including every class of photography and from the simplest lens on the cheapest camera to the most expensive anastigmat.

## Bausch & Lomb Opt. Co.'s LENSES or SHUTTERS

must have been used to make the pictures. That is the only condition. The exhibits will be judged in classes such as Landscape, Portrait, Genre, Instantaneous, Hand Camera large and small, etc., and every one can have an opportunity to compete. It costs nothing to enter: and the most competent and impartial judges will make the awards. If you are buying an outfit, see that the lens and shutter are Bausch & Lomb's make.

## Back to the Country.

ONE OF THE most significant facts brought out by the last Federal census was the rapid growth of cities in the United States. It was shown that the immense increase in the total population of the country for the ten years previous was to be credited largely to the cities, the drift from the rural regions to the cities being greater and more marked than in any previous decade in our national history. In many sections of the country, and particularly in the older States, it was shown that the rural population had actually declined and the towns had gained at their expense.

The question thus raised is by no means a new one, but a fresh interest has been given it by the facts thus disclosed. The drift to the cities is generally regarded as an unhealthy symptom in our national life, a tendency to be deplored, discouraged, and, if possible, checked. It is the old problem to the front again—"how to keep the boys on the farm"—a topic which has been prolific in years past of innumerable disquisitions and a large and varied assortment of solutions. But in the present discussion of the problem, as in the past, one great factor seems to be generally disregarded. This factor is the social one. The chief reason why farming or life in the open country has so few attractions for the majority of people, and particularly for young men and women, is because of the isolation, the loneliness, to which it dooms those engaged in it. The truth cannot be too strongly emphasized that man is a gregarious animal, a being possessing strong social instincts; any occupation or sphere of action which tends to separate him from his kind, no matter how many inducements it may hold out of a material nature, is certain to be shunned, so far as possible.

A plan whereby the drift from the farms to the cities can be checked is one whereby the pleasures and advantages of urban life may, in a large measure, be secured to the tillers of the soil. This may be done by introducing the community system of farming, such as now prevails in many parts of France, Russia, and other portions of the Old World. Under this system the owners or tillers of the soil are not scattered over the land in isolated homes, but are grouped together at central points in villages or small towns. Here their homes are established together; here their families enjoy that social intercourse which all healthy natures crave, and those opportunities for recreation and improvement made possible only by combination or associated effort.

All the operations on the farm are carried on under this system, at a distance, the workers going to and returning from their village homes to the lands which they cultivate. This plan, of course, has some obvious disadvantages over that of living directly on the farm. It is less convenient, and offers more difficulties in the care and protection of stock and crops, especially in inclement seasons of the year. But the question is, whether these disadvantages would not be more than offset by the comforts, pleasures, and conveniences of living in the village or town, by the enlarged opportunities of community life and the probability, in this case, of making the rising generation happy and contented with their lot.

If, for example, a given number of families about to settle in some new and hitherto unoccupied region of our great West were to select some point as nearly central as possible to their holdings, and there group their homes together, each on a plot large enough, perhaps, for a generous garden and a few small outbuildings, it would seem quite certain that their outlook in life would be much more promising and agreeable for themselves and for their children than it would be if they were scattered over a large area of miles from each other in isolation and loneliness. By grouping together in a village they might secure for themselves the advantages of churches, schools, libraries, sanitary and lighting facilities, and many other good things not possible to individual families settled at long distances from each other.

But due account should also be made, in this consideration, of factors now at work toward the amelioration of the conditions of country life which did not exist a few years ago, and which in the future must undoubtedly make existence in the rural districts much more attractive and desirable than it has been in the past. Among these are the extension of rural mail delivery and also of local telephones and trolley lines. It is Edward Everett Hale's contention that the modern post-office is one of the greatest of popular educators, and the kind of edu-

cation thus afforded may be greatly promoted by a system under which newspapers and letters may be sent and received every day in remote country neighborhoods, instead of only once a week, as is now often the case.

The remarkable growth of the independent telephone system in the farming districts of Ohio, Indiana, and other parts of the country, and the general reduction in telephone rates, indicate that the time is near at hand when this means of social and business communication will become universal and thus add largely to the conveniences and social advantages of rural life as well as the life of the city. The rapid multiplication and extension of electric roads, linking together small country towns and villages, is another powerful agency in the breaking up of the isolation and stagnation of country life.

In any event, the situation has changed greatly for the better in the last few decades. When Lord Sterling visited this country, some fifty years ago, he remarked upon the sad and worn look seen on American faces. "They go about," he said, "with a serious and joyless air." However that might have been true then, it certainly is not so now. If our cities are increasing rapidly in population, it is equally true that the army of commuters—those who transact their business in the great cities, but seek the restfulness of the country when the day's work is done—is an immense and ever-increasing army.

## Government on the Rabble Theory.

THE PRACTICE of rotating congressional nominations from one county to another in a congressional district is just now coming in for severe condemnation by the leading newspapers of Pennsylvania, and notably by the *Philadelphia Press*, which pronounces the system to be vicious and reprehensible to the last degree. That characterization may justly be applied to the same practice everywhere, whether followed in the nomination of congressmen or any other class of public officials. The practice is the fruitage of the same noisome soil that has given rise to the spoils system and various other evil products of our democratic government.

The root of all these abuses lies largely in the foolish and vicious notion, far too prevalent in this country, that one of the chief aims and greatest benefits of a popular system of government lies in the possibilities such a system affords of giving public office at remunerative rates to a large number of persons. The theory advanced practically amounts to the claim that government exists mainly for office-holding; that in a democracy every man ought to have his turn at the dignities and emoluments of public station as a right inherent in his citizenship, rather than as a recognition of special merit, proved fitness, or a popular demand. Put in the frankest form, the idea is that every man should have his chance at the public crib without particular regard to his qualifications for office or to any previous service he has rendered to the community. What's the use, say the professional advocates of this principle, of being in politics unless you can get something out of it?

To such false and fallacious doctrines in precept and practice do we owe the shifting, uncertain, and unbusiness-like character which marks the administration of many of our departments of government, and the consequent wastefulness, extravagance, and corruption which scandalize their history. Such are the inevitable results of a system whereby there is a frequent and never-ending change of men and methods in public office, the executive direction of the most important public enterprises and the discharge of the most difficult and delicate public responsibilities being shifted about every year or two into the hands of new and untried men, elected to their places not primarily because of any known fitness for the service, but chiefly because their turn has come, under the rules of the political machine, to hold some office.

It is this puerile and wretched method of filling positions of trust and responsibility that is responsible more than anything else for the shameful and scandalous condition of our municipal governments generally. Instead of being managed as great business corporations, which they truly are, where expert knowledge, long experience, and fidelity in service are essentials to success, our municipal affairs are generally made a theatre for the doings of political acrobats, professional spoilsmen, and official runabouts, who seek office primarily for the enrichment of themselves and their friends, and only secondarily, if at all, for the benefit of the people and the promotion of the public good. Here we have the true genesis of the "halls," rings, and cliques that debauch our politics and curse the country.

Some of the lesser evils growing out of the rotation system or the office-holding idea of government are seen where the practice is followed in many of the assembly and senatorial districts of New York State. In some of these it has been the custom for years to pass the nominations for Assemblymen and Senators around each term to different parts of a district in an agreed order, each section having a recognized claim to its man. The result is that these districts send up new men to Albany each term, no representative being allowed a second chance, no matter how faithful and efficient he may have been. The representative is therefore always a "green" man, a beginner in legislative business, and as such must be content with inferior places on legislative committees, gains no prestige for himself nor his district, and has little opportunity to make his mark on public affairs, no matter how gifted or sagacious he may be.

Common modesty, to say nothing of the usages and precedents of the legislative body of which he is a member, forbids that a representative serving his first term should be put forward as a leader of his more experienced fellow-legislators. How much a district loses, therefore, by the rotation practice, in the way of power and influ-

ence in legislative matters relating to its own interests, to say nothing of the loss to the State at large coming from crudeness and inexperience in public service, can hardly be estimated.

How far, indeed, the whole theory of government as expressed in the rotation system is from any sound and rational theory need hardly be stated. The difference between them is all that existing between a government administered by a rabble for a rabble, where looseness, extravagance, shiftlessness, and inefficiency are predominant features, and a government administered on business principles for business ends, where office-holding is an incident and not an aim, and where considerations of fitness, experience, faithfulness, and acknowledged merit have the same weight in determining tenure of place that they do in most other spheres of trust. In the light of these facts we doubt very much the truth of the statement that the Secretary of the Treasury has decided that after five years of service the employees of the customs department having finished their period of usefulness must be replaced by new men.

## The Plain Truth.

WHETHER THERE is any connection between the appearance of a strenuous chief executive at Washington and the outbreaks of pugilism which punctuated the proceedings of the Senate during its recent session, we shall not undertake to say, but the fact is that such displays of muscular activity as those indulged in by Messrs. Tillman, McLaurin, and Bailey have been happily rare at the Capitol since ante-bellum days. And it may be hoped that they will be rarer still in the future. So far as the example of Mr. Roosevelt goes, it is to be noted that he never practices on an antagonist smaller than himself, never indulges the meanwhile in bad language, and never hits below the belt. If the honorable Senators must and will fight, they ought at least to so far conform to the usages of polite society as to observe the Queensberry rules.

CLEAR-SIGHTED and thoughtful people generally will acknowledge the good sense underlying the recent decision of Charles R. Skinner, Superintendent of Public Instruction for New York, that teachers in a religious garb shall not be permitted to instruct pupils in the schools of the State. The decision was made in the case of two teachers employed in the public schools at Lima, N. Y. The superintendent also decided that after June 30th of the present year the school at Lima was not to be held in the church of that village. It is difficult to see how any other decision could have been rendered on these points that would have been consistent with the principles underlying our whole system of public instruction, not only in New York State, but throughout the Union. That the introduction of sectarian differences or sectarian instruction of any sort into our public schools would be fatal to their usefulness and ultimately to their very existence is a fact so obvious as to need no argument.

OF THE duty of sweeping before our own doors in the matter of race prejudices and antagonisms we have a sharp reminder in the published reports of the outrages recently inflicted on negroes in Illinois and Indiana for no better reason apparently than the color of their skin. In the one case, in a certain locality in Indiana the colored waiters in the hotels were ordered to leave the neighborhood forthwith under penalty of being horse-whipped or put to death. In Carbondale, Ill., a mining district, an anti-negro crusade has been in progress for some time, resulting thus far in the closing of the normal and industrial school for negroes located in that town, and the maltreatment and wounding of a number of inoffensive colored men. It would not be fair nor just, of course, to charge up these shameful deeds against the entire population of these States or communities, but they serve to remind us that we of the North are not guiltless with respect to cruel and barbarous treatment of the colored race. It is well that we should remember this when disposed to rail at our Southern fellow-citizens for offenses of like kind. In this, as in many other things, both of the virtuous and the vicious, it is clear that we enjoy no monopoly.

THE CRITICISM that Mayor Low's administration thus far has been unfruitful of good is based either upon willful ignorance or equally willful misrepresentation. As a matter of fact, a large and valuable amount of service has already been rendered to the city in many directions, but chiefly in the matter of economies in municipal expenditures and in adding to the sources of municipal revenue. Under the latter heading may be placed the granting of the crosstown franchise under conditions which insure the city, for the first time in its history, a reasonable compensation for such a privilege. The revenue from this franchise alone in twenty-five years will not be less than \$2,478,000. It is shown also by a statement put forth by Comptroller Grout that the city will be saved \$1,000,000 this year by the new system of letting paving contracts and doubtless a like amount through the improved system of acquiring sites for public libraries, schools, and other municipal buildings. In the way of positive betterments, also, we have the new system for the payment of school teachers, policemen, and other municipal servants, introduced by Comptroller Grout, effecting a large saving of time and money, and also a greatly improved method of transacting business with the comptroller's office which will insure to the benefit of all who have occasion to confer with that official on business matters. Considering all the circumstances, this showing for the first quarter of Mayor Low's term is highly creditable and amply sufficient to satisfy every just and reasonable expectation.

## PEOPLE TALKED ABOUT

ONE OF the most cheering signs of the progress of humanity is the growing readiness of wealthy men

MR. JOHN M. BURKE,  
Who gave \$4,000,000 to aid the unfortunate.

to devote the millions they have inherited or acquired to beneficial public uses. Additions to the ranks of such eminent philanthropists are becoming more and more frequent. The latest name inscribed on the grand honor-roll of beneficence is that of Mr. John M. Burke, an aged retired merchant of this city, who has for many years been quietly spending much money for charitable purposes, but who has now openly given away the bulk of his fortune. Mr. Burke has placed in the hands of four trustees property worth \$4,000,000, to be used for "the relief of worthy men and women who, notwithstanding their willingness to support themselves, have become partly or wholly unable to do so, by reason of sickness or misfortune, or who have been discharged from hospitals before regaining sufficient strength to assume their regular employments." This is the largest sum ever given by a single individual for the specific and excellent purpose quoted. The need of such a fund is admitted by charity workers, and there is no doubt that the trustees, ex-Mayor Abram S. Hewitt, Edward M. Shepard, Frank K. Sturgis, and William Hubbard White, will administer it in the wisest way possible. They have formed a corporation entitled, in honor of the donor's mother, the Winifred Masterson Burke Relief Foundation, and will proceed to associate with themselves a committee on plan and scope, and to establish a convalescents' home. Mr. Burke, who is eighty-five years old, was born in this city, and made his money in trading with the West Indies and South America. He is a bachelor, without near relatives, and lives in a modest house in West Forty-seventh street, New York. Though he has leaped into prominence in a day, he shuns publicity. He is a man of considerable culture and is highly esteemed by his friends. Naturally, his generosity has evoked universal praise, for, as Philosopher John Johnson, of the *Troy Press*, says: "Men like John M. Burke convince us that this is a pretty good world, despite all evidences to the contrary."

AMONG THE residents of the ill-fated island of Martinique is Behanzin, the ex-King of Dahomey, who is held as a prisoner by the French government at Fort de France. After the awful catastrophe at St. Pierre the old monarch wrote a pathetic letter to the Minister of the Colonies at Paris, imploring him to allow him to leave Martinique for France. He declared that he had been fairly treated, but that the shock of the eruption had brought on an attack of nervous fever, which would shorten his life if he remained on the island.

THE INTEREST taken in outdoor sports by many American young women is in general wholesome and conducive to health and vigor.

MISS MARION JONES,  
Winner of the women's national lawn-tennis championship.

This statement would certainly appear to apply to Miss Marion Jones, daughter of Senator Jones, of Nevada, who won the women's national lawn-tennis championship, at the tournament recently held on the grounds of the Philadelphia Cricket Club, at Wissahickon Heights, Philadelphia. The outcome was disappointing, because the final match, in which Miss Jones contested with Miss Bessie Moore, last year's champion, was never finished, Miss Moore defaulting to her opponent after two sets had been played, both of which Miss Jones won in rather hollow fashion. Just at the end of the second set the old champion, overcome by the strain of play, fell fainting on the court. Miss Jones generously refused to take advantage of the incident, but on Monday, when Miss Moore was still unable to continue play, the judges declared Miss Jones the winner. Tennis experts express the opinion that Miss Jones was fairly entitled to the honors of victory. Miss Jones found her sturdiest opponent this year in Miss Neely, of Chicago, whom she defeated in the semi-finals only after an exciting struggle. In the women's doubles, the championship was won by Miss

Jones and Miss Atkinson, who defeated Miss Banks and Miss Closterman, 6-2, 7-3.

THE PHYSICAL attack by Senator Bailey, of Texas, on Senator Beveridge, of Indiana, in the United States Senate Chamber on the next to the closing day of the late session of Congress was as regrettable as it was unprovoked. It was the second occurrence of the kind during the session, the first having been the Tillman-McLaurin encounter, which created so great a sensation. After the exchange of heated words in debate, but also—a matter to be thankful for—after the Senate had adjourned for the day, Mr. Bailey demanded that Mr. Beveridge retract certain language the latter had used. Mr. Beveridge courteously, but firmly, refused to do so, whereupon Mr. Bailey attempted to seize the Indiana Senator by the throat and threatened to kill him. Other Senators interfered and pulled Mr. Bailey away. Mr. Beveridge preserved his dignity and made no resistance, and he declined to consider the attack as serious. As the latter is the smaller man, and as his language was entirely parliamentary, Mr. Bailey's conduct was without excuse. The words which Mr. Bailey resented were "an unwarranted attack,"

SENATORS BAILEY AND BEVERIDGE,  
Who had a clash in the Senate, the former assaulting the latter.

in which way Mr. Beveridge characterized Mr. Bailey's severe criticisms of the State Department for an alleged failure to furnish him with information in connection with the charges against the Hon. Powell Clayton, our ambassador to Mexico. Mr. Beveridge thought Mr. Bailey's remarks reflected on his (Beveridge's) friend, Judge Penfield, the solicitor of the department, and so used the phrase quoted. Mr. Bailey saw in this an insinuation and an insult, and demanded a withdrawal, which Mr. Beveridge declined to make, although disclaiming any intention to insult the Senator from Texas.

JUST ON the eve of its one hundred and fifty-fifth anniversary exercises the alumni, students, and friends of Princeton University were treated to a genuine surprise in the resignation of President Francis L. Patton, who has been at the head of the institution for fourteen years, and under whose wise and tactful administration it has grown and prospered as never before. Dr. Patton's chief reason for taking this step, as stated by himself, is the desire to carry on literary plans on a larger scale than he could do by retaining the presidency. He will still retain the professorship in ethics. The universal regret felt over Dr. Patton's resignation from a post he has filled with such conspicuous ability is tempered by the fact that the university is to suffer no interim without an executive head, a successor to Dr. Patton being im-

DR. FRANCIS L. PATTON AND PROFESSOR WOODROW WILSON,  
The old and the new president of Princeton University.

mediately chosen in the person of Professor Woodrow Wilson, who has been a member of the Princeton faculty since 1890, holding the professorship of jurisprudence. Through his literary work President-elect Woodrow Wilson has been widely known for some years. While yet a student at Johns Hopkins in 1885 his book, "Congressional Government: A Study in American Politics," at once attracted attention on both sides of the Atlantic and gave him a position of honor among writers of the day. The appointment of a layman to the presidency of Princeton is, however, a distinct departure, for all of Professor Wilson's twelve predecessors have been clergymen. Professor Wilson was born at Staunton, Va., December 28th, 1856. His father, Rev. Joseph H. Wilson, occupied a prominent place among Southern Presbyterian divines. Augusta, Ga., and Columbia, S. C., furnished his early education, but he came to Princeton for his collegiate course, being graduated in 1879. In all its long and illustrious line of great educators and administrators, including such commanding figures as Jonathan Edwards, John Witherspoon, and James McCosh, Princeton has

never been more ably and successfully served than under the administration of Dr. Patton, and his name will rank in the history of this institution with the greatest and noblest of them all. No better future can be desired for President Wilson than that he shall prove a worthy successor of such men.

WE ARE gratified to learn, through an authoritative source, that Dr. William Elliot Griffis, the well-known writer and authority on Dutch history and Oriental topics, who has been pastor of the First Congregational Church at Ithaca, N. Y., since 1893, will retire from the active ministry before the close of the present year and devote himself wholly to literature and the lecture field. Dr. Griffis has in view a work on the constitutional development of Japan and also a standard history of the Netherlands, tasks for which he is eminently qualified by many years of special study and investigation. Dr. Griffis first went to Japan in 1870 to help organize the public schools of the empire, and remained there four years, the latter part of the time as a professor of physics in the University of Tokio. On his return to America he resumed his profession as a minister, being pastor first of a Dutch Reformed Church at Schenectady, and later, for seven years, of the Shawmut Congregational Church, of Boston. Dr. Griffis's first notable book, "The Mikado's Empire," appeared in 1876, since which time he has written twenty or more volumes, chiefly of a historical and biographical character, including lives of Matthew G. Perry and Verbeek of Japan, a history of Corea, and several works on Holland and its people. Dr. Griffis is also a frequent and popular contributor to the newspapers and periodicals of the day. A man past middle age rarely leaves one profession for another, but the doctor's success as an author proves that he is making no plunge in the dark.

DR. WILLIAM E. GRIFFIS,  
Forsakes the ministry for literature.

MOST PEOPLE have no doubt asked themselves at some time or other what part of the world's history would have been best worth living in; it is a favorite topic, on which the superlative degree is often exercised. Mr. Justin McCarthy, the eminent Irish historian, has been heard to vote for the period of Dr. Johnson and Mrs. Thrale. Years ago, when Mr. Gladstone was alive, the Grand Old Man and a group of friends were discussing this same question at Hawarden Castle. Mr. Gladstone, without any hesitation, decided from the intellectual point of view, and expressed the opinion that he would describe as the greatest day in the world's history a day in ancient Greece, when Athens was at the summit of its glory. Another member of the group chose the day of Pentecost. The effect on Mr. Gladstone is still remembered vividly by those who were present. The intellectual gave way at once to the spiritual, and the aged statesman, "seeming rather ashamed of himself," according to one who was present, asked leave to withdraw his former choice, and to say, "A day with the Lord."

IT IS indeed a good deal to say of a woman that she is the best dressed in London; but this is the distinction borne by Lady Algernon Gordon Lenox at present.

Lady "Algy," as she is called, was recently visiting in this country, being the guest of former United States Senator Wolcott of Colorado, at his home in that State. Lady Lenox is very beautiful and is the sister of that other beauty, the Countess of Warwick. She is blond and has the most brilliant coloring. She is a famous rider to hounds and is an accomplished huntswoman. She is very prominent in smart London society, and during "the season" is one of the beauties of the royal set.

LADY ALGERNON GORDON LENOX,  
The best-dressed woman in London.

MANY INTERESTING anecdotes are told concerning King Lewanika, of Barotseland, who went to England to attend the coronation ceremonies. He is said to have the manners of a gentleman and "bathes every day." He had long been looking forward to a personal interview with the English sovereign, and when one was granted he was delighted. "Will you not feel embarrassed when you find yourself in King Edward's presence?" he was asked. "When we Kings get together we always find plenty to talk about," was the reply.

### A Notable Golden Anniversary.

IN NO department of its activities has the Methodist Episcopal Church given larger or more indubitable evidence of its progressive and aggressive spirit, its wise zeal and practical wisdom in the great work of winning the world to the Christian faith, than in the methods it has employed for reaching, influencing, and instructing the people through the medium of the press, in the high character and notable efficiency of its own denominational journals, and the loyal and generous support which it has generally accorded to them. Certainly no religious denomination in the United States is so well served to-day and so abundantly provided with newspaper organs as the Methodist. Nearly every large city and every section of the country, North and South, has its *Christian Advocate*, there being not less than fifteen of these journals altogether, all of them under the official direction and control of the denomination and all of them edited and conducted by men of conspicuous ability and special fitness for the work, selected and elected to this service by the church assemblies. The influence which these journals collectively exert in the propagation of religious faith and the general promotion of righteousness in society and government it is impossible to estimate, conducted, as most of them are, in a liberal, fraternal, and tolerant spirit, on broad lines, and not solely with the view of sectarian aggrandizement.

We are reminded of all this by the appearance of the jubilee number of the *Northwestern Christian Advocate*, published in Chicago, one of the oldest as well as one of the ablest and most influential of these denominational papers. The *Northwestern* has been specially happy and fortunate in the character and ability of the editors

chosen to conduct it during the fifty years of its life, several of them, like the late Dr. Arthur Edwards, being men of extraordinary intellectual gifts and journalistic abilities who have won a national reputation in their field. How large and important a place the *Northwestern* has occupied in the religious life and thought of its day is made evident, in some measure, by the tributes and testimonies to its power and influence contributed to its jubilee number by prominent men of all ranks, creeds, and professions throughout the country. And it is but just and fair to say that, in all its long and useful career, the *Northwestern* has never been edited more judiciously or in a more winning and generous spirit, and never so attractively printed as it is at the present time. We have heard much lately, in certain quarters, about the decadence of religious journalism, but there are surely no signs of decay in the columns of the bright, vigorous, and aggressive *Northwestern*, fresh and youthful in spirit in spite of its fifty years.

### Unique Sailing-vessel with Seven Masts.

AN EVENT of unusual interest and importance, as illustrating the enterprise of Americans in the matter of ship-building, was the recent launching, at the Fore River Ship and Engine Company's yard, near Boston, of the *Thomas W. Lawson*, the first seven-masted schooner and the largest American sailing-vessel ever built. The affair naturally attracted a large assemblage, and the vessel was christened by Miss Helen Watson, a sophomore at Wellesley College and the daughter of Mr. Thomas A. Watson, president of the Fore River Ship and Engine Company. The *Thomas W. Lawson* was built for a syndicate headed by Captain John G. Crowley, with whom the idea of a seven-masted schooner originated. The craft is made of steel, is 403 feet long, 50 feet 5 inches wide, and with a maximum cargo of 8,100 tons will draw twenty-eight feet. The full spread of canvas on the seven masts will be 43,000 square feet, and the schooner is expected under favoring conditions to make seventeen miles an hour—comparing well in respect of speed with the ordinary tramp steamer. While the *Lawson* will be propelled by sails, nearly all the work on sails, anchors, and cargo will be done by steam power, there being six engines aboard. For this reason a crew of only sixteen men will be required.

The launching of the *Lawson* marked a revival of ship-building in Massachusetts and the development of a type of sail-driven cargo-carriers which, it is expected, can successfully compete in many lines of trade with the steamships. The Fore River Ship and Engine Company's yard is a model one, and in it are being constructed the battleships *New Jersey* and *Rhode Island*. The cruiser *Detroit*, about to be launched, and two torpedo-boat destroyers are among the vessels recently built at the yard.

## A Progressive Railroad's Unique Appliances for the Passenger's Comfort

IT IS the constant study of the railroads to supply to those who ride by rail all the conveniences which these persons enjoy at home—even more, if possible. So there are parlor cars, observation cars, library cars, sleeping cars, dining cars, buffet cars—all calculated to satisfy the wants and give comfort and pleasure to the traveler. The progressive Erie Railroad has gone one step further than most of them. Aside from all the privacy and appliances for comfort which one finds on the compartment cars running on this road between New York and Buffalo, there is another and a novel device. It is a contrivance by which a woman may curl her hair. This is a most unique and practical idea. It supplies that which is said to be quite a common necessity, and it completes the fittings of the compartment for making the toilet. The device is simply an electric heater attached to the wash-stand of the compartment and conveniently near the mirror. It is like a small box, covered with ornamental iron work, unobtrusive and inconspicuous. In the illustration we print, it can be seen just above and a little to the left of the wash-bowl. The curling-tongs are simply slipped into this heater. Then a button is turned, which throws on the electric current, at once supplying heat. When the tongs have reached the right temperature they may be as easily slipped out of the heater and the current may be turned off with the button. These electric appliances have already been placed in the compartment cars on the Erie, and the cars are rapidly being wired so that the curling-tongs heaters may be brought into practical use. It is, of course, necessary to have everything very compact in these hotels on wheels, for in each car there are ten compartments. That no space be wasted the wash-stands are arranged to be folded up, and the exterior of each one has the appearance of a pretty cabinet in the corner of the room. Each compartment has all the furnishings of a first-class suite of rooms in an up-to-date hotel. The builders of these cars have made each of these compartments artistic and beautiful in interior finish and furnishings. Some of them are finished in light, clear bird's-eye maple; others in cherry; others in oak; and in every case the mural decorations of the compartment harmonize with the wood finishing. On the door which leads from one compartment to another—which, of course, is locked unless one party engages more

than one room—is a full-length mirror, where one may see himself or herself from head to toe.

While the railroad has made special effort in this way to supply the necessities and conform to the habits of woman, the comforts and conveniences of men who ride on the Buffalo train have very wisely not been overlooked. The railroad even caters to what are sometimes called the frailties of the human race. For on the same train with the compartment car is a combination restaurant and smoking car. In the evening, after the dinner is over and before time to retire, it is not unusual for men to meet in a very enjoyable social way to talk and smoke over their glass. This is their custom in the hotels and in other places where men gather. This custom the railroad takes pains not to interfere with, for the smoking and restaurant car is there to supply the opportunity. In one end of this are the tables with the white cloths where food is served. In the other end are great, comfortable, leather-upholstered seats, at your elbow little tables, and just beyond a waiter in white jacket and apron who will bring you anything you want to smoke or drink. The train on the Erie which has these inducements is called "the Buffalo Express." It leaves New York at such an hour that the traveler may dine before he takes the train or after. The time of starting is 7:25 p. m.,

from the Twenty-third Street ferry, and 7:30 from the Chambers Street ferry, in New York. It reaches Buffalo the next morning at 7 o'clock. The train returns, leaving Buffalo in the evening and reaching New York after the night's run. The opportunity to enjoy the fine scenery along the line is supplied in other ways, for this, being a night train, does not furnish scenery. The Erie has a train from Buffalo to Niagara Falls, and connects with the Detroit and Buffalo Steamship Company for the West—a trip full of delight to the eye and repose for mind and body.

The road has provided for the wants of the people at this particular season by arranging convenient service and quick and comfortable trains for many of the most desirable summer resorts in the East. Its lines extend to some of the most beautiful inland lakes and rivers and charming summer places in New York, New Jersey, and Pennsylvania—resorts of the sort that furnish the most welcome contrast to the rush and heat and bustle and noise of the city. There are places to fish and hunt and enjoy the absolute freedom and informality of the country. The Erie reaches Greenwood Lake, which is the finest body of inland water in New Jersey; a lake famous through the East for its natural charms. It visits many another inviting spot throughout the East, some of which are pictured on this page.

### Some Washington Humor.

GENERALLY the guests at dinner in Washington write their names on a menu card as a souvenir for the host or hostess. At a recent dinner at Senator Foraker's, Madame Takahira, the wife of the Japanese minister, wrote her name in Japanese characters. The menu card was next handed to Justice McKenna, of the Supreme Court. The justice looked at Madame Takahira's signature and, turning to Senator Foraker, said:

"Why, what's this? It looks like the Senate debate on the Philippines—past understanding."

"No, indeed," replied Senator Foraker. "It would be better to say it resembles the decision of the Supreme Court on the insular cases."

# Should We Construct an Interoceanic Canal?

THE ADOPTION by both houses of Congress of the Isthmian Canal bill as modified by Senator Spooner's amendment constituted a triumph for Senator Hanna such as has been achieved by few of our greatest statesmen, for it was owing mainly to a single masterly address by him that the passage of the measure was so promptly effected when the odds seemed against it. The act, as passed, leaves it to the President to decide on which of the two rival routes—the Nicaragua and the Panama—the interoceanic waterway shall be constructed, but it gives a decided preference to the Panama route, making the choice of the Nicaragua one an alternative only in the event of the failure to obtain a good title from the Panama Canal Company, whose rights are to be bought by this government. This shows a remarkable reversal of the situation of a few weeks ago, and the credit for it is chiefly due to Senator Hanna.

Before Senator Hanna had spoken the outlook was highly favorable to the Nicaragua route. The House had passed the Hepburn Nicaragua Canal bill, and it seemed certain that the Senate would concur in this action by a decisive majority. Mr. Hanna's speech, however, dealing with the subject in a purely practical, business-like way, and championing the Panama route, profoundly affected opinion throughout the country and in Congress, and insured the enactment of the Spooner proposition. The acceptance of the latter was the first definite step taken by Congress as a whole in the direction of securing an interoceanic canal.

But, although the bill has now become a law, the interoceanic canal matter is still very far from being settled. A flaw in the Panama title and inability to obtain from Nicaragua and Costa Rica the necessary concessions—both possible contingencies—would block the canal scheme altogether, and render of no avail the shifting of the responsibility for the selection of the route from Congress upon the President. In any case, the President should, and doubtless will, investigate thoroughly and proceed carefully in the forming of his judgment as to the route. The vast expenditure involved in constructing an interoceanic canal—\$184,000,000 at the least, equaling the cost of an important war—is an all-sufficient reason for not hurrying matters to a conclusion. And, in fact, not only is this true as applying to a choice between the two proposed routes, but also with reference to the question of whether we should construct any interoceanic waterway at all.

Public sentiment generally in this country appears to demand the building of an interoceanic canal somewhere, and no doubt that demand will be complied with if circumstances will permit. But there are many thoughtful

people who are not yet convinced that such an undertaking is advisable. They recall, among other reasons for doubting its value to the nation, the strong and plausible arguments once advanced against the Nicaragua Canal scheme by the late Collis P. Huntington, the trans-continental railway magnate. It does not appear that these arguments have been effectually answered, and they cannot be demolished simply by accusing Mr. Huntington of a selfish purpose. It will be seen that they apply with almost equal force to the Panama Canal enterprise, and so they deserve to be treated with candid consideration.

Mr. Huntington, in addressing the Chamber of Commerce at Galveston, Tex., in March, 1900, estimated the cost of the Nicaragua Canal, if sufficiently large to accommodate ships 700 feet long, at \$250,000,000. He claimed that the Suez Canal offered a better route, all things considered, for commerce between New York and Asia and Australia. He expressed the belief that the Nicaragua Canal would be a flat failure as a commercial enterprise. Against the revenue from tolls, estimated by friends of the project at \$6,000,000 per year, Mr. Huntington calculated an expense, including interest on the investment, of at least \$10,000,000, and probably \$15,000,000. The railroads, he declared, would contract to carry the same tonnage from New York to San Francisco for the same or less money and in half the time, besides insuring the goods.

Mr. Huntington also stated that if the canal, as had been proposed, were made free to strictly American-built, manned and laden ships, the foreign vessels, constituting 95 per cent. of the tonnage of the seas, would be driven to the Suez waterway and the American canal would yield no income. He showed that the Suez ditch ought not to have cost more than one-tenth of what the Nicaragua Canal would cost, the digging of the former being a comparatively easy task. The Suez Canal, he said, was a sea-level one, while the Nicaragua Canal involved 220 feet (vertical) of lockage. The price of coal and the location of coaling stations also favored the Suez Canal, he maintained. He asserted that the rainfall at Suez was only two inches annually, but the precipitation at the eastern end of the Nicaragua Canal was twenty-five feet in a single year, which vitally affected the permanence of the earthworks of the canal.

There was no railroad, Mr. Huntington continued, to compete with the Suez Canal, which connected great commercial and industrial nations, whereas an American canal would conjoin only two unproductive oceans. A railroad built to compete effectively with the Suez Canal would quickly take from that waterway, Mr. Huntington

averred, the carriage of all passengers, mails, express and perishable goods, and high-cost freight generally. Neither the Panama nor the Nicaragua Canal, he pointed out, would be on the line of any great independent commercial movement. He was of the opinion that the nation could better afford liberally to subsidize the merchant marine than to build a canal, 90 per cent. of the benefits of which, if any, would inure to foreign vessels.

As to the canal's being a military necessity, Mr. Huntington stated that the railroads would contract to transport quickly all the men and munitions of war needed across the continent to San Francisco, and could transfer 1,000,000 men in ten days, if necessary. In conclusion, Mr. Huntington said that he had studied the question after sixty-odd years of business life, and he believed that in advocating the enormous expenditure required to dig the Nicaragua Canal the American people would be making a costly mistake, financially and commercially, and an enormous blunder in military policy.

The foregoing were the views of a man not wholly disinterested, yet able, experienced in big undertakings, and perfectly competent to estimate their feasibility, their cost, and their utility. His statements were positive and frank, and they challenge discussion and a careful consideration of the entire subject.

## Our National Disease.

CAUSED BY COFFEE.

PHYSICIANS know that drugs will not correct the evils caused by coffee, and the only remedy is to stop drinking it.

Dr. W. J. Allison, of Heber, Ark., says: "I have been a coffee drinker for 50 years and have often thought that I could not live without it, but after many years of suffering with our national malady, dyspepsia, I attributed it to the drinking of coffee, and after some thought, determined to use Postum Food Coffee for my morning drink. I saw that Postum was made carefully with directions, and found it just suited my taste. At first I used it only for breakfast, but I found myself getting so much better, that I used it at all meals, and I am pleased to say that it has entirely cured me of indigestion. I gained 19 pounds in 4 months and my general health is greatly improved."

"I must tell you of a young lady in Illinois. She had been in ill health for many years, the vital forces low, with but little pain. I wrote her of the good that Postum did me and advised her to try it. At the end of the year she wrote me that Postum had entirely cured her, and that she had gained 40 pounds in weight and felt like herself again."

## Flowers a Bride Should Carry

By Martha Coman

A WEDDING NOVELTY — BRIDESMAID WITH A ROSE-ADORNED SHEPHERD'S CROOK.—Davis & Sanford.

FLOWERS HAVE always been pre-eminently a symbol of nature's bursts of joy, and for that reason, perhaps, more than any other, excepting their own beautiful excuse for being, they have been used lavishly for all festive occasions. But there is no one time when flowers are so universally called upon to play an important part as in the month of June, for then it is that the carved arches of the church and the walls of the home echo back the triumphant notes of the wedding march. There is but one thing fairer than a perfect day in June, and that is a June bride, clad in shimmering satin and crowned with folds of frosty lace.

The flowers the bride shall carry is a question to be decided by her own individuality, for every girl has her favorite, and her wedding day is a welcome opportunity to make her choice a public one. The bride's bouquet is not invariably of pure white, though the paler colors are more effective and much more acceptable than the deeper ones of red or pink. Lilies-of-the-valley made up into one of the beautiful shower bouquets are about as appropriate for the fair maiden as anything, though there are innumerable combinations possible in the way of orchids and violets.

The shower bouquet is rarely successfully turned out by an amateur, and those persons who save the last sweet service of personally arranging the bride's flowers for their own fingers had best not attempt much in the way of a shower. But the palest of pink roses or the beautiful bride roses are at hand and can be easily arranged. The sweet, old-fashioned white lilac is a most acceptable flower to use when the bouquet is put together by loving hands rather than by busy professional ones, and it lends itself easily to an admirable result.

White orchids combined with the delicate green of the Farleyensis fern make a stunning bouquet, especially when the whole is tied lavishly with broad, soft velvet ribbon that matches exactly in shade the delicate petals of the rare exotic. This flower and fern, put together

in the form called the "Princess Plume" bouquet, is a most beautiful and effective accessory to the bride's attire.

The violet cuff bouquet was a fad for a time, as was also the Du Barry collarette of the same modest but popular flower. The collarette and cuff effects were generally used only for the bride's attendants, the bride herself carrying a huge shower bouquet of white violets. Leghorn hats of white, lavishly decorated with pink roses and tied on with broad streamers of ribbon to match, are very pretty for bridesmaids, and it is then a most effective idea to have the attendants carry only large bunches of waving, feathery, maidenhair fern. Wild sweet-brier roses and apple blossoms are very lovely for floral decorations, but they are rather difficult to manage when it comes to the bouquets, and so they are both more popular for wall and aisle decorations.

Marguerites are pretty for the little pages to carry, and they are also most effective for banking chancel rails and the like. One extremely pretty wedding occurred not long ago, at which marguerites were extensively used, as this was the bride's favorite flower, and also because she was a Marguerite in name.

The pages, two boys and two little girls, carried straw hats tied in the form of baskets and swung over the arms of the children with broad streamers of ribbon. The hats were filled to overflowing with the nodding field flowers, and after they had been decorously carried up the aisle to the altar, and when the ceremony had been performed, the little tots walked down the aisle ahead of the bride and groom strewing in their path the blossoms from the basket hats. It was done so solemnly and so sweetly by the grave-faced children, and was in itself so tenderly significant, that many a spectator found himself looking on with dimmed eyes.

Another most effective idea in the way of a novelty is that of having the bride's attendants carry shepherds'

crooks, the long, graceful affairs painted pure white, and to each one tied a beautiful bouquet of Mermot roses. From these depend sweeping streamers of white velvet ribbon. The effect is extremely beautiful. When orchids of a pale and most delicate tint are tied with velvet ribbons it is often the fad to have the streamer ends embroidered in the same tints.

Gardenias and violets are a lovely combination, though it is generally the custom to use either the one flower or the other. A bridal bouquet has a certain sweet dignity of its own, and this must not be encroached upon by any injudicious combinations of colors. The "plume" bouquet is one now very popular, and its name really indicates its peculiar shape. The plume is built, not as a round or shower bouquet is, but the plume is made to lie along one's left arm, the heavy heads of the long-stemmed roses lying over the crook of the elbow, and the stems crossing the front of one's gown. Sweet peas, the long-stemmed variety, are very stunning made into a double plume, or with great bunches of the flowers at both ends, and when this is the case the centre is carefully wrapped with wide ribbon, which hides the stems successfully and leaves only the pretty blossoms in sight.

At one of the early spring weddings which occurred while the lilacs were still in full bloom, the bride carried a beautiful loose bunch of pure white lilacs, relieved only by the subdued green of their own pretty leaves, while her attendants carried great bouquets of the same flower, but in the purple shade. Great branches of the same old-fashioned flowers were fastened about the altar rail and lined the aisle, and the clean, spring-like fragrance was everywhere.

Perhaps, when it comes to the last word concerning the flowers for the bride, and unless her individual taste is rather out of the ordinary, there is nothing lovelier for the maiden than a great loose bunch of the real bride roses, those heavy-headed white flowers that are at once so lovely and so symbolical.

## Making Things Easier for the Traveler

ALTHOUGH it is but a short time since he was installed in office, the Hon. Nevada M. Stranahan, the new collector of customs at the Port of New York, displaying a power of adaptation born of long familiarity with public duties, is handling the business of his department with efficiency and ease. Mr. Stranahan is of medium height and well built, and he has a strong, grave, earnest face, which lights up pleasantly as he converses. He is a most courteous gentleman and reveals that trait to callers and subordinates alike. He is quiet, but alert and business-like, and has acquired a complete grasp of the situation to which he so recently came from the very unlike surroundings of the State Senate. He is proving as successful as an executive as he was as a Senator, in which position he made a high reputation. Not only is his administration certain to be satisfactory, so far as general routine is concerned, but it has also thus early been marked by an event which is likely to make it unusually popular.

For a long time complaints have been uttered by passengers, mainly women, arriving from abroad, of the manner in which the inspection of baggage has been conducted at this port. It has been alleged that the inspectors were rude, unfair, and even in some cases dishonest. The clause in the law limiting to \$100 the value of exempt baggage has also been the subject of fierce denunciations. So strenuous became the outcry of the complainants that Secretary of the Treasury Shaw in person paid several visits incognito to the steamship docks and keenly observed the methods of the examiners. The result has been a decision by the Secretary that the passengers had at least some grievances, and the amendment by him of the regulations, so as to relax the rules, as far as possible without action by Congress, in favor of the tourists. He has, in addition, warned his subordinates

against discourteous treatment of passengers. This is calculated to promote good feeling among the thousands of travelers who will have dealings with the custom-house, and of that the head of the establishment will naturally get the benefit.

When asked to express concisely the significance of the new regulations, Collector Stranahan said: "While Secretary Shaw has aimed in several ways to relieve passengers from annoyance, so far as he could under existing law, the most pronounced change indicated by his circular is with reference to the construction to be given to the tariff law relating to non-residents. Heretofore a non-resident, within the customs law, was held to be a person who had been abroad for two years with a fixed place of abode for one year. Under the new regulations a non-resident will be a person who has been abroad for a year or more, for purposes of study, health, or other specific purpose, with a fixed place of abode for one year. The significance of this change is that the non-resident is not limited by the \$100 personal baggage clause of the law, but may bring in free of duty all articles of wearing apparel, and of personal adornment and similar personal effects, in actual use and appropriate to the passenger's station in life.

"It is believed that this change in the regulations will be a substantial relief to a large number of persons who go abroad for study or health, and who find it necessary during their stay to purchase more than \$100 worth of wearing apparel, etc.

"This, as I read the circular, is the only change made in the construction of the baggage law. The other new regulations relate purely to methods of administration. For instance, provision is made that when women ask for a private examination of their baggage the inspectors shall accord it wherever the steamship companies

have provided places therefor on the docks. Three steamship companies have already informed me that places of that sort will be made ready without delay. Again, under the new rules, the government will hold on the dock for twenty-four hours the baggage of such persons as need time in which to procure money for the payment of the duties. The government will not accept checks, but must have the actual cash, which it is not always convenient for the passenger to furnish at once.

"Another new rule, of some importance, requires inspectors to wear white gloves, so as to avoid soiling the articles they are compelled to handle. The steamship companies are to furnish to both outgoing and incoming tourists copies of a circular giving the rates of duty on articles most usually found in the baggage of passengers. The spirit in which the law is to be enforced is perhaps best expressed in the following language, used by Secretary Shaw in his instructions to the inspectors:

"While all customs duties properly collectible under the law must be secured, and intentional violations of the law detected and punished, care must be taken to avoid petty and extortionate exactions under a narrow interpretation of the law and a misapprehension of the purposes of the inspection."

"It is confidently expected that the new regulations will go far to remove past causes of friction and that hereafter there will be no reasonable grounds for complaint concerning the enforcement of the law."

# The Vacation of the Child on Crutches

By Harry Beardsley

WHEN THE mother of the tenements held her little blighted son, in a fervor of love and joy, close to her breast, I appreciated what a beautiful charity it is that gives to 400 little crippled ones of New York City some of the better things in life, which, through their unfortunate poverty, they would otherwise never know—a charity which provides every summer a vacation on the seashore for the 400 children who, during the winter months, receive an education in schools conducted especially for them, where the teachers are both instructors and nurses, training the minds of the children and at the same time caring for their broken little bodies. A boy of a west-side tenement had been brought home from his vacation. His mother ran to meet the wagon, lifted her little son from the seat, and carried him into the house. In the radiance of that mother's face, in the sparkle of her eyes, in the gladness of her smile, in her eagerness to clasp close her child, could be read at once a happiness that was far greater than that which the little sufferer himself had felt, for it was a gratitude that partook in its intensity of the strongest love of all, maternal love—and maternal love augmented and deepened by the child's misfortune. For it is the true mother nature to bestow her tenderest affection, her deepest anxiety, on the little one among her flock who swings his twisted body between crutches or holds his head in braces of hard steel. The joy given by the outing to the child was trebled in the happiness which came through the great bond of sympathy to the mother.

More interesting, even, than the schools for the crippled offspring of the poor sections and the way in which they are conducted is the origin of this remarkable charity. There are now in New York City six schools which are attended solely by crippled children, and these are children of the tenements, whose parents cannot afford to send one cent for their care or education. Three of these schools are on the east side, three on the west side. The attendance at all of them is nearly 400, one school on the east side having almost 100 pupils. These children are protected from the time they leave their homes in the morning until they are returned to their parents after school hours in the afternoon. A wagonette, comfortably cushioned, calls in the morning at the door of each boy or girl of the school. The child is carried from the house by the driver of the wagonette, lifted into his seat and taken away to school, and after the session is over returned in the same way.

During the class hours, when they are given the same education that is provided in the public schools, the teachers keep watch that none of their delicate pupils is injured—that a plaster cast is not broken, that a brace is not pulled out of place when the children are at their games. The teachers employed are specially fitted by training for this work. They understand the afflictions from which their little charges suffer and know what to do in an emergency or accident.

Each summer these 400 children are taken to the seashore for an outing of two weeks, in the beautiful summer home for children of the Children's Aid Society at Bath Beach. They go on their vacations in groups of twenty-four, carried thither in a special car, and from their homes to the street railway and ferry in the same wagonettes which are used during the school months in taking them to school.

## President Roosevelt's Vacation.

IF ANY man earns a right to a long and restful summer vacation it is the President of the United States, whose duties and responsibilities, even in ordinary times, are onerous and trying. President Roosevelt is now having his first spell of leisure since he succeeded to his present high office, and, after the cares and trials of the past ten months at the national capital, even his strenuous spirit must enjoy the relaxation and repose of his pleasant home, two and one-half miles from Oyster Bay, L. I. That little town, which recently spruced itself up in proud anticipation of being the summer capital of the United States, will doubtless be invaded during the hot months by many sight-seers and political visitors, but few of these will be permitted to cross the threshold of the Roosevelt home. The President has engaged offices in the village, where his secretaries and others of the White House force are at work and where he keeps regular hours, attending to necessary governmental business. There he receives those who wish to call on him, and thus the seclusion of his home life is preserved. It is probable, however, that the President will, from time to time, entertain at his residence prominent men with whom he may desire to confer freely on important matters.

The President will remain at Oyster Bay, for the most part, until he starts on his Western trip in the fall. But if at any time he should feel the need of getting away from the public gaze he has a ready means of doing so in the official yacht of the President of the United States. This vessel, the *Mayflower*, formerly Mrs. Ogden Goebel's private yacht, which was purchased by the government for use as an auxiliary cruiser during the Spanish-American war, has just been refitted at the Brooklyn Navy Yard at an expense of \$50,000, and made a luxurious sea home for the President and his family. The vessel is exteriorly a delight to the eye, and the interior furnishings and decorations are now of the finest, those of the President's quarters surpassing all the rest. These quarters include six state-rooms, the President's own room being finished in white enamel and gold. A handsome brass

Five years ago these same children sat drearily, hour after hour, day after day, in their crowded, unhealthy homes, dragging out an existence of pathetic misery; too weak and infirm to join their sturdy brothers and sisters in the queer, ingenious games of the children of the streets, too frail to go to school, where they would be injured in the careless rush of the stronger ones.

In a family of eight or ten, occupying three or four small rooms, a crippled child is sure to suffer neglect. His body aches with its deformity, his mind grows dull with inactivity. A dreary future is before him—a shapeless body, an empty mind, no means of earning a livelihood. To such as these the path of mendicancy is, alas, too easy.

The first help for New York's crippled children came from one who herself had been a weak and helpless child. Until she was twelve years old, an affliction of the spine made May Darrach unable to walk. Her mother attended her faithfully, her father, who, strangely enough, was a manufacturer of appliances for the deformed, studied constantly to discover a contrivance which would give strength to his daughter.

I have heard of men who have become physicians in order that they might cure persons whom they loved. Their studies and research, inspired by this, the strongest possible incentive, have often resulted in the perfection of means of cure that have been a lasting benefit to all mankind. So it was in the experience of the father of May Darrach, the crippled girl. He invented a mechanical support which not only enabled his daughter to be nearly as active as a normal child, but which has since become a benefit to many of those who suffered as she did.

At twelve years old, May Darrach began to know something of the freedom of health. She appreciated the contrast to her life of helplessness. It was then that she began to think of others who were stricken as she had been. More than five years ago she visited the poor districts, looking for little cripples. She found many of them—sitting alone, dreary and unhappy, in the squalid, festering tenements. Outside on the streets and in the public playgrounds their brothers and sisters were shouting, laughing. The little cripples were sitting, silent and solitary, in the heat and the evil air. Miss Darrach's sympathy was overflowing. One summer she took several of these children to a cool New England summer home. The next year she took more of them.

## Fishing-time

I CANNOT fix my mind to-day  
On what I have to do;  
A picture haunts my inner eye  
Of waters swift and blue.  
My fingers itch to cast a fly,  
The bells of memory chime  
And call me to the woods and fields,  
For this is fishing-time.

I DREAM of mossy stepping-stones  
In lazy amber brooks,  
Of grassy banks with blossoms bright,  
And silent, shady nooks,  
Where I forget the world of toil  
And wash away its grime  
In crystal depths of running streams  
That sing of fishing-time.

I LONG to see the sunfish play,  
The minnows' merry school,  
The trout beneath the shelving bank  
Or in his favorite pool,  
And all the silver finny folk  
That throng the watery clime;  
So hand me out the old brown coat  
I keep for fishing-time.

MINNA IRVING.

bedstead, many-hued panels of silk, and bath-tubs cut out of solid marble are also features of the President's section of the yacht. Needless to say, the yacht has every convenience of a modern pleasure craft, so that a cruise on board of her should be the perfection of comfort and recreation.

After her renovation the *Mayflower* was put in commission, with Lieutenant-Commander Albert Gleaves, formerly of the dispatch boat *Dolphin*, in command. The *Dolphin*, heretofore the President's boat, will now be used exclusively by the Secretary of the Navy. The *Mayflower* is a much larger vessel than the *Dolphin*, and has more powerful engines. Since the late war she has done little service beyond taking Governor Allen to Porto Rico. In her bettered condition she is now entirely at the President's orders, and he can sail on her whenever and wherever he pleases.

Then she realized that others who had facilities might in the same way give happiness. She saw that she reached only a few of the vast number of the crippled young among the poor—for it is estimated that there are 3,000 such in New York City. You seldom see them on the streets. You do not know of them until you penetrate their homes; and then the mothers, in their pity, foolish, perhaps, sometimes conceal their blighted offspring until the visitor is gone.

The Children's Aid Society accepted the suggestion of Miss Darrach and set aside a cottage for the summer in their place at Bath Beach for those physically weak and imperfect, who should be taken thither. The children of the six special invalid schools are divided into groups of about twenty-five each. First a group of boys goes for an outing, then a company of girls.

At the cottage on the seashore they are under the care of two thoroughly skilled and gentle teachers. They rise for breakfast at seven, then they go out of doors to play under the trees. They have chair swings and toys, and the amusements provided in a kindergarten course. They play baseball, too, these children, with their heads in frames or their legs in plaster casts. In the afternoon they are on the beach, digging in the sand and bathing in the surf. One of the teachers is always with them to prevent the strong children, who also use the playgrounds, from entering the games of the little cripples, for then there would be great danger of injury. At night, when the breath of life from the ocean blows through the fresh trees, these little, broken, struggling human plants sleep in their soft white beds.

Even in these happy surroundings some of the children are homesick for a time. Those which come from the poorest homes, the most squalid surroundings, and to whom the contrast is therefore the greatest, become the most homesick. But that is quickly passed, and then the pallor leaves their faces, the look of distress about the eyes, which is peculiar to those of physical deformity, disappears. You do not feel sorry for any child whose face is rosy and whose eyes are bright and full of laughter, even though he hobbles a little as he walks.

"These little outings mean a good deal to some of the poor families of New York," said Mrs. Frasier, who teaches in one of the schools for cripples and attends them at the seaside during a part of the summer. "You see those two little boys, both of whom have spinal trouble?" she continued, pointing toward two of her charges. "They are in the same family; one is nine, the other five. One of them fell from a swing, injuring his spine; the other was sliding on the ice; he fell on a rock and the same trouble developed. Through constant care—it takes the closest watching and proper medical attention—many of these children are cured. They grow from a childhood of pain and deformity to be strong and healthy men and women. But they must not be neglected. I knew a child who was nearly cured. His brace was to have been removed within a month. One day he had a violent fall, and from that injury he became a cripple forever. An insignificant thing like that, to stumble and fall, may mean everything in a life."

I was at the home of the two little crippled brothers whom Mrs. Frasier pointed out when they were returned from their outing in the wagonette, and it was their mother whom I saw receive them in her arms.

## Summer Advice.

By ONE WHO KNOWS.

KEEP cool in hot weather.  
"How?"  
By eating Grape-Nuts every day.  
"Rats!"

No, not rats, but a good, sound fact that thousands make daily use of.

Grape-Nuts is a predigested food which makes digestion easy.

It gives the nourishment without the internal heat caused by heavy carbonaceous foods.

You can feel from ten to twenty degrees cooler than your neighbor when you eat proper food that does not overtax the stomach.

Grape-Nuts is made from certain parts of the grain and by mechanical process the starches are changed into grape sugar in the same manner as the stomach would do in the first act of digestion.

The phosphates of the cereals are retained in Grape-Nuts and these and the grape sugar supply the necessary nourishment to body, brain and nerve centres.

Grape-Nuts is a concentrated food, giving strength, vitality and coolness to the body and energy and cheerfulness to the brain, in place of the heavy sluggish draggy feeling caused by meat, potatoes, etc.

Another point.

It is thoroughly cooked at the factory by food experts and saves you the trouble.

You get it from the grocer and, by adding cream, it is ready to serve.

No hot stove, no cross cook, no loss of time or exertion as with other food.

Its crisp taste with the delicate sweet of the grape sugar makes it pleasing to the palate of the most critical epicure.

The recipe book in each package of Grape-Nuts gives many pleasing puddings, salads, entrées and desserts that can be made.

Worth a trial and a package will prove it.

# In the World of Sports

INCREASING INTEREST IN ALL OUT-DOOR SPORTS—AMERICAN ATHLETES ABROAD

THE PHENOMENAL success of the running turf this year has astonished everybody and especially those who have not watched the race-track closely. The track is simply sharing in the popularity and prosperity achieved by all branches of outdoor sport this season. Professional baseball has passed through enough in the

last year to kill any ordinary sport, yet the game at the end of the season will be found to have attracted more people than it did in either 1900 or 1901. There has been a keener interest in college athletics, and nobody need be surprised if the football games next fall attract more people than ever before. Americans are just beginning to appreciate the beauties and physical benefits of outdoor sports and recreations.

Of the thoroughbreds shown on the Eastern courses this year, the McLewee and Brady pair, Gold Heels and Major Daingerfield, are undoubtedly the best. While the winner of the Suburban and Brighton handicaps has been heralded as the best race-horse this country has ever seen, I have been told by those who have watched these animals in their preliminary work that Daingerfield generally outruns Gold Heels in their trials. If his breakdown is not permanent, great things can be expected of Daingerfield in his four and five year old stage. In spite of his racing blood Gold Heels looks almost like a cob, and has few of the lines of beauty possessed by his sire, The Bard, or by his grandsire, Longfellow. It has been said that Watercolor is the handsomest thoroughbred ever seen in this or in any other country, but veteran horse-men, while admitting that Watercolor is a beautiful animal, are wont to give preference to Longfellow, the grandfather of Gold Heels. Longfellow, as his name implies, was lengthy of limb and barrel, but he was the perfect equine racing machine, if one ever lived. After his victorious career in the East, Longfellow broke down and was taken back to the Blue Grass State to end his days in quiet and peace. All Kentucky cried when the magnificent animal was led into the fair-grounds, hobbling. The people paid \$1 each for souvenir hairs from his mane and tail. Friends of McLewee and Brady would like to see Gold Heels taken to England, but it is doubtful if such a course will be pursued. American horsemen have had such poor luck in getting their thoroughbreds over the ocean that it would seem like tempting Dame Fortune to take such a valuable animal away from his rich engagements in this country. It takes time for an animal, just as it does for a man, to become acclimated and accustomed to the different conditions in England.

**PRACTICABILITY OF MOTOR CYCLES.**—While there are some people who look on the bicycle as a thing to be used for exercise, there is a growing opinion that the motor cycle has come to stay. Others maintain that the motor cycle is a sort of compromise between a bicycle and an automobile, and are shy about admitting that the two-wheeled motor vehicle has any positive future. The fact remains, however, that the motor cycle is gaining in popularity on both sides of the ocean, and every day its usefulness and practicability become more and more apparent. The first really authentic test made was that arranged recently between Boston and New York, which proved to be a success beyond the anticipations of the promoters of the endurance contest. The run of over two hundred and fifty miles was made in good order over some villainous roads and in all sorts of weather, rain falling most of the time during the two days that the riders were on the road. The test was many times more successful than the initial endurance run of the automobile in this country, when only one machine made the arranged trip in good order. As pacing machines on the race-track the motor bicycles and tandems have entirely superseded the old-time triplets, quads, and sextets, manned by three, four, and six riders. The motors furnish better and steadier pace. Many of the machines now in use on the bicycle tracks are of ten horse-power, and it is no longer a question of a rider not getting pace fast enough for him, as was the case last year and the year before. On some of the properly constructed tracks the motors are capable of traveling at the rate of close to a mile a minute, and not a pace-follower on the track has been able as yet to follow that speed. It is much easier to follow a big motor than it is one of from three to five horse-power. On the big motors regular automobile tires are used on the rear wheel, the one which the pace follower is glued to so closely.

**AMERICAN ATHLETES ABROAD.**—The success of the American athletes abroad this year has not surprised the critics in this country. Duffey, Jones, and Coe have had little trouble to date in holding their own with the Englishmen, and even Edgren, the artist, has done good work with the weights. Several of the prominent college trainers in this country intend in the future to give more attention to distance runners. American athletics have for years been woefully deficient as distance runners. Singularly enough, most of the distance men who have done well in this country came here from England in their youth. There is no reason why the trainers cannot turn out runners who can go the long routes if they will give the same attention to distance running that they give to the field sports and sprints. To say that the American athlete has not the necessary strength and stamina is all nonsense. If some one college will give particular attention to developing distance runners next fall and spring it may give that university the intercollegiate championships next year, should one event decide the championship, as was the case this year.

**INTERNATIONAL TENNIS COMING.**—While the weather of May and June in the East was not the sort to encourage lawn tennis, still, the tournaments held to date have been interesting, and the promise made in the spring that there would be a revival of interest in the game has been fulfilled. The tournaments about New York, in New Jersey and Pennsylvania, have been well attended and the games themselves finely contested. The coming of the Doherty brothers, the English champions, to take part in the American championships, is

bound to increase general interest in the sport, as international competition of any sort invariably does. The Doherty brothers will be here the last week in July, and the largest crowd of the season will journey to the handsome grounds of the Crescent Athletic Club, at Bay Ridge, to witness the games. Whitman, Ware, Wrenn, Ogden, Little, Alexander, and Clothier are all playing in good form, and do not appear to fear a tilt with the invaders.

ALEXANDER J. FRASER,  
Of Columbia, champion inter-  
collegiate sculler.—Karl

**THE BASEBALL WAR.**—

Baseball enthusiasts have wearied of the troubles between the major professional organizations, and would hear of a treaty of peace with positive pleasure. Both organizations suffer, but each seems content to continue the fight. The American League has thrown out hints to the effect that it is ready to talk in a friendly spirit, but the old club owners of the National League feel too bitter at this time over the loss of their players to consider a white flag. But an equitable arrangement must be arrived at sooner or later, and the sooner the veteran club owners realize this the better it will be for all concerned. The jumping of players from one to the other has done the game no good. There is no reason for changing the opinion, given before the season started, that Pittsburg would win the National League pennant, and Chicago finish first in the American League. Baseball is a mighty uncertain game, but the above teams appear to have the better chance.

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

**W. E. S., St. Louis.**—The special race between The Abbot and Lord Derby will be trotted at Brighton Beach on August 14th. It will be the best two in three heats for a purse of \$10,000.  
**J. M. W., Chicago.**—In a game of draw poker house rules govern. If a player picks up his hand and finds he has six cards his hand is dead and cannot be played. When a call is made those in the game are entitled to see both hands exposed on the board.  
**J. A. C., Boston.**—Harvard defeated Yale in the dual athletic meet and also in the intercollegiate championships. Yale won the hockey championship, not losing a single game. Harvard finished second.  
G. E. S.

## Business Chances Abroad.

A LIMITED number of American glass-workers and skilled artisans in this line of manufacture are offered an opportunity for employment in Japan. The government of that country has decided to establish a model factory, or technical school, for training workers in window-glass manufacture. Japan affords the necessary materials for this industry and the cheap labor, but lacks the skilled artisans necessary to make it a success. All of the window glass now used in Japan is imported and the market is an increasing one, since it is used for buildings of both foreign and Japanese style.

THE American consul at Warsaw, Poland, Mr. Horodyski, sends a translation of a letter from the executive committee of the agricultural exhibition to be held at Bilno, in August next, which sets forth that the exhibit is not only for the purpose of showing the advance in agriculture in the districts represented, but also to enable agriculturists to study improvements in this line of industry. The committee wishes, in view of the likelihood that the commercial treaty between Russia and Germany will not be renewed after next year, to see samples of farm machinery and products from other countries, and would like United States exporters to be represented.

## Camping

In some sections of the country, in the hot months, many pleasure parties camp out in the woods.

In packing for these trips, a supply of

**Hunter**  
Baltimore  
**Rye**

is needful against emergencies.

This is a pure and perfect whiskey and a fine stimulant.

Sold at all first-class cafes and by jobbers.

## Reduced Rates to Tacoma,

PORTLAND, SEATTLE, VANCOUVER, AND VICTORIA,

VIA PENNSYLVANIA RAILROAD, ACCOUNT MEETING Y. P. C. U. OF THE PRESBYTERIAN CHURCH AT TACOMA, WASH.

ON account of the meeting Y. P. C. U. of the Presbyterian Church at Tacoma, Wash., July 23d to 27th, the Pennsylvania Railroad Company will sell excursion tickets to Tacoma, Portland, Seattle, Vancouver, or Victoria from all stations on its lines, from July 10th to July 20th, inclusive, at greatly reduced rates. These tickets will be good for return passage until September 15th, inclusive, when executed by Joint Agent at destination and payment of 50 cents made for this service. Apply to Ticket Agents for additional information.

## New Jersey a Unique Spot.

NEW JERSEY is the natural summer resort for New Yorkers, and for the Easterner as well, for the simple reason that it is accessible. Exceptional train service, fine locations, wonderful bathing facilities, and a marvelous climate are the chief attractions. The popular route is the Sandy Hook, which leaves New York, Pier 8, N. R., and runs to Atlantic Highlands, where connection is made with the New Jersey Central for all New Jersey coast resorts, including Seabright, Normandie, West End, Monmouth, Long Branch, Asbury Park, Allentown, Ocean Grove, Avon, Belmar, Spring Lake, and Point Pleasant. The boats which comprise the fleet are models in convenience and equipment, and are the fastest plying from New York. The sea trip is delightful, and the rail portion of the journey is close to the water's edge. The New Jersey Central also operates a rail line to these resorts, passing Shrewsbury, Red Bank, Matawan, Beach Haven, Atlantic City, Ocean City, and Cape May. Its trains are fast, frequent, and finely equipped, and the principal ones have Buffet Parlor Cars. The General Passenger Department of the New Jersey Central, Sect. G. B., has just issued a hotel book, giving information regarding the principal hotels and boarding-houses on its line. It's free for the asking; send for it.

## Hints to Money-makers

NOTICE.—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, so sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

OUR exports are decreasing, business is not as good in all lines of trade as it has been, and competition is getting more acute all around. Some industrials and some railroad corporations are reducing dividends or passing them, while at the same time, instead of "a community of interests" and a more friendly feeling between great industrial and railroad magnates, bitter controversies are springing up, which may signify much in the future. The peremptory manner in which the Pennsylvania Railroad transferred its Eastern telegraphic contracts from the Western Union to the Postal Telegraph shows how bitter is the feeling of that great railway corporation because of the aggressive work of Mr. Gould in pushing the Wabash into Pittsburg and on toward the Atlantic.

Strife between the Pennsylvania Railroad and the great Gould combine would mean a terrific warfare. More than this, the fact that the Wabash was favored by Mr. Carnegie with a long-time contract for much of the iron and steel freights from his great manufacturing (now a leading part of the Steel Trust), gives reason for the Pennsylvania Railroad's interest in some of the largest independent steel and iron works. Out West, the Moffett financiers of Colorado, joined with those of the copper king, Senator Clarke, of Montana, are building to the Pacific coast, and making a new competitive iron thoroughfare from Denver to Los Angeles and the St. Paul is headed for Seattle.

The bitter fight against the proposed issue of bonds by the United States Steel Trust and the disclosure, by the publication of the stockholders' list of the latter, that Pierpont Morgan, Carnegie, and others, who were supposed to be on the inside, have little or none of the common shares, and not very much of the preferred, have caused decided weakness in the shares of this great trust. The suggestive statement of its attorneys that, after the bond issue was projected, the Morgan interests purchased \$80,000,000 of United States Steel preferred at \$94 a share emphasizes the fact that the Morgan interests must have sold their large holdings when the steel shares were first put out at high prices. If they had not sold, it would not have been necessary for them to have gone into the market to purchase \$80,000,000 to protect the proposed bond issue.

The fact that \$10,000,000 is to be paid to the Morgan syndicate for financing a loan of \$50,000,000 has created a great deal of adverse comment. It was said that this would save a million and a half a year to the corporation, because of the difference between the interest on \$250,000,000 of bonds at 5 per cent. and the dividends at 7 per cent., now being paid on \$200,000,000 of preferred shares. But it is pointed out that while, in a period of depression, the interest on the preferred or common shares was only to be paid if earned, the interest on the new bonds must be paid, or a foreclosure, which may wipe out the stockholders, will follow. This phase of the situation apparently has appealed to the courts.

The proceedings taken on behalf of the State of Colorado to dissolve the American Smelting and Refining Company, on the ground that it is a trust, following the proceedings against the so-called "Beef Trust" and the action against the Coal Trust and against the Northern Securities merger, all reveal the tendencies of the time, and indicate that a dangerous anti-trust and anti-corporation sentiment is being developed throughout the country, and that it will have its influence at the next State elections and the next presidential election there can be no doubt. The disposition to strike, manifest in many departments of labor, is another sign of the times which is far from encouraging to those who look for stability of values, for continuous conditions of prosperity, and for the maintenance of high prices for industrial and railway securities. We are clearly approaching, or already in, the transition stage. The pendulum has begun to swing the other way.

"E." Tiffin, O.: No.  
"S." Providence, R. I.: Mistake rectified.  
"Trustee," Atlanta, Ga.: The new bonds of the Mexican Central Railway are collateral trust 4 1/2 per cent. I do not advise their purchase.  
"A." New Orleans: The bonds are a local security, fairly good, but not a high-class investment. They are not quoted on the New York exchange.

"H." New Orleans: The party has no rating. You should be a subscriber to *LESLIE'S WEEKLY* at the home office, at full rates, to be entitled to a place on my preferred list.

"M." Hiram, O.: (1) Party has no rating. (2) I think very little of the speculative companies to which you refer. (3 and 4) No quotations on Wall Street. Highly speculative.

"C." Harrisburg, Penn.: From all that I can learn the company is speculative. I would not regard it in any sense as a good investment. I do not believe the statements made to you.

"W. L." St. Louis: You should be a subscriber to *LESLIE'S WEEKLY* at the home office, at full rates, to be entitled to a place on my preferred list. Subscribers not on the preferred list are entitled to occasional answers.

"D." Lowell, Mass.: I do not believe in the enterprise. There are other much better real estate propositions around New York, some of them with vast possibilities. If you desire a combination of investment and speculation, you will find it in some of these, for New York real estate is bound to increase in value with the growth of the city, and nothing can wipe it out.

"H." Newark, N. J.: (1) Your holdings are mainly of investment securities, but if you need the money it would be wiser to sell something in which you have a profit in this market and use it, for it is hardly probable that the present high scale of prices can be maintained another year. (2) The Chicago and Alton bond ought to be a very good one. New York banks will loan on all the bonds you mention.

"H." Schenectady, N. Y.: I agree with you that the enormous capitalization of the Steel Trust is liable some day to create a grave financial situation. In times of depression, the steel and iron business suffers worse than anything else. You perhaps have noticed the recent cablegram from Antwerp stating that, as a result of the over-capitalization of steel works and rolling mills on the Scheldt, the city is threatened with a twelve-million-dollar failure.

"Investor," Hartford, Conn.: (1) The report that the Standard Oil Company and its greatest competitor, the Russian Oil Company, have contracted to divide the markets of the world probably accounts for the renewed strength of Standard Oil. I would not sacrifice the shares. (2) The new suit against the Steel Trust alleges that the assets of the trust, after deducting the amount of its indebtedness, do not equal the amount of the preferred stock now issued. It also charges that J. P. Morgan & Co. obtained the ratification of their preferred stock and bond scheme by unfair means.

"B." Newton, N. J.: The secretary of the Globe-Boston Copper Mining Company informs me that the company is pursuing very extensive development work, and that a letter from the engineer proves, first, the permanency, continuity, and regularity of the numerous veins to a depth of 250 feet; and, second, the great similarity in underground conditions between the property and the United Globe and Old Dominion mines, on the same belt, on which millions of dollars' worth of high-grade ore are now being mined. The order for \$250,000 has been received. You are on my preferred list for six months.

"T. G. R." Brooklyn: (1) The future of United States Steel preferred depends more on the support its promoters and manipulators care to give it than on the decisions of the court. Less than a year ago it was given out that the trust was earning so much money it did not know what to do with it. Now it is so pressed for cash that it seeks to borrow \$50,000,000, and to do this it pays virtually a commission of \$10,000,000 to promoters who have already divided among themselves and the other members of their syndicate more than \$25,000,000 of profits. This is not only a great steel trust, but it looks like a great steal. (2) Speculative.

"S." Saratoga: (1) The earnings of International Paper, during the past fiscal year, showed only 2 1/2 per cent. on the common stock, as against 10 per cent. the preceding year. Either this is a very bad outlook or else the figures have been given out in their worst form, to depress the stock. (2) The statement of Thomas P. Ryan, a large holder in Hocking Valley Railroad, that dividends on the common will not be increased in the near future, as publicly made. Perhaps Mr. Ryan would like to keep the price down. (3) The action against Mr. Hallenborg, promoter of the Sonora Copper Company and the Puerco Copper Company, was brought by a stockholder in the former, who alleged that misrepresentations had been made to him.

"Banker," Boston: I agree with you that the financial outlook abroad is far from good. There must be a tremendous liquidation some day in the greatly inflated mining shares on the London exchange. There is an acute cotton crisis in Lancashire, a deficit in the French treasury, a strained industrial situation in Germany, and a threatened revolution in Russia. All these things must have a world-wide influence, which even we, prosperous as we are, cannot escape. Several of our railroads report diminished earnings, a notable decrease in our exports is apparent, money is in greater demand in all our financial centres, the crop situation is still problematical, strikes are prevalent, and gold exports are in sight. A bull market, under such circumstances, would be phenomenal.

"G. A. S." Wilmington, Del.: (1) I do not think the proposition very attractive. (2) St. Joe and Grand Island first preferred sold last year as low as 55 and as high as 78. It pays at the rate of 5 per cent. per annum and looks cheaper than Southern Railway common, which pays no dividends and sells around 37. (3) Southern Pacific, it is said, is able to pay fair dividends whenever the Union Pacific gets ready to declare them. While it is a speculative stock—and I am not advising speculative purchases at this time—many believe in it for a long pull. (4) I would sell my Steel common whenever it did not involve too great a sacrifice. You should be a subscriber to *LESLIE'S WEEKLY* at the home office, at full rates, in order to have a place on my preferred list.

"G." Roseville: (1) I doubt if the new combine will have an unfavorable effect on the Fore River Ship and Engine Company. Morgan's shipping combination embraces steamship lines rather than shipbuilding plants. (2) The loss of the Pennsylvania Railroad's business east of Pittsburg by the Western Union must impair the earnings of the latter somewhat. Just how much remains to be seen. It must always be borne in mind that the Gould and Pennsylvania interests may at any time see fit to come to an amicable understanding again. I think better of American Telegraph and Cable, which has the guarantee of the Western Union behind it. (3) If your friend knows the inside workings of United States Steel and is a cautious and experienced counselor, I would take his advice, but I do not believe that United States Steel common is anything more than a speculation at prevailing prices.

ISSUED IN SEMI-MONTHLY SERIES: AN EXHAUSTIVE REVIEW AND ANALYSIS OF THE LEADING RAILWAY AND INDUSTRIAL ENTERPRISES OF THE COUNTRY, WHICH PERMIT INVESTORS TO INTELLIGENTLY DETERMINE SECURITY VALUES. RAPID COMPANIES EACH RAILWAY TREATISE.

The series thus far includes ERIE, WABASH, ST. PAUL, CHICAGO & GREAT WESTERN, AMERICAN SUGAR, MISSOURI PACIFIC, and DENVER, KANSAS AND CHICAGO, and are ready for delivery. Our next series, No. 8, will be devoted to a review and analysis of

## NEW YORK CENTRAL

and its relation to the Pennsylvania in the community of interest investment.

CAN BE HAD BY CALLING AT OUR OFFICES OR BY ADDRESSING STATISTICAL DEPT., MAIN OFFICE.

## Dividends 1% per Month

on Par are now being paid by the

## OHIO & CALIFORNIA REFINING OIL CO.

from the sales of Oil from its producing wells. STANDARD OIL COMPANY BUYS IN. TIRE OUTPUT. Enormous acreage yet to be developed. The safest, surest, and best of opportunities ever offered the public. PRODUCING WELLS GUARANTEE INVESTMENT. Company in the hands of bankers and men of integrity and experience in the oil business. To raise funds for further development of the property a limited number of shares are being offered at

\$1.00 PER SHARE.

This Company now owns 33 Producing Oil Wells and 1 Gas Well. Has 52,145 acres Oil and Gas Land, mostly in West Virginia, adjacent to the 40,000 acres recently purchased by Standard Oil Co. In January last we predicted that this stock would be selling for \$1.00 per share in June. This prediction has been fully verified. We now predict \$3.00 per share this time next year.

Send remittances, or for further information write, to the Company,  
27 WILLIAM STREET, NEW YORK

## IMMENSE AMALGAMATION

TWENTY COPPER, GOLD AND SILVER  
MINES CONSOLIDATED UNDER THE  
MANAGEMENT OF THE

## Globe-Boston Copper Mining Company

This Company, composed of the leading business men of New York, Chicago, and Leavenworth, Kansas, after years of hard work, was enabled to complete the consolidation which gives it the ownership and control of this vast property, located in the very heart of the Globe-Arizona mineral belt. Every one of these twenty mines contains from one to three fissure veins from which large quantities of rich ore have been shipped. The Company has spent a great deal of money on the property and has brought it to a state where large profits are merely a matter of a reasonable length of time. The ore bodies are rapidly being opened up at a great depth and the Company is preparing to erect smelters for the treatment of its ores.

Absolutely the best opportunity ever offered the public is now presented in the stock of this Company, 50,000 shares of which are offered for public subscription at 50¢ per share. The right is reserved of allotment should this amount be over-subscribed.

For further information address

W. F. KENNEDY, Sec., 253 Broadway, New York

THERE is as wide a difference between my proposition of the Yuma Consolidated Mine and Milling Co. and the average proposition of an advertised mine as between daylight and darkness. The Yuma pays 12 per cent. now—in all human probability will never pay less—and I believe will pay twice 12 per cent. in twelve months. I would like to tell you the whole story by mail. CHARLES C. WOODWORTH, 69 Wall Street, New York.

## STOCK IN A GROWING AUTOMOBILE BUSINESS

Many who have some money to invest want it to earn more than the usual 4 and 5% interest and still be safe. To these investors we have the following business proposition to offer: Have been manufacturing automobiles in a small way for three years, making a simple and moderate-priced gasoline machine, which sells for \$500 to \$550. Have been compelled to turn down hundreds of orders; now we propose to build in quantity. A limited number of shares of Treasury Stock we will sell at par, \$50. They will earn 12% in 1903. Full particulars, THOMSON AUTOMOBILE CO., TWENTY-SECOND AND MARKET STS., PHILADELPHIA, PA.

## Hints to Money-makers.

Continued from preceding page.

"M." St. Louis: (1) No. (2) It is purely in the experimental stage.

"Subscriber," Walnut, Ill.: I cannot. Perhaps the company will buy it.

"J. S." Brooklyn, N. Y.: One dollar received. You are on my preferred list for three months.

"F." Bedford, Penn.: Not unless you are a speculator and willing to take considerable risk.

"T." St. Louis: The first mentioned is fairly well considered. The second I can ascertain very little about.

"H." St. Louis: N.: regular time for statements is fixed. Watch the financial reports in the daily papers.

"Inquirer," Cincinnati: I certainly would not advise the purchase of the 3 and 4 per cent. shares to which you refer. No stamp.

"A." Honolulu: Five dollars received. You are on the preferred list of LESLIE'S WEEKLY for fifteen months. Answer by mail.

"E. R." New York: None of the concerns you mention is regarded with favor on Wall Street. All are highly speculative and cannot be recommended for investment purposes.

"C." South Dakota: Three mentioned favorably by Consolidated Exchange parties include W. E. Woodend & Co., Ennis & Stogami, and J. L. McLean & Co. All have Chicago branches.

"Cecil," Baltimore: Two dollars received. You are on my preferred list for six months.

(1) Glad you came out with a profit on my T. & P. advice. (2) Things look badly mixed at present.

"Ed." Baltimore: Douglas, Lacy & Co. are members of the New York Consolidated Exchange, with agencies in all the principal cities, and handle mostly mining investments. Such properties naturally must be speculative.

"Zig Zag," Pittsburg: So much deception has been practiced in the matter that it is difficult to advise. Usually it is wise to even up after a stock has had a tremendous decline. The entire market is now in a most unsettled condition, and I am not advising purchases.

"C." Newark, N. J.: Mr. Walter S. Logan informs me that the property of the Copote Mining Company "seems to be all that it was ever supposed to be" and expects soon "to have work resumed with full force." He says he expects it will turn out to be "a very profitable investment." I have no personal knowledge of the property.

"S." Trenton, N. J.: The annual reports of the mining companies of Butte, Mont., to the tax assessors, show that earnings for the fiscal year shrunk from about \$16,000,000 in 1901 to \$5,500,000 in 1902. The Anaconda's decrease was nearly \$4,000,000, the Boston and Montana's about \$5,500,000, and Butte and Boston's about half a million. Parrot shows the only increase, and it was slight. The Anaconda mined low ore and of lower grade.

"S." Syracuse: (1) The new mortgage on the Brooklyn Rapid Transit is for the enormous sum of \$150,000,000. Just what it is to be used for is not revealed. As a stockholder, it would seem that you have a right to know. Certainly it is not conducive to the welfare of the stock to put a big mortgage ahead of it. (2) Corn crop figures are altogether conjectural. We shall not know what the corn crop really is until well on into September. (3) The high price of corn may interfere somewhat with the profits of distillers and glucose manufacturers.

"H." Portland, Me.: President Bouldin, of the Guanajuato Consolidated Mining and Milling Company, advises me that it was a mistake to infer that the company has no late reports of ore bodies in detail, and he submits the engineer's reports on the properties, showing the workings on the various mines, the measurements of the ore bodies, their assay and estimated values, and he adds that "no reports as to the development of new ore bodies are being sent out at this time." President Bouldin announces that the financing of the company has been completed, and that it hopes to begin the distribution of the profits this fall or early in the new year.

"T. J. C." New York: Two dollars received. You are on my preferred list for six months.

(1) I have no doubt that the American Ice Company, if honestly managed, would earn and pay dividends on the preferred. The new president insists that he proposes to run the company on a business and not a speculative basis, and that no dividends will be paid until they are earned and until a sufficient surplus has been accumulated to justify their payment. The trouble is that he is a president only by the sufferance of the large stockholders. If dissatisfied stockholders will refuse to give their proxies to the present manipulators, and put them in the hands of some representative man, there will be an interesting stockholders' meeting next January. That is what should be done.

"A." Butte, Mont.: (1) The report of the Virginia-Carolina Chemical Company apparently shows more than 12 per cent. earned last year on the common. You know the history of all these industries, however. I do not recommend the common as an investment. It pays 5 per cent., but American Ice common paid 4 per cent. and made favorable reports without intermission, when, all of a sudden, it was discovered that the dividends had not been paid from earnings.

(2) It is a rule with veteran speculators when a stock having any merit at all falls to half its best figures, to pick it up as a fair speculation. That is why many holders of American Ice, and especially the preferred, have been evening up. I decline to make further recommendation about a stock which has been in the hands of such an incapable or dishonest clique. (3) For the same reason, American Can, and especially the preferred, has been regarded as a fair speculation, at the recent tremendous shrinkage in its value.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

ONE of the latest protests against the laxness of supervisory legislation of the fraternal beneficiary associations and societies comes from the insurance commissioner of Missouri, who, in calling attention to the opportunities for fraudulent transactions, recommends an amendment to the law, so as to set forth a standard of financial solvency to be required from all fraternal insurance associations who do business in the State. He thinks this standard can best be accomplished by an enactment fixing the minimum mortality assessment rate of each association or society and providing that the funds so collected shall only be used for the payment of death losses. The commissioner of Missouri wants this minimum mortality assessment rate to be based on some recognized table of mortality. This is a sensible suggestion. The time must come when the Legislatures of the respective States will all insist, in spite of the protests of politicians, on as strict supervision of the assessment associations as that now given to the old-line life insurance companies. The first to demand such legislation should be the members of the fraternal associations, but, strangely enough, they are usually opposed to it.

"B." Wheeling, W. Va.: You are too late.

"L." Richmond: The policy is the best that you could get. Its guarantees are excellent.

"H." Little Rock, Ark.: (1) The Equitable's endowment policy to which you refer should be entirely satisfactory. (2) The New York Life or Montreal Life.

"G." Toledo: The Penn Mutual of Philadelphia was organized in 1847. It is therefore one of the oldest of the old-line companies. Its business shows a constant increase in reserves, assets, and surplus. I regard its policies with much favor.

"J. G. S." Hohenwald, Tenn.: The company is in good standing, but I do not regard it as comparable in strength with the great New York institutions.

*The Hermit.*

## Hints to Money-makers.

Continued on opposite page.

"C." De Smet, S. Dak.: Holiday delayed it.

"H." Northeast, Penn.: Parties have no rating. Would not invest.

"A." Batavia, N. Y.: I do not answer inquiries with reference to insurance.

"B." Lebanon, Penn.: Both are good, but I think better of the new Metropolitan four.

Inquirer, "Healthful, Va.: If you can hold it you ought to get out of your Southern Pacific without a loss.

"M. P." Ashtabula, O.: (1) It is easy to get good names to support a questionable proposition.

(2) A speculation.

"T." Tallahassee, N. Y.: The parties have no rating and the preposterous claims of their circulars are sufficient to justify suspicion.

"S." Providence, R. I.: I find no information of value regarding either one of the companies. The shares are not known in Wall Street.

"D. P. B." Milwaukee, Wis.: I have other correspondents who seem to agree with you, but don't jump out of the frying-pan into the fire.

"S. F.": As a rule, when a stock has been hammered down to about half its price it is a good speculative purchase. (2) Not at present.

"F." Syracuse: (1) I regard it as a misrepresentation, though the company claims otherwise. (2) So claimed. Wish I had proof to the contrary.

"K." Canon City, Col.: Address the parties, as "Bankers and Brokers, General Delivery, New York Post Office," and your letters will reach them.

"E. C. M." Cheshire, Conn.: (1) I do not regard it by any means as safe as a savings-bank. Everything depends upon the integrity of the management.

"E. W. G." Newark: I agree with you that if the Republican party continues in power it will pass a ship-subsidy bill before many years. This would help all the American ship-building concerns.

"M." Roxbury, Mass.: (1) Chicago Great Western common has had a generous advance. The strategic position of the road may some day give it greater value, but in the present temper of the market I am not advising purchases.

"K." Butte, Mont.: (1) I regard Moody's Manual as the best publication of its kind and price. (2) Reports have confirmed your surmise to a degree, but the condition of the money market and of business generally does not warrant a recommendation for the purchase of Southern Railway

common at present. (3) Nothing is known of it on Wall Street.

"M." Minneapolis: (1) Every one anticipates that some day Leather common will be manipulated for a rise. It is not an investment stock. If you believe in speculation you might "even up." (2) If American Lee common was able to pay 4 per cent. per annum for several years, and to sell at fifty, it would seem as if it were a fair speculation around ten, unless the concern is utterly rotten.

"M. B." Denver: One dollar received. You are on my preferred list for three months. North American is controlled by the Morgan interests, is closely held, and has substantial earning assets in the shape of electric-light and street-railroad securities in prosperous Western cities. It declares no dividends, but is regarded with favor by those who claim to know the truth about its earnings.

"R." Okolona, Miss.: I have not believed in the Copper shares, nor have I believed it possible for the market to have much of a rise before general liquidation sets in; but some experienced men in Wall Street persist in the hope that a big corn crop and fair wheat and cotton crops will stimulate an advance in railway, industrial, and copper shares. I hesitate to advise you to sell at a loss, but I would get out at the first favorable opportunity.

"Larry." New York: (1) I would sell almost anything on which I had a profit, and wait for lower prices, which are bound to come within a year. (2) Favorably on relations. (3) Yes; questions are answered by mail to subscribers to LESLIE'S WEEKLY at the home office at full subscription rates. Such subscribers receive the earliest copies of LESLIE'S WEEKLY sent out and are entitled in emergencies to answer by mail or wire. (4) It usually requires a week or more to bring out an issue of LESLIE'S WEEKLY.

"G. R." Danville, Penn.: (1) I would not sacrifice my American Lee common; it ought to be worth something, and it would seem wiser to hold and watch the outcome. It may be necessary for the stockholders to organize a defensive committee. (2) Tennessee Coal and Iron, I am told by one of the largest holders of the United States Steel Trust, has not been considered a desirable acquisition by the latter, but conditions and situations change so rapidly in Wall Street that one must follow them closely to keep up with the procession.

"Doubtful." Philadelphia: John M. Butler, president of La Zausilia Rubber Plantation Company, declares that his is the only company as far as he knows that is shipping rubber in commercial quantities from its own cultivated and wild trees, and that the income from this source enables it to pay 5 per cent. on its interest-bearing cash shares. He adds that the botanist sent by the Agricultural Department to inspect the company's plantation has made a satisfactory report. A number of Mexican plantation companies are on the market. Several of them have not justified the faith that was placed in them. If your friend is in a position to verify the claims he presents I should view the matter in a conservative light. Investments nearer home are usually preferred.

New York, July 17th, 1902. JASPER.

Novel Courage in the Pulpit.  
THE ACTION of the Lexington (Kentucky) clergyman in exhorting from his pulpit the prominent and professedly Christian men who allow their names to figure in bogus investment concerns and quick-rich enterprises is a refreshing example of courageous and outspoken denunciation of a present-day evil which might well be followed by other men of the clerical profession. The occasion for these remarks arose from the published report of a certain investment company which had just appeared, showing that the stockholders did not put up a dollar of the alleged capital stock, and had created an expense fund of the funds of the company, the surplus from which was divided between them. The brave preacher's condemnation derived particular force and point from the fact that several men in the congregation addressed were known to have figured in the concern in various capacities. These were advised to pay back the money they had taken unlawfully, and the brothers and sisters who had sought to get money quick and easy to pray for forgiveness instead of grieving over their losses. If the pulpits of the land generally were as frank and direct in their attacks upon questionable schemes of money-making as this one in Lexington confidence games of this sort would not flourish as they do to-day, often under cover of reputable names.

## Stock to be Withdrawn

Notice is Hereby Given that the Stock of the GLOBE-BOSTON COPPER MINING COMPANY, now selling at

40 Cents a Share

will be withdrawn from the market

Thursday, July 31st

AN ALLOTMENT of the Treasury Stock of the company has been offered to the public for popular subscription at 40c. per share. This allotment is now about exhausted and no more stock will be sold at this price after Thursday, July 31st. The reasons for this withdrawal are that the company has, after fourteen months of continuous work on its twenty mines located in the heart of the Globe, Arizona, mineral district, fully demonstrated the permanency of the nine large veins comprising the property to a depth of 250 feet. Considering that the company has 9000 feet of drifting ground on each of its nine veins, or a total of about fifteen miles, it can readily be seen that the future ore production and dividend-paying possibilities of its properties are almost without limit. All the tedious preliminary work and all the elements of speculation are now things of the past; it is simply a question of the completion of the work mapped out and the erection of a smelter when large profits will be a certainty. Purchasers wishing to avail themselves of this opportunity will have to do so at once, as after August 1st the price of the stock will probably be placed at \$1.00 per share.

W. F. KENNEDY, Sec'y,  
253 Broadway, New York.

## The Clock That Keeps Wound

THE Clock Without the Key—the clock that needs no winding—the clock that is right, goes right, and stays right—and the price is right—was gradually perfected until it was a complete mechanical success, and at once gained public approval. This clock wonder is appropriately called the

## "KEYLESS CLOCK"

and is made only by

## The United States Clock Company of New York

It is protected by the strongest kind of patents in the United States and Europe. It goes for one whole year without attention, and it keeps time—the best of time. It's a beautiful clock—a novel clock—a safe clock—an economical clock—a clock that causes no trouble. The "KEYLESS CLOCK" is made for public buildings, business purposes, home use. For anyone, everywhere, for everywhere and anywhere. The four manufacturing departments are on Centre Street and Broome Street, New York. The general offices and exposition rooms are at 40 and 42 Broome Street. Come see the clock. The "KEYLESS CLOCK" is not sold at clock stores, but only at the office of THE UNITED STATES CLOCK COMPANY, which are being established everywhere. GOOD, RELIABLE MEN, with limited capital, can secure territorial rights to represent this greatest of money makers. If you know a good man, tell him you know of a good thing, and send him the wonder clock or send for prospectus and catalogue.

## "Keyless Clock" SHARES are now \$7.50 each

Par value \$10.00, full paid and non-assessable

The stock of the "KEYLESS CLOCK" Company sells as rapidly as the clock. If you want an investment that is absolutely safe, unusually profitable, sure to increase in value, send your subscription. Best telephone stock went from nothing to \$4000. UNITED STATES CLOCK stock will be a major investment in the very near future.

More orders at 50 per cent. profit are now on hand than the four departments can turn out. REMEMBER: This is not a scheme or project, but an established, profitably running company, with factories in full operation, goods in great and growing demand, no debts, mortgages, or other obligations, and with a big deposit and surplus in National banks in New York.

Don't put off until to-morrow what you should do to-day—WRITE, OR CALL. Address

## How To Regulate the Trusts.

Specialty contributed article by Representative Charles E.  
Littlefield, of Maine.

CONGRESSMAN LITTLEFIELD.

IN MY opinion it is incumbent upon Congress to take such action as lies within its power to place reasonable restrictions upon the operations of great corporations and business combinations, commonly known as "trusts." It would seem impracticable, at least at the outset, to devote attention to other than regularly organized corporations. The Sherman Anti-Trust Act has nearly exhausted the constitutional power of Congress in restraining contracts in restraint of interstate trade and commerce. It is, I think, susceptible of some amendments which

will increase its efficiency as a piece of practical operative legislation. These are suggested in one of the bills I have introduced.

One of the greatest evils of the so-called trusts, to my mind, is involved in over-capitalization, with possibly attendant misrepresentations or deceptions in connection with their organization, and to provide a restraining agency in this field is the object of the measure providing for publicity which I have introduced in the present Congress, and which I am inclined to believe will pass. This is designed primarily to secure publicity regarding the inner workings of the corporation, and will disclose to the public whether or not capitalization is justified by the value of the property of various kinds upon which it is based and to what extent, if any, stock has been "watered." This invocation of the powerful agency of publicity is not designed to arouse public sentiment against great combinations of capital, as great combinations of capital are not only commendable and useful when controlled by correct principles, but indispensable to the management of great business enterprises, incident to our phenomenal commercial and industrial development. One of its purposes is to protect a considerable portion of the public who are in danger of suffering far greater loss than are the consuming classes, to whom the formation of a trust may perhaps mean a slight increase in the cost of living. The class referred to is the extensive one comprised of small investors, of which a considerable portion are women or residents of more or less isolated localities, who are, perhaps, somewhat handicapped in the matter of acquiring full knowledge regarding the exact character of the giant corporation whose stock is offered for sale in the open market, and yet are led to invest by reason of the business reputation of the men who are at the head of the institutions, or by reason of the stories of fabulous profits which have been circulated with reference to operations in the field in which the public is given an opportunity to invest.

With compulsory publicity turning a search-light on the antecedents and to a certain extent upon the operations of one of these powerful corporations the ordinary citizen will at least have an opportunity to exercise his judgment untrammelled. In short, each citizen will have the same opportunity to pass upon the standing of a corporation that he now enjoys in the case of a national bank. If, on the other hand, there are indications of excessive capitalization, the prospective investor is apprised of it in advance; whereas, if, having invested his money in a corporation, a stockholder is at a loss to understand an absence of dividends or other disappointing circumstances, he has an opportunity to probe for its cause in the facts open to the public regarding the amount of stock upon which dividends must be based, the salaries, and the operating expenses of the corporation in question.

An important feature is the practical certainty that a restraining influence of this character would tend to deter more or less unscrupulous persons from foisting upon the public industrial and commercial investments of unsound

Continued on page 100.

## At Last an Isthmian Canal.

IT IS gratifying to believe that after years of negotiation and discussion, much of it wearisome and fruitless, a vast amount of expenditure, much of it wasteful and useless, the proposal to cut a ship-canal across the Central American isthmus has at last been brought within the realm of positive achievement in the immediate future. As a matter of fact, the idea of an isthmian waterway is almost as old as the occupation of the American continent by white men, and no less than thirteen different surveys of the isthmus at various points, under the auspices of some five or six different governments, have been made in the two hundred years or more which have elapsed since the project was first conceived.

It was one of Napoleon's dreams during the brief period when he was stretching out his hand for American dominion, and it has appealed to the thought and ambition of financiers, commercial expansionists, and statesmen of almost every European country as well as our own. France, indeed, under the lead of the unfortunate De Lesseps, actually took up the work at Panama, and expended millions upon it, while other millions were wasted and stolen by the promoters of the scheme. The Nicaragua route has been surveyed several times, and some work upon it was actually begun several years ago by a company of American capitalists.

But all other projects are now abandoned, or held in abeyance, in favor of Panama. The advantages of this route over that at Nicaragua may be briefly summarized as follows: It is a shorter route—49 miles against 183½ at Nicaragua. It will require a shorter time for passage, twelve hours being the time allotted for Panama against thirty-three for the more northern waterway. Panama will require only five locks, whereas Nicaragua would require eight. For the cost of maintenance, the estimated difference in favor of Panama is about \$1,300,000 yearly. The way chosen has better harbors than the other, and it has a railway already in existence, facilitating the work of construction.

It will be possible on the Panama route, eventually, to dig the canal down to the sea level. That could never be done on the other. If we make a canal at Panama, no one will make another at Nicaragua or elsewhere on the isthmus. But if we build at Nicaragua, some nation or company may complete a rival canal at Panama. These are the chief points urged in favor of the plan as determined upon by Congress and recommended by the latest canal commission, made up of engineering experts.

The bill passed by Congress confers large powers upon President Roosevelt. It authorizes him to buy out the Panama Company for \$40,000,000, if a satisfactory title can be obtained to its property, and to the necessary lands in the United States of Colombia. In the event of failure to secure such title, the President is authorized to proceed with the construction of a canal along the Nicaraguan route. In addition to the \$40,000,000 conditionally voted for the purchase of the Panama company's assets, and the indefinite appropriation made to compensate Colombia on the one hand, or Nicaragua and Costa Rica on the other, \$10,000,000 is appropriated outright "toward the project herein contemplated by either route so selected." The President is then, through the agency of an isthmian canal commission, to construct a canal of sufficient capacity to afford convenient passage for vessels of the largest tonnage and greatest draught now in use and such as may be reasonably anticipated. He is also to build harbors at the canal termini, and make such provisions for defending them as may be necessary.

While a very pronounced and even bitter division of feeling has existed in some quarters over the rival routes under discussion, the decision in favor of Panama will please and satisfy the great body of the American people, who are much more anxious, as Senator Morgan, a leading Nicaraguan advocate, has gracefully conceded, to see a canal built somewhere on the isthmus, than they are to the exact point of its construction. Now that the enterprise has been confided to the hands of President Roosevelt, it will undoubtedly be pushed forward with all the energy and enthusiasm characteristic of our present chief executive, who in his first message to Congress dwelt at length upon the necessity and importance of this work.

We may also be confident that so far as the control of affairs remains in President Roosevelt's hands, the odious history of previous canal schemes at Panama will not be allowed to repeat itself, but that the work will be done honestly and economically. Having the past in view, it would seem as if our government might well make a special and extraordinary effort to safeguard this isthmian enterprise from beginning to end against extravagance, corruption, and other scandals. Let us hope that there will be no occasion for "exposures" or investigations at any time in the progress of this work, that thus a refreshing precedent may be set for all great enterprises of the kind.

As for the benefits which the world at large, and this country in particular, will derive from an interoceanic canal across the isthmus, it would require a volume to recount them all. That it will impart an immediate and enormous stimulus to every branch of our maritime trade, and indirectly to every department of American industry, there can be no doubt. It will abolish forever the dreaded and dangerous Cape Horn passage; it will bring the two great seacoasts of the United States within safe and easy distance of each other, and will greatly reduce the rates of transportation between the East and our fertile and populous Pacific States. And the beneficent influences of this new passage-way will by no means be confined to trade and industry. It will draw us into still closer and more intimate relations with all other civilized nations, and thus will surely and continually promote the peace, the enlightenment, and the progress of the entire world.

## The Plain Truth.

THE RICH fool who gave a costly banquet to a monkey at Newport the other day and found a number of other rich fools, like himself, to join with him in the "sport," made as large contribution as he was probably able to make to the feeling of bitterness and hostility pervading the ranks of certain elements of our population, who see in such exhibitions of extravagant and wasteful folly another irritating illustration of the heartlessness and indifference of the rich for the hardships and sufferings of the poor; another example of the injustice of a social and industrial system which loads wealth upon incapable and unworthy men, to throw away upon monkeys while multitudes of hard and faithful workers find it difficult to earn enough to keep the "wolf away from their doors." Reasoning in this line has its weaknesses, but banquets to monkeys are without excuse in a land where a thousand real needs for the help that money gives are appealing to every man who has the ears to hear them.

INDEPENDENCE DAY has been given a larger meaning and a new, loftier, and more inspiring significance by the act of President Roosevelt, dated on that day, proclaiming peace in the Philippines, amnesty to political prisoners, and the institution of civil government in the islands. How much these things will signify for the Filipinos themselves in the future must chiefly depend on them in the use they make of the splendid advantages and enlarged opportunities opened before them under a free and enlightened government. The conditions imposed upon them by the American government are such as to give them every right and reasonable opportunity to develop their capacity for self-government, and to rise to the highest levels of civilization. If they construe the President's proclamation in the right spirit and conform to its requirements, the Fourth of July in the Philippines may well take its place in the local calendar as the happiest, most joyous festival of the year.

THE REPORT of Commissioner Chamberlain, of the Bureau of Navigation at Washington, showing, as it does, the decadent condition of our merchant marine, gives a sharp accentuation to the failure of Congress at its recent session to pass a ship-subsidy bill. Commissioner Chamberlain's statistics show an actual decrease of fifty-two vessels in the number constructed in the last fiscal year, as compared with the previous year, and a decrease in tonnage of 15,635. "Last July," it is said, "255,000 tons of ocean steel steamers were under construction or under contract, while during the same month this year only about 160,000 tons are under construction, and no large seaboard contracts are reported." The commissioner's comment on this, as disappointing to those who have been looking for an early upbuilding of our ship-building industry, is moderate enough. It is almost disheartening. The only relief to be hoped for is in the passage of the shipping bill at the next session of Congress. In view of existing conditions, as disclosed by this report, it is difficult to see how the forces which have hitherto opposed and delayed this necessary and beneficent measure can find ground for blocking its progress any further.

THE CAUSE of higher education for women has received substantial and highly gratifying encouragement from the gift of over \$500,000 to Bryn Mawr College, one-half of this sum being donated by Mr. John D. Rockefeller on condition that an equal sum be raised by other friends of the institution, a condition happily fulfilled through the personal efforts of President M. Carey Thomas. No institution has done more than Bryn Mawr to give dignity and prestige to the educational advancement of women. Its standards have been more rigorous and elevated than any other college of its kind, and in consequence it has won the deservedly high reputation of sending out a body of graduates of the first order in point of real and solid acquirements. It is, furthermore, an institution where every association and influence, all policies and disciplinary methods, are made to tell so far as possible, in the all-around development of a lofty and noble type of womanhood. Our women's colleges hitherto have shared too little in the remarkable flow of beneficence which has distinguished our educational history in recent years, and it is to be hoped that this large and well-deserved gift to Bryn Mawr is only the beginning of better things.

SOME IDEA may be gained of the power and vastness of the vested interest which our friends, the total abstinence and prohibition propagandists, are running up against, from the recent census bulletin giving the statistics on the manufacture of alcoholic liquor in this country during the census year ended May 30th, 1900. This report shows a capital of \$457,674,087 invested in the manufacture of alcoholic liquors in the 2,820 establishments reporting. This sum does not include the capital stock of any of the manufacturing corporations, which would add many millions more. The value of the products returned is reported as \$340,615,000, which serves to indicate the enormous margin of profit there is in the business. Dealt out in glasses of the average size, this three hundred and forty million dollars' worth of alcoholic liquors would fill at least six billion up to the brim, a number of glasses sufficient, if placed one upon another, to reach all the way from the earth to the moon; or, if passed around on a per-capita basis, to give every human being on the globe something over two glasses apiece—enough, in fact, to set the whole world into a drunken sleep. If the friends of temperance can extract any comfort and encouragement out of these statistical calculations they are abundantly welcome to it. We wish, indeed, that it might be so, for the showing does not make for the peace or happiness of the world.

# PEOPLE TALKED ABOUT

AS IN common life so in the rule of kings, it is not from length of years that honor comes, but from the way the years are spent.

KING CHRISTIAN OF DENMARK,  
Father of Queen Alexandra  
of Great Britain.

To King Christian, of Denmark, belongs the twofold distinction of ruling long and ruling wisely. Were a monarchy to be chosen as the best form of government, it is doubtful if any living ruler would come so near the ideal head of such a government as the man who sways the sceptre over Denmark to-day. King Christian is eighty-three years old and is apparently as vigorous in mind and body as he was twenty years ago. He came to the throne in 1853, and his forty-eight years of sovereignty have been, on the whole, happy and peaceful. In addition to other distinctions, the venerable ruler of the Danes has the peculiar honor of being the father of the King of Greece and the father of Queen Alexandra of England, and father-in-law of the Czar of Russia, and thus grandpa to a host of prospective kings and queens. Further than this, his son, the Crown Prince Frederik, married a princess of Norway and Sweden, and another son, Prince Waldemar, is united to Princess Marie of Orleans. Thus, were such an exercise of parental authority permissible to kings, Christian of Denmark might summon members of his family from almost every court of Europe and issue orders that would determine the policy of half the civilized world. King Christian is a genial, kind-hearted, peace-loving man; and if all the royal quarrels in Europe were left to him to settle there would be no war-clouds on the horizon for years to come.

REV. DR. FRANCIS E. CLARK, who has been abroad since last January, engaged in promoting the Christian Endeavor movement in Europe, will return to this country in September. During his present tour he has visited nearly every European country, including Finland, northern Russia, Norway, Bulgaria, Spain, and Portugal, and has met with large and unexpected success in all these fields. The latter part of his trip was spent in Iceland, where a promising beginning was made in the establishment of Christian Endeavor societies.

AN ELEMENT of special interest and sadness is connected with the fate of M. Mouttet, the Governor of Martinique, and his beautiful and accomplished wife, who perished together in the awful storm of volcanic fire at St. Pierre.

GOVERNOR MOUTTET AND HIS WIFE,  
Of Martinique, who perished in the  
volcano disaster.

The two had been absent in another part of the island for several days previous to the catastrophe, and hearing of the panic that was taking possession of the people of St. Pierre, because of the threatening aspect of affairs, had returned to that city to calm the excitement and show by their presence that there was no good cause for alarm. This brave deed and the faith that went with it proved all in vain, for Governor Mouttet and his wife were numbered among the victims of that dreadful day. M. Mouttet, though still a young man, had been the chief executive official of the island for a number of years, and was greatly beloved by all the people, and Madame Mouttet was no less so, their home being the centre of a hospitality as gracious in character as it was boundless in extent. Madame Mouttet, before her marriage, was Hélène Decoppet, a daughter of a distinguished French family. The couple left three little children, who were in France at the time, and thus escaped their parents' awful fate.

CONTROVERSIES IN the churches over matters of doctrine may create much unrest, but they cannot be half so harmful to the cause of religion as are disputes involving the moral standing and behavior of leading divines. A trouble of the latter sort is now afflicting the Protestant Episcopal diocese of central Pennsylvania, whose bishop, the Right Rev. Ethelbert Talbot, is charged with wrongfully unfrocking the Rev. Dr. Ingram N. W. Irvine, of Huntingdon, Penn., for alleged "improper language and conduct toward females." The disturbance had its origin in Dr. Irvine's refusal of the communion to Mrs. Emma D. Elliott because she was a divorced woman. Mrs. Elliott is prominent in Huntingdon society, and she says that her mother was a half-sister of Mrs. William K. Vanderbilt, now Mrs. O. H. P. Belmont, and mother of the Duchess of Marlborough. Dr. Irvine accuses Bishop Talbot and Mrs. Elliott of conspiring to unfrock him, and he has begun a civil suit for conspiracy

against them. The case was also lately brought before an ecclesiastical board of inquiry which took testimony in private on the charges preferred by Dr. Irvine. These were to the effect that the bishop disturbed the peace of the parish to please Mrs. Elliott; that he conspired with Mrs. Elliott to have Dr. Irvine arrested and prosecuted, and that he violated his consecration vow and scandalized the church and religion. The board decided by a vote of five to four that Bishop Talbot ought not to be brought to trial. Dr. Irvine, however, declares that the procedure was unfair to him and that he will demand a new hearing.

BISHOP ETHELBERT TALBOT,  
Accused of wrongfully unfrocking  
the Rev. Dr. Irvine.

IN SUCH momentous and critical struggles as that through which the American nation passed in the years 1860 to 1865, it is not alone essential that the cause of truth, justice and righteousness, as represented at that time by President Lincoln and his advisers in the government and his military coadjutors, shall have a body of brave, loyal, and efficient men to do their bidding on the field of battle, but that they shall have the no less essential sympathy, support, and prompt co-operation of the mass of their fellow-citizens who remain at their posts of duty on the farms and in factories and workshops, and especially of those who hold positions of power and influence in various subordinate spheres of government. President Lincoln was specially fortunate in having many such strong, true, and noble men in the Governors of various States to uphold his hands, to respond to his calls, and to

TWO FAMOUS WAR GOVERNORS.  
Hon. Alexander Ramsey, of Minnesota, and Frederick Holbrook,  
of Vermont.

give him every support in his arduous task that intense patriotism and lofty devotion could suggest. Such men were Andrew, of Massachusetts; Curtin, of Pennsylvania; Morgan, of New York; Sprague, of Rhode Island; Ramsey, of Minnesota, and Holbrook, of Vermont, heroic and gallant men all, and full as worthy of praise and honor as those who fought and bled on the battle line. Of these war Governors only three survive, Sprague, Ramsey, and Holbrook. The latter is now in his ninetieth year, but still hale and hearty, and with a voice to speak of honor and duty no less ardently than of old, as was evidenced by his part in the exercises of Decoration Day this year. Governor Ramsey is only two years younger than Governor Holbrook and also bears his years well. He is distinguished as the Governor who was the first to respond to Lincoln's call for troops. He is a Pennsylvanian by birth, but has lived in Minnesota since 1848, being Governor of that commonwealth before it became a state, as well as afterward, and also at one time mayor of St. Paul, United States Senator from Minnesota for two terms, and Secretary of War in 1879-81. Governor Ramsey entered political life early, and was making speeches for "Tippecanoe and Tyler, too," in 1840, when he was a young man of twenty-five.

CHARLES REGINALD SHERLOCK is one of those who have put behind them the dreary grind of newspaper work to seek the luxurious ease of authorship.

CHARLES R. SHERLOCK,  
Whose American novels are  
attracting attention.

The success of his first novel, "Your Uncle Lew," smoothed the way. Now he is out with "The Red Anvil," a book that instantly attracted attention, and he continues to look down a road that offers a pleasing vista. Mr. Sherlock has always known the smell of printer's ink. As a boy he was an amateur editor, writing and printing a little monthly at Syracuse, N. Y., called *Our Gem*. At eighteen he began work professionally, and kept the pace of modern newspaper methods for the next twenty years, serving in every editorial connection that was available in newspapers like the *Syracuse Courier*, *Albany Evening Journal*, and *Syracuse Standard*, retiring three years ago from the editorship of

the last-named journal with the best part of his life before him. Mr. Sherlock says, however, that if there is anything in book-writing as he has developed it, he credits it to his newspaper experience. His success as a writer of American fiction is noted with great pleasure by his numerous friends in journalism.

THE WORLD-WIDE interest manifested in recent years in the subject of tuberculosis, its cause and cure, has been followed by a large and gratifying display of philanthropic feeling for the unfortunate class afflicted with this dread disease and a correspondingly generous outlay of funds in their behalf. Many institutions now exist both in Europe and America for the care and treatment of consumptives, some under government supervision, and others maintained either wholly or in part by private beneficence. To the latter class belongs the sanatorium for consumptives to be established in Denver, Col., by Mr. Lawrence C. Phipps, one of Pittsburg's captains of industry and leading business men. The institution is designed as a memorial of Agnes Phipps, the mother of its founder, and will bear her name. It is not to be a purely charitable institution; it will be open to all sufferers from consumption, including those who are unable to pay anything for treatment and those of limited means, who are able and willing to make some return. The institution has been planned on a broad and generous scale in every sense and will be equipped with everything that science has devised and money can procure to restore the patients committed to its care to health and strength.

MR. LAWRENCE C. PHIPPS,  
Who has recently established  
a home for consumptives.

A NEW WAY to settle labor difficulties with a touch of genuine romance in the bargain is disclosed in a pretty little story related by *The Independent*. The incident happened in Vermont. The daughter of the principal owner and manager of one of the largest manufacturing in that State was to be married to a young man who, from a poor boy, had grown up in the establishment to a position of the highest trust. Her father asked her what she would like for a wedding present. She answered that nothing would please her so much as to have the strike in her father's factory settled and the men returned to their work. It was not an easy thing to do, but the indulgent father yielded the point in dispute and agreed to pay the same wages to his men for one hour's less work a day. This is a variation of the old method of distributing gifts at wedding celebrations.

IN NO country have the foes of the liquor traffic had a leader abler or more popular than is Lady

Henry Somerset, president of the British Woman's Christian Temperance Association, and a worker of world-wide fame in the cause of total abstinence. Hosts of Americans will be delighted to learn that Lady Henry is about to revisit this country. She will sail September 26th, will attend the W. C. T. U. convention in Portland, Me., October 17th to 22d and thereafter will hold meetings in Montreal, Boston, Washington, and other leading cities. Lady Henry's devotion to temperance dates from 1885, when, at Ledbury, three miles from Eastnor Castle, she signed the temperance pledge, with forty of her tenants. She is a large real-estate owner, having nearly 100,000 tenants in East London. She aided the Rev. Hugh Price Hughes, a Methodist, in St. James's Hall, London, and entertained at her castle 10,000 London poor. It was through Mrs. Hannah Whitall Smith, a Quakeress of Philadelphia, resident in England, that she was led to accept the presidency of the British Woman's Christian Temperance Association. Ultimately the late Miss Frances E. Willard became her guest and a lifelong friendship was formed between the two leaders of temperance reform. Lady Henry first visited this country in 1891, and she captivated the women alike in the highest and the lowest circles, for she is highly gifted, thoroughly educated, a forcible speaker, and humane in all her sympathies and labors. Lady Henry has continued to promote the varied philanthropies in which she and Miss Willard were both interested. She has been an editor, orator, story-writer, philanthropist, and reformer. She has suffered a species of ostracism from so-called "society," to which she was equally devoted down to 1885. But this has not caused her to deviate from her course of well-doing.

LADY HENRY SOMERSET,  
Temperance reformer of world-wide  
fame.

THE SPRINGFIELD *Republican* says that every recommendation made by Governor W. Murray Crane, of Massachusetts, in his three annual messages has been enacted into law by the successive Legislatures. A more striking tribute than this to the wisdom, foresight, and conservative qualities of this rising Massachusetts statesman could hardly be paid.

# How the Little Children of the Tenements Are Taught To Swim in New York

By Oliver Shedd

EVERY CHILD in New York City, boy or girl, rich or poor, has an opportunity to become an expert swimmer. More than that, by a cleverly arranged system, each child is urged and induced to swim and swim well. The same effort is made to interest children in this art as in their studies at school. The effort is even greater, because the swimming teachers who are employed by the board of education to teach in the public baths are anxious to make a good showing at the end of the summer, to demonstrate that they have been useful; and the best way to do this is to exhibit large classes of expert young swimmers when the season ends in September. The one great drawback is the fact that there are not bath-houses sufficient to make room for all those who apply for a swim. On the hottest days scores of disappointed children are turned away.

The government of the schools and the government of the city unite in the enterprise of teaching swimming. The city furnishes the floating bath-houses, nine of them, at the beginning of the summer, and the schools supply the teachers; and every day of the week, excepting Sunday, the children of New York are learning to swim in the public baths. On Monday, Wednesday, and Friday, the girls alone occupy the baths, and in each place two women teachers are busily giving instruction. These instructors are the most expert swimmers that can be found. Some of them are women who have accomplished marvelous feats of skill and strength and endurance in the water. On Tuesday, Thursday, and Saturday the boys reign in the public baths and the girls are excluded. The boys, too, have teachers. This division of the time is a hardship; for it seems that on Monday, Wednesday, and Friday, when the baths are exclusively feminine, boys are more anxious than at any other time to go swimming, and this is not so strange when we remember some of the peculiarities of human nature. And on the three days of the week when the baths are closed to them the little girls long most for a cool and refreshing splash in the water.

In order that each boy and each girl may go swimming every day, it has been decided to double the number of bath-houses, placing two side by side at every bathing place on the water front of the city—one for boys and one for girls. In fact, the city is going into the business of furnishing free baths on the wholesale plan. Aside from the summer places for boys and girls, to which reference has just been made, a large public bath is now operated in the centre of the Jewish quarter, the most thickly populated district. It was opened in March, 1901, and since that time 800,000 visits have been paid there simply for the purpose of becoming clean. There is no pool for swimming—only showers and tubs, with hot and cold water summer and winter. Seven thousand persons have visited this place in a single day. The city will soon build three more such bath-houses, one on the west side, two more on the east side; and another, an enormous bathing place, to cost more than \$200,000, is to be erected on ground owned by the municipality at the point where Twenty-third Street meets the East River. It has been demonstrated at the public bath on Rivington Street that cleanliness not only prevents but cures disease. The city authorities, particularly President Cantor, of the Borough of Manhattan, believe that cleanliness is a preventive of crime; that if all the people have ample facilities to keep clean the amount of evil in the crowded districts of the city will be greatly reduced. Light and soap and water, President Cantor believes, are the worst enemies of the devil.

The board of education, in its methods of instruction in the swimming schools, is following the same line as that pursued by the city. By encouraging regular visits to the baths it is fixing early in life habits of cleanliness, besides giving to each of those who take the swimming course a valuable and almost necessary accomplishment. At the opening of the season, early in July, regular classes are formed at the baths. Each pupil who enrolls gives his name, residence, and age just as are given at school. The little girls, particularly, are very earnest about this. "They feel," said one of the teachers, "that unless they are properly enrolled they will not receive the same attention as the others." At the end of the season, if the pupil has learned to swim well, he or she receives a diploma, a beautifully engraved parchment, from the board of education. To receive this recognition of having accomplished something is very gratifying.

The children work hard to prepare for the examination. This is made in person by Mr. G. Sunstrom, who is in charge, for the board of education, of the whole swimming department. Each child is made to swim seventy-five yards in the bath-pool, and Mr. Sunstrom carefully observes the movements. Unless a pupil swims properly, with motions like a frog, the diploma is withheld.

Miss Nellie Clark, who has been teaching in the public baths since the first teacher was installed four years ago, says that this frog-like motion is not difficult to acquire. She also proceeds on the principle that a person may nearly learn swimming without going near the water. The first instruction in the course which she gives the little daughters of the crowded districts is in what is called the land drill. All the motions required in swimming are practiced first vigorously before the pupil ever dips into the water. This is to learn the proper rotation of motions, which is probably the most important part of the whole art. And when this is learned, it is practiced continually until the motions follow each other naturally, in order.

"In the first motion," said Miss Clark, "the arms are

thrust forward horizontally and directly in front, the palms down, the fingers extended and held close together, the thumbs touching (No. 1). It is the position which one would naturally assume first in the water. The second motion, the arms are thrown back, still held stiff and horizontal, while the palms are turned back (No. 2). The next motion brings the elbows close to the body, the hands extended in front, palms down and thumbs together (No. 3). From this position the first motion is made. The person who does this, throwing his or her muscle into each movement, will see what a propelling force there is in it even on dry land." Then Miss Clark had her class go through the drill several times.

"But that is only preliminary," she said. "It is simply the arm drill. The leg drill completes the series of movements required of the body in swimming. The pupil first takes the position that she would naturally take if trying to lie flat on the water. The arms and legs are extended (No. 4). Next the knee is lifted high in front; at the same time the elbow is brought close to the body, the hand being extended (No. 5). Then the swimmer thrusts out the arm and kicks out and back at the same time. The arm is pushed back gradually and the leg, still held rigid, is swung still farther back (No. 6).

"This motion is gone through, first with the right arm and leg, and then with the left arm and leg. This completes the land drill for swimmers. Every morning, until they learn to swim, I give my pupils this drill," continued Miss Clark. "It lasts about fifteen minutes. Then I put

## If Life Were All

IF life were all, what need the living then  
In transient griefs that seem to multiply  
Each with the disappearance of its mate,  
And so to crowd in one long misery  
The little pains, in union waxing great,  
And racking us beyond all mortal ken?

THIS tear-wash'd vale—were nothing else  
to be  
There where the twilight robes the close of  
day  
In filmy mist, and shrouds the after while  
In mystery—were this uncertain way  
Not less of tear, and more of cheery smile,  
Why fear the issue of eternity?

IF life were all—ah! but the shadows give  
An outer edge of promise and of cheer  
To smooth the frown and banish our  
despair—  
And as we use our golden talents here,  
We find fruition of our labors there;  
Eternal joy is measured as we live.

HENRY EDWARD WARNER.

them in the water, on the broad canvas belt." This belt is suspended from a rope, so that it lies about six inches under the surface of the water. Three little girls, whom Miss Clark was teaching, threw their bodies across it, their arms being in front of it. Then they stretched themselves out to full length on the water, balancing on the broad canvas strip. Miss Clark leaned over the railing and gave orders:

"One!  
"Two!  
"Three!"

The children on the floating belt repeated exactly and in the same order the movements which they had learned on land.

"Fifteen minutes of the belt," said the teacher, "and if the pupil appears to have learned the motions correctly, she is put in the pulley." This consists of a belt just under the arms, to the back of which is attached a rope, which runs on a pulley over another rope stretched horizontally between two sides of the open interior of the bath. Here the pupil has an opportunity to learn very quickly whether or not her efforts will give her any momentum in the water. She is prevented from sinking by the rope and belt, but unless she has learned the arm motion and the kick she will not move forward.

Pretty soon the child discovers that she is not only progressing through the water, but that she is supporting herself without the belt, which she finds to be in the way. Then she is put in the water all by herself, and soon she is swimming with motions like a frog. She goes forward steadily with each sweep of the arms. No time has been wasted in useless exercises. The object of the lessons has been to teach the child to learn to swim as quickly as possible and to swim correctly.

"A great many of my little pupils," said Miss Clark, "learn to swim in four lessons. They are taught the sailor stroke, which I think is undoubtedly the best method of

swimming. It is not always the strongest child who learns to swim first. The worst impediment to the progress of many of them is their nervousness. At the same time rivalry makes them more eager to learn. There are usually several together, and each little girl will work very hard and be very brave in order to prevent any other little girl from exceeding her. Besides, they are all anxious to get that diploma in the fall."

The teachers are paid a salary by the board, and their proficiency is determined by the number of pupils which they teach to swim. Thus the poorest children of New York get the best sort of instruction in an enjoyable accomplishment.

But it is not alone the children, who go to the public baths. The poor mothers are there, too, often with babies in their arms. A crowd is always waiting at five o'clock in the morning, when the baths are opened. Among these, the other morning, was an Italian mother and her child only a few months old. She took the infant into the water, and it splashed about, laughing and kicking in its mother's arms. She remained in the bath until eight o'clock, and after that day she and her child were frequent visitors. On the hottest days in August the baths are sometimes so thickly crowded that there is only standing room in the water. It is with difficulty that instructions can be given at such times.

Unless one has spent some time in observing some of the facts associated with public baths, one does not appreciate the demand that exists, even among the people of the lowest slums, to be clean. The records show that during 125 days in the summer of 1901, 5,200,000 baths were taken in the free bathing places—the floating baths and the public bath located in the Jewish quarter on Rivington Street. About one-third of the bathers were women and girls. On any hot summer day, if you should be in the vicinity of the foot of Rivington Street, you would see men and women walking along the sidewalks with towels rolled up closely in their hands or with packages in newspaper covers under their arms. Follow these persons and you would see that they are bound for the same objective point. As you proceeded you would see others coming along other streets. Then you would observe that they would reach finally—after walking a dozen blocks, many of them—the big stone building on Rivington Street, which is the public bath-house.

As no smoking is permitted inside, some of the men put out with their fingers the cigarettes which they were smoking when they reached the door, and putting the unfinished ends in their pockets, proceed within. So great is the number which visits this bath, that a man who has opened a little store and sells soap at a cent a cake across the street does a thriving business, and a youth who stands near the bath, receiving two cents for the use of a towel, disposes quickly of his fresh stock. People of the crowded tenements, who use the bath daily, have told the superintendent that they have been cured of sickness by it, and these are the earnest advocates among their neighbors of the gospel of cleanliness.

## Wonderful Firing of a Big Gun.

DURING THE recent target practice of the North Atlantic Squadron, Rear-Admiral Higginson commanding, on the southern drill grounds off the coast of Virginia, American gunnery achieved added celebrity through the making of a new world record with a thirteen-inch cannon. The gun was one of the two monsters in the lower part of a superimposed turret on the battle-ship *Kearsarge*. The big piece was loaded and fired four times in six minutes, and its projectile struck a target 16x26 feet in size, one mile distant from the vessel, three times out of four discharges and grazed the object the fourth time. This was unprecedented speed and accuracy in the case of so large a gun.

The rapidity with which one of these great guns is handled is due to the improved electrical mechanism for that purpose now in use. All the heavy lifting is done by machinery. The gun is nicely balanced and the turret can be turned around swiftly and with ease. A sailor has also invented an appliance whereby, in case the electric apparatus is shot away, a man may swing the turret about by pulling a lever, but only one of these devices is as yet in operation and it is attached to one of the *Kearsarge's* turrets.

The thirteen-inch gun is fired by means of electricity. It goes off with a tremendous roar and the men near it find it necessary to stuff their ears with cotton. Sometimes the gun inexplicably hangs fire, and then the officer in charge sends the men away and himself investigates the trouble. On a British man-of-war is an instance of this sort the breech-plate was too hastily removed and the powder then exploded, killing all in the turret. The men composing the gun crews are in these days intelligent and well educated, and each in an emergency is competent to take charge of the firing. The men become much attached to the big guns, calling them their babies. Each gun has its pet name. One of the thirteen-inchers on the *Kearsarge* is named Fitz and its mate John L.

The drawing in this issue, showing the interior of the turret at the time of the firing of the thirteen-inch gun, was made by Mr. T. Dart Walker, our special artist with Admiral Higginson, commanding the North Atlantic Squadron. It is the first of a series of drawings dealing with naval subjects which will appear in *LESLIE'S WEEKLY*.

# Good Chances for Young Men in the Navy

By Harry Beardsley

CAPT. ALBERT S. SNOW,  
Of the Columbia.—Copy,  
right, 1900, by J. E. Parley

YOUNG MEN are wanted in the United States Navy—young men of good bodies, good minds, good habits. Already there are 25,000 in the service, probably, taken all in all, the sturdiest body of men and the most efficient in their calling in the world. The navy appropriation bill passed by the last Congress provides for 2,500 more, and it is this which has created the strong demand for more men to sail in the great floating forts of Uncle Sam. The Navy Department has sent its recruiting parties into the rural districts of the land, where those who come to enlist in the ranks of the nation's sea-fighting force will be country-born and country-bred men, who have in them the freshness, purity, and vigor of the fields. Navy officers have learned by experience that their

best recruits are not found among the population of the great cities. So the recruiting parties have been distributed to the smaller cities and towns, which are in the midst of the agricultural districts.

The good result of this course has already become apparent. The new recruits, who have come from the interior recruiting stations and have arrived at New York, to be taken into the service, are clean, intelligent, alert, and physically superior. The officers are congratulating themselves on obtaining such good material—raw as yet, but easily moulded into the finished product. The result of this recruiting work has made a demand for country boys in the United States Navy.

Of course the ideal naval recruit is the man who already knows something of the sea, who has a knowledge of the general work that is done on shipboard. Such a man has only to be trained in the special work peculiar to the trade of naval warfare. But very few of these men are to be had, so the navy is after the best raw material it can find, and this they are getting at present from the great interior of the United States. The quality of applicants who have applied for enlistment at the New York station, and also the degree of perfection required, are shown by this fact: Of 700 men examined during the last three months, only 200 have been accepted. The 500 were rejected mostly on account of physical imperfections. They were diseased, their eyesight was defective, their teeth were decayed, they were too short or too light in weight, or not sturdy and muscular enough. In the rural districts the proportion of those accepted is higher.

In the navy, as in all professions and business, the process of specialization is going rapidly forward, and it is this fact that furnishes an opportunity for a young man of ability and ambition, even though he have little schooling, to become within a comparatively short time a person of importance among his fellows and to earn a competent livelihood. In fact, the navy is looking for boys whom it can train in the special work which they will be

required to do. By this course two things are accomplished: the young man, who enters the service receives a practical education which fits him not only to hold important positions on board ship, but in the trades on land as well; and the navy itself is improved by this means, because more important, even, than good weapons of destruction are good men to fire the guns.

"A ship is such a complex organism," said Captain A. S. Snow, commanding the receiving ship *Columbia* in the New York navy yard, "that men have to be trained specially for the various and varied duties on board a man-of-war. It is this that furnishes an opportunity for advancement. If a man has mechanical skill it is possible for him to receive, after seven years of service, the highest pay of an enlisted man in the service—\$1,800 a year. In addition to this salary he is at no expense for food or lodging, and the matter of clothing is a minor item, because the uniform of the navy is cheap and the clothing is durable. Besides there is an inducement to save. On all money that is deposited with the paymaster of the ship by any man in the service, the government pays interest at the rate of four per cent.—which is a very profitable income."

Suppose a young man, without any previous training—from the farm, for instance,—presented himself for enlistment in the naval service, he would first be examined by the physician at the naval station. He must be free from disease, possess good eyesight and good teeth. He must be at least 5 feet 4 inches in height, stripped, and well developed, considering his height and age. Should he enlist as a landsman for training he would receive at once pay at the rate of \$16 per month, and he is given a complete outfit of clothing worth \$45. This includes three suits of white ducking, the picturesque working clothes, which are worn by all the "jackies" at work on a man-o'-war; one white dress uniform, one blue dress suit, one blue undress suit, three suits of woolen underwear, two pair of shoes, two pair of socks, one blue cap, three white ducking hats to wear while at work, one neckerchief and one overcoat. All this the recruit receives on enlistment. It is clothing enough to last a year. After that he must pay for his own wearing apparel.

Then he may choose the department of the navy's work in which he believes himself best fitted. If he writes a good hand and is ready at figures, he may enter at once the school for yeomen, which is in the New York navy yard. The yeomen are the clerical force of the navy. They are the men who keep all the records in the paymaster's office and other departments aboard ship. In the Brooklyn navy yard the yeomen class is under the instruction of John E. Tremere, chief yeoman, and a special class, in which instructions are given, particularly, in the work of the office of the paymaster of the ship, is under Chief Yeoman John F. Flynn. A man who passes the examination in the yeoman school at once becomes a yeoman of the third class and is assigned to duty on one of the ships of the navy. His pay is \$30 per month, and all the time that he was receiving his instructions he was paid \$16 a month. The next step in the yeoman class, entailing clerical work a little more difficult, brings a salary of \$35 per month; and the next, a yeoman of the first class, receives \$40 a month. These are book-keepers, stenographers, and typewriters. The next position in the

yeoman service is that of chief yeoman, and the salary is \$60 a month.

Suppose that the recruit shows mechanical skill. Again he is in demand. In the New York navy yard is an electrical school and a machine shop for landsmen who enlist for training. In these schools a thorough practical education is given. Men who pass through these schools may become electricians at \$30 a month, or machinists of the second class at \$40 a month. The instruction given in these preparatory schools is particularly in the line of mechanical knowledge that will be necessary in any part of the work of the ship, but men who have become good electricians and machinists in the navy have, after leaving it, secured first-class positions on shore, where they have an opportunity to use to advantage the knowledge acquired in the service of the government and while receiving government pay.

The navy is certain, however, of four years of the service of each man, because no enlistment is for less than that time. But there is opportunity in the mechanical line in the navy, because the machines of war are intricate mechanisms and it requires skilled hands to repair them and keep them in order. A machinist of the first class, involving a higher degree of skill than that of the second class, receives \$55 a month, and a chief machinist \$70 a month. Then when a machinist becomes an officer and he is in charge of parts of the ship machinery he receives a salary of \$1,800 a year. Any mechanical skill which a man may possess will at once be of use to him, because plumbers and fitters, painters, carpenters, blacksmiths, coppersmiths are all wanted.

There is a chance for the boys, too. They may enlist, if they are healthy, strong, and of good morals, and receive at once \$9 a month and an outfit of clothing, as the men do. They are taken for practice on a training ship, as are also the landsmen for training, and on that cruise they are made sailors. They are taught all there is to know about the navigation of a vessel. Then they receive \$15 a month, and the next advancement is to \$21. They are ready, then, to enlist as seamen in the navy.

"As an opportunity for lifework, the navy offers good inducements," said Captain Snow, "to the man who tends to business. War is not frequent, and while there is peace the vessels are usually lying in some harbor, and the man whose conduct is good has a great deal of shore leave. This relieves monotony and gives him an opportunity to see his family, should he have one."

One of the foremost among the enlisted men, who had charge of a gun during several actions in the Spanish war and is extremely loyal to the navy, said to me very seriously that there was one drawback to the service, "because," he said, "a navy man should never marry. It isn't the right thing to do," he continued; "you can't tell what moment you may be called away to the other side of the world, and then you do not see your wife and children again for months. If a man wants to marry he had better get out of the navy. It's not the place for a married man."

Captain Snow does not agree with this view.

"Should a sailor marry?" he was asked.

In answer the captain swept his hand toward the *Columbia* and said:

"Practically every man here has a wife and children!"

## What Congress Did.

THE SENSE of disappointment possessing the minds of many over the failure of the recent Congress to pass a Cuban reciprocity bill should not be allowed to obscure the fact that the country is indebted to that same Congress for several legislative measures of the most beneficial character and vital and wide-reaching importance. These may be briefly enumerated as follows:

A law authorizing the construction of a ship canal to connect the waters of the Atlantic and Pacific oceans, and providing \$184,000,000 for the project. A law providing a civil government for the Philippine Archipelago. The repeal of \$73,250,000 of war taxes. The authorization of the expenditure of about \$2,500,000 annually in the reclamation of arid lands by irrigation. The establishment of a permanent census bureau. The appropriation of two hundred thousand dollars for the relief of volcano sufferers in Martinique. The extension of national bank charters for another twenty years. The prohibition of the sale of firearms, opium, and intoxicating liquors to natives of certain Pacific islands. The authorization of a new modern establishment at West Point.

In addition to these important pieces of completed legislation, the following prominent measures passed one branch and can be taken up in the other early in the next session: A bill making a reciprocal trade agreement with Cuba; bills for the upbuilding of the American merchant marine; for the establishment of a Department of Commerce; granting statehood to Oklahoma, New Mexico, and Arizona; to promote the efficiency of the militia; for the protection of the life of the President; providing further restriction of immigration, and creating the Appalachian Forest Reserve.

Of the laws actually enacted, four, those providing for an isthmian canal, for a civil government in the Philippines, for a national irrigation system, and the establishment of a permanent census bureau, would alone be sufficient to give the proceedings of the Fifty-seventh Congress an epoch-making importance. The provision for an extensive irrigation system in the Western States insures an enormous addition in the near future to the pro-

ductive area of the country, and thus to the wealth of the whole nation. In fact, the possibilities for good coming from this irrigation law to the agricultural interests of the region affected, and indirectly to the nation at large, are beyond all present estimation. As a measure for the development of the country it ranks with the homestead law and the opening of the transcontinental railroads.

Even greater as a stimulus to home industry and commerce will be the waterway across the Central American isthmus, for which provision is made. To bring an isthmian canal scheme down out of the realms of dreams and prophecies, of speculation and controversy, to a basis of potential reality was, in itself, a most memorable achievement. In the establishment of civil rule in the Philippines under provisions guaranteeing the native people the largest practicable measure of self-government and larger liberties and opportunities than they have ever yet enjoyed, the United States makes good its pledges to the world and gives practical attestation to its benevolent designs in the acquirement of these islands.

A permanent census bureau insures that continuity of service in this increasingly important department of governmental activity, essential to thoroughness and efficiency. As for the law applying to the sale of drugs and intoxicants among the natives of the New Hebrides and other Pacific islands, we have given a tardy, but none the less welcome, recognition to an imperative moral obligation, long ago recognized by other civilized nations, in our treatment of a people brought in a measure under our tutelage and peculiarly susceptible to the vices, as well as to the virtuous influences, of our advanced civilization.

Thus much for the things actually accomplished by the Fifty-seventh Congress. As for the measures which have passed one stage of legislation, we may hope that further agitation and discussion during the months intervening before the next session of Congress will help to insure for them early and favorable action. If satisfactory reciprocity treaties with Cuba and other nations, a ship-subsidy bill, and the statehood bills can be added to the record of the Fifty-seventh Congress, that body will deserve a foremost rank in the legislative annals of the nation.

## Freaks of a Flood in an Iowa Town.

THE FLOOD which recently wrought damage amounting to \$1,000,000 in the little town of Decorah, Iowa, had some features that were very peculiar. The inundation was caused by a cloudburst which followed a ten days' rain. A wall of water eight feet high rushed down Dry Run, a small creek which passes through the town, destroying much property and drowning two persons. M. T. Torsen, who was near his barns was swept away, but managed to grasp the handle of a neighbor's pump, to which he clung until he was rescued. His barns were borne along for several blocks and were deposited in the middle of a street, without damage to their contents, which included a horse and a cow. A hose cart was washed away from an engine house down a street, the hose unwinding as the apparatus moved on. Richard Bucknell's one-story cottage was carried three blocks and lodged against a large brick house. The rising water drove the family up to the attic, and Mr. Bucknell cut a hole in the roof through which he and his wife and children climbed into the second-story window of the brick residence and were saved.

The Chicago, Milwaukee and St. Paul branch railroad was torn up for several miles. Two railroad bridges were swept half a mile from their foundations and piled together in a smashed condition in a grove. A section of the railroad 459 feet long was carried down stream, and 120 feet of it shoved under the lowest wire of a barbed-wire fence without disturbing the latter. Nearly 100 feet of rails was bent into the shape of a figure 6 without breaking the post on which the strain must have come. In some places rails were twisted around trees and broken off. A third railroad bridge was landed in a picnic ground.

This was the fourth disastrous flood in Decorah during the past twenty-seven years, but, as in the previous instances, the inhabitants went energetically to work to repair the damages, and now the town is itself once more.

# How To Get a Free Farm

By Waldon Fawcett

AS THE population of the country increases and the desirable government land available for free distribution for homestead purposes decreases, it is but natural that each new gratuitous apportionment of fertile tracts in the West should excite a greater amount of popular interest than any of its predecessors. At Uncle Sam's last gift party of this kind there were thousands of applicants for free homes in excess of the number which could be supplied; and it is believed that the enthusiasm among government offerings of this kind will reach a climax when there is opened for settlement in the near future upward of half a million acres of the most desirable land in South Dakota, comprising what was formerly a portion of the Rosebud Indian Reservation. Not only is this one of the largest tracts ever thrown open to settlers at one time, but from the standpoint of the present value of the land and its possibilities for development, it is easily one of the most important as well.

The tract to be given away by the government comprises all of the unallotted lands lying within the boundaries of Gregory County, South Dakota, approximating 416,000 acres, for which the United States government has recently agreed to pay to the Indians the sum of \$1,040,000. Gregory County embraces more than half a million acres of the Rosebud Reservation, but of this about 100,000 acres has been permanently allotted to different individuals of the tribe and is not of course included in the tract to be apportioned among the white men.

The land in Gregory County is without doubt the best and most desirable portion of the entire Rosebud Reservation, which extends over several counties, and it is indeed worthy to rank among the best tracts in the Northwest. To be sure the allotments reserved by the Indians comprise much of the choicest land, yet vast tracts of good quality remain unallotted. The whole tract is excellent for grazing, and the greater portion is good agricultural land, upon which excellent crops can be raised when there is sufficient rainfall during the growing season.

The government has seldom experienced greater difficulty in inducing Indians to sell their lands than in the case of the portion of the Rosebud Reservation soon to be opened. At the outset all the Indians demanded from \$7.50 to \$15 an acre for their land, a demand prompted by the circulation of reports to the effect that adjacent land in Nebraska and South Dakota was selling at from \$5 to \$10 an acre and that a syndicate of Iowa cattlemen were willing to pay \$5 an acre for the entire tract. Finally, however, the representatives of the government induced the Indians to sell on a basis of \$2.50 an acre. This point settled, the red men for a long time insisted upon having the entire sum turned over to them in one payment, but the government officials—acting for the best interests of the Indians themselves—finally induced the acceptance of a plan which provided for five annual installments. By this plan each Indian will receive \$30 a year for half a decade.

It is probable that in view of the tremendous rush which is certain to ensue when this new domain is opened to settlers it will be necessary for the government to resort to the lottery plan of distribution which operated so satisfactorily in connection with the recent distribution of Kiowa and Comanche lands in the Indian Territory. As

soon as the land has been surveyed and divided into homesteads the great contest will begin. Each application received will be numbered, and a corresponding number inscribed on a slip of paper will be placed in a great receptacle. When the fateful day of the drawing arrives slips will be drawn out one at a time and the homeseekers will have an opportunity to select their homesteads in the order in which their numbers appear. Thus the man or woman whose number is drawn first will have the choice of all the homesteads in the entire tract. There will be so many more applicants than can be accommodated that every person whose number is drawn will be considered fortunate, but naturally those whose numbers are drawn early in the lottery will be deemed especially lucky, for the reason that they will have an opportunity to secure the property in localities where towns are likely to be established. It may be noted in connection with the proposal to dispose of these lands by lottery that if this plan is resorted to it will be necessary for every applicant either to be on the ground at the time of the drawing or be represented by an attorney, and no attorney will be allowed to represent more than three clients. If a number be drawn the holder of which is not present or personally represented it will be thrown out.

When the land is ready to be opened for settlement a special proclamation to that effect will be issued by the President. It will provide for the formal opening of the tract to settlement at noon on a date designated, the disposition being subject to the homestead, town site, stone and timber and mining laws of the United States, and the sixteenth and thirty-sixth sections in each congressional township being reserved for common-school purposes subject to the laws of the State in which the land is located.

In all probability all agricultural lands will be sold at the rate of \$2.50 an acre and grazing lands at the rate of \$1.25 an acre, one-fifth of the purchase price of each tract disposed of to be paid at the time of original entry and four-fifths at the time of making final proof. No purchaser is permitted in any manner to purchase more

than one hundred and sixty acres of land. A small fee and commission, which vary under different circumstances, must be paid at the time of making the original entry, but all commissions in the original and final entry will be computed at the rate of \$1.25 per acre, the ordinary minimum price of the public lands under the Revised Statutes.

As has been stated, there is within that portion of the Rosebud Reservation which is to be opened to settlement a considerable portion of land occupied and cultivated by individual Indians, to whom the property has been regularly allotted; and inasmuch as many of these Indian occupants will prefer to remove to lands within the limits of the reduced reservation, such improved lands as they may abandon will be thrown on the market along with the unimproved property, but unlike the latter will be sold to the highest bidder, with the understanding, however, that no sale shall be made for less than the full appraised value placed on the property by the government officials delegated to inspect it, which is likely to be approximately \$10 an acre. The proceeds of every such sale are paid to the Indian owning the property. No purchaser may acquire more than 160 acres of improved land, and each buyer of such property has thirty days after the date of the purchase for preference right of entry. In the unimproved land the classification as to what is to rank as agricultural land and what is to be denominated grazing land is made by an employé of the General Land Office under the direction of the Secretary of the Interior.

The general supervision of the opening of the new mecca of home-seekers will be under the direction of the General Land Office, Department of the Interior, Washington, D. C., from whom may be obtained the blanks which must be filled out by applicants to enter the lands. The actual transaction of disposing of the property newly opened will be in the hands of a register and receiver, who will be designated in advance. This receiver upon receipt of the first payment of one-fifth of the purchase price from homestead claimants will issue cash receipts for the money, noting thereon "First payment." When final proof is submitted and final payment made the regular final receipt and certificate will be issued, as well as a cash receipt for the purchase money paid. In the case of the improved lands which are sold, in any case where a tract is bid off and the purchase money not paid the tract is again offered just prior to the conclusion of the sale, and the party to whom the tract was originally awarded will not, in the second instance, be recognized as a bidder.

It is believed that the reservation lands will be opened to settlers about September 22d. The Fremont, Elkhorn, and Missouri Valley Railroad is being extended from Verdigris, Neb., to Bonesteel, which is on the edge of the tract to be thrown open. This road will be completed shortly after September 1st, and will be the only all-rail route to the bounds of the reservation. Fremont, where the line begins, is on the Union Pacific Railroad, a short distance west of Omaha. Yankton, Running Water, Platte, and Chamberlain are among the places not very distant from the reservation which can be reached by rail. The drawing for homesteads, if that system is used, will take place at Bonesteel.

NEW LANDS FOR HOME-MAKERS, SHOWN BY DOTTED SPACE—ALL-THE-WAY RAILROAD RUNS FROM OMAHA TO BONESTEEL—OTHER PLACES ON MAP MAY BE REACHED BY RAIL.

## New York as a Foreign City.

IN THE city of New York there are only 737,477 white persons born of native parents, or but 21.4 per cent. of the population of the city. This statement means that out of every one hundred persons living within the municipal boundaries of New York seventy-eight are either foreigners, or the children of foreign-born parents, or colored people. New York, however, is not the first, but the second city of the country having the largest foreign-born population. Fall River, Mass., is first in that respect. Official figures show that there are in New York City more males under twenty-one years of Slavonic parentage than of any other people, and the number of Slavonic men more than twenty-one years of age exceeds that of any other nationality except Germans and Irish. In the Fourteenth Assembly District of New York County the percentage of Hebrew families with nine children each is six times as great as the Protestant percentage, while the number of Hebrew families with no children at all is but about one-half the Protestant percentage. South of Fourteenth Street and east of Broadway, in the borough of Manhattan, where the foreign-born people are most numerous, there live 538,494 persons. That is to say, that 28.4 per cent. of the population of the borough live in less than 10 per cent. of its area. In this region is the Eighth Assembly District, whose ninety-eight acres have an average of 735 persons to the acre. In the borough of the Bronx the average is but 7.7, and in the boroughs of Queens and Richmond but 1.8 to the acre.

There are more persons of foreign birth in New York than in Chicago, St. Louis, Philadelphia, and Boston combined. Manhattan has not one Assembly district—even on the upper West Side—where the number of foreign-born residents is below 25 per cent. There are only three other cities of more than 25,000 inhabitants in the State of New York in which the foreign-born population is in excess of that percentage. These are Buffalo, Rochester, and

Yonkers, the last almost part of the metropolis. Note the changing character of the immigration in recent years. Until 1890, out of a grand total of 15,427,857 immigrants accounted for an arriving in this country, 12,853,828 were natives of Germany, Ireland, Great Britain, Canada, Newfoundland, Norway, Sweden, and Denmark. Between 1891 and 1900, out of 3,687,464, these countries sent us but 1,539,926 immigrants. This decline has been offset by the increase in immigration from Austria, Hungary, Bohemia, Italy, Russia, and the area comprised within the former territory of Poland. The census of 1900 shows that there are in New York 1,007,000 males of voting age. About half of this aggregate are natives. Of the other half, 152,000 are not naturalized. Fewer than half the Italians, Russians, and Poles have taken steps for naturalization. Less than 1 per cent. of the native voters are illiterate, while 11.4 per cent. of the possible voters of foreign birth are without education. An estimate, based on official returns and special inquiries, divides the population of the metropolis by religious beliefs as follows:

Protestants .....	1,733,465
Roman Catholics .....	1,266,561
Hebrews .....	598,012

It is sufficient to say now that these figures mark a distinct and changed tendency, and that they are the forerunners of new problems.

HENRY McMILLEN.

## Nobly Risked Their Lives for Others.

THE FRONTIER days, when soldiers and the Indians fought frequently for the supremacy of the plains, were filled with thrilling incidents of bravery, self-sacrifice, and narrow escapes from death. Some of these have been immortalized by the brush of the artist, Charles E. Schreyvogel, who loves to paint these most characteristic and picturesque scenes in American life. The story

which he has told and which is reproduced on the front page of this issue of *LESLIE'S WEEKLY* is a story of the rough days in Arizona. During an Indian campaign a body of American cavalry occupied a stockade on a high ridge of ground, which was at once a refuge from a large troop of murderous savages and a stronghold from which effective attack could be made until a number of the Indians stole up to the very walls of the stockade and set fire to it. The soldiers were then in a hopeless situation. To remain in the stockade would be cremation; to leave it would be death from the Indians' bullets. Two of the troop volunteered to go for re-enforcements to the main body of cavalry not far distant. It was a willing and noble sacrifice, for they expected, and with good reason, to be shot. On their horses the two heroes emerged suddenly from the stockade, dashed down the hillside in full view of the Indians and in a rain of their bullets. One of the cavalymen, the story goes, fell mortally wounded; the other, bleeding from wounds, a bloody bandage on his head, reached the main body of troops and guided re-enforcements to his imprisoned comrades in time to save them. There were many other incidents like this on the frontier where men developed character as noble as the grandeur of the prairie.

## He Didn't Cross the Sea in a Hack.

MR. C. F. STANBURY relates in *The Barrister* many stories of Tom Nolan, the counselor, who for years kept the New York bar laughing at his conscious and unconscious drooleries. Once Nolan was arguing a case in behalf of clients who were sailors, and while in the midst of an exhaustive display of lore on nautical matters he was interrupted by the Court: "How comes it, counselor, that you possess such a vast knowledge of the sea?" "Does your honor think," responded Nolan, "that I came over in a hack?"

character. And again, it would tend to remove the incentive to abnormally increase the price to the consumer in order that dividends may be declared upon a capitalization greatly in excess of the actual amount of the capital invested. The contemplated enforcement of a policy of publicity with reference to all corporations engaged in interstate commerce has at least the merit that it cannot be construed as a radical step, and in my opinion this is important, since it is essential that the national government, in whatever direction it may seek to deal with the subject of capitalistic combinations, shall proceed with conservatism. Any drastic measure would be very likely to upset conditions in the business world and in all probability, therefore, would do more harm than good.

It must also be remembered, moreover, by persons who have under consideration the attitude of the national legislature in this matter that Congress has jurisdiction over corporations only when they enter the field of transportation to the extent of participating in interstate commerce. The national law-making body can scarcely be expected to correct all the evils involved in the operation of corporations if it has not the co-operation of the

governments of the various states, and certainly not if some of the states continue to manifest a willingness to encourage the organization of corporations of almost any character and with scarcely any limitation upon their powers so long as the state is enriched by the money paid for the privilege.

Comparatively limited as the jurisdiction of the national government might appear in the case, I cannot say that I am at this time in favor of a constitutional amendment broadening the power of Congress in this respect. I would first exhaust our constitutional power under the interstate commerce clause. Hundreds of attempts have been made to amend the Constitution of the United States and in only fifteen cases has success crowned the effort, so that it will readily be seen that the chance of securing remedial action in this direction is comparatively slight; whereas, even with a promise of the certainty of the passage of such an amendment, the lapse of time necessary before it would come into operation would constitute a serious drawback. It will be remembered that the minority easily succeeded in defeating a very conservative amendment on this same line during the last Congress.

I doubt if there is in labor circles any deep-seated opposition to combinations of capital. The sentiment of the private citizen on the subject will be determined by the effect upon his pocket-book. If the "trusts" are able

to supply the necessities of life at a lower cost than it has heretofore been possible to procure them, they will go far toward disarming opposition; but if, on the other hand, they, by stifling competition and over-capitalization, impose grievous and unjustifiable burdens upon the consumer, vigorous agitation for legislation on the subject must be expected as a natural sequence.

# A Tenderfoot and the Apache Uprising

By Arthur J. Burdick

JOE LOWERY, foreman of one of the largest of New Mexico's cattle ranches, made it an invariable rule to hire every tenderfoot who made application to him for employment. Not that he stood in constant need of help, but that he and his coterie of cowboys were perpetually wanting amusement, and they found it, usually, in the tenderfoot during his one, two or three days' stay in camp.

Three days was the limit. The tenderfoot usually got his fill of cowboy life in that period, therefore it was that the cowboys felt it a necessity to make the most of their opportunities while they lasted. Thus it was that the tenderfoot who struck Lowery's camp found matters lively—for him—from the start to the finish.

Brady was, in appearance, the tenderest of tenderfeet when he struck the ranch. His flaxen hair hung in ringlets about his temples, his mild blue eyes had in them the innocence of childhood and his slender form was almost girlish in its delicacy. The thin lips seemed always to be smiling and his teeth showed white and gleaming, as so much ivory.

The boys fairly hugged themselves with delight when he was made one of the force.

"Cissy won't last twenty-four hours," was the prediction they made, but they were mistaken. In fact, they made several mistakes within the next few days.

Jack Dermott made one mistake the very first evening when, after a period of bantering, in which the new comer good-naturedly held his own, he reached out and tweaked one of "Cissy's" curls. He instantly measured his length upon the ground. He explained afterward that he didn't have time to dodge the tiny fist, which shot out with lightning swiftness. When he had picked himself up and while he was trying to staunch the blood that gushed from his damaged proboscis, he blurted out:

"SHOOK HIS FIST VINDICTIVELY."

"Confound it! can't you take a joke?"

"Certainly," laughed Brady, "and return one, too. Repartee is my strong point, my friend. Sorry you don't appreciate the joke. I notice you didn't miss the point, however."

This was surprise number one. The boys, discussing the circumstance that evening, agreed that Brady was a variation from the ordinary brand of tenderfoot.

The next morning the second number on the programme was brought on. A vicious bucking bronco was bridled, saddled, and brought out for Brady to ride. The other fellows exchanged expressive glances and fairly hugged themselves in pleasant anticipation. Brady sprang into the saddle and told the nag to "get up." He did so—up in the air, coming down with elevated back on four stiff legs, bunched. To the surprise of the spectators—and of the bronco, too, no doubt—the rider was not dislodged. He merely rose in his stirrups as the horse came earthward, and took the jar as easily and unconcernedly as he would the rocking of a chair. The bronco repeated the bucking process several times with a like result in each instance, and then he tried new tactics. He stood first on his hind legs and then on his forward, with no better results. Brady still stuck. Then the ugly brute leaped into the air and flung himself over backward, falling at full length upon his back, evidently hoping to crush his rider beneath him. Brady leaped lightly to the ground, and as the animal fell, he planted himself upon the head of the bronco and sat thereon.

Now a horse, as every one knows, is helpless with his head pinioned, and after a little ineffectual struggling the animal lay passive, and Brady took some paper and tobacco from his pocket, rolled a cigarette, lighted it, and sat in apparent enjoyment while he smoked it. When he had finished he arose, spoke to the animal, which also arose at his bidding, and leaping upon his back, he rode away at a brisk canter. Half an hour later he returned with the meekest piece of horse-flesh on the ranch. This was surprise number two. The boys experienced several others during the next few days, and then ceased to be surprised at anything that Brady did.

Then, one morning, came a rider from Bascom's ranch, thirty miles away, to warn the boys of an Apache uprising. The reds, he explained, had not, as yet, come to the actual slaughtering of the whites, but they were ugly,

discontented, and aggressive. They were stampeding cattle and stealing horses, and they were evidently waiting and watching for an excuse to begin killing the ranchers. The rider was passing from ranch to ranch, warning the settlers to be on their guard.

"We'll carry Winchesters and revolvers hereafter, till this trouble is over," said Lowery, after Bascom's man had ridden away.

"I had an idea I hired out to 'tend cattle 'stead of fightin' Injuns,'" growled Jack Dermott.

"Any man as wants his time can have it now," said Joe. "If keepin' the reds from runnin' off with the stock ain't 'tendin' cattle, what is it?"

There was no more grumbling and no one called for his time. Nothing further was heard of the Apaches till nearly a week had elapsed, and then, without a warning, from out the foothills near where the herd was feeding, came riding half a dozen Indians, whooping and howling and firing their guns over the herd, as they dashed straight at them with the evident intention of creating a panic. The leaders of the herd tossed their heads and began to bellow with apprehension. In ten minutes the several thousand head of cattle would be tearing across the plain, mad with terror and beyond control. Then, no doubt, from some point along the line of the hills, would ride a score or two of the thieving Apaches, and they would manage to swing the herd, or a portion of it, into some cañon or valley, where the animals could be slaughtered.

Dermott and Brady were nearest the Indians—the other boys were two and three miles away—and Brady drove his spurs into his horse and rushed forward to meet and intercept the red men. Sad to relate, Dermott made equal speed in the opposite direction. He explained afterward that he was going for help. It took Brady

about thirty seconds to get within shooting distance of the Indians; then he brought his horse to a standstill, raised his Winchester and fired six shots in rapid succession. Six Indians found themselves plowing turf with their noses. Brady had shot each man's horse from under him and in each instance the rider had landed on his head.

One by one the astonished Indians gathered themselves together and ran limping back to the hills. The other men soon came riding up and the cattle were quickly calmed. Joe noticed, when he stopped to examine the fallen ponies of the Indians, that each one had been shot through the head.

"I tell you, boys," he remarked, when telling of the circumstance later, "that Brady is no slouch. He may be a tenderfoot, but he's the toughest tenderfoot I ever saw."

"There's bound to be trouble now," said Joe that evening. "This is the excuse them devils have been layin' for an' they'll be back soon. Maybe to-night or to-morrow night, an' maybe not for a week, but back they are sure to come. If Brady, here, had killed two or three of the reds themselves, they might have overlooked it, but them horses—they'll never let that pass. We'll all have to lay out nights now till this is over."

Joe posted the men at different quarters of the plain with full instructions how to act in case of an attack. Brady was stationed, by his own request, in the neighborhood of a dugout over against the hills at a point near where the Indians had made their appearance when they attempted to stampede the herd.

Two nights passed and nothing happened. Then, on the morning of the third day thereafter, Brady rode around the hills to a point where he could command a view of the plain beyond. He sat upon his horse and swept the plain

with his eyes. Away out in the sage and mesquite was to be seen half a score of horsemen. They were Apaches. In the foreground, and not more than a mile away, was a camp-fire and by it three figures. They were watching his movements; and, even as he looked, one of them stepped a few paces toward him and shook his fist vindictively. A moment later shouts were borne to him on the wind and the mounted men in the background came toward him, riding at full speed. When they reached the camp, the others mounted and joined them.

Brady turned his horse and rode back around the hills to his shack. When he came in sight of the herd he fired his gun three times as a signal to the other boys that the attack was about to be made. Then he dismounted and backed his

"HE SWEEPED THE PLAIN WITH HIS EYES."

horse into the dugout, placed his cartridges within convenient reach, and stood in readiness. He had not long to wait before the foremost Indian came in sight around the point of the hill. Brady stepped forward, where he could be plainly seen by the rider, and waved his hand as a signal for the rider to turn back. The reply was a shot, which clipped the curl the humorous Dermott had playfully tweaked a few weeks before.

This act convinced Brady that the Indians meant fight, and a moment later the Indian lay silent upon the plain. Then two others, whose ponies were a little less speedy, rode into sight, and there were two shots and two riderless horses went galloping across the prairie. Next came five or six Indians, all in a bunch, and this time the shooting was not all on one side, but before the last two or three riders hove in sight the last half-dozen Indians had joined the silent figures on the turf.

That settled the battle. The Indians who came last turned and fled. When, three or four minutes later, Joe Lowery and Bill Clancy dashed past the bodies of the Apaches upon the plain and drew rein at the door of Brady's shack, they found him, coat off and sleeves up, trying to bind up an arm and a thigh which had caught Apache lead. He threw back his head to toss the curls from his innocent blue eyes, and smiled out at his companions.

"This shack came in mighty handy for the horse," he said. "I reckon I'd have been out a mount if it hadn't happened to have been here."

"Well, I'll be locoed!" ejaculated Lowery, turning to his companion. "He's thinkin' more about that hoss than he is of himself. An' we called that feller a tenderfoot!"

## Actor W. H. Crane's Summer Home.

THE ROOF that shelters William H. Crane, the actor, in his "fishing box" at Cohasset does not cover much dreamy elegance, but it is quite a comfortable home, nevertheless, and in thorough keeping with its thrifty and prosperous New England neighborhood. Mr. Crane has a notion that some ancestor of his was "a sad sea-dog," for in no other way can he account for his passionate love for the "blue water" and a certain irrepressible appetite for yachts and electric launches which seizes him every season. Mr. Crane's idea of a man's house, we are informed, "is that it should possess not only the attractions of an ordinary home, but also of the club and other places which fascinate the male character," and this is the ideal which he has approached in the sunny and hospitable home at Cohasset.

# Among Books and Authors

By La Salle A. Maynard

MR. EDMUND GOSSE,  
Who is preparing a history of  
English literature.

supplemented his literary earnings with an income derived from a government position. He was at one time assistant librarian at the British Museum, and in 1875 he received the post of translator to the board of trade, which post he has held ever since. In the spring of 1884 he was elected Clark Lecturer in English Literature at Trinity College, Cambridge, in the place of Mr. Leslie Stephen, who had retired. For this appointment there were many candidates, fortified with testimonials from countless men of letters. Mr. Gosse's sponsors were three—Tennyson, Browning, and Matthew Arnold. The following year he received the honorary degree of M.A. from the university. In the winter of 1884-5 Mr. Gosse visited America.

THE TREMENDOUS hold upon popular favor obtained by "David Harum" has given it the most phenomenal run of the age. No other work of modern fiction has approached it, especially in so short a time. The figures given out by D. Appleton & Co., the publishers, of the sales since September 23d, 1898, when the book made its appearance, tell a remarkable story. January 1st, 1899, 15,000 copies had been sold, a most satisfactory run in itself; yet this was not even the beginning, for during the next six months 179,750 copies were sold and presses were kept going night and day. By January 1st, 1900, the total had jumped to 412,750, the following July to 460,750, and by the end of the year had passed the half-million mark. Thereafter the demand slackened, but the monthly totals, in themselves, still exceeded the tidal run of the ordinary novel. On July 1st, 1901, the gross sales aggregated 517,500 copies, and by the close of the year were 537,000. But now came another reaction. The typical personality of David had charmed the reading public across the ocean, both in England and on the continent, and the requests from foreign houses came so fast that an order was placed for an edition of 100,000 copies, which with the regular home demand brings the sales on August 1st to the gigantic total of 850,500 copies.

HILAIRE BELLOC,  
A new biographer of Robespierre.

man, he was not always as hot for blood as some of his associates. Referring to the documents covering the last seven weeks of the Terror, Belloc says, "and it will be discovered that Robespierre would not sign the lists of the condemned, that he protested against nearly all the more famous of the prosecutions, and that the body directly responsible for them, the committee of public safety, regarded him as a danger; more, you will find that the spokesman of that body says that Robespierre perished 'because he attempted to put a curb on the Revolution'; and you will find that those who chiefly overthrew him were men determined to push the Terror to a further extreme." Whether this reluctance on the part of Robespierre arose from a feeling of cowardice in the man, foreseeing the end of the awful business, or whether the Methodist parson in him got the ascendancy, M. Belloc leaves us to conjecture. He does not attempt, however, to whitewash the famous conspirator but simply

to tell all the truth about him as he has found it. Whatever may have been Robespierre's true character, he was the dominant figure in one of the most cataclysmic events in human history, and we are indebted to M. Belloc for the most satisfying portrait of the man that has yet been given to the world.

THE LATEST and most notable event in the sphere of religious journalism in this country is the transaction by which the New York *Observer* passed entirely out of the hands of the Prime family, who had been its owners for more than sixty years, and under whose editorial direction it became a recognized power in the Presbyterian denomination and the church at large. Rev. Dr. Samuel Irenæus Prime, the head of the family, and for many years editor-in-chief of the *Observer*, was a man of striking individuality, a born journalist, and a gifted and popular public speaker. His "Irenæus Letters," a weekly *feuilleton* on men and events of the day at home and abroad, replete with wit and wisdom of a rare kind, were a leading feature of the paper for a long period, and contributed much to its success. Another strong factor in building up a constituency for the *Observer* was the gracious and winning personality of Dr. Prime, which drew his readers, as well as other men and women, to him in bonds of intimate and lifelong friendship and affection. He was never too busy for a breezy chat with a subscriber who "just dropped in" to the office while in town, and always made it a point, as far as possible, to answer every letter or query which a subscriber directed to the paper, in a prompt and kindly way, no matter how apparently trivial the subject of it might be. Dr. Prime himself attributed much of his success in holding readers to the

THE RUSKIN MUSEUM, AT CONISTON, ENGLAND.

paper to these little civilities, which, imbued as they always were with a spirit of sincere kindness and genuine courtesy, made the recipients feel that the writer was a real and true friend.

In his later years Dr. Prime had associated with him in the management of the *Observer* his brother, Rev. Dr. Edward G. Prime, his son, Rev. Dr. Wendell Prime, and a son-in-law, Rev. Dr. Charles A. Stoddard. On the death of the elder Prime, some fifteen years ago, Dr. Stoddard became chief owner of the paper and was its editor-in-chief and general manager up to the time of the recent sale, maintaining its high standard and large influence to the end of his service. The new owners of the *Observer* are both men of large and successful newspaper experience. One of them, Rev. Dr. John B. Devins, has been managing editor of the *Observer* for five years, and was formerly connected with the New York *Tribune*; the other, Mr. John A. Offord, has been business manager of the paper for seven or eight years, and was formerly connected with the New York *Evangelist* in the same capacity.

It is not generally known that Dr. Samuel Irenæus Prime was also editor for some years of "The Editor's Drawer," the humorous department of the well-known *Harper's Magazine*. Dr. Prime himself was one of the sunniest and most genial men who ever lived, a capital storyteller, and with a flow of ready wit that gave his conversation, his writings, and his public speeches a sparkle rarely excelled. These qualities gave a special fitness to the selection of Dr. Prime as editor of the "Drawer," although for various reasons, more obvious at the time than they would be now, it did not seem judicious to let it be known that a reverend doctor of divinity and editor of a leading Presbyterian journal was also the "funny man" of a magazine. In his later years Dr. Prime used to speak of this connection to his intimate friends, with a characteristic chuckle, as in itself one of the best jokes of his life. And we think that old readers of *Harper's* would bear us out in the assertion that the "Drawer" was never conducted with more freshness, vivacity, and genuine interest than it was in those early days under the management of Dr. Prime.

THAT PEOPLE do read poetry in these days, and Burns in particular, is evidenced by the fact that no less than four complete editions of the great Scotsman have recently appeared from London and Edinburgh houses almost simultaneously. One of them is edited by William E. Henley.

## NOVELS WRITTEN

with a distinct and obvious moral purpose are the *forte* *moire* of critics, and yet such stories have done an immense amount of good in the world, as all must admit. Providing one has the natural gift for it there is no way of showing up any existing evil so effectively as in the guise of fiction. Where the treatise or the sermon designed to strike a blow at some great wrong, however brilliantly and eloquently worded, may hope to gain a thousand readers, the story with a like purpose executed with equal power will have its ten thousand. It was thus with Dickens's "Little Dorrit," Charles Reade's "Put Yourself in His Place," and Harriet Beecher Stowe's "Uncle Tom's Cabin," all of these being aimed primarily at some existing injustice in the social system. For these reasons Mr. Josiah Flynt may succeed in impressing certain aspects of the tramp evil upon many through his story of "The Little Brother" (The Century Company), who have not read his studies and observations on this subject as they have appeared in the magazines and other publications during the past ten years, although these sketches, based, as they have been, on personal experiences in Hoboland, have not been lacking in life, color, originality, and dramatic interest. Mr. Flynt's purpose in this story is to let the public understand that a great many of the so-called "kidnapped" youngsters are in reality simply runaways with romantic temperaments, and that trampdom claims many of them, where they are "kids" at first and stool-pigeons for the grown-up vagabonds, and from this apprenticeship are graduated into full-blown hoboes. Of such kind is Benny, the hapless lad in this story, whose hardships and privations on the road lead to his pitiful death. As there are said to be some fifty thousand tramps in the United States, it is surely worth while knowing how their ranks are recruited as the truth is disclosed in Mr. Flynt's story.

JOSIAH FLYNT,  
Author of "The Little Brother."  
(The Century Company.)

DESPITE THE fact that the actual resting-place of Oliver Goldsmith is not known, there is a movement on foot in England for the erection of an elaborate monument over or near the supposed grave of the poet in the Temple Churchyard, London. Goldsmith's burial-place was not definitely known when the plain stone slab with its simple inscription, "Here lies the body of Oliver Goldsmith," was placed in its present position, but the stone has served as the shrine at which homage has been paid to the poet's name for many decades. It is said that over a hundred persons daily visit the quiet corner in the shadow of the Temple Church.

JAMES HUNEKER, author of "Melomania" (Scribner), has been associate editor of the *Musical Courier* since 1887. He came from Philadelphia, where he studied both theology and law before devoting himself finally to music. For two years he studied the piano in Paris, under Theodore Ritter, and during the ten years following was professionally associated with Rafael Joseffy. He has been musical and dramatic critic of the *Morning Advertiser*, and is now music editor of the New York Sun.

JAMES HUNEKER,  
Who wrote "Melomania."

NO SPOT in England is more fragrant with memories of Ruskin than Coniston, in the lovely lake district, hallowed also to all true lovers of literature as the home of Wordsworth, Coleridge, and other master singers of days gone by. It will be remembered that Ruskin, in his autobiography, dwells with many tender and characteristic touches upon the joys and satisfactions which came to him during that part of his life spent among the hills and moorlands of this picturesque region. It was wholly appropriate, therefore, that Coniston, in whose pretty lakeside churchyard the remains of Ruskin lie, should be selected as the site of a building, recently opened, wherein have been gathered by reverent hands the choicest mementoes of the great essayist and art critic, in the shape of manuscripts, pictures, and others of his works and belongings. As Ruskin has an assured place among the immortals, so this museum at Coniston is certain to be a shrine to which many pilgrims will turn their feet in all years to come.

THE MARKED REVIVAL OF CYCLING—INTERESTING GOSSIP OF THE RACERS

**CYCLE-RACING IMPROVING.**—With the general revival of interest in cycling comes, as a natural consequence, a larger attendance at the various meets held throughout the country. This is apparent throughout the East, where more meets have been held than was the case at this time last year. It is a fact, also, that the racing men, both amateur and professional, are riding faster this year than ever before, both in open competition and in paced races. The latter is easily accounted for by the fact that the motor pacing machines in use at present

are better than those in use last year, making faster time and furnishing better pace, in steadiness and protection, to the rider going at railroad speed behind. Still some of the early races, especially those at Manhattan Beach, N. Y., have been marred by the fact that one competitor has had a ten horse-power machine while a four or five horse-power machine has been used by the other. The man with the big machine will invariably win if he has anything like the speed and endurance of his rival. Hereafter when matches of this sort are arranged it will be agreed that the men will ride behind motors of the same power. The big machines use an automobile tire on the rear wheel, which gives the rider behind a fine surface to follow. As to the sprint riders, F. L. Kramer continues, as predicted, to set the pace for the professionals and will probably do so to the end of the season. Iver Lawson has shown that he cannot hold his sprint, and it looks as if "Major" Taylor, who has returned from Europe, will have to do better riding than he has ever done before to hold his own. "Pluggie" Bill Martin returned from Australia to take Kramer's measure, but admits that he is not in it with the young champion. Martin is the cycling wonder of the age, being forty-two years old, and is good at anything from a quarter-mile sprint to a six-day grind. Kramer's friends hope to see him visit Europe next year, as they believe that he is the fastest man who ever rode a wheel. He would take Europe by storm as Zimmerman did years ago, as he is a modest, unassuming fellow not unlike "Zim." The old champion has gone abroad to ride exhibitions this year. While on the topic of cycling, the recent parade in New York surprised many people. It was up Fifth Avenue before the homes of New York's millionaires, and 3,000 riders were in line. Many thousands witnessed the parade and voted it a success. It was the first wheelmen's demonstration since 1897.

**ARE MILLIONAIRES' HORSES PAMPERED?**—The poor success of the high-class horses owned by William C. Whitney on the running turf this season has caused much discussion among breeders, owners, and trainers during the last few weeks. I have talked with several of the well-known trainers about New York, but few of them can give any reason for the continued ill luck of the millionaire owner, who has spent several fortunes in purchasing animals of speed and of the best breeding. Mr. Whitney's bad luck began when he sent Nasturtium to England

with the hope of winning the English classic, the Derby. When Nasturtium left these shores Mr. Whitney had in his possession the most promising lot of two-year-olds, probably, ever owned by one racing man in this country. Even Nasturtium was not missed, good colt that he was. Then Nasturtium went wrong and was brought back to this country, and this misfortune was followed by the sickness of his other colts and fillies down on Long Island, and a stable which last year looked to have all the three-year-old classics in this country at its mercy cannot win an ordinary handicap. Yankee, Blue Girl, Endurance by Right, and Goldsmith are all away below their form, and the other animals in that stable have done no better. One trainer, who did not wish to criticize the methods at the Whitney stables, said that he thought that the millionaire's horses had been pampered and fondled too much. He considered heated stables and covered sheds were all right in moderation, but thought the Whitney horses had had too much of them. He believed that possibly if the Whitney horses had roughed it as the animals of other and less wealthy owners had done, better results might have been obtained. He argued that a horse, like a human being, cannot thrive without plenty of fresh air. Great crowds continue to flock to the tracks, both East and West, and this season will undoubtedly prove to be the banner year for racing in this country.

GREAT PARADE OF WHEELMEN ON FIFTH AVENUE, NEW YORK, JULY 32TH, IN CELEBRATION OF THE TWENTY-FIFTH ANNIVERSARY OF THE INVENTION OF THE SAFETY BICYCLE.—Lackey.

**CAN CRESCUS DO TWO MINUTES?**—Followers of light harness racing are watching the early try-outs of Cresceus with much interest this year. The splendid work done by the holder of the world's trotting record last year, a mile in 2:02½, indicated to close observers that Mr. George Ketcham's stallion would come nearer to the two-minute mark this year than possibly any other trotter had done. Mr. Ketcham says that he believes his stallion will accomplish the two-minute mark this year. The Abbot, Lord Derby, Borahm, and the other circuit followers, are also stepping out in lively fashion, foreshadowing one of the liveliest seasons on the national circuit in years. Mr. Ketcham uses the lightest and costliest harness ever made on Cresceus. He is the inventor of several little contrivances which, in his opinion, have helped and will further help Cresceus in his races this year. Unlike The Abbot, Cresceus is the most docile and lovable of animals and readily makes friends with strangers. The Abbot is almost a man-eater. GEORGE E. STACKHOUSE.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *Leslie's Weekly*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *Leslie's Weekly* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *Leslie's Weekly*, 110 Fifth Avenue, New York.

**THE WESTERN** plungers whose eccentric but successful methods in Wall Street are attracting so much attention are led by John W. Gates, of Chicago, a good man weighing something over two hundred pounds. Despised at first and rejected afterward by the Eastern leaders of finance, Gates finally compelled recognition of his careful nature by securing such a twist on some of the great railroad properties that it was impossible to get rid of him without accepting, substantially, his terms. Mr. Gates himself, however, has had one or two bad twists. It is the general impression that he wishes he had kept out of the corn corner. But he is a resourceful man, as adroit as he is resourceful, and as audacious as he is adroit. He is not the first financial meteor that has shot across the Eastern sky, projected from the West. James R. Keene, all the way from San Francisco, where his phenomenal success as the leader of the Mining Exchange brought him wealth and reputation, came to New York many years ago with the avowed purpose of cleaning out Jay Gould; and when the quiet little man of Wall Street—peace to his ashes—heard the news, he remarked, in his characteristically nonchalant way, "Keene is coming on in his private car; I will send him back in a cattle-car." Within one year Keene's fortune was gone and his reputation as a daring speculator was badly damaged.

But Jim Keene learned some things in the East. He learned the necessity of repose and repression, and in due time, being a man of brains, he made himself a factor in Wall Street, and at last won general recognition as the ablest and most successful stock manipulator in the market, a reputation he still retains. He has paid the penalty of success by his broken health, and is seeking recuperation abroad, taking a few "flyers" in the market by cable all the same.

That Gates will meet his ups and downs is just as certain as anything can be if he remains in Wall Street. All the able and successful men who have ventured into the arena of speculation, and haven't finally graduated into the upper class of conservative financiers, have had a like experience in Wall Street, from the time of Daniel Drew to the days of Jim Fisk. Some there are who predict that the danger in the present situation lies in the over-ambition of the apparently successful group of Western speculators at a time when stocks are selling on the average at their highest. Everybody knows that over-speculation, over-confidence, over-production, over-lending to the officers and directors on the part of banks, and over-lending on fragile collateral, are among the principal causes of bank failures and panics. This is a time to bear the fact in mind.

The condition of the money market of late has been attracting serious attention. The large withdrawals of money from New York by banks in the West and South have not been because of better business in those sections but because of over-speculation and shrinkage in values. The speculative fever which reaches all over the country portends ultimate anxiety, liquidation, distrust, disquiet, and distress. While it is true that last year's drought has not, apparently, thus far decreased the earnings of our principal railroads, the Treasury Department's report reveals that during the last fiscal year our agricultural exports were ninety-one million dollars below those of the preceding year, and our excess of merchandise exports for last June was the smallest recorded since June, 1897. Another bad corn crop would be a blow the force of which cannot be measured. The corn crop will not be out of danger until toward the middle of September, in all probability. What hope is there of a Wall Street boom until this critical period has been passed?

I have alluded to the strain in the money market. The London exchange dreads an approaching liquidation in its highly speculative mining shares, which have been boosted

to ridiculously high figures. Our interest in this matter lies in the fact that the great American financiers who have been staggering under a load of securities during the past year, and seeking, without success, an opportunity to sell them to the public, are tremendous borrowers of money abroad. One report, no doubt exaggerated, estimates that American bankers are borrowing as much as two billions of dollars in Europe. A depression in the foreign money markets, or panicky conditions which might lead to the withdrawal of a large part of these loans, would certainly cause great alarm in this country. I do not write in this vein to alarm my readers. I only intend to warn them that this is a good time to take profits, to get out of the market, and to

be prepared for the days of clouds and darkness that always follow seasons of alluring sunshine.

"H." West Superior, Wis.: I do not advise the purchase.

"Extra," Helena, Mont.: Two dollars received.

You are on my preferred list for six months.

"H." Skinner's Eddy, Penn.: I would have nothing to do with the party. He has no rating.

"H." Danville, Quebec: If you would like to speculate at some risk it offers you an opportunity.

"C. A. B." New York: Nothing is known on Wall Street regarding the concern, but the business as profitable if properly managed. The capital looks very high, but if your friend has inside information he is better able to advise you than I am.

"C." South Dakota: All but heading, which is apparently very closely held. Missouri Pacific looks as if it was being sold by insiders on every advance. Wabash preferred is a long way off from dividends. Atchison and Baltimore and Ohio seem to have very strong support.

## Why They Do Not Eat Ducks in Honan, China

A story which is told to the little Chinese children  
Repeated by  
Alice Hamilton Rich

**THE PEOPLE** in Honan do not eat ducks, especially wild ducks. No one is allowed to kill them; it is regarded as almost like killing a person. The reason for this care is found in the following story:

Long, long ago, there was a widow who had a very bright son. The brother-in-law, because the widow refused to marry him, took away all the property and turned the widow and son out to die. The mother found some work, but being afraid the wicked uncle would kill her son, she sent him far away, but the god of good luck took the boy for his brother and went with him. He was very, very fortunate and finally became an Emperor. It then became his duty to find his mother, not only because he was anxious to care for her, but also because she only knew where were the ancestral tablets and graves. Great rewards were offered for her discovery, and all the mandarins put out proclamations to that effect. Finally, a wise man came to the Emperor and asked him what kind of birds lived in his province (the King did not even know in what province he was born). The Emperor replied that he remembered as a child seeing, in spring, great numbers of wild ducks. The wise man then said, "give me a letter written to your mother and I will send it to her." The Emperor was very glad to do this, although he greatly wondered how it would be possible for the wise man to know where to send this letter.

One day the poor widow was washing rice at a pool when a wild duck came fluttering down at her side, but something seemed wrong with its wing. On examining it she found there was a letter attached to it. She thought the letter must surely have come from the gods, so carried it to the village elders. On their examination, they found it was addressed to the widow, and brought not only good news to her, but good fortune also to the whole village. Word was sent to the Emperor, who first rewarded the wise man, then sent a handsome eunuch, accompanied with a long procession of mandarins and their attendants, bearing banners and rich presents to all in the village who had been kind to his mother. He also punished all who had been unkind. Many of the young men of the village were called to the Emperor's court, and the taxes for that whole province were lightened, and in gratitude the officials declared that henceforth the wild duck was to be free from all danger.

To this day no one is permitted to kill this bird, as they still believe that it is a good-luck bird.

## Two Tours to the Pacific Coast

VIA PENNSYLVANIA RAILROAD.

LEAVE New York August 2d, visiting Chicago, Denver, Colorado Springs, Salt Lake City, San Francisco, Del Monte (Monterey), Santa Barbara, Los Angeles, San José, and Portland on the going trip.

Returning, Tour No. 1 will run eastward through the magnificent Canadian Rockies by leisurely daylight trips, with stops at Glacier, Banff Hot Springs, and other points, reaching New York on August 31st.

Tour No. 2 will run eastward via Yellowstone National Park, including the usual six-day trip through that interesting preserve, arriving New York September 4th.

Special trains will be provided. Rates from New York, Philadelphia, Washington, or any point on the Pennsylvania Railroad east of Pittsburgh, including transportation, Pullman berth, and all meals on the tour except during the five days spent in San Francisco, when Pullman

accommodations and meals are not provided:—

For Tour No. 1, \$200. Two persons occupying one berth, \$180 each.

For Tour No. 2, \$250, including all expenses through Yellowstone Park. Two persons occupying one berth, \$230 each.

A preliminary announcement outlining the various details will be furnished upon application to Ticket Agents, Tourist Agent, 1196 Broadway, New York, or Geo. W. Boyd, Assistant General Passenger Agent, Pennsylvania Railroad, Broad Street Station, Philadelphia.

## Hints to Money-makers.

Continued from preceding page.

"M." New Haven, Conn.: I regard it as too speculative.

"H." Philadelphia: I do not regard it as in any sense an investment, and it looks to me as if it were a very poor speculation.

"S. S." New York: I would not advise its purchase: it is convertible into bonds, and you can do as well by buying the bonds.

"E." Nashville, Tenn.: I do not regard it as a "steel," but it is an over-capitalized speculation conducted by shrewd and in many respects capable men.

"P." Wakefield, R. I.: It is not rated among the best, and the company shows by its prospectus that it is nothing but a cheap speculation. I would keep out of it.

"Z." Philadelphia: (1) Change noted. (2) Chicago and Great Western is a fair speculation only if the market maintains its strength. There is no assurance that the corn crop is safe.

"B." Allentown, N. J.: I am not advising the purchase of anything at this time. United States Leather common and Chicago and Alton common are highly speculative and are as good as anything if you insist on taking a flyer.

"E. G." New York: The capitalization of the Okemine Mining Company is so enormous that I cannot regard it in any sense as an investment, nor do I advise its purchase for speculation until greater developments have been made.

"E. T." New York: You are not the only one who has complained of the juggling with the bank stock. It looks like a case for the courts, but it would not pay you to litigate unless you hold a considerable quantity of the stock.

"M." Dedham: The stocks you name all have speculative possibilities, but all have had a very substantial rise. Chesapeake and Ohio, as the most active on your list, will give you the best opportunities for quick trades, but this is a good time to keep out of the market.

"H." Columbus, O.: (1) There seems to be increasing bitterness of feeling between the Gould and Pennsylvania interests. Unless there is a reconciliation I should regard the prospects of Western Union as unfavorable. (2) I would not subscribe my faith. Mail. You ought to be able to sell it without much loss.

"K." Detroit: (1) Have been making inquiries regarding the copper concern. Very little is known about them by traders on Wall Street. They all have the appearance of being highly speculative. (2) You should be a subscriber at the home office at full rates to be entitled to a place on my preferred list.

"Plunger," St. Paul: I am told that September corn offers opportunities for speculation. This statement is made by one who believes that September corn will sell at a record price. I do not usually advise regarding the grain market and only give you this opinion as that of one who has been conservative and successful.

"W." Chicago: I gave you the advice that came from the headquarters of the company, and was ostensibly honest. Either my advisers were ignorant or misleading. At all events, I did the best I could. Later on I hope to hear from one who is fully posted and who, if he cares to, can give me the inside of the matter, which I will be glad to communicate to you.

"B." Brooklyn, N. Y.: You must understand that all mining propositions must partake largely of a speculative character, because it is impossible to know what is under ground until you have thoroughly made an exploration, and even then the product of the mill alone would give the value of the ore. If you are seeking a speculation, the company offers you a fair one.

"G. A. D." Far Rockaway, N. Y.: You inadvertently addressed me at *Harper's Weekly*, with which I have no connection. Des Moines and Fort Dodge sold last year as low as 18. It has had a very heavy rise, but speculatively still attracts attention and some favor. (2) General Electric will suffer in the first wave of business adversity. (3) Is a member of the New York Stock Exchange with good rating.

"B. P. L." San Francisco: All the New York local traction dividend-payers have advanced to high prices. What the effect of the completion of the rapid-transit subway will be and also of the franchise tax law litigation remains to be seen. Metropolitan looks high enough, but I hesitate to advise its purchase, for in time a combination of all local traction interests and perhaps of all electric and gaslight properties may give it a much higher value. You might make a transfer of one-half of it on the line suggested.

"Reader," New York: (1) It is impossible to predict what Metropolitan or any other investment stock will sell at while the market is being handled, as it is, by a lot of eccentric plungers who seem to be able to make a successful dash in almost any direction. It must be borne in mind that dividend-paying stocks of good reputation can be easily manipulated for a rise, because investors are not inclined to part with them and speculators find it risky to trade largely in them. (2) Evansville and Terre Haute offers fair opportunities for speculation in an active rising market. (3) Brooklyn Rapid Transit is in the hands of wealthy financiers and expert manipulators. It

never has paid a dividend and never has earned one per cent. Its high price is maintained solely on the possibilities of the future. It is therefore a dangerous stock to deal in at the present prices. (4) It is advisable to keep out of the market when it is at such a high plane, and when experienced financiers are looking for trouble in several directions. I still believe that Toledo, St. Louis and Western is one of the cheapest stocks on the list. (5) Any of the industrials that have had such a heavy decline as United States Rubber offers fair speculative chances.

Continued on page 118.

## Jim Snack.

"It was due to the courage of James E. Snack, the motorman, that the fire was not attended with injury and possible loss of life to many persons. With flames raging about him Snack remained at his post until all the passengers had been moved to a place of safety and the train sidetracked. Then, closely gassed by the flames the motorman jumped headfirst through a window in the tracks, ten feet below, receiving slight injuries." —*Daily Paper.*

HE boasted no high-sounding name,  
Nor ancient lineage.  
He had no thought to seek for fame—  
He conducted thus to gauge:  
He didn't think at all, in fact;  
He saw no other way to act.

He was a humble motorman;  
His name was just Jim Snack.  
A three-car Brooklyn train he ran  
Upon the lofty track.  
He had small learning of the schools;  
Just got the word and followed rules.

The hour was late, the day was spent;  
The weary people all—  
Men, women, children—homeward bent,  
Had climbed the structure tall.  
They filled the cars from door to door,  
And still pressed closer for "one more."

There came a crash and then a flame  
Oh, what a fearful plight!  
Oh, wretched fate without a name!  
Oh, horror, wearing sight!  
Below, the smoking, stony street  
Around, blank space forbids retreat.

The women shriek, the children cry.  
The stifling human mass,  
With frenzied effort, vainly try  
The narrow doors to pass.  
The crouched cowers, dressed like men,  
Seek only flight from slaughter-pen.

Composed as in his daily work,  
With not a thought of choice,  
Though well he knows what dangers lurk,  
Jim baits with stentor voice  
The man on whom his eyes first fall—  
"On fire up here! Send hurry call!"

Some agonizing minutes more  
He holds his duty's place,  
Till up the ladders eager pour  
The firemen, in a race  
To save the lives the fiend would claim  
And fill with floods the maw of flame.

Then, with his thought of duty rich,  
The blazing, dripping train  
He runs upon a safety-switch,  
And clears the line again:  
That men may their occasions meet  
For which were made the line and street.

Now, headlong, through the flaming wreath  
That circles round his car,  
He plunges to the track beneath.  
Noe cracks of wound and roar.  
He counts it all in the day's work  
Men must expect, where dangers lurk.

He was a humble motorman;  
His name was just Jim Snack.  
A three-car Brooklyn train he ran  
Upon a lofty track.  
Noblesse oblige to him was Greek.  
Reward or praise he did not seek.

Z. E. LEWIS.

Reduced Rates to Salt Lake City.  
Via PENNSYLVANIA RAILROAD, ACCOUNT  
GRAND LODGE, B. & P. O. E.

On account of the Grand Lodge, B. & P. O. E., to be held at Salt Lake City, August 12th to 14th, the Pennsylvania Railroad Company will sell excursion tickets to Salt Lake City, from all stations on its lines, at reduced rates. Tickets will be sold and good going on August 6th to 8th, inclusive, and will be good to return until September 30th, inclusive. Tickets must be validated for return passage by Joint Agent at Salt Lake City, for which service a fee of 50 cents will be charged.

For specific rates and conditions, apply to ticket agents.

## Summer Tours to the North.

TWO TOURS TO CANADA VIA PENNSYLVANIA RAILROAD.

For the summer of 1902 the Pennsylvania Railroad Company has arranged to run two personally-conducted tours to Canada and Northern New York. These tours will leave July 19th and August 13th, including Niagara Falls, Thousand Islands, Rapids of the St. Lawrence, Quebec, The Saguenay, Montreal, Au Sable Chasm, Lakes Champlain and George, and Saratoga, occupying fifteen days; round-trip rate, \$125.

Each tour will be in charge of one of the company's tourist agents, assisted by an experienced lady as chaperon, whose especial charge will be unescorted ladies.

The rate covers railway and boat fare for the entire round trip, parlor-car seats, meals en route, hotel entertainment, transfer charges, and carriage hire.

For detailed itinerary, tickets, or any additional information, address Tourist

Agent, Pennsylvania Railroad Company, 1196 Broadway, New York; 860 Fulton Street, Brooklyn; 780 Broad Street, Newark, N. J.; or Gen. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

## OHIO &amp; CALIFORNIA REFINING OIL CO.

from the sales of Oil from its producing wells.  
STANDARD OIL COMPANY BUYS EN-  
TIRE OUTPUT. Enormous acreage yet to be  
developed. The safest, surest, and best of prop-  
ositions ever offered the public. PRODUCING  
WELLS GUARANTEE INVESTMENT.  
Company in the hands of bankers and men of  
integrity and experience in the oil business. To  
raise funds for further development of the property  
a limited number of shares are being offered at

## \$1.00 PER SHARE.

This Company now owns 53 Producing Oil Wells  
and 1 Gas Well. Has 52,145 acres Oil and Gas  
Land, mostly in West Virginia, adjacent to the  
40,000 acres recently purchased by Standard Oil  
Co. In January last we predicted that this stock  
would be selling for \$1.00 per share in June. This  
prediction has been fully verified. We now predict  
\$3.00 per share this time next year.

Send remittances, or for further information,  
write, to the Company,  
27 WILLIAM STREET, NEW YORK

## IMMENSE AMALGAMATION

TWENTY COPPER, GOLD AND SILVER  
MINES CONSOLIDATED UNDER THE  
MANAGEMENT OF THE

Globe-Boston Copper Mining  
Company

This Company, composed of the leading business men  
of New York, Chicago, and Leavenworth, Kansas, after  
years of hard work, was enabled to complete the con-  
solidation which gives it the ownership and control of  
this vast property, located in the very heart of the Globe.  
Arizona mineral belt. Every one of these twenty mines  
contains from one to three future veins from which large  
quantities of rich ore have been shipped. The Company  
has spent a great deal of money on the property and has  
brought it to a state where large profits are merely a  
matter of a reasonable length of time. The ore bodies  
are rapidly being opened up at a great depth and the  
Company is preparing to erect smelters for the treat-  
ment of its ores.

Absolutely the best opportunity ever offered the public  
is now presented in the Stock of this Company, 50,000  
shares of which are offered for public subscription at 90c.  
per share. The right is reserved of allotment should this  
amount be over-subscribed.

For further information address  
W. F. KENNEDY, Sec., 253 Broadway, New York

THERE is as wide a difference between my prop-  
osition of the Yuma Consolidated Mine and  
Milling Co. and the average proposition of an ad-  
vertised mine as between daylight and darkness.  
The Yuma pays 12 per cent. now—in all future  
probability will never pay less—and I believe will  
pay twice 12 per cent. in twelve months. I would  
like to tell you the whole story by mail. CHARLES  
C. WOODWORKS, 69 Wall Street, New York.

## The Clock That Keeps Wound

THE Clock Without the Key—the clock that needs no winding—the clock that is right, goes right,  
and stays right—and the price is right—was gradually perfected until it was a complete mechan-  
ical wonder, and at once gained public approval.

This clock wonder is appropriately called the

## "KEYLESS CLOCK"

and is made only by

## The United States Clock Company of New York

It is protected by the strongest kind of patents in the United States and Europe. It goes for one  
whole year without attention, and it keeps time—the best of time. It's a beautiful clock—a novel  
clock—a safe clock—an ever-reliable clock—a clock that causes no trouble.

The "KEYLESS CLOCK" is made for public buildings, business purposes, home use. For any-  
one, everywhere, for everywhere and anywhere.

The four manufacturing departments are on Centre Street and Broome Street, New York. The  
general offices and expanding rooms are at 40 and 42 Broome Street. You see the clock.

The "KEYLESS CLOCK" is not sold at clock stores, but only at the office of THE UNITED  
STATES CLOCK COMPANY, which are being established everywhere.

GOOD, RELIABLE MEN, with limited capital, can secure territorial rights to represent this  
greatest of money makers. If you know a good man, tell him you know of a good thing; come and  
see the wonder clock or send for prospectus and estimates.

## "Keyless Clock" SHARES are now \$7.50 each

Par value \$10.00, full paid and non-volatile

The stock of the "KEYLESS CLOCK" Company sells as rapidly as the clock. If you want an  
investment that is absolutely safe, instantly profitable, sure to increase in value, send your subscription.  
Full Telephone stock sent from nothing to \$4000. UNITED STATES CLOCK stock will be a  
higher investment in the very near future.

More orders at 50 per cent. profit are now on hand than the four departments can turn out.  
REMEMBER: This is not a scheme or project, but an established, profitably thriving company,  
with factories in full operation, goods in great and growing demand, no debts, mortgages, or other  
obligations, and with a big deposit and surplus in National banks in New York.

Don't put off until tomorrow what you should do to-day. WRITE, OR CALL. Address

A. E. Siegel, Secretary, The United States Electric Clock Company

"Yes, he's a 'Skipper of Industry.'"  
"Eh? How so?"  
"If there's any industry around he skips it."

College idiot (indefinitely)—"It doesn't necessarily follow."

Kind friend—"What doesn't?"

College idiot—"Why, a dog—when you whistle for it."

"Dearie," said Mrs. Loveydovery, "I see in the paper that a man out West has had his stomach removed. I wonder why?"

"I suppose," said Mr. Loveydovery, "that his wife persists in trying to cook all the new-fangled things she reads about in the recipe department of the *Ladies' Home Weekly*."—Judge.

## Blood Poison Cured Free

The Remedy Is Sent Absolutely Free to  
Every Man or Woman Sending  
Name and Address.

A celebrated Indiana physician has discovered the most wonderful cure for Blood Poison ever known. It quickly cures all such indications as mucous patches in the mouth, sore throat, copper-colored spots, ulcerations on the body, and in hundreds of cases where the hair and eyebrows had fallen out and the whole skin was a mass of boils, pimples and ulcers, this wonderful specific has completely changed the whole body into a clean, perfect condition of physical health.

William McCreath, 48 Guilford Street, Buffalo, N. Y., says: "I am a well man to-day where a year ago I was a total wreck. Several doctors had failed to cure me of blood poison. I was rid of my sores and my skin became smooth and natural in two weeks, and after completing the treatment there was not a sore or pimple on my body, and to-day I am absolutely well."

Every railroad running into Fort Wayne brings scores of sufferers seeking this new and marvelous cure, and to enable those who cannot travel to realize what a truly marvelous work the doctor is accomplishing, they will send free to every sufferer a free trial package of the remedy, so that everyone can cure themselves in the privacy of their own home. This is the only known treatment that cures this most terrible of all diseases. Address the State Medical Institute, 3306 Elektron Building, Fort Wayne, Ind. Do not hesitate to write at once, and the free trial package will be sent sealed in plain package.

## Hints to Money-makers.

Continued from preceding page.

"G." St. Louis: I advise the lady to keep her money. The concern has not a good reputation financially.

"Inquirer," New Haven Conn.: A booklet describing what is meant by short sales of stocks will be sent you free of charge if you will inclose a two-cent stamp to W. E. Woodland & Co., 25 Broad Street, New York, and mention *LESLIE'S WEEKLY*. The same firm issues a weekly opinion of railroad securities which will be sent to your address without charge.

"Doubtful," Philadelphia: I am a little surprised to hear that the botanist in charge of the government bureau of plant industry should write an endorsement of a plantation company's enterprise. Such action is very unusual, for the endorsement naturally carries great weight. It would be easy to ask your Congressman regarding the status of the botanist.

"W." Patheogue, N. Y.: (1) Buffalo Gas bonds look like a reasonable speculation with an investment character. My preference would be the Central of Georgia first income. (2) I am not in favor of the purchase of any of the Copper shares. (3) If half that is promised from the electrical equipment of the Manhattan Elevated is realized the stock looks cheaper than that of the Metropolitan Traction Company.

"A." Westport, Md.: (1) I hardly regard it as the best form of investment. (2) As I have said before, Southern Pacific, it is generally believed, will be further advanced as market conditions permit, but I am not advising the purchase of securities at present. (3) I might say the same about Tennessee Coal and Iron. (4) Since the manipulation of the old Lined Oil concern I have had no use for its successor.

"Carr," Madison, Wis.: (1) The cut in rates between Chicago, St. Louis and New York points by the Walrus in opposition to the Pennsylvania signifies that a railroad war may be on before long. "Gentlemen's agreements" do not seem to embrace the Gould and Pennsylvania interests. (2) Earnings of Tennessee Coal do not indicate more than about 5 per cent. on the common stock. I am not advising its purchase.

"Banker," Des Moines, Ia.: President Schwab, of the steel trust, in my judgment, makes the most extravagant and unwarranted statements regarding the value of that property. He does not tell us that if the company charged off for depreciation from year to year as much as Carnegie was accustomed to do on his great plant there would scarcely be a dollar of surplus at the end of the year for dividends. If the steel trust is such a tremendous money-maker, why does it need \$50,000,000 now and why is \$10,000,000 not considered too high a figure to pay the J. P. Morgan syndicate for guaranteeing the exchange of stock for bonds? These are questions, I venture to add, that neither Mr. Schwab nor any other official of the United States Steel Trust will care to answer.

"S." New Orleans: (1) The annual report of the American Chile Company showed undivided profits, after the payment of the full dividends on the preferred and common shares, of over \$600,000, or almost fully the amount of the dividends on both classes of shares. The statement was very favorable. (2) I would buy Union Pacific convertible four rather than the common stock of the road. About \$92,000,000 of these bonds are outstanding. They mature in 1911 and are subject to redemption at 102½ after 1906. Until that time the holders can convert them into common stock at par upon presentation. This is really a four years' option on the common stock, which ought to be worth considerable money, for if the stock should have a heavy advance the bondholders could take advantage of the opportunity to make a fair profit. Meanwhile, if the stock should decline, the bonds standing ahead of the preferred and paying 4 per cent. interest will be a substantial investment.

New York, July 24th, 1902. JASPER.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *LESLIE'S WEEKLY*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.]

JUST how the fraternal insurance scheme works is again plainly disclosed by the circular announcing the failure of the order of "The Mystic Fraters of the Covenant," which was started some two years ago in Illinois. It offered such an attractive opportunity for what was supposed to be cheap insurance that it received large additions to its membership from week to week. Now it suddenly discovers that the enthusiasm of its members is gone, that one after the other they have resigned, until, as the circular states it, "we haven't enough members left to carry on the business of the order legally, and, being unable to get new ones to take their places, we have, at our own expense, made an arrangement

Use BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.

Let every good fellow now fill up his glass and let the vintage be Cook's Imperial Extra Dry Champagne.

Advice to Mothers: Mrs. Wesslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

The firm of Sohner & Co. has grown constantly in favor with the public since its founding, and this is a natural result on account of its reliability and trustworthiness. This firm has shown so much enterprise and real ability in the management and "push" of its business, that even competitors freely acknowledge the leading position it occupies in the trade.

with the 'Tribe of Ben-Hur,' whereby they will assume the risk of all our policy-holders." It is interesting to note that The Mystic Fraters of the Covenant, reporting an insurance business of \$199,000, was able to show admitted assets of only a little over \$800. It is safe to say that every other fraternal insurance order, whenever it ceases to attract new membership, must speedily share the fate of the Mystic Fraters. As the death rate of these orders is increasing and the assessments are made more burdensome, there is less and less attraction for new members and more and more risk for those who remain in the ranks.

"K." Bonanza, Ore.: It is ridiculous to believe that any company for \$1 a year can issue a policy conferring such benefits as you mention.

"E. R." St. Louis: The company you mention is reliable and its contracts satisfactory. Of course it is not as large nor as strong as the New York company to which you refer.

"C." St. Paul: If the words you quote from your policy are correctly quoted you must accept the company's offer, because you have entered into a contract which neither side can lawfully break.

"M." Portland, Ore.: An annuity at your time of life and considering your circumstances would be the wisest investment; \$10,000 would purchase an annuity of about \$900 a year for the remaining years of your life. As you have no dependents and no heirs, and only yourself to look after, this would certainly give you a much handsomer income during your declining years than you could possibly get by investing the money in securities.

## EAT COOK'S FLAKED RICE

### DON'T COOK.

1. Pour the dry flakes from the package into a colander.
2. Put a liberal amount of salt into a little boiling water.
3. Pour the boiling salted water on the rice, through the colander.
4. Drain, shake slightly, and turn out on a hot dish; serve with sugar and milk. That is all—and the rice is perfectly prepared in less than a minute.

### FOR BABY TOO.

NEW BORN INFANTS—One cup of Cook's Flaked Rice, one quart water, boil ten minutes, add a pint of milk, pinch of salt, and a very little sugar, and strain.

THREE MONTHS OLD CHILD—Use double the quantity of Cook's Flaked Rice (two cups) and do not strain.

**COOK'S FLAKED RICE CO.,**  
1 Union Square, New York.

### The Zim Collection of Original Water Color Reproductions of sketches By ZIM

Zim has been characterized as the  
Mark Twain of picturedom. His figures,  
while always broadly comic and some-  
times grotesquely exaggerated, are nev-  
ertheless truly

#### Artistic Caricatures

of actual types, selected with fine humor-  
ous discrimination.

#### The Pictures in this Collection

were done specially for it, and have  
never been published in any other form.  
The elaborate color-work, reproduced in  
fac-simile by the famous Grignard pro-  
cess (the same employed in the Christy  
pastels published by Scribner's), shows  
Zim in several of his happiest moods.

Copyrighted, 1900, by Judge Company

Remarkable  
Experiments  
completely  
successful.  
Supreme luxury  
at a low price is  
the result.

Young tobacco plants brought over from the  
Vuelta Abajos district of Cuba and transplanted in  
carefully chosen spots near Southern Atlantic and  
Gulf waters. Those that thrived are sprouted and  
multiplied until good-sized crops are raised. After  
natural processes of curing, a perfectly delicious  
genuine Vuelta is obtained. Escaping the enormous duties,  
the projectors—Bondy & Lederer, the largest independent factory in  
America—are enabled to produce a five-cent cigar with a prime, genuine  
Vuelta filler. The best kind of a properly cured Sumatra wrapper, with  
all bitterness removed, is added. The benefit of it all is given to the old  
B. & L. brand, "Tom Keene." Most people say money could not pur-  
chase anything finer to smoke. The delicate "Java Coffee" flavor of  
the costliest imported goods of the milder type is plainly seen at its best  
in this new "Tom Keene."

Send to the factory for a box. We make a special offer to send  
sample box of twelve for 50 cents prepaid, or twenty-five for \$1.00 pre-  
paid. Address Sampling Dept.

## A Spanish Victory at Rome.

WHEN JUDGE TAFT was sent on his special mission to Rome we pointed out the impolicy, not to say the impropriety, of the precedent established by President Roosevelt in this formal recognition, for the first time, by the United States, of the temporal status of the Roman See. In view of the peculiar relations, more or less hostile, existing between the Vatican and the government of Italy—a government most friendly toward the United States—we questioned the wisdom of the President's action and remarked that the outcome would be awaited "with a considerable degree of anxiety." The outcome has been a humiliating failure. No other could have been expected. Anxiety over the future on the part of Republican politicians, however, hardly warranted Archbishop Ireland's well-meant but gratuitous intrusion of his explanation, or of apology for, the real situation.

We have suffered a defeat, and the victory, curiously enough, belongs to Spain. The objectionable friars are mostly Spanish subjects, and therefore claim that they come within the provisions of Article IX. of the Paris Treaty of Peace, which says: "Spanish subjects, natives of the peninsula, residing in the territory over which Spain by the present treaty relinquishes or cedes her sovereignty, may remain in such territory or may remove there, retaining in either event all the rights of property, etc. . . . In case they remain in the territory, they may preserve their allegiance to the crown of Spain by making before a court of record within a year from the date of the exchange of ratifications of this treaty, a declaration of their decision to preserve such allegiance."

Retaining their allegiance to Spain and also retaining ecclesiastical domination over the Filipino parishes where they resided but where they were heartily detested by the natives, the friars had a monopoly of religion and hence exercised a potential influence in municipal affairs. Before Dewey's victory they were the government, and they used all their powers after the fall of Manila to defeat the purposes of the United States. We shall not enter into a discussion of the moral influence of many of these friars. That is left to others or to another time. Devoted Roman Catholics as the Filipinos are, they drove these friars from their parishes by force, putting to death by torture some who would not be driven, and seizing and retaining possession of much of the valuable property owned by the four orders of the Church against which this enmity was chiefly directed. One of the purposes of Aguinaldo's insurrection was the confiscation of the friars' lands; and if he had succeeded, there would have been no question for this government to settle at Rome.

President Roosevelt's desire to be fair and honorable in his dealings with the Church led to the unfortunate mission of Judge Taft to Rome, and to the very generous offer to purchase the lands of the dispossessed friars at a handsome price, provided that Rome would send the objectionable clergymen to other parishes where they would be more acceptable. Most of the friars are now seeking refuge in Manila. They dare not return to their parishes, though under the treaty of Paris they are entitled to peaceful possession of their property, and the army certainly could not be employed to reinstate them. What remains to be done but to pay for their property and ask them, in the interests of peace, to retire?

The administration had received assurances, we are told, that the proposals of the United States would be favorably regarded at Rome, realizing, as the Church did, that our attitude was not one of hostility to Rome, but that it was due entirely to the undying hatred of the Filipinos toward the friars. It was necessary to relieve this unfortunate situation or prejudice the establishment of American civil government in the islands. The commission of cardinals which conducted the negotiations on behalf of his Holiness showed by its very organization that an unfavorable outcome was expected. We have it on the high authority of that distinguished churchman, the Rev. Dr. Rooker, that two of the members of the sub-committee belonged to the mendicant order which the Washington government would drive out of the Philippines and that a third member was a Spaniard. The last mentioned is Cardinal Vives y Tutor, a Spaniard by birth, one of the youngest members of the sacred college and a special representative of all the Roman Catholic orders in Spain. With his appointment on the commis-

sion by the Pope, the last hope of a successful result of Judge Taft's mission vanished.

We have, therefore, as the result of an honest, well-meant but misconceived effort to conciliate the Roman See and to settle the question of the friars in the Philippines, only a promise that Rome will send an apostolic delegate to Manila to continue the negotiations with the Philippine authorities. The result will probably be a demand for a still further diplomatic recognition of the Vatican at Washington as well as at Manila.

And the anti-imperialists continue to smile.

## Who Wins in 1902 Wins in 1904.

SENATOR VEST and the other statesmen and politicians, Democrats and Republicans, are mistaken who are saying that the congressional election of 1902 will have no particular consequence except as affecting a few sorts of legislation. Congressional contests which take place in the middle of a presidential term have a function which these gentlemen overlook. They show the direction and the strength of the partisan currents, and usually point out the way in which the presidential elections two years later will go.

The Whig victory for Congress in 1838, in the middle of Van Buren's service, was followed by the tidal-wave triumph for the Whigs, "Tippecanoe and Tyler, too," in 1840. In 1842 the setback for Tyler's party foreshadowed the return of the Democrats to power in 1844, when they nominated Polk. Polk's party's reverse in the congressional election of 1846 portended the defeat of his party in 1848, when Taylor, the Mexican War hero and Whig, went to the White House. The Democrats elected the Congress of 1850, in the middle of the Taylor-Fillmore administration (they also elected the Congress chosen in 1848), and the Whigs dropped out of the presidency and the Democrats under Pierce went in in 1852. When the Republicans carried Congress in 1858 they began to feel that they had a good chance to win the presidency in 1860, and they did win it.

Between the Civil War and the reconstruction days, too, and the present time these congressional off-year elections have often told the story for the presidential canvass two years later. The Republican setback in 1882 because of the Garfield-Conkling feud was followed by the defeat of Blaine and the election of Cleveland in 1884. The defeat for Harrison's party in the middle of his term in 1890 was succeeded by his expulsion from office in 1892 and by Cleveland's re-entrance into the White House. When the congressional election in 1894, in the middle of Cleveland's term, went against his party the country had a right to expect the overthrow which that party suffered two years later when led by the Nebraskan populist and sorehead. Similarly, when the Republicans held on to the Congress chosen in the middle of McKinley's term, in 1898, the outlook was bright for them for 1900.

There have been instances when the mid-presidential term congressional elections failed as pointers for the bigger canvass two years later. Thus, the Republicans carried the House of Representatives chosen in 1854, though by a plurality only, while they were beaten in the Fremont-Buchanan canvass two years later. In the middle of Grant's second term, in 1874, the Democrats carried Congress, but they were beaten in the presidential canvass of 1876, though by a margin so small that the electoral commission had to be called in to settle the contest. In 1878, too, the Democrats won Congress (they also won it in 1876) while the Republicans elected Garfield and Arthur in 1880. In general, however, the congressional off-year canvasses are reliable portents for the bigger campaigns two years later. If the Republicans lose the Congress elected in 1902 they may as well prepare to get out of the White House in 1904.

## Renewed Persecution of the Jews.

ALMOST AS tenacious and inexplicable as the racial peculiarities and general characteristics of the Jewish people themselves are the prejudices and antagonisms with respect to them cherished and often manifested by other people in various parts of the civilized world. One might think that in our day of tolerant and enlightened thought, when the contributions which the Jews have made and are making to science, literature, and art, to industrial wealth and financial progress, are coming to be recognized at their full value, that at this time the blind and unreasoning hatred of the race which formerly obtained would lessen and vanish away. And so it has, in a great measure, in most enlightened communities; in others, it seems to remain in full force.

Just now a new anti-Jewish movement seems to be sweeping over parts of Europe, more especially in the East. Fifty thousand Jews have, it is stated, been ordered to quit the mining province of Russia, and to reside within the pale after sacrificing their occupations and their property. In Roumania, also, they are being forced to emigrate by a series of laws which practically deprive them of all means of subsistence. They have absolutely no rights, and live at the mercy of a population which hates them to such a degree that their Parliament has declared all Jews to be foreigners, although they have been resident for centuries. Neither Germany nor Austria will do anything for them, and it seems impossible for western Europe, which is more tolerant, either to protect them or to find them a new habitat.

The problem, then, what to do with the Jews, appears, from a European point of view at least, to be almost as insoluble as our own problem of the colored race. One thing seems clear, that it is not to be solved by wholesale emigration or colonization, such as the Zionists propose, any more than our negro difficulty can be cleared

away by a like process. The only rational solution now presenting itself in either case is that lying through education of the right kind, through development to a higher, broader, more tolerant and humane plane of life and thought for all classes concerned; a slow process, it is true, but apparently the only one that holds out any promise of success.

## The Plain Truth.

THE STATEMENT that all newspaper representatives were to be excluded from attendance on the approaching army and navy manoeuvres turns out to have been entirely erroneous. Our alert and capable Secretary of the Navy, Mr. Moody, says it has never been the purpose to make any special mystery about the coming joint manoeuvres. He will extend, so far as he can, the ordinary courtesies which the press has usually received. In this country where so much pride is manifested in the splendid and patriotic work of the army and navy, a pride largely stimulated by the press, a policy of news suppression would not be in any sense satisfactory. The administration has repeatedly shown by the utterances of the President and the members of his Cabinet that this fact is appreciated.

THE ANNOUNCEMENT that President Roosevelt intends to displace Augustus P. Winbush as collector at New Orleans comes none too soon. This appointment was made by President McKinley in fulfillment of a pledge given to Senator Hanna. It was nevertheless an unfit appointment, and while President McKinley in this matter showed his splendid loyalty to his best friend—he did it at the sacrifice of his own reputation and to the detriment of the public welfare. The protest against Mr. Winbush's appointment was of such a nature that it should have been regarded both by Senator Hanna and the President. The fact that he is to be superseded by a gentleman of integrity, high standing, and acknowledged fitness ought to be a consolation to Senator Hanna, but whether it is or not, the action of President Roosevelt in this matter will be heartily approved.

THE REPUBLICAN managers ought to pass an immediate and unanimous vote of thanks to the blatant, self-conscious bundle of self-conceit from Nebraska who has twice led the Democratic party to defeat and who, finding himself cast out and rejected on all sides, now threatens to follow an independent party in the next presidential campaign. This creature of circumstances, this political soldier of fortune, who, while denouncing the aristocracy of wealth has managed to accumulate a fortune of a quarter of a million dollars for himself, is the most successful free advertiser, not barring the circus or the stage, of his time. He has sufficient influence not only to induce the Associated Press to send out his rambling vapors, but also sufficient influence to secure their publication in the over-crowded columns of even our greatest newspapers. No other political Lazarus, dead and buried, receives such attention. Why not let him alone!

THE LEADING newspapers of the country will be interested in the fact that the contract for the construction of the Brooklyn part of the great Rapid Transit system of New York distinctly provides that no portion of the Brooklyn tunnel or its cars shall be used for advertising purposes. The alert Brooklyn newspapers have seen to it that their interests in this matter were carefully safeguarded. They have shown greater diligence and common sense than the newspapers of the Borough of Manhattan and of many others of our large cities. The *Troy Times*, in its thoughtful comment on this fact, says—and we commend its utterance to the attention of the press generally—that "this prohibition is significant, because it indicates the growth of the conviction that the proper place for advertising is in the newspapers and not on street bill-boards or the walls of conveyances. The opinion is gaining force that there is essential injustice in permitting owners of franchises for the purpose of public conveyance to turn their vehicles or routes into advertising mediums and thus to encroach upon a function toward which the publishers of periodicals have contributed much time and effort, and to the use of which they are legitimately entitled."

THE BELIEF of Governor Odell that the Republican party in New York must put its best foot forward in the approaching campaign is that of every other thoughtful member of the party. Evidences multiply that ex-Governor Hill, now recognized on every hand as the leader of the State Democracy, is making the effort of his life to unify conflicting factions and bring about a harmonious Democratic State convention. His purpose, it is said, is to name as a candidate for Governor the ablest, purest, and most representative Democrat that he can prevail upon to accept the nomination. He intends to place a strong ticket in the field; to conduct the fight himself, and to make it a speaking and argumentative campaign, both on State and national issues. There is no question that a large number of prominent Democrats, bankers, and others, especially in New York City, who openly advocated McKinley's re-election, are now quite as openly declaring their renewed adhesion to the Democratic party since its populist idiosyncrasies have been discarded. Talk of Governor Hill's acceptance of the gubernatorial nomination is ridiculous. No such thought has entered his mind. The splendid record made by Governor Odell, his devotion first to the interest of the tax-payers and to the best welfare of all the people, entitles him to a renomination and to a re-election. He has not thus far said that he would accept a renomination, but his friends believe that he will. He will make the strongest candidate that the party can name.

## PEOPLE TALKED ABOUT

AMONG THE members of the American delegation who went over to London to attend the coronation

MISS WILSON,  
Daughter of Gen. James H. Wilson.  
Copyright 1902, by Cleveland.

ceremonies was Miss Wilson, the eldest daughter of General James H. Wilson, appointed by President Roosevelt as one of the special representatives of this country on that occasion. Miss Wilson has figured prominently in Washington society, where her many graces, her beauty and accomplishments, have made her deservedly popular. She has been highly educated and is a fine musician. Her father, General Wilson, is a veteran of two wars, having served with distinction in the Civil War, in which he rose to the rank of major-general, and also in the late conflict with Spain, in which he commanded our forces in Porto Rico. His wife is a daughter of General J. W. Andrews, of Wilmington, Del., where the family home now is.

GENERAL THOMAS L. JAMES has a good story to tell in the *Utica Observer* of an incident which occurred during the visit of the present King of England to this country in 1890. Colonel George Bliss, who, at that time, was Governor Morgan's private secretary, was detailed by the Governor to meet the prince and his suite in New York and accompany them to the capitol of the State at Albany. The party left by the famous steamboat *Daniel Drew*. A foreign steamer had just arrived and a number of letters were handed to the prince just as the steamboat left the landing. He was so busy reading them and in dictating replies to his secretary, being seated in the wheel-house, that when the boat arrived at Poughkeepsie, where a large crowd had assembled, he declined to show himself, saying that he was too busy and that his mind was too much occupied by his correspondence. The Duke of Newcastle, who was in charge of the party, urged him to go out on the paddle-box and exhibit himself, but he declined. "Let Colonel Bliss appear in my stead," he said, and so, that the crowd should not be disappointed, the gallant colonel did go out and stood upon the paddle-box. He was taken for the prince and was received with enthusiastic cheering, and bowed his acknowledgments as the steamer left the dock. Few if any in the crowd knew that it was not the prince upon whom it was bestowing its plaudits.

THE PRACTICAL completion of the great Trans-Siberian Railroad, linking St. Petersburg with

M. SERGE DE WITTE,  
The Russian statesman, diplomat,  
and financier.

Vladivostok on the Pacific coast, is an achievement for which credit is chiefly due to M. Serge de Witte, the Czar's resourceful and brilliant minister of finance, and it forms not the least among the many great achievements of his long and remarkable career. It was M. de Witte who devised and executed a scheme for financing this road in the face of a bitter opposition, and who as boldly and resolutely pushed the enterprise forward in spite of all difficulties and discouragements to its triumphant conclusion. And while this railroad

has been a constant and heavy drain on the Russian treasury, the finances of the empire have been so well managed by M. de Witte that no embarrassment has been felt in any quarter and the credit of Russia has never been better than, it is good as, it is to-day. For M. de Witte is not only a prudent and far-sighted financier, but an able statesman and diplomat as well. He is one of the chief props, in fact, to the throne of the Emperor Nicholas. M. de Witte has just come into greater prominence through sending a note to the European Powers proposing a conference to consider measures to restrict the trusts. It is claimed that the object is to apply in the economic domain the principles of The Hague peace conference. M. de Witte's scheme, however, is regarded in some quarters as really designed to protect Europe from American commercial aggression.

DR. CARROLL D. WRIGHT, in addition to his work as United States commissioner of labor, is acting president of Clark University, at Worcester, Mass., and he is also the executive head of the National Conference of Charities and Correction. Notwithstanding the duties of these positions Dr. Wright found time recently to do efficient service in the personal investigation of the coal strike at the request of the President.

THE PUBLIC decoration of Mr. Francis Kimbel, president of the American Chamber of Commerce of Paris, on the night of July 4th at the annual banquet, was one of those occasions which cause an American's hat to fit just a little tighter, and quite a number of those present knew not and cared not whether they sang the "Marseillaise" or the "Star-spangled Banner." When Monsieur Trouillot, minister of commerce, pinned the grand cross of the Legion of Honor on Mr. Kimbel's coat and kissed him on both cheeks Mr. Chauncey Depew remonstrated forcibly, and insisted in his speech afterward that his prerogatives were being infringed upon, and intimated that if Lieutenant Hobson were only present to assist him he would stop the whole business. Mr. Kimbel is a partner in the giant shipping and forwarding firm of Michel & Kimbel, who, prior to the advent

FRANCIS KIMBEL,  
President of the American Chamber of Commerce in Paris.

of the American Express Company in Paris, practically controlled the shipping and forwarding between Paris and United States ports. He is a genial, warm-hearted gentleman whose hearty hand-shake and pleasant smile make you feel at home at once, and his present distinction gives general satisfaction to the American colony. He is quite a connoisseur of paintings and his office is always decorated with some new purchases in that line for which he has not yet arranged a place at home.

THE AMERICAN people will have an opportunity this fall to do honor to three of the bravest and most brilliant Boer leaders, Generals Botha, De Wet, and Delarey, who, it is said, are coming here to collect funds for their countrymen who were ruined by the war. An official history of the conflict will be written by Botha, who is the most gifted man among the Boers, so far as literary ability is concerned.

AMONG THE quite numerous centenarians now living none seems to have borne the burden of years with better grace than Mr. William H. Seymour, who celebrated his one hundredth birthday at his beautiful and historic home in Brockport, N. Y., on July 15th last. Mr. Seymour was born in Litchfield, Conn., and in his days of business activity he was widely known in the western part of the State as a successful merchant and manufacturer. He was one of the first to realize the benefit to the world of harvesting machines, and he associated himself with the late Cyrus H. McCormick, inventor of the well-known reaper, in the manufacture and sale of that wonderful sower of labor on the farm. Mr. Seymour did much to encourage the development of this reaper, and was duly rewarded for it. In spite of his great age, Mr. Seymour is in excellent physical condition. His eyes are not dim and his powers are not failing. His mind is active, his memory retentive, and he takes a lively interest in all that is going on in the world, being sufficiently up to date to even enjoy a ride in an automobile. Well may he be envied the rich store of experience and knowledge acquired during the first century of his well-spent life.

MR. WILLIAM H. SEYMOUR,  
A Brockport centenarian who rides in an automobile.

A PATHETIC interest attaches to the gift of \$92,064 which John D. Rockefeller recently made to Oberlin College, being a part of his pledge of \$200,000. The receipt of this check completed the \$500,000 endowment movement for which the late President John H. Barrows labored so earnestly in the last year of his busy life.

ONE OF the most remarkable political campaigns ever known in this country within the ranks of a single political party was that recently concluded in the renomination by the Republicans of Hon. Robert M. La Follette as Governor of Wisconsin. The most singular feature of the campaign consisted in the fact that the choice of Governor La Follette to succeed himself was hotly and even bitterly opposed by almost the solid Republican press of the State, and also by most of the leading politicians of his own party, backed, it was declared, by the wealth and influence of the corporate interests of Wisconsin. Despite all this array, however, Governor La Follette captured the delegates from two-thirds of the counties, and when the State convention was held in Madison on July 17th he received the nomination by an overwhelming majority. This signal victory is ascribed chiefly to the fact that the farmers, as a rule, stood by the Governor from start to finish, and as Wisconsin is distinctly an agricultural State, with no large cities outside of Milwaukee, this support was amply sufficient. Governor La Follette has stood out for six years past in energetic and aggressive advocacy of the taxation of corporate property at the same rate as individual property and the substitution of direct primaries for delegate conventions. These were the chief grounds of the opposition to him and the real issues of the campaign. La Follette's success, therefore, may be fairly regarded as a triumph for these principles within the bounds of Wisconsin at least. Many strong and sweeping charges and counter-charges of bribery and corruption were made by the opposing elements during the campaign which, it is to be feared, will leave roots of bitterness within the Republican party in Wisconsin for a long time to come. The renomination of La Follette, under the circumstances, is likely, some of his admirers believe, to make him a conspicuous figure in national politics in the near future. He served in Congress from 1887 to 1891, where he made a notable record for himself as a member of the Ways and Means Committee and one of the framers of the McKinley tariff bill.

ONE OF Lord Salisbury's pet anecdotes is the story of a barber of Portsmouth who, after cutting the statesman's hair, placed this sign in the window: "Hair cut, 3d. With the same scissors as I cut Lord Salisbury's hair, 6d."

ONE OF the most effective arguments in the interests of peace is the pictorial representation of the horrors of war. Whether designed for that purpose or not, it is certain that paintings and other works of art setting forth in graphic detail the miseries and sufferings due to the pursuit of arms are the best possible object lessons for teaching the principles of kindness and humanity. A young artist who has won deserved distinction as a battle painter in recent years is Mr. Caton Woodville, of London. His pictures of stirring and eventful scenes in the lives of such generals as Marlborough, Wellington, and Wolseley have made him famous. More recent than these are his paintings of the battles of Orange River, Maagersfontein, Ladysmith, and other scenes of blood and carnage in the South African war. Mr. Woodville has traveled in all parts of Europe and the East, visiting battle-fields which he desired to reproduce on canvas—for it is not his method to paint from hearsay but so far as possible from first-hand knowledge. His splendid equestrian portrait of King Edward VII. attracted an immense amount of attention in London.

MR. CATON WOODVILLE,  
Whose battle-paintings have given  
him world-wide fame.

LORD KITCHENER was entertained at a public banquet in Johannesburg a few days previous to his departure for England. "Men of his temper," said Lord Milner, in proposing his health, "are commonly supposed to be less sensitive to the slings and arrows of outrageous fortune than others, but no man has felt more than Lord Kitchener the loss of the many gallant officers and men. But all the more honor is due to him that he never let the acuteness of his sorrows and disappointments deflect the steady, unswerving pursuit of his aim." In the course of his reply Lord Kitchener said of the Boers, "Whatever our previous opinion, we have come to realize that they are a virile race, and an asset of considerable importance to the British empire."

# All Immigration Records Broken

MORE FOREIGNERS ARRIVED FROM EUROPE LAST YEAR THAN EVER BEFORE IN THE COUNTRY'S HISTORY

By T. Williams

NO OTHER country in the world admits so many immigrants as does the United States, and in no other land have such elaborate arrangements been made to receive and care for the foreigners who flock to its shores. During the year ended June 30th, 1902, a total of 648,743 immigrants were allowed to enter this great republic. This is the record figure for one year, and it exceeds that of the preceding year by 160,825. For the year ended June 30th, 1902, as many as 493,380 immigrants landed at this port alone, or more than the aggregate for the whole Union in the previous twelve months. Coming as they do in such vast numbers, the immigrants would fare badly were it not that on their arrival they become for the time being wards of Uncle Sam. They are treated with a sort of paternal solicitude and no effort is spared by the faithful among the immigration officials to protect them and speed them safely to their destinations. With this national philanthropy is mingled a prudence which seeks to prevent the addition of undesirable elements to our population. The process which exemplifies this two-sided policy contains numerous features of interest, and it may be observed at its best at the chief immigration station of the Union, situated on Ellis Island, in New York harbor.

When the hundreds of immigrants carried in the steerage of an ocean steamship have run the gauntlet of Health Officer Doty's quarantine down New York Bay the vessel steams up to her pier in the city and there the passengers are transferred to barges and towed to Ellis Island, where they disembark. The well-filled barges often resemble similar craft packed with excursionists from the East Side, and the aliens seem weary of crowding and voyaging, and eager to land. Those of the poorer class are often grimy and strangely and shabbily dressed, although numbers of the women wear bright and picturesque costumes. These include Italians, Russian Jews, and several other nationalities. They appear generally to be of a low order of knowledge, if not intelligence, as well as of physical development. The better class, comprising natives of Great Britain, Germany, and Scandinavia, frequently are as well attired as are average Americans. Better developed physically, and mentally superior to the former class, they are more desirable acquisitions to American citizenship.

Some of the debarking immigrants demonstrate their pleasure at having at last got to America; more are merely quiet and contented or patient, while there is a sprinkling of those who are sad and homesick. When the gang-plank is in position they toil up from the barges, carrying bundles of belongings—large and heavy, or scant and light, as the case may be. These represent in many instances the total property of their owners, apart from a little money, but the better class also possess trunks filled with effects more or less valuable. Led by one of the bureau of immigration employes, and kept in motion by repeated "hurry orders," the procession of "green-horns" straggles up to the open doors of the big main building of the station, which to the majority of the strangers must have an awe-inspiring official look.

After reaching the entrance the immigrants are required to mount a stairway leading to the landing bureau on the second floor. There they are obliged to pass in single file through a narrow runway for inspection by a uniformed officer of the marine hospital service. Each immigrant, except the small children, carries a card denoting his group and number—for the immigrants are handled in blocks of thirty—and this is stamped by a clerk as the new comer goes by. Then begins the march toward the doctor, who scrutinizes the eyes and scalp and also the general appearance of each immigrant. The medical man is so skilled and has so keen an eye that the work of inspecting proceeds rapidly. Whenever the doctor's trained glance informs him that all is right the people move along with scarcely a check. But the least suspicious indication causes him to stop the approaching man, woman, or child and examine the subject carefully. Sometimes he pries up the eyelids and takes a good look at the under sides; sometimes he sounds the ribs of a man or peers under the handkerchief tied about some one's neck. Not even the infants in arms escape his observation. When carried youngsters are large enough to walk he has them put on their feet in order to discover whether they are lame or have any other physical defect. Now and then the doctor waves into a detention pen some unlucky individual whose condition is doubtful, for later and more particular examination. Occasionally the doctor washes his hands in an antiseptic solution.

Once past the doctor the immigrant is directed to a pen the letter of which corresponds to the one on his card. The latter shows to what group of thirty the holder belongs. Each of these groups is recorded on a manifest prepared on the other side by the steamship officers, and which gives the names and particulars as to age, calling, physical, financial, mental, and moral condition of the members of the group, their prospects in the United States, etc. Each group is kept in the pen until called for by a registering clerk. Then the group passes along an aisle to the registration desk, where the immigrants are questioned one by one in order to verify the memoranda on the manifest. If the manifest and the immigrant's statements do not materially disagree the immigrant, if he proves to be qualified, is at once granted his "discharge." If there is shown to be a serious error in the manifest, such as a false name, the otherwise qualified immigrant is detained until the steamship company pays the legal fine of \$10. Persons having little or no money,

and thus liable to become a public charge, but otherwise fit, are sent to detention rooms and kept there until relatives or friends can be communicated with and either send money or tickets or arrive in person to claim and to go surety for them. Such immigrants, even if they have no friends, are also released if responsible benevolent individuals or societies agree, as is frequently the case, to take them in charge and find work and homes for them. All immigrants bound for New York City are detained until friends or reliable parties come for them. This is done with a view to protect them from sharks and swindlers who lie in wait for the unsophisticated. On no account are immigrant women and girls permitted to leave the island without due escort.

Detention also occurs when an immigrant, although possessing sufficient cash, is believed to come within the prohibited classes of idiots, insane, criminals, contract laborers, etc. In the cases of all detained persons who are not soon allowed to go, hearings are held before special boards of inquiry, which decide whether the parties concerned shall be excluded and deported or not. A first decision to exclude may be appealed from, but a second decision is final. The record of exclusions shows how strict is now the endeavor to keep unfit persons from entering the country. Out of some batches of thirty as many as twenty-four persons have been ordered excluded and returned to the port from which they sailed. Of course the average is far below that figure, but many a group of lower-class immigrants loses members while crossing the line, and deportations have greatly increased under the present management. The expense of feeding detained and of feeding and deporting excluded immigrants is borne by the steamship company which brought them here.

When the immigrant able to look out for himself and his family, if he has one, is granted permission to land he proceeds to exchange his foreign money for that of the United States, at an office established under government sanction, where a fee for the service is charged. He then procures railroad tickets, if the place he is bound for be distant from the city. Some immigrants have already paid for their tickets on the other side; others now proudly make their initial purchase with American money. This new kind of money is a puzzle to most of the immigrants, who have to take what is given them on faith. After obtaining their tickets the travelers lay in stocks of provisions, which are sold in the building at reasonable prices by dealers who have secured the privilege from the government, the rates being publicly posted. At an express office on the scene all baggage is checked through. The immigrants who are to travel by rail are led to a large room, partitioned off into sections each of which is a sort of Ellis Island station for a particular road, and at stated times are carried from the island in special boats and conducted to the proper stations by trusty men and started securely on their land journeys. Most of the "New Yorkers" are met in good season by friends and are conveyed on the regular ferry-boat to the landing place near the Battery. In this manner, by energetic work, the island is relieved of the greater portion of the alien multitude on the day of its arrival. In May last some 13,000 immigrants were disposed of in the course of two days. Sometimes too many immigrants arrive in a single day, or else reach the island too late to be disposed of even by hard work on the part of the officials up to midnight, and then the overplus, as well as the regularly detained ones, have to be provided with sleeping quarters. These consist of hundreds of "double-decked" iron bedsteads, with two berths to each, and each accommodating four persons. The bedsteads for the men fill a large room on the top floor and occupy much space in the corridors. Those for the women and children are located elsewhere. At times many hundreds are lodged for the night in this fashion.

It is in the detained immigrants that sympathetic interest chiefly and naturally centres. These temporary prisoners are separated according to sex, the women being quartered in one part of the long building and the men at a distance in another. Often several dismal days elapse before word is received from the detained immigrants' friends. It is a curious fact that immigrants who are not relying on friends sometimes cause their own detention merely by understating the amount of money they possess. A few days in virtual prison, however, makes them willing to confess their wealth and then they are set free. Occasionally an inspector may misunderstand the immigrant and the latter may be detained without real good reason until the facts come out.

The scenes when detained persons are called for by their friends are not seldom affecting. Those about to be liberated in this way are gathered in a cage-like structure and before they are freed their friends are closely questioned as to identity and relationship. There is often much embracing and shedding of tears when long-parted relatives meet again.

The excluded immigrants, who have a special place of confinement, are the unhappiest and most disappointed of those under detention. In many instances their unfitness for admission is apparent, but the good appearance of some of them excites wonder as to why they are to be sent back. The officials of the bureau, however, always have excellent reasons for their action. Men and women of fine seeming may have been proved to be criminals or disreputable characters, who would be a detriment to any community. Occasionally detained individuals, es-

pecially those in the excluded list, make desperate attempts to escape to the main land. One excluded immigrant climbed from the roof pen down a steampipe, burning himself badly on the way, and hid himself for a whole afternoon before his flight was detected. Officers who searched for him after dark at length overtook him just as he was about to launch a rude raft which he had constructed with the object of attaining the New Jersey shore. Four men did get away once in a watchman's boat and were never recaptured. But owing to the vigilance of the officers of the bureau, plots to leave surreptitiously are usually futile.

The stowaway is frequently a troublesome proposition. He is almost always young, vigorous, determined, and a likely fellow, but if nobody agrees to vouch for him he has to be detained and sent back. This is not necessarily the last that is seen of him. He may return in the first steamer on which he can again stow himself away. One youth made four successive appearances at Ellis Island in this way before his persistence was rewarded.

One of the notable features of the care taken of the immigrants is the attention paid to them by missionaries of several religious denominations and the agents of benevolent societies. These philanthropic people are continually on the watch for cases of need and distress, and they have been the means in countless instances of preventing injustice and affording succor to their transient charges. The work they are doing is of the kind that merits unstinted praise.

The force of officials and employes engaged in handling the business at Ellis Island mounts up into the hundreds. The salaries of these and the other current expenses aggregate a large sum, but the greater part of this is repaid to the government in the form of the head tax of one dollar per immigrant collected from the steamship companies. With this corps of workers it is possible to do everything systematically and promptly. The record of each immigrant is carefully preserved, which involves a vast amount of book-keeping. But there is no unnecessary red tape, and the aliens are now treated in the main quite as considerately as would be crowds of like size and character in the heart of the city. That to a considerable extent advantage has in the past been taken of the more ignorant immigrants and that they have been misused and fleeced by dishonest employes of the bureau is not denied. But abuses of this sort are to be kept at a minimum, if not extirpated, under the present administration at the island. The new commissioner, Mr. William Williams, a thorough, resourceful, and hard-working executive, his able and experienced deputy, Mr. Joseph Murray, and their helpful associates, are doing their utmost to make the conduct of affairs more honest, efficient, and humane, and have already taken stringent measures to remedy admittedly bad conditions. On this point Mr. Allan Robinson, secretary to Commissioner Williams, speaking for the latter said:

We came here on April 28th last, just in time to strike the biggest rush of immigrants on record—82,000 of them arriving during May, the largest number for a single month in the history of the bureau. We found the method of dealing with them the poorest one imaginable. It had not been deliberately devised, but had simply grown up in the course of years. Responsibility and work were divided among different sections in a most unbusiness-like way. Duties properly belonging to one set of officials had been allotted to another, and there was a lack of order and system. Politics had entered completely into the running of the bureau. Many men were slack, neglectful of duty, and idle, depending solely on their political backing for retention in service. Some of these even refused to obey the orders of their chiefs. We proceeded at once to make radical changes. We insisted that each man perform his full share of labor, or else give up his place. We demanded perfect obedience to the chiefs and excluded politics from the establishment entirely. Merit alone is now the ground for permanency of employment. Under this administration the tone of the service has improved 100 per cent.

We have also made notable improvements in the system of transacting business here, defining duties more sharply and expediting matters greatly. It is true to a degree that this island has been, as it has been described in Congress, "a nest of thieves." Ignorant immigrants are easily fleeced by dishonest officials. But we have set our faces firmly against all that sort of thing. We are determined that full justice shall be done to the immigrant and some of the changes made have had that end in view. The feeding of the immigrants, the changing of their money, and the handling of their baggage have now been placed in the hands of men in whose honesty we have absolute confidence. Mr. Williams's two great objects are: First, to administer the laws without fear or favor. Second, to properly safeguard the immigrants.

Employes of the bureau, as well as outsiders having dealings with it, have expressed their satisfaction with the new régime, praising it for the firm, systematic, and honest manner in which it is managing the affairs of the station. Some of the specific reforms effected in behalf of the immigrant are reductions in formerly extortionate prices of provisions, and in excessive rates for carrying baggage and fees for exchanging money. The alleged practice of detaining qualified immigrants at the station for days in order that the restaurant keeper might make money out of them does not flourish in these days. The new commissioner has made a number of changes in the personnel of the force and it is said that he contemplates other changes and still further action in the direction of reform.

### Troubles of a New Commonwealth.

THE NEW ship of state, which began its voyage a little over a year ago under the Southern Cross, bearing the name of the Australian Commonwealth, finds itself in danger of shipwreck at the very outset on the craggy reefs known to modern politics and statecraft as the tariff question and the race problem. The first Federal Parliament, which adjourned on December 13th last, after a session of eight months, devoted a large part of its session in furious debate over a tariff bill and two different measures aiming at the exclusion of certain nationalities from Australia, and a great amount of ill-feeling was stirred up in consequence which has not yet abated.

The weary old issue of free trade and protection precipitated the hottest fight, and it sounds like a familiar echo from Washington to read in a Melbourne paper about one party accusing the other of the crime of mere stone-walling, and the latter protesting that cabinet officials were engaged in a dark conspiracy to rush the tariff through without debate. The various States of the commonwealth, like our own, differ widely on the tariff issue, some standing for free trade, and others as strongly for protective duties, the latter apparently being in the majority.

The race problem has settled into a controversy over "a white Australia," with the various parties and sections separated as widely, and apparently as hopelessly, as they are over the tariff issue. A majority of members, for example, returned to the Federal Legislature by the Queensland electorates is favorable to the abolition of Polynesian labor, while the government of Queensland itself, largely supported by members of both houses of the State Legislature, is strongly impressed with the absolute necessity for its continuance.

According to one party and its newspaper organs the commonwealth is threatened with a "Japanese Peril," and their influence was strong enough to secure the passage of a bill by one of the provincial legislatures excluding certain classes of the Japanese. But this measure was afterward vetoed by the imperial government at Westminster, on the ground that its provisions are not in harmony with imperial interests, and if a measure on similar lines were adopted by the commonwealth Parliament, it is believed that it would share the same fate. This issue of "a white Australia" promises, in fact, to lead to a longer and more bitter struggle than the tariff or any other question, the contention being not only between the different Australian States but between the commonwealth itself and the home government. It is even whispered that the division over this may lead to the secession of some of the States or the separation of all from England.

Feeling in Australia over the influx of Chinese, Japanese, and Polynesians has been growing for years, and the demands for exclusive measures have been more and more insistent and imperative. It is declared that the presence of these aliens is a menace to the health and morals of the country, and most of all to free white labor,

As for the Japanese, it is claimed that the legislation of that country is not over-liberal to Australians, and in their military schools the Japanese make no secret of their ultimate aims to acquire territory in Australia. Accordingly, the policy of Australia to prevent the Japanese from getting a foothold there sufficient to assist the latter's plans of conquest is regarded as a question of the gravest importance.

Queensland, or northern Australia, is particularly exercised over the proposed exclusion of the South Sea Islanders, or "kanakas," as they are called, upon whom it depends largely for the cultivation of its cane-sugar plantations, which yield a product valued at over \$5,000,000 a year. The cane-sugar men insist that the exclusion of the kanakas would ruin their industry, and they have appealed to the British throne to veto the exclusion bill passed by the Federal Parliament. Thus local interests conflict with each other and also with the principle laid down by the English Secretary of State for the Colonies, that legislation which imposes disqualification on account of race or color is contrary to the general conception guiding British rule through the empire.

In view of these conflicts and widely variant policies it is not surprising to hear regrets expressed already that the commonwealth ever was formed, and that the Tasmanian Legislature is even seriously considering the question of withdrawing from the federation. There are such minor and purely local questions also as the selection of a site for the Federal capital, which appears to be no nearer a settlement than it was a year ago. The removal from Melbourne, its present location, is strongly opposed, but New South Wales insists that the final location must be somewhere within the limits of her territory, as being the most central and most populous of the States. And there the matter stands.

Looking from this distance, the talk of secession or independence on the part of any Australian State on account of such differences as those named, serious as some of them are, appears rash, hasty, and ill-considered, since the new federation has only had a year of trial. With the exercise of patience, moderation, and mutual forbearance all around, even such knotty problems as the tariff and the exclusion of aliens may yet be solved satisfactorily and the commonwealth remain intact to work out the still weightier problems which the future is certain to bring.

### How Won?

JUST a man and just a maid,  
 Just a hammock in the shade,  
 Just a pair of laughing eyes  
 Tinted like the summer skies,  
 Just a little argument  
 Savoring of sentiment,  
 Just the theme of love begun,  
 And just this—the maiden's won!  
 ADELAIDE PUGH.

### The World's Costliest Real Estate.

THE EXCEEDINGLY high and rapidly advancing price of land in the business sections of New York City has forced the erection of many lofty buildings in the endeavor to supply the increasing demand for convenient office room. Floor space, if it is to be obtained at reasonable rates, has now to be created far in the upper air. So many towering structures have been reared that in some localities they rise above the streets like the walls of deep canyons. The constructing of such edifices involves immense amounts of money and the buildings make material and welcome additions to the assessment rolls of the city. So urgent is the call for business quarters, that the height of new buildings will be limited only by the line of safety or the size of the construction fund.

In the lower portion of the city, skyscrapers are multiplying fast. Among the most important of them are those comprised within the bounds of the so-called "insurance district." Here there are many huge buildings, accommodating thousands of busy workers and affording facilities for a fabulous aggregate of business transactions. A not extensive view from the roof of a building on William Street takes in, among others, the following structures: Lawyers Title Insurance Company, 44½ to 46 Maiden Lane; Mutual Life Insurance Company, 28 to 40 Nassau Street; Empire, 69 to 73 Broadway; Gillender, 1 Nassau Street; Manhattan Life Insurance Company, 66 to 70 Broadway; Commercial Cable, 20 Broad Street; Queens Insurance Company, 67 to 89 William Street; John Wolff, 66 Maiden Lane.

The collection of buildings of which the above form a part is one of the most valuable in the world. The buildings named have a total valuation, according to the assessment rolls, of about \$12,000,000, but it is probable that they would sell for nearly \$20,000,000. The other structures in the area referred to doubtless add several million dollars of value to this aggregate.

### A Wholesome Tonic.

HORSFORD'S ACID PHOSPHATE.

DR. S. L. WILLIAMS, Clarence, Iowa, says: "I have used it to grand effect in cases where a general tonic was needed. For a nerve tonic I think it the best I have ever used."

### Feeding to Fit

is the problem with infants. The growing child has ever-changing needs but a perfect milk can never go amiss. Borden's Eagle Brand Condensed Milk is the acme of substitute feeding. Send 10c. for "Baby's Diary." 71 Hudson St., N. Y.

TELEPHONE Service is the modern genius of the lamp. With a telephone in your house the resources of the whole city are at your elbow. Rates in Manhattan from \$48 a year. N. Y. Telephone Co., 15 Dey, 111 W. 38th.

ONE OF THE WORLD'S COSTLIEST GROUPS OF BUILDINGS.  
TOWERING BUSINESS STRUCTURES IN NEW YORK'S INSURANCE DISTRICT, WORTH MORE THAN \$20,000,000.

# HYACINTHS

By Kate Milner Rabb

DOWN in southern Indiana, where the broad Ohio curves abruptly to form what is known as the Porket, in the low bottom land, its air heavy with miasma from the sluggish waters of Willow Pond Ditch, lies the little village of Eureka.

But to the eyes of Dick Maxey, prematurely bent and broken by unremitting toil over the barren hills of northern Kentucky, these huts scattered over fertile fields appeared a land of promise. Greek was a tongue unknown to him, but his enthusiastic exclamation of the name unwittingly gave its interpretation—"I have found it! I have found it!"

His enthusiasm was not to be wondered at. In the rich black soil corn and tobacco attained a wonderful growth, one acre producing more with less labor than did his entire rocky farm across the river. And his first joy was uncheckered by any knowledge of the treacherous floods that in a night creep up the "pond" from the river, sweeping away a season's labor and leaving with the "back water" a legacy of insidious malaria that saps the strength of the disappointed toiler and makes labor, even in this Eden, bear the primal curse as heavily as in the hills he had forsaken.

He soon learned it, yet lost not with the knowledge his elasticity and love of life. While his dark-browed neighbors pessimistically prophesied a freshet or a premature frost or an epidemic of hog cholera as a certain sequel to a year of unvaried prosperity, hope sprang perennial in Dick Maxey's breast. This crop failed, that was washed away, animals sickened and died, but he, Dick Maxey, "ovah heah," was still a little nearer things.

The Kentucky heritage, the few paternal acres from which he had vainly tried to wrest a living, lay back in Breckinridge County among rock-ribbed hills and deep, swift, quickly swollen creeks. When the fifteen miles of bridge paths—roads by courtesy only, for they were impassable by wagon—had been traversed to Hardinsburg he found nothing there save men like himself, who idled about the streets and talked drawlingly of country happenings. There was a saloon, but Dick had no taste for that kind of dissipation. In his soul a voice was ever calling him, had been calling from his boyhood. He could not know that it was a legacy, a curse, maybe, from ancestors of long ago (for poor, unlettered Dick was well descended), belles and cavaliers who laughed and were gay in London town and on Virginia plantations, and whose souls cried out against imprisonment in this barren spot. The years of guiding the plow up hill and down among stumps and stones, the round of dreary farm work performed in the most primitive fashion, had never silenced their voices, ever crying to him of "seem' things."

But how to see them without money? His dealings with the village stores consisted solely in the barter of farm products for necessary "store goods." The corn that came into his hands was always of the smallest denomination. Accumulation, even with the thrift of a miser—and this Dick had not—was impossible.

But "seem' things," when most unexpected, became a possibility. Dick had a cousin who may have heard voices, too. At any rate, he had managed, years ago, to escape from the hills, had studied medicine, and had settled in an Indiana county, not far away. Through him, Dick learned of the possibilities of bottom land, and with his help reached the little village of Eureka with his wife and baby, there, on a rented farm, to begin life anew.

It was slow, but the novelty of life among these Hoosiers, who were so different from his people, though only the river flowed between them; the flat fields, the muddy, sluggish, treacherous creeks, so different from the clear, swift streams to which he was accustomed; the neighborhood of the county seat and the good roads that made weekly visits to it a possibility—all combined to give engrossing interest to life. Then there was money—he handled it—real quarters, half-dollars, and dollars. As yet, he had none to lay by, but it at least passed through his fingers.

Joy transfigured his face as he rode home one afternoon in August, gilded like Midas by the setting sun, and joyful as Midas in the first possession of his gift, ere he learned its fatal con-

sequences. Leaping from the wagon he clucked to "he horse to find its own way to the barn, and in a voice trembling with excitement called to his wife:

"Jinny!"

Jinny, a rural Madonna, appeared in the doorway, the baby in her arms.

"Come heah, honey! Heah, Pansy! Come to pappy!"

Straightway two dimpled hands flew out, and with a crow of delight Pansy leaped into Dick's arms. In another minute the dimples were buried in the crubby blond beard and the little body was churning up and down to give pappy the hint that locomotion was more to be desired than petting.

Dick's prominent gray eyes became eloquent as they rested on the babe in his arms. Unknown to himself, as passionate a love for beauty filled the homely little man as e'er inspired an ancient Greek. He realized dimly sometimes as he gazed at the baby that this flower had blossomed into his barren life to gratify an ever before unsatisfied longing for beauty. Life among the rocky hills was not conducive to good looks, and Jinny was not beautiful, although he had first been attracted to her by a bright color and the dainty curve of her rounded cheek, a curve hinted at in Pansy's face, though yet concealed by baby plumpness. But Pansy was a baby to be carved in marble, and not a curve of the little body, not a fleck of gold in the hair, not a glance of the black-fringed, dark blue eyes was lost on the beauty-loving father.

"Come in now, honey," he said, coaxingly. "Pappy's got somethin' to tell Pansy's mammy. D'reckly I'll tote you up to the barn."

Pansy cuddled under his chin as he stepped indoors, her blue eyes eloquent of content.

"Jinny!" he cried, excitedly. "We're goin' to Millville to-morrow—you an' me an' Pansy. That's goin' to be a circus an' I've got the money in my pocket to take us in."

Jinny smiled. She had never seen a circus and no thought of the necessities for the coming winter that might be purchased with the silver dollar balanced on Dick's finger for Pansy to blink at, troubled her innocent soul. Jinny had never had the aunt's store of wisdom placed at her command; she was just another poor, foolish grasshopper.

That night Dick sat in the moonlight doorway with Pansy and told Jinny of the glories of the posters he

had seen that day, and of how lucky he was to get cash for his load of early potatoes.

"We can go right to Cousin Doc's," he said, excitedly, "an' put up the boss. More'n likely, ef we start early enough, we'll get thar in time to see the p'rade. Then we'll go back thar to dinneh, an' aft' dinneh—Pansy! Pansy!"

In the excess of his enthusiasm he seized the baby, flung her up and caught her in his outstretched arms. "We'll see the circus!"

As he talked on, Pansy crawled cautiously from one parent to the other. Now she carefully touched her mother's bare foot, now tagged at the hem of her homespun dress and chuckled at her achievement. Having won a smile as a reward, she crept back and pulled herself up to her father's shoulder, twisted her fingers in his beard, in his hair, and swung herself back and forth, crowing lustily.

"Neveh mind, honey, just wait tell you see the ol' elephant. Then I reckon you'll have somethin' to holler foh. You'll hold tight to ol' dad then, won't you?"

Pansy shivered as he caught her in his arms.

"Pansy cold?" Dick jumped to his feet, reproaching himself for his carelessness. "Night air hurt pappy's baby? Let's jump in bed, now, lambie!"

Jinny shivered, too, as she rose from her chair. "Peah's like I'm aguish to-night. Reckon I'd better be goin' to bed, too."

Early as they rose the next morning, the August sun already beat down pitilessly on the long stretches of unshaded dusty road, bordered on one side by the sparkling river, dotted with yellow sandbars, on the other by fields of tall corn or the tropical-like gray-green tobacco plant. Here and there an isolated group of tall pecan trees rose like giants from the lowlands, and they occasionally passed a bit of woodland whose sycamores, beeches, and walnut trees towered far above the undergrowth of persimmon, hazel, and pawpaw bushes.

"Hump yo'self, Bill!" Dick addressed his horse in the conversational tone of the tiller of the soil, to whom the animal is something more than a beast of burden. "Hump yo'self, ol' boy, or we'll be too late foh the p'rade."

"I'm tired to death!" Jinny leaned wearily back in one of the splint-bottomed chairs that served as wagon seats. "So's Pansy. I'm 'feard she's sick. She neveh slept this way afore."

Dick looked reverently at the baby face pressed against the mother's breast, but he protested stoutly.

"Sho, that's nothin'! She's just restin' up to get good an' ready foh the p'rade. Pansy's sharp, she is. Brace up, ol' gall! You're not sick, an' if you air, I don't know a better place in the country to go to than Cousin Doc's. He'll fix you an' Pansy up in no time. That's the beauty of goin' thar. An' aft' you've rested up a little an' had yo' dinneh, I reckon you an' Pansy'll feel right smart pearter than you do now."

Cousin Doc's wife, her face strongly marked with disgust and disapproval, met them in the dark hall, whose green oilcloth floor-covering and green and stone-colored wall paper gave an effect of refreshing coolness in contrast with the sunny street.

"Dick Maxey! Well, if this isn't just what I'd expect of you! I wouldn't be afraid to bet anything I own—if I was a betting character, that is—that you've dragged your wife and that baby up to town this hot day to spend your last dollar on the circus."

"You wouldn't lose yo' bet, Cousin Emmeline." Dick's manner was conciliatory; for the life of him, he couldn't help being afraid of her, but his eyes met hers squarely.

"And Pansy in her second summer, too; teething, of course," she continued, still frowning, for she resented Dick's free-and-easy Southern assumption of relationship. "Come in, Jinny! You look half dead. Put the baby down here, Dick. Dinner will be ready in a minute. Don't you stir a step till I call you."

Cousin Emmeline pressed Jinny back in her chair and hurried into the kitchen. In theory she was merciless to the people she classed as "trifling," in which category stood Dick; in practice there was no warmer heart,

"THERE HE HELD HER PATIENTLY, CROONING OLD AIRS, SONGS OF HIS BOYHOOD."

no more generous hand in the county, as any tramp or back-door beggar—to say nothing of the county's poor—could testify.

"You'll never lay up a cent in your life," she began as they sat down to dinner and she heaped the plates from the profusion on the board. "You'll end in the poor-house yet as a result of such extravagance. How do you expect ever to buy you a farm, or to clothe Pansy, or to lay up anything for old age, if you do like this—always running about, gratifying every foolish whim?"

Dick ate his dinner in silence, his ears deaf to Cousin Emmeline's sharp words, which might otherwise have embittered the dinner of stalled ox. He never tried to defend himself. Though Dick had never read the Koran he felt, like Mohammed, that if he had but two loaves of bread he would sell one and buy hyacinths with which to nourish his soul. He knew, as instinctively, that any such emotion would be perfectly incomprehensible to Emmeline, so he made no attempt to argue with her. To-day, moreover, he was abstracted; happy in the thought of dreams realized, of the voices that would this day be silenced.

"Let's hurry, honey," he said, as they pushed back from the table. "You see, this is a big thing for us," he explained to Cousin Doc. "We ain't none of us ever saw a circus afore, an' we want to see the whole thing. I reckon it's an ol' story to you all."

"I went to the circus once when a child," replied Emmeline stiffly. "I haven't wanted to waste my money that way again. For that matter, if I had wanted to go a second time I should have considered it a wicked extravagance. The parade went by here this morning, but I couldn't leave my bread to watch it. I reckon you'd have let it burn up if it had been you, Dick. I'll venture you've left more than one thing undone on your place to-day that will be spoilt before to-morrow."

More pin-pricks, these, quickly forgotten in the wonders revealed on their entrance to the circus tent. Pansy, more languid than usual, lay against her father's breast while he pointed out the long-necked giraffe and the great hippopotamus, and wondered over the sea-lions and laughed at the monkeys. Tenderly Dick held her on his knee while they watched the lovely ladies and agile gentlemen canter around the ring, bareback, leaping through hoops and performing wonderful feats of horsemanship, or gazed breathless at their performance on the high-hung trapeze. When the clown uttered his wonderful witticisms Dick paused in his nudging of Jinny long enough to whisper, "Next time she comes she'll be old enough to understand, too, and laugh at the ol' feller!"

Regretfully they rose at the close of the performance. "Can't stay foh the concert this time, ol' gal," Dick confided to Pansy. "Next time we will, though. Pappy's baby had a good time?"

Pansy smiled languidly and turned her face, with half-closed eyes, against his breast. So she lay motionless,

the thick brown hair in wet clusters about her face, as they walked home, uttering no sound until he attempted to lay her on the sofa in Cousin Doc's sitting-room.

"Neveh mind, honey! Don't cry! Pappy'll nurse his Pansy," he said, soothingly, in response to her fretful wail. "Pappy'll hold you, honey; pappy's not tired."

He hummed, as he rocked, the air that the clown had sung to the equestrienne that afternoon—a handsome lady she, on a beautiful dapple-gray steed, her up-to-date riding-habit strange to Dick, accustomed to the long, full, black calico riding skirts of the hills:

"Whoa, Emma!"

"You put me in such a dilemma!"

"You all go on an' eat yo' suppeh, Cousin Emmeline," he whispered when summoned to the dining-room. "I don't care foh nothin' any way, an' I'm not goin' to put heb down an' make heb cry. You can leave me out a piece of hockeak if you want to, an' afteh while, when she's soundeh asleep an' I can put heb down, I'll eat. Po' little thing, she's all woh out seein' so much that was strange to heb."

Cousin Doc was late that evening and the others were in the kitchen when he came in upon Dick, still rocking Pansy.

"What's the matteh with that child?" he asked. "What you huggin' her up to you that way this hot a night?" Cousin Doc's tone was as rough as his touch was tender, and he took the sleeping baby so gently that she did not seem conscious of his examination of her half-shut eyes, her clammy forehead, her disturbed breathing.

"Go out and tell Emmeline to put on the tea-kettle," he said, roughly. "And bring me a glass of water and a spoon and get that medicine case out of my coat pocket on the back of that chair, there. Makkase, now!"

Emmeline, just entering the room, paused long enough before returning to the kitchen to aim another shot at Dick.

"I didn't expect anything else after that long, hot ride to-day. Any fool ought to 'a' known better than to bring out a sickly wife and a teething baby such weather as this. I've just got Jinny to bed and she's so sick that I didn't say anything to her about Pansy. Dick, you go up stairs and stay with Jinny and I'll help Doc with the baby."

Dick took one step forward and looked back beseechingly. Doc caught the glance. "Go on yourself, Emmeline," he said, gruffly. "Dick knows a heap more about babies than you do. Put on that tea-kettle. I'll be up to see Jinny in a few minutes."

Lights turned in Doc's rooms through the hot August night, and patient Doc and efficient Emmeline, whose hands ably seconded his, labored alternately with Jinny and Pansy. Since Dick would not give up the baby they had put a pillow on his knees, and there he held her patiently, changing the cloths on her head, fanning her, crooning old airs, half-forgotten negro melodies, revival hymns, songs of his boyhood. His sorrow face was worn

and weary, his prominent gray eyes never left the baby's face except to scan Doc's when he entered or left the room.

The child's breathing became more and more labored; the tiny hands fell relaxed on the pillow, from which Dick lifted them as he had done time and again to admire and marvel over their tininess and delicate perfection. The long, curling lashes lay black against the white cheeks, the little mouth was drawn, the lips colorless.

Slowly, as he watched her, the gray dawn, ghastly in its conflict with the yellow lamplight, crept into the room, in which the shades had not been drawn. In the fir-trees outside the birds were twittering; the noises of the street began to make themselves heard, and down the river a steamboat noisily announced its approach to the lower landing. At the unwonted noise, the blue eyes opened and sought the familiar face.

"Pappy!" the child cried, feebly.

"Pansy! Pappy's darling want a drink? Go to sleep, baby! Pappy take care of you! Go by-by, Pansy!"

But not until Cousin Doc told him a little later, interrupting the crooning of his cradle-song by a touch on his shoulder, did Dick realize that his baby had gone by-by forever, that she would never again gladden his eyes with her baby loveliness, never again greet his ears with her piping cry, sweeter to his ear than any other human sound—a cry that would ring in his heart forever:

"Pappy! Pappy!"

Slowly and reverently, as though knowing his burden, old Bill drew the wagon over the dusty road under the moonlight that illuminated the tall ranks of corn and the dew-sprinkled tobacco plants and touched the waves of the dull gray river into points of silver. Jinny, pale and feeble, wrapped carefully in Cousin Emmeline's shawl, leaned against Dick, whose arm encircled her. At their feet rested the little white coffin provided by generous Cousin Doc. Pansy must rest on the farm, where they could see her grave every day.

"Don't cry no moh, honey. Yo' weak now. Soon's yo' get strongeh yo'll feel better 'bout it. Po' baby! Well, she didn't suffeh long, Jinny, an' I neveh let heb out of my arms, not foh a minute. An' she saw the circus, Jinny; don't you remembere how she enjoyed it all? We can't tell what's foh the best. Cheeh up, Jinny. Lean on me an' rest yo'self. Law, no, honey, yo' not heavy. We're nearly thar now."

On and on, past field and woodland, under the fast sinking moon the patient horse plodded, while Jinny, refusing comfort, alternately shivered and wept. She was weak, she was ill, and her arms were empty.

Dick's patient face was colorless and haggard, its lines of care unconcealed by the scanty beard; but his honest eyes wore still their look of hope, even of joy. He had sold his boat and had had his hyacinths, and, in spite of his loss, their perfume had gladdened his soul.

## Preserving the Buffalo from Extinction

JAMES PHILIP, of Fort Pierre, S. D., has the distinction of owning a magnificent herd of sixty pure-breed buffaloes and seventy part-bred animals. This herd of one hundred and thirty splendid bisons is, without exception, the largest and finest in the world. Until a short time ago Mr. Philip's herd of pure breeds had never been corralled or known the meaning of captivity. They are consequently far superior to the buffaloes bred in bondage, for the monarch of the plains seems to degenerate as soon as he is kept in restricted limits.

Some of Mr. Philip's famous herd are over six feet high and weigh over two thousand pounds. The pasture in which these animals are now kept is twenty-four hundred acres in extent; it is the rough land that the buffalo likes, and is plentifully supplied with buffalo grass, upon which the bison thrives. When it is known that eight hundred liberally counts the number of buffaloes in the United States to-day, it will be readily seen that Mr. Philip's herd of one hundred and thirty fine specimens of that beast once so numerous, now nearly extinct, is a most important collection.

In 1800 these monarchs of the plains inhabited a space equal to one-third of the entire continent, and were found from Virginia to Oregon and from Mexico to the Northwest Territory and the Dominion of Canada. Now they are found only in the Northwestern States, and even there they do not roam about in countless droves as in the early days, but are herded together in private collections. Fifty years ago a good healthy buffalo would frequently be sold as low as \$5—\$20 being considered a very fair price for one to bring. To-day a live buffalo is worth as much as \$800 and it is doubtful if one could be purchased even at that price. Mr. Philip would not part with one of his herd at any figure—it is his aim to increase rather than to take from his stock.

MR. PHILIP'S HERD OF BUFFALO GRAZING ON ONE OF THE ROUGH BLUFFS WHICH LINE THE SHORES OF THE MISSOURI RIVER.

BUFFALO AT PASTURE IN THE ROUGH LAND IN WHICH THEY DELIGHT.

Mr. Philip secured his first pure-breeds from Peter Dupree, whose father was a Frenchman, but whose mother was a Sioux Indian. Dupree secured his buffaloes from the Indians, and realizing that this noble animal was fast being exterminated, he determined to establish a buffalo farm and do all that he could to prevent the bison from becoming extinct. Mr. Philip secured several fine animals from Dupree by promising to assist him in the good work of protecting the buffalo. From five head he has increased his stock to one hundred and thirty fine animals, all in a perfect state of health, with skins which are worth a fortune.

Mr. Philip says that the bisons raised in captivity fall far short of those found roaming wild over the plains, therefore he gives his animals as much freedom as possible, and as yet they have not degenerated in any way. The most striking difference between the captive and the free buffalo is seen in the body between the hips and the shoulders. The animals raised in captivity display a shortness of body and a lack of muscle which but poorly resemble the splendid proportions of their ancestors. Mr. Philip has, however, only specimens of the finest stock, and as the twenty-four hundred acres gives them plenty of room in which to indulge in an occasional stampede and take the exercise necessary to their full development, the one hundred and thirty beasts show very few signs of being held in captivity.

Mr. Philip thinks that the United States government should take steps to prevent the entire extermination of the buffalo, and as he owns nearly seven per cent, of the whole number to be found in the States his argument should have some weight.

# Business Men and Municipal Misgovernment

VIEWS OF DR. WASHINGTON GLADDEN, WHO WILL HELP DRAFT A CODE FOR GOVERNMENT OF OHIO CITIES

WASHINGTON GLADDEN,  
Eminent divine and publicist.

**A**FTER TWO years of intimate association with the city government of Columbus, Ohio, Dr. Washington Gladden has reached the conclusion that the primary defect of the municipal system of the country lies in the character of the men who are intrusted with the performance of important public duties. Weakness and incapacity, he says, are more frequently responsible for the mismanagement of civic affairs than viciousness and downright dishonesty. The absence of clean, capable men in the executive and legislative offices of American cities he ascribes to the rapid pace of the commercial and industrial worlds, and the reluctance of the business men and manufacturers, whose experience would insure judicious and economical administration, to assume their share of the public duties. The election of incompetents to important offices, the waste of public funds, the disregard of law and order, and the host of other ills inflicted upon urban populations is the result.

Dr. Gladden concedes that men of ordinary intelligence might be trained into fairly good officers, were it not that the personnel of the superior and subordinate forces of city employes is changed with each election, preventing them from holding their positions a sufficient length of time to become familiar with their duties or to be of any real service to the people. The remedy, he says, lies with the business men, and until they realize the importance of taking an active interest in public affairs and are willing to accept their portion of the annoyances and responsibilities, there is little prospect of a betterment of current conditions.

Dr. Gladden was elected as an independent member of the Columbus, Ohio, city council from one of the strongest Republican wards of the city. His friends and neighbors pleaded with him to enter the contest against the regular Republican nominee, in order that the conditions that prevailed in the official life of the city at that time might be corrected. They asked him to accept the office in the interest of the city's entire population. It was a distinct sacrifice of valuable time upon Dr. Gladden's part, but he consented and was elected by a very large plurality. When he entered the council he found the executive and legislative engaged in petty and unceasing warfare. Everything one proposed the other resisted, and government, so far as public improvements and the preservation of law and order were concerned, was at a standstill. He immediately formulated a policy of conciliation and conservatism designed to bring the conflicting interests into harmonious relations. Both received his suggestions with respectful attention—and then resumed fighting where they left off.

After a few weeks he found that his task was hopeless. The preponderance of ignorance and viciousness could not be overcome single-handed, and thereafter his voice was seldom heard in the council chamber. For nearly eighteen months he sat quietly in his seat, voicing his commendation or disapproval of pending legislation only by his vote, refraining from argument, for the reason that it was useless. When the councilmanic nominations were being made again his constituents asked him to again become

a candidate, and he refused, because it would be a waste of time that could be devoted to better purpose in his literary pursuits. Dr. Gladden's official experiences seem to demonstrate the need for general and intelligent co-operation among the better element of a municipality, if the governmental plane is to be elevated, and the utter futility of any man undertaking the task alone and unaided. In a statement to the public, giving his reasons for declining to again serve in the council, Dr. Gladden said:

To refuse to do this work because it is disagreeable, because it exposes me to unenviable environments, would be a cowardly reason. The man who insists that he will do no public service which is not agreeable, that he will not expose himself to rude or undesirable association or to malevolent criticism, is a very poor sort of a patriot. I cannot, indeed, complain of the treatment I have received in the council. I have learned much which I am glad to know respecting the details of our city housekeeping. It is a kind of work in which any intelligent man will find interest and profit. I am conscious that I could do the city better service in the next two years than I have done in the last two, but the burden cannot be borne by me any longer at present without endangering my health. That any good man should be willing to sacrifice his life for good city government I do not deny; indeed, I believe that, if I could hope to secure a thoroughly good government for Columbus by making that sacrifice, it would cost me no more of an effort to make it than it has cost hundreds of thousands of soldiers to march into the jaws of death.

But in order that such a sacrifice may have any value under the present circumstances, two conditions are necessary. The first is that there shall be some prevalence of the same spirit throughout the community—a general willingness to take up the burdens of municipal responsibility. It would not be a heroic act for a single volunteer to start out from the lines where his comrades are strongly entrenched, sleeping on their arms, and make a charge alone upon the stronghold of the enemy. It would be simple foolhardiness. If the men of character and intelligence and standing in the different wards in this city were bestirring themselves to secure good government, volunteering to take the positions of responsibility on the school board and in the council—resolute and determined to bring about better conditions—I think I should hesitate about laying down my burden, even though the risk of bearing it for two years more were to me very serious.

But I see no present indication of that kind; my comrades are nearly all as soundly asleep in the breastworks as they have been, so, these many years—sleeping a sleep from which, I think, nothing but the thunder of the Judgment Day will waken them; and if one of them now and then rolls over and rubs his eyes and exhorts me to go ahead and make my charge upon the battery, I am not perhaps greatly moved by the exhortation and do not feel quite clear that in such an enterprise I should not be throwing away my life. I am sometimes asked if I have not learned much in the council. One thing I have learned to hate, with a perfect hatred—to loathe and abominate with all the energy of which my nature is capable—the thing which is called "party politics," in all its connections with the city government. It makes every man who becomes its devotee an unconscious traitor. He is always ready to sacrifice the interests of the city for the sake of putting his adversaries in a hole; he would rather that the city should take detriment than that his political enemies should receive any credit. Not until the people have learned to stamp out this deadly infection shall we have good government in our city. For that day I shall wait in hope.

Dr. Gladden gave his views upon the present evils of the municipal system the other day during the course of a little chat in his comfortable study in the First Congregational Church, of which he has been pastor for many years. He said: "The trouble with our city governments is largely due to the incapacity and the inexperience of the men in charge of them. There are rascals in some of

them, as the recent exposures have shown us, but weakness more than wickedness is the cause of our municipal miseries. Even where corporations have made corrupt use of city officials, it has often been by playing upon their weakness more than by bribery. And if the figures could be published I suspect they would show that the average venal councilman is bought at a very low price. This is truly an indication of the quality of the men in these city offices. So far as I have been able to learn, the intellectual qualifications of these men are limited and their business experience is narrow. There are always honorable exceptions, but, as a rule, the men whom we intrust with the great affairs of our cities are men who could not hold high or responsible positions in any private business.

"The business of any considerable city—even of a city of fifty or one hundred thousand inhabitants—is business of serious importance. The water supply, the sewerage, the fire protection, perhaps levees and viaducts, all these and many other interests must be provided for, and they call for large knowledge, keen business sense, and firm integrity. If the city is providing these things for itself it needs expert and capable men to manage them. If the city is buying these services of corporations it needs a still higher class of men to deal with the corporations. When people say we cannot have public ownership so long as we have the kind of men we are now electing in the city offices, they do not seem to reflect that this is the kind of men whom we are now employing to make bargains with sharp and powerful and not always scrupulous managers of great companies. My own opinion is that there are about two chances for a weak or rascally public official to betray the city in dealing with private companies where there would be one if the city were managing its own business. But whether these services are managed for or by the city, the city officials ought to be men of large capacity and high character, and our bad municipal government is largely due to the fact that their capacity is generally small and their character low.

"Some, even, of these would learn something, after a while, if we gave them a chance, and would be worth something to the city after a few years of service. But our principle of rotation in office—our great American principle—generally forbids the acquisition of experience by city officials. As soon as a man has had a chance to learn a little about his duties we turn him out incontinently and put a green hand in his place. The majority of men in the municipal service throughout the country are men who have never learned and who never will have a chance to learn the business that they are trying to do. And yet we wonder why it is we have bad government in our cities.

"What is the reason why such people are elected to the city offices? The principal reason is that those who ought to hold these offices refuse to take them. Our American men are too busy to perform their civic duties. The business is therefore largely left to those who are not fit for anything else. Hence the waste of funds, the enormous debts, the growth of lawlessness, the spoiling of the people by means of plundering franchises. What it is all coming to I don't know; but I suspect that the day will arrive when our busy Americans will wake up to the fact that one important part of their business is the government of their cities, and that in neglecting that part of their business they have brought down upon their own heads a terrible retribution." \*

J. S. MOSSGROVE.

\* Dr. Gladden has been asked by Governor Nash, of Ohio, to aid in drafting a new code for the government of Ohio cities. This code has been made necessary by a decision of the State Supreme Court declaring all forms of special municipal administration unconstitutional. Dr. Gladden is in favor of permitting each city to choose its own form of charter.

## The Clothes of Athletics.

**I**T IS GRATIFYING to note the many indications of a revival of interest in outdoor sports and amusements. As to the causes of this revival, one need, perhaps, look no further than the better health of this generation, and the consequent greater physical activity. The wider education has, however, developed a certain impatience with the monotony of daily toil; and the uneducated, in their inability to satisfy the craving for diversion with literature and art, turn naturally to sports.

But whatever the cause, there will be hope that the new interest in athletics may prove a salutary balance to the irksomeness of continuous toil. What we wish to point out, however, is not the benefit of outdoor sports in promoting the general health, but the contribution made by the clothes of athletics to the brightness and cheerfulness of life. For it is impossible any longer to separate athletics from clothes of a picturesque and flamboyant type. No outdoor game can now be well played unless the players are attired in garments which approach in clamorosity those denounced by Isaiah on the daughters of Zion. Nobody engages in any of the many games of ball, for example, without a sweater, a red coat with a green collar, knee-breeches, and tan shoes, any more than a true knight of Pythias enters his lodge-room without a badge and an apron.

There are, of course, a good many people who deride this phase of athletics, who talk, as Latimer did, about the wickedness and folly of superfluous clothes. They assert that undue attention to dress is an indication of effeminacy, and that it destroys the true perspective of life. But these cynics miss the real significance of the clothes of athletics, the real motives which prompt their wearing. These are to intensify the sense of devotion,

for the time, to outdoor sports and so to separate the minds of both the wearer and onlooker from purely business affairs, and to brighten the world. It is not a passion for vociferous clothes which moves the wearer, but a subtle recognition of the varying engagements of life, and of one's interest in them. The sweater is thus an emblem of devotion to physical activities, and of separation from intellectual pursuits.

No doubt the habitual wearing of knee-breeches and tan shoes tends to confirm the wearers in this separateness, and to keep them up, or down, to their ideals. But no reflecting mind can find fault with a perception of the fitness of things so delicate as to indicate diminution of intellectual energy by a change of dress. On the other hand, as contributing color and variety to the human scenery, there will be gratitude to those who, by a mere display of clothes, do so much to lighten a dull and colorless world.

Of course there is nothing in vivid colors to make men virtuous. But without agreeing with Teufelsdröckh, who asserted that all society is founded on clothes, it will be admitted that clothes do have a great influence on morals and manners. We all recall the story of the late Mr. Warner, of a lady addicted to simplicity and inexpensiveness, who was induced to buy a red hat, and thereupon bloomed out like Solomon in all his glory. There is no reason why the clothes of athletics should not be equally effective in contributing to the brightness and cheerfulness of every-day existence. At any rate, the self-sacrifice of those who wear these clothes, and so cultivate the taste of the community for warmth and color, is one of the most admirable things in life. As promising to lend something of a holiday appearance to this gray and monotonous earth, the revival of interest in athletics is thus to be welcomed.

## Sweet Breath.

WHEN COFFEE IS LEFT OFF.

A TEST was made to find if just the leaving off of coffee alone would produce an equal condition of health as when coffee is left off and Postum Food Coffee used in its place.

A man from Clinton, Wis., made the experiment. He says: "About a year ago I left off drinking coffee and tea and began the use of Postum. For several years previous my system had been in wretched condition. I always had a thickly furred, bilious tongue and foul breath, often accompanied with severe headaches. I was troubled all the time with chronic constipation, so that I was morose in disposition and almost discouraged.

"At the end of the first week after making the change from coffee to Postum I witnessed a marvelous change in myself. My once coated tongue cleared off, my appetite increased, breath became sweet, and the headaches ceased entirely. One thing I wish to state emphatically, you have in Postum a virgin remedy for constipation, for I certainly had about the worst case ever known among mortals and I am completely cured of it. I feel in every way like a new person.

"During the last summer I concluded that I would experiment to see if the Postum kept me in good shape or whether I had gotten well from just leaving off coffee. So I quit Postum for quite a time and drank cocoa and water. I found out before two weeks were past that something was wrong and I began to get costive as of old. It was evident the liver was not working properly, so I became convinced it was not the avoidance of coffee alone that cured me, but the great value came from the regular use of Postum."

## In the Realm of Letters

By La Salle A. Maynard

WE TREMBLE to think what would have been the fate of the excellent gentlemen who are responsible for the two modernized and up-to-date versions of the Bible now before the public, had they lived a few centuries ago and dared to do the thing that they have done now. The rack and the stake would surely have been inadequate to inflict the punishment which the zealous defenders of the Faith in that day would have regarded as their due. As it is in this much enlightened age, they will not escape scot free, for we can easily imagine what a "roast" these brethren will get in the columns of certain ultra-sensitive religious journals, when the editors have recovered from their first shock of pained surprise, and how all the Bonapartes Furiosos of the "sun-do-move" order will rage when some one tells them about it, and fly into a frenzied defense of the old text, commas and all. But in the name of calm reason and pure common sense, why not these new versions done in the English of our own day? Surely no one can doubt the devoutness and sincere purpose of the author of "The New American Bible," published by Mr. Thomas Whitaker, nor of the committee of thirty eminent theologians and Bible students who have produced the finer and more scholarly "Twentieth Century New Testament," issued by the Fleming H. Revell Company. The imprint of these houses is a sufficient guarantee in itself that no heretical or dangerous innovations have been made in these versions. And as for their warrant, the committee of thirty at least have just as firm ground to stand upon as the select body of men who gave us the King James version, or that of 1881, to say nothing of the obvious advantages of additional years of Biblical study and research to help them out in their renderings and interpretations. It must be equally clear to an unprejudiced mind that to youthful readers and other beginners in Bible study it would be an advantage to have a text stripped of the archaisms, the obsolete phraseology, and the long, involved sentences which make many passages of both the Old and the New Testaments in the older versions as difficult of understanding to the lay mind as Browning's "Sordello." All sincere Bible students would probably admit this, except, of course, the extreme literalists, the worshipers of periods and punctuation points, who would make the salvation of the race dependent on a Greek subjunctive. Of such no account need be made.

In a single comparison of the two versions—the revision of 1881 and this modernized form—let us take so familiar a passage as the opening verses of the second chapter of Ephesians. In the older version the first nine of these verses are run together in one long, involved, highly complex sentence, which only an expert grammarian could construe with success. In the Revell edition the same passage is broken up into ten sentences—an obvious advantage, one might think, to go no further, in the direction of clearness and good form. And as for the language employed, let us see. Here is the older rendering: "And you did be quicken, when ye were dead through your trespasses and sins, wherein aforetime ye walked according to the course of this world, according to the prince of the power of the air, of the spirit that now worketh in the sons of disobedience; among whom we also all once lived in the lusts of our flesh doing the desires of the flesh and of the mind."

In the Revell edition we have this: "Once you were, so to speak, dead because of your offenses and sins. For at one time you lived in sin, after the way of the world, and in subjection to the rulers of the powers of the air—the spirit who is now at work among the disobedient. It was among such people we all at once lived, indulging the craving of our earthly nature, and carrying out the desires prompted by it and by our own thoughts."

We fail to detect in this second rendering any departure from the essential meaning of the first, while there is a distinct gain, it seems to us, on the side of perspicuity and understandableness. A fair and practical test of the modernized form may be made by reading a chapter from it to a group of young people and noting the effect. If this effect is not an eagerness of attention and a freshness of interest rarely secured by reading the old text, the result will be different from the experiences of many who have already made this experiment.

It is best, no doubt, to be charitable toward all objectors to new versions of the Bible, since few of us realize how deep-rooted and tenacious are our prejudices and preconceptions, fostered by long habit and inherited usage, until they are disturbed by some innovation, however wise and kindly meant. It may be imagined, for example, what would follow if some reformer or iconoclast should dare to propose a transposition of the characters of our beloved alphabet, making the series begin with "g," perhaps, instead of "a." Even if such a

change were justified by a whole library of learned argument, it would not avail against the howl of indignant protest that would go up from the whole English-speaking world. And when these same prejudices and preconceptions are rooted in the soil of superstition or religious belief, you have a growth that often defies the stoutest logic and stands stiff and stubborn against the soundest and most enlightened argument. It is for reasons like these, among others, that the new version of our English Bible completed in 1884, and admittedly conservative to an extreme degree, has made such slow progress in popular use and is still regarded with suspicion and distrust by a vast number of Christian believers. Popular aversion to any material alteration in the King James text is due, in part, to certain prejudices which we are all bound to respect, because we all cherish them in some measure. Such are those arising from the tender and endearing associations wrapped up in the phrase, "my mother's Bible," and also from lifelong use and familiarity.

And a much stronger reason than these purely sentimental ones for the retention of the King James version within convenient reach lies in the fact that it undoubtedly holds us fast, as nothing else can do, to the terse, simple, and vigorous speech of our Anglo-Saxon forefathers and thus keeps our language from going over into pure Latinism, or something worse. It is Ruskin, it will be remembered, who, in his "Præterita," ascribes his acquirement of a lofty and noble style to his mother's insistence upon his learning by heart certain passages in the King James Bible, such as the forty-fourth Psalm. And other great masters of our English tongue have testified to the same formative influence. In fact, the most progressive of the new theologians and modern Biblical scholars and revisers will hardly deny that certain parts of the old version, such as the twenty-third Psalm and the Beatitudes, are quite beyond improvement, or the need of it, in a literary sense. One might better try to revise Gray's "Elegy," or a sonnet of Keats, with a view to improvement, than to give a rendering of "The Lord is my shepherd" sweeter or more beautiful than the old form, loved and cherished by so many generations of Christian believers. It is a flawless gem as it stands, a lily in the garden of language, to whose dainty loveliness no word-artist, however skilled, can add a touch that will not mar and defile.

WE HAVE known Mr. Henry E. Rood for years as a clever all-around writer and magazinist, with special remembrance of a brilliant stroke of work which he once performed in investigating and writing up the condition of the coal-mining population of Pennsylvania. It was made evident at that time that Mr. Rood had the eye to see and the power to describe the tragic, the picturesque, and the pathetic phases of life, far beyond the ordinary. We are not surprised, therefore, to find his name before us now as the author of a novel in which these elements, and others, enter. For a first novel, Mr. Rood's "Hardwicke" (Harpers) is certainly promising and worthy of special commendation. In style, plot, and literary workmanship generally it betrays a high degree of skill and an intuitive and thorough knowledge of the requirements of literary art. While the work of a novice in fiction, it has the grace, the reserve, the finished touch of an experienced hand. The scene of "Hardwicke" is in a little country village not far from New York. The plot is simple, the characters few. Chief among the latter are the village clergyman, the officers of his church, several women of the congregation, and the daughter of a church elder. The interest centres around the manner and method of the clergyman, who is a Presbyterian of the new and advanced school and a believer in the higher criticism and institutional church work, and the opposition which these methods and views arouse in the narrow and bigoted circle in which the preacher's lot is temporarily cast. The story has a distinct purpose, which, however, is not so obtrusive as to detract from the lighter interest and entertainment of the narrative as it concerns itself with the petty intrigues of the preacher's enemies, or the course of his love for the elder's daughter. The purpose is to show how wide and deep the variance is in some quarters, even of our own enlightened land, between Christianity as it is now held by broad-minded and thoughtful men, and the form of Christian faith still adhered to and insisted upon by a large class of believers: the former a joyous, progressive, liberal, expectant faith, eagerly looking for and gladly welcoming new light from any quarter; the latter gloomy, reactionary, literal, fast-bound to old forms, types, and interpretations chiefly because they are old, and rejecting all new thought as an emanation of the evil one himself. These differences and antagonisms are brought into clear and significant relief in the course of the life and work of the preacher of

"Hardwicke." They give the story a special interest for a large class of readers at the present time, notable, among other things, as a day of unrest and advanced thought in the sphere of religious belief.

FOR A VIEW of the late Boer war from the standpoint of an Irish Nationalist and a predestined Boer sympathizer, nothing better has been written, or probably ever will be written, than Michael Davitt's "The Boer Fight for Freedom" (Funk & Wagnalls). Of course no one will look for soberness, impartiality, or even scrupulous accuracy in an account of this conflict written by an inveterate, bitter, and irreconcilable enemy of England and all things English, such as Mr. Davitt is, but, knowing the man, one may expect a narrative that shall be picturesque, to say the least, intensely graphic, and entertaining to a high degree. And this is the character of Mr. Davitt's volume. It is based in part on personal knowledge and observation, the author resigning his membership in the British House of Commons as "a personal and political protest against a war which I believe to be the greatest infamy of the nineteenth century," and afterward going to the Transvaal to see and learn more about "the little nation against whose liberty and land this crime had been planned and executed." Therefore we have some six hundred closely printed pages crowded with lively and exciting details of battles, skirmishes, and guerrilla fights, in which the emphasis is invariably laid upon the brave, manly, and chivalrous character of the Boers as compared with the cruel, villainous, and often dastardly conduct of their enemies. The clearly evident purpose of the work is, in brief, to support the author's contention that the English are a brutal, greedy, and rapacious set of rascals always and everywhere, for the latest proof of which ride this war against "a struggling handful of noble freemen." To this end every circumstance and detail of the conflict as it proceeds through these pages are studiously brought to bear. The reader who is sufficiently unprejudiced and disinterested not to care particularly about these exaggerations and the violent partisanship of the book will find it mightily diverting. All readers, whether prejudiced or not, can enjoy the photographic illustrations, of which there are many, most of them "taken on the spot."

DR. ARTHUR H. SMITH, whose recent two-volume work, "China in Convulsion" (Revell Company), will undoubtedly rank as the authority on the recent Boxer outbreak, its origin and results, is a man of remarkable traits and a most interesting personal history, a characterization which applies also to his wife, who has been his constant companion and co-laborer for many years. They went to China over thirty years ago under the auspices of the American Board of Foreign Missions, and located at once in a village in the remote interior, far away from other missionaries, that they might get nearer to the common people and study them at close range in their homes and every-day occupations. How well they succeeded in winning the love and confidence of the people may be judged by the fact that they soon became known among them as Ming Hsien Sheng and Ming Tai Tai, which, being interpreted, are Teacher and Lady Bright. The "Fire Wheel Cart" is another expressive name they have given the doctor, so energetic are his movements, while they can bear testimony to his knowledge only by asserting that "he has a stomach full of their language." During the siege of Peking, in 1899, Dr. Smith was as a pillar of hope on which his fellow prisoners and associates leaned during the dark and dreadful days before rescue came. His intimate knowledge of the country and the people, their methods and characteristics, stood him and his companions in good stead during a period which tried all hearts. Dr. Smith and President W. A. P. Martin, of the Chinese Imperial University, served as watchmen at the north gate of the legation, and by their vigilance and resourcefulness helped greatly to relieve the situation of its perils.

JOHN LUTHER LONG, whose first novel, "Naughty Nan," was recently issued by The Century Company, is the author of a number of remarkably successful short stories, one of which, "Madame Butterfly," has been a stage success for more than a year. It is understood that an opera based on the same tale is being written by the Italian composer, Giacomo Puccini, whom Verdi called "the most promising of his successors." Mr. Long, who is a young Philadelphia lawyer, has written in "Naughty Nan" an American love-story which is as powerful in its way as was his Japanese story, "Madame Butterfly."

CLEAR complexion indicates pure blood—result from use of Abbott's, the Original Angostura Bitters.

QUEEN ALEXANDRA, THE CENTRE OF ATTRACTION AT THE BAZAAR.

IMPERIAL CORONATION BAZAAR, LONDON'S GREATEST SOCIAL EVENT—BEAUTIFUL WOMEN OF TITLE AND POSITION PROMINENT AS PATRONS AND STALL-HOLDERS.

### American Women Grace London's Fair.

THE REMARKABLE gift which so many American women possess for organizing and making successes of public functions of any sort has been put to the test in London during the coronation period, with results that surprised and delighted society in the English capital. The Coronation Bazaar, which was opened on July 10th and which lasted for several days, was the largest undertaking of its sort ever set on foot in England. It was held for the benefit of the hospital for sick children in Great Ormond Street, in which institution the King and Queen are deeply interested. The fair was organized chiefly through the efforts of Mrs. Adair, Mrs. Choate, wife of the American minister, and other prominent American women, and they were also active in its management. The bazaar was held in a structure covering 150,000 square feet in the Botanical Gardens, Regent's Park. More than 5,000 tickets at a guinea each were sold in advance, and the affair was opened in semi-state by Queen Alexandra in the presence of a large assemblage of notabilities.

After the formal opening of the bazaar the Queen inspected the stalls, which numbered nearly forty. At the "American Court" Mrs. Choate and Mrs. Whitelaw Reid accompanied the Queen on the round of inspection. This court included eight magnificent stalls presided over by American women, whose names and the articles they offered for sale were as follows: Consuelo, Duchess of Marlborough, embroideries and American books; Mrs. Bradley-Martin, American preserved fruits; Mrs. Eaton, candies; Mrs. Ronalds, the American bar; the Countess of Orford and Mrs. Ralph Vivian, parasols and fans; Cora, Countess of Strafford, old silver, and Mrs. Arthur Paget, jewelry.

Mrs. Paget's stock in trade would have done credit to a large wholesale house, for it was valued at \$15,000,000. Some splendid jewels had been loaned simply for exhibition, especially by Mr. J. Pierpont Morgan. For the

De Beers 207-carat diamond, seen at the Buffalo exposition, and the Great Southern Cross pearl, \$50,000 each was asked. Mrs. Choate, Mrs. Reid, and the women of the American embassies were in charge of the Ambassadors' stall, where were displayed works of art and fancy articles. The Duchess of Marlborough had in her stall £300 worth of china, donated by Emperor William. Among the other stall-holders were the Duchess of Leeds, the Duchess of Sutherland, the Duchess of Somerset, the Duchess of Wellington, the Duchess of Westminster, Princess Alexis Dolgorouki, and Princess Henry of Pless. The Canadian section was presided over by Lady Strathcona, wife of the Canadian High Commissioner, and Lady MacDonald. With such an array of social leaders in its support the bazaar was handsomely patronized and the financial returns were very large.

### Do Tobacco and Cheese Cause Cancer?

OF ALL the ills that flesh is heir to there is none more justly dreaded than cancer, a painful and lingering disease for which no adequate remedy has yet been found. It will be remembered that in an address before a medical congress a year or so ago, King Edward of England expressed the hope that a diligent effort would be made to discover some means of checking this dreadful malady. Recent investigations point to the conclusion that one of the causes of cancer is improper food and drink. That cancers of the lips and mouth are caused by excessive smoking is now a fact established by the case of General Grant and others, and it has been intimated that cancer microbes have been found in certain vile-smelling foreign cheeses for which some fashionable people profess to have a great liking. So far as the malady is traceable to causes like these the remedy to be applied is simple and easy, viz., to smoke moderately, if at all, and to let all mouldy and decayed articles of food alone, no matter if gourmets pretend to like them.

### Granny Did It.

KNEW THE FOOD THAT FURNISHED POWER.

A GRANDMOTHER, by studying the proper selection of food, cured herself of stomach trouble and severe headaches. Later on she was able to save her little granddaughter because of her knowledge of food.

She says: "When baby was five months old she was weaned because of the severe illness of her mother. She was put on a prepared baby food but soon lost flesh and color, became hollow-eyed and fretful. We changed her food several times but with no permanent benefit. At last her stomach rebelled entirely and threw up nearly everything she took. She would be wet with a cold perspiration after feeding and would cry piteously with pain. That is a dangerous condition for a small baby, and in this extremity I remembered how beautifully Grape-Nuts had agreed with me, and suggested we try the food for baby."

"We began very carefully with it, giving two small teaspoonfuls at a feeding, softened with boiling water and fed in sterilized milk, warmed. The experiment was a perfect success."

"She has been on the food five weeks and can now eat other food, for the change in this brief time is wonderful. She has gained over three pounds in weight, has rosy cheeks, bright eyes, and she has the appearance of a satisfactorily nourished and thriving child."

The reason that Grape-Nuts will agree with adults and babies is that the starch of the cereals has been transformed into grape sugar in the process of manufacture, and when introduced into the stomach it is ready for immediate assimilation and does not tax the powers of the organs of digestion. The result is always beneficial, and the food has saved thousands of lives.

Recipes for many easy hot-weather dishes in each package of Grape-Nuts.

## In the World of Sports

"JIMMY" MICHAEL, WHO IS TO RACE ON THE WHEEL AGAIN AFTER DESERTING THE BICYCLE TO BECOME A JOCKEY.  
Copyright, 1901, by Horner.

**ROWDIES NOT WANTED IN BASEBALL.**—For the sake of the good name of professional baseball it is to be hoped that the transfer of McGraw and the Baltimore players from Maryland to Manhattan will not mean the introduction of further strenuous tactics in New York. McGraw is one of the best ball players in the country, and as a field captain he has no superior in the game. His aggressiveness, however, at times veers into conduct which is not exactly of the sort to elevate sport of any kind. His enemies in the Oriole City inti-

mate that it was methods of this kind which did much to hurt the game in Baltimore, and veteran enthusiasts will remember that aggressiveness all but killed baseball in Cleveland. Rough-and-ready tactics and conversation during the last few years at the Polo Grounds have done the game no good. McGraw's trip to New York will undoubtedly strengthen Freedman's team, and if the little ex-Oriole fire-eater will only curb his temper on the field, New Yorkers may yet see the first-class baseball for which they have waited patiently so many years. Some people will criticize the methods of the National League in trying to disrupt the American League by buying out the Baltimore club. That there will be some startling changes in baseball before another season comes around seems assured. John T. Brush, of the Cincinnati club, is the recognized leader of the National League, and his intention to move to New York is conclusive proof to many people that he will before long secure a controlling interest in the New York club. Brush has tired of Cincinnati, and, according to his friends, would like to sell out the Porkopolitan club. He already owns considerable stock in the New York club, and as he has been on apparently friendly terms with Freedman during the last year, the latter might consent to sell out his interests to Mr. Brush. Brush is the real diplomat of the National League, and with him at the head of the club in New York, hustling baseball would be assured.

**SYMPATHY FOR TRAVIS.**—Some people like to gloat over the downfall of a champion, but to those who have enjoyed the pleasures of pennant winning the downfall of a really clever player is always a sad incident. The defeat of Walter J. Travis, at Chicago, was not anticipated, and there are many who believe that the old champion will easily defeat both Louis N. James, the new

champion, and Eben M. Byers, the runner-up, when they meet on the greens. There has been some criticism over the manner in which the preliminaries were conducted. In most sports the recognized national champion is not compelled to take part in the preliminaries, simply holding himself ready to meet and defend the title against the winner of the tournament. Such an arrangement is nearly always satisfactory. What made the downfall of Travis the more unsatisfactory was the fact that he was beaten in an 18-hole match, while the final was over a 36-hole course. In any event, it will be interesting to watch for the next meeting on the links of Messrs. Travis, James and Byers. In the final, James proved to be the better man on the greens.

**SARATOGA'S EXCLUSIVE RACING.**—Saratoga is to try a new experiment this year by increasing the price of admission to the track to \$3—\$1 more than is charged for all privileges at most of the other pretentious tracks. The move will not keep many people away and is probably justified by the fact that the sport at the Spa will have only a limited number of people to draw from. The establishment of the so-called "free field" at the tracks has been a good move. Admission to these less desirable stands is from fifty to seventy-five cents, and it has proved to be a boon to those who like to speculate and cannot well afford to pay the regular admission price.  
GEORGE E. STACKHOUSE.

### Sporting Queries Answered.

**L. P. M., LONDON.**—The rounds are limited to three minutes each with one minute rest between each round. Most of the big fights held in this country are for a share of the gate receipts.  
**M. A. C., St. Louis.**—The National League has a salary limit of \$2,400, but it has never been lived up to. Salaries of professional ball players are from \$1,000 to \$2,500 less than they were early in the 'nineties.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *Leslie's Weekly*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *Leslie's Weekly* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *Leslie's Weekly*, 110 Fifth Avenue, New York.

**THE OFFICERS** of the United States Steel Trust charge that the litigants who seek to prevent the consummation of the preferred stock conversion scheme are animated mainly by purposes of blackmail. It is possible that some of those who have brought suits against the trust hope to compel the latter to pay a handsome

bonus for a compromise of the litigation, but people do not compromise suits with blackmailers except under the compulsion of circumstances prejudicial to the plaintiff rather than the public. In other words, if the steel trust is only doing what is lawful, right, and equitable, it has no reason to be afraid of blackmailers. No innocent man or woman ever compromises with a blackmailer. He or she turns the contemptible scoundrel over to the tender mercies of the police.

In the steel trust case the bold, naked fact stands out that this colossal combination which has been boasting, and is still boasting, that it is earning millions of dollars beyond its dividend requirements and beyond the necessary surplus for emergencies, interest charges, depreciation, etc., is in such tight quarters that it is compelled to borrow \$50,000,000 and to pay the enormous commission of \$10,000,000 to carry out a scheme which will add to the permanent fixed charges of the company, and which will put \$250,000,000 of bonds as a prior lien ahead of the remaining preferred and common shares.

If the steel trust is earning so much money, if it is so prosperous that it has a surplus far beyond expectations, if, as President Schwab testifies, the surplus during the first year of its business was over \$25,000,000 and this year will be almost twice that figure, why not use this surplus to conserve the interests of the company and bring about the changes for which the proposed additional \$50,000,000 indebtedness is about to be incurred. Here is a trust scarcely more than a year old, paying 7 per cent. dividends upon its preferred stock and 4 per cent. upon its common shares, alleging that it has earned during the fifteen months since its incorporation net profits in excess of 10 per cent. upon its entire capital stock, or 13 per cent. upon the common stock (after deducting the 7 per cent. upon the preferred), and now earning at the rate of over 14 per cent. upon its common stock, with credit so low that it proposes to pay a syndicate ten million dollars in order to carry out a scheme to add only \$50,000,000 to its surplus account. Either the company is not able to borrow as readily as it should or else an inside syndicate is anxious to get the \$10,000,000 rake-off. Which horn of the dilemma will President Schwab and his associates take?

And the steel trust has no monopoly of the business and cannot have until it absorbs a large number of vigorous competitors. The truth has just leaked out through an interview with John P. Gates that he is the gentleman who led Mr. Morgan into the steel trap. Mr. Morgan had either to step into the trap or to face a panic in the iron and steel trade. It was easier and far more lucrative to organize the steel trust, and so Mr. Morgan took over a lot of properties that Mr. Gates and others wished to unload, capitalized them at an enormous price, raked off his big "syndicate's" profits and then let the public take the load, or at least as much of it as it could carry.

Mr. Gates says that the Carnegie Steel Company threatened to become a hot competitor of Mr. Morgan's National Tube Company. Mr. Gates advised Mr. Morgan to combine all the iron and steel companies of the United States into one big corporation and to begin by taking in Carnegie's Steel Company, the largest and most aggressive steel works in the world. This was Mr. Carnegie's opportunity and he straightway unloaded his magnificent works at a magnificent price, taking his pay, mind you, not in the preferred or common shares of the steel trust, but in the bonds, the first lien on the property. Thus was a disastrous war in the steel and iron trade averted by Mr. Morgan and his associates, and they have had nothing to do ever since but try to avert panic and disaster.

The panic of May 9th, 1901, was stopped because Mr. Morgan compelled his associates to give way, in part at least, and we have the word of Mr. Gates for the statement that a panic greater than that of May 9th would have been caused by the enormous short interest in Louisville and Nashville a short time ago, but for the fact that Mr. Morgan called Mr. Gates out of bed at 1:30 in the morning and at that unholy hour informed him that at a meeting of bankers it had been determined that Mr. Gates had secured control of the Louisville

and Nashville and that the bankers wished to know what he proposed to do about it. An agreement was then made that the short interest should not be cornered but should be let down easily, and a panic was thus averted.

This shows on what thin ice the public is skating in this hot weather. A tremendous burden of loans at home and abroad being carried by our great financiers may some day suddenly break them down. It is estimated that nearly half a billion dollars is locked up in the Northern Securities shares which are in litigation and which the public therefore will not buy. All sorts of new investment securities, collateral trust bonds, redeemable timber certificates, realty mortgage bonds, adjustment debentures, and other new-fangled securities are being contrived to whet the public appetite, which has been gorged to surfeit with common and preferred shares, income bonds, and securities of the old-fashioned kind.

We have begun to send some of our surplus gold to Europe, the interior is calling upon New York for surplus funds, we have cut down our Federal revenues and may face a deficit in the Treasury within a year or two, with all that that implies. Meanwhile on every advance in the stock market insiders and outsiders flock to sell whenever a profit is in sight. There will be a day of reckoning sooner or later, and when it comes I hope my readers will all be ready to stand from under.

"C." Marblehead, Mass.: Nothing is known about it on Wall Street.

"H." Syracuse: I do not advise the purchase as an investment. No stamp.

"C." Egan, S. D.: He has no rating and I would have nothing to do with him.

"L." Holly Springs, Miss.: \$2 received. You are on my preferred list for six months.

"C." Onida, N. Y.: Your surmise was correct. Such parties are good ones to leave alone.

"O." Helena, Mont.: (1) It is not an investment and I do not advise its purchase. (2) It is unreliable.

"C. C. S." Salem, Ohio: I would have nothing to do with the property. It is highly speculative. The company you included amounts to nothing.

"H. S." New York: All are speculative properties, as their very name indicates. They are quite as good, however, as most of such properties whose shares are offered for sale.

"J." South Lyon, Mich.: It looks very much as if your suspicion was justified. If you could get other stockholders to combine with you, it might pay to engage counsel and make a fight.

"A. B. T." St. Louis: From the report of the Guaranty Consolidated submitted to me I cannot obtain the data you request. The company will no doubt send a similar report to you if you will write for one.

"A. B. C." New York: (1) In this erratic market you may have an opportunity to realize on your Wisconsin Central. Whenever it comes, I would accept it. (2) I doubt it, and would not advise the purchase of Colorado Southern or anything else at present excepting for a quick turn.

"Z." St. Louis, Mo.: The shares of the St. Louis and San Francisco Railroad Company have had a very heavy advance since I first advised their purchase. While they are strongly held and may be still further advanced, I am not inclined to advise the purchase for investment purposes of any stocks at present.

"W." Lynn, Mass.: Minnesota, St. Paul and S. M. preferred sold last year as low as 49 and as high as 64. This year it has sold as high as 127. Its earnings indicate that it has become an investment stock, but the price looks high. (2) Do you refer to Western Union Telegraph? If so, I do not advise its purchase as a permanent investment. No stamp.

"M. K. N." Attleboro, Mass.: (1) I would sell the copper stock at 5 if you can get it, unless you choose to speculate in it. (2) A few hundred dollars safely invested in stock would not bring you a larger income than you can receive from a savings-bank. Unless you have some prospect in view on the Pacific it would hardly seem advisable for you to make such a venture as you suggest.

"M." Battleboro, Vt.: (1) Gil-Edged bonds pay only about what you could get at a savings-bank. Bonds ought to sell lower when stocks fall. (2) For investment I would prefer Union Pacific first convertible four to Wabash debenture. As the latter pay no interest. For speculation the Wabash debentures are the better, as interest is being earned and will ultimately be paid.

"L." New York: (1) I do not regard it with much favor. (2) Conflicting reports are heard regarding Greene Consolidated. A practical mining engineer who has visited it questions the value of the property, yet I am informed that the shares have been picked up by very wealthy interests on the recent decline. As the par value is only \$10 it will be seen that it is selling at a very fair price.

"A." Dover, Del.: There has been such a drop in American Tin that you had better hold your shares. It is said that the United States Steel Trust is willing to take it in if it can secure control of the stock at prevailing low prices. I am unable to confirm this rumor. (2) A good deal of the talk about the combination of Southern railways and of Vanderbilt and Gould lines and a new Anthracite combination is nothing but Wall Street wind.

"S." Indianapolis: (1) It looks as if the Virginia Carolina Chemical Company had been boosting its shares in order to make a better market for the seven million dollars of collateral trust bonds it is about to issue. If it has been making such large earnings, why should it be necessary to issue bonds? (2) The Colorado Fuel and Iron Company is extending its business. The impression prevails that if Gates secures control he will make a deal with the United States Steel Trust.

"A." New Orleans: Some of the promoters of the American Lee Company are now endeavoring to float the stock of the New England Consolidated Ice Companies. One rumour has it that a combination between this company and the American Lee concern may eventuate, but I am wary of any stocks in which the American Lee crowd are concerned. (2) I would not sacrifice my American Smelters, nor would I hold it for too great a profit.

## IMMENSE AMALGAMATION

TWENTY COPPER, GOLD AND SILVER  
MINES CONSOLIDATED UNDER THE  
MANAGEMENT OF THE

**Globe-Boston Copper Mining  
Company**

This Company, composed of the leading business men  
of New York, Chicago, and Leavenworth, Kansas, after  
years of hard work, was enabled to complete the con-  
solidation which gives it the ownership and control of  
this vast property, located in the very heart of the Globe-  
Arizona mineral belt. Every one of these twenty mines  
contains from one to three fissure veins from which large  
quantities of rich ore have been shipped. The Company  
has spent a great deal of money on the property and has  
brought it to a state where large profits are merely a  
matter of a reasonable length of time. The ore bodies  
are rapidly being opened up at a great depth and the  
Company is preparing to erect smelters for the treat-  
ment of its ores.

Absolutely the best opportunity ever offered the public  
is now presented in the Stock of this Company, 50,000  
shares of which are offered for public subscription at 40c.  
per share. The right is reserved of allotment should this  
amount be over-subscribed.

## Hints to Money-makers.

Continued from page 138.

"H." Baltimore: I would not advise its purchase.

"T. H. P." Utica, N. Y.: Do not advise the speculation.

"T." Wakefield, R. I.: I do not advise the purchase of its shares.

"E. E. K." New York: I am unable to find any record of dividends.

"M. H." New York: (1) Green Bay stock at \$8 seems to be preferable. (2) Nothing new.

"W." Chicago: The parties have no rating and I consider their proposition purely speculative.

"T. W. N." Philadelphia: Two dollars received. You are on my preferred list for six months.

"S." Aurora, Ill.: I regard Toledo, St. Louis and Western shares among the cheapest and most promising on the list.

"E. M. L." Minneapolis: Nothing is known of the proposition on Wall Street. So far as my information goes it seems to be highly speculative.

"W." Terrell, Texas: The 6 per cent. gold timber certificates may be all right for the present, but I certainly do not regard them as a permanent, solid investment.

"J. T. C." New York: The best advice to one who is not familiar with Wall Street methods, is to put your money in a savings-bank and wait for an era of lower prices, which is bound to come.

"F. A. J." New Bedford: The Illinois Steel debenture bonds, around par, are a fair speculative investment; not gilt-edged. No stamp inclosed. Anonymous communications are not answered.

"G." Fiskeville, R. I.: (1) The Hudson River Water Power Company 5 per cent. around par, are not a strictly high-class investment. (2) I would not make the exchange, if you are seeking security.

"J. J. S." New York: Dollar received. You are on my preferred list for three months. The literature you speak of is intended to sell the shares of the stock. I do not regard it as an investment; it looks highly speculative.

"P." Butte City, Mont.: (1) The information you request is such as you can readily obtain by dropping a line yourself to Douglas, Lacey & Co. (2) The claim seems somewhat extravagant. I have been unable to verify it.

"A. B. C." New York: I have frequently referred to Bay State Gas as a purely speculative proposition, liable to a sudden advance, if the large interests identified with it feel like having it, and more liable at any time to an assessment and a reorganization.

"K." Minneapolis: (1) The "preferred list" is explained by the introductory note at the head of this department. (2) The entire market looks too high to advise purchases. (3) Impossible to predict the chances. Any broker will take an order to handle it, as suggested.

"M." Fairbault, Minn.: (1) At this time it would be wiser to keep your money in a savings bank if you are seeking primarily the element of security. Speculatively, the proposition you mention appears to have commendable features, but hard times would unfavorably affect all industrials.

"M." Quincy, Mass.: (1) The Federal Securities Company, or any other company, that offers to pay dividends of 5 per cent. a month, is a good thing to keep away from. (2) No rating. Better leave them alone. (3) I would be inclined to get out of the United States Steel common at the first favorable opportunity.

"U." Ludlow, Ky.: (1) Detroit United Railway Company's stock is a fair speculation. Southern Railway preferred is more of an investment security, with speculative possibilities, if business conditions in the South continue as promising as they have been. Something depends upon the outcome of the cotton crop. (2) Moody's Manual will give you the desired information.

"H." Hannibal, Mo.: (1) I do not believe in the company or its ability to make money for you. (2) The entire market looks too high, but the danger in selling short lies in the fact that powerful combinations and cliques are in and out of the market at unexpected points and unusual places. I predict that a year from now seven-eighths of the stocks on the list will be selling lower.

"G." Anacostia, Mont.: (1) The possibilities of the absorption of Wisconsin Central depend to an extent upon how much of this sort of thing the market will stand. For some time its absorption has been predicted and ultimately it will probably come to pass. (2) Ontario and Western is one of the few anthracite coal shares that sell at a low price. The maintenance of the anthracite trust would no doubt be helpful to it.

"S." Seneca Falls: There is nothing in the immediate prospects of Brooklyn Rapid Transit to give it an advance. On the contrary, its recent failure to secure a valuable tunnel contract as regarded as detrimental, as is also the issue of \$150,000,000 of bonds ahead of the stock. On its present earnings it is altogether too high. Its future prospect lies mainly in the growth of its business, dependent upon the construction of additional tunnels and bridges over the East River, or an amalgamation with other local traction interests on a favorable basis. I would be inclined to get out at the first favorable opportunity, unless you are a good waiter.

"K." Minneapolis, Minn.: One dollar received. You are on my preferred list for three months. (1) All mining propositions must be more or less speculative. My inclinations are altogether inclined to investment securities. The mine to which you refer is apparently doing well now. How long it will continue to do so is the question. (2) The officers of the Helena Consolidated Mining Company stand very well and the concern seems to be managed with considerable care. Whether the large dividends can be continued, must of course depend upon the developments of the property. The transfer of your shares to the new security simply means a consolidation, which might be made to yield more economical results. If you desire to sign the certificates, I do not see that your rights could be jeopardized. The law forbids confiscation.

NEW YORK, July 31, 1902.

JASPER.

## American Tools Needed.

AMERICAN manufacturers of surgical instruments will find it to their advantage to look over the field in Switzerland, where our consul at Basle says that he believes there is a good market for their wares. In a recent conversation with the consul, Dr. Egli-Sinclair, an eminent physician of Zurich, who resided for many years in the United States, expressed surprise that so far no attempt has been made by our manufacturers to introduce surgical instruments into Switzerland, his opinion being that they would undoubtedly meet with a ready sale, as they were admittedly the best in the world. Our dental instruments, it appears, are largely imported and, in fact, are used exclusively by Swiss practitioners.

## How Trade Follows the Flag.

THE best monthly bulletin on the commerce of the Philippines, comparing the eight months ending August 31st, 1901 and 1900, the imports show an increase of 35 per cent. in the period of 1901, as compared with the same period of 1900. In the exports there was a six per cent. increase in favor of 1901. The imports from the United States in eight months of 1901 were \$2,470,050, being an increase of 84 per cent. over the same period of the preceding year, while the export figures show \$1,960,687, or a slight increase in favor of 1901. The import figures show a gain of nearly \$1,000,000 on food stuffs and in manufactured articles of nearly \$4,000,000 for the eight months of 1901.

## Hanna's Heavenly Hash.

THE corned-beef hash which was the feature of breakfasts given at Senator Hanna's home in Washington to President Roosevelt and other magnates was greatly relished by the guests, and has become famous. The recipe for preparing it is as follows: Equal parts of boiled prime corned beef and potatoes are prepared. The beef is chopped as fine as possible, and the soft, mealy potatoes are cut into tiny cubes. A small onion is minced to add flavor, and the bottoms of the dishes are rubbed with a head of garlic. Another garlic head is wrapped in a piece of fat and thrown into the center of the mass. The whole is then mixed thoroughly and nicely browned in a big skillet or frying-pan. During this operation disks of Bermuda onions cut so that each round shows every ring of the onion are thrown into a deep dish of pure lard and browned delicately. When these disks are crisp they are used to garnish the edge of the platter, and the hash is served garnished with parsley or herbs, and a squeeze of a lemon.

THERE is lobster à la Newburg, which some people think is great. And terrapin's a dainty for the cultured enter's plate. There are many pleasant dishes for the man who has the cash. But there's nothing that quite equals Hanna's famous corn-beef hash.

WE have heard of old Lucullus, who was famous in his day. For the spreads he gave the Romans—they were wonderful, they say. But the daintiest dish he never gave his guests. For he didn't have the Hanna hash upon his bill-of-fare.

THE prince with pampered palate loves his bottle and his bird; By the frog that's placed before him the gay Frenchman's heart is stirred; The German likes his wiener wurst, but all these things are trash. When compared with that concoction known as Hanna's heavenly hash.

OH, the hash served at those breakfasts would have pleased the gods, they say. Who on lofty old Olympus used to while the time away? The heavenly hash, the Hanna hash, the hash beyond compare—Who knows? Perhaps 'twill yet be on the White House bill-of-fare. S. E. Kiser.

## Life-insurance Suggestions.

IT HAS often been said that doctors do not take their own medicine. Perhaps the best evidence of the soundness of the great old-line life insurance companies is the fact that their officers are among their heaviest policy holders, many of them carrying from \$100,000 to \$500,000 each. As these officers are compelled to pay premiums, the same as any other policy holders, their membership must indicate supreme confidence in the integrity and success of their institutions. These policies are not taken for personal exploitation or for advertising purposes, because very little is ever heard in the public prints, or is ever permitted to be published, regarding these holdings. If insurance in fraternal orders or by any of the other cheap plans so often recommended were satisfactory, the officers of the great companies would certainly be attracted by them. Some of the letters I have received from those who paid for many years their assessments to fraternal organizations, that were afterward dissolved by bankruptcy, have been pathetic in the details of the hardships they reveal. It is for my readers, however, in these matters as in all others, to act with caution and prudence, believing only what they know to be true and making only such contracts as are thoroughly comprehended.

"G." St. Louis: An inactivity.

"Subscriber." Atlanta, Ga.: I prefer a larger company. You cannot afford to sacrifice security to cheapness.

"R." Lake Odessa, Mich.: Please give me the official titles of the two companies, the home office and name of president.

"A Subscriber." Lawrence, Mass.: A letter addressed to either of the two companies you name, at New York City, will reach it.

"G." St. Louis: (1) The New York Life bond insurance of which you speak is excellent. (2) About the same, and little choice between them. Both are "sure."

"W." Vicksburg, Miss.: The Mutual Reserve has been reorganized as an old-line company, and is making a strenuous effort to win success. It has passed through severe experience, and its future reports are awaited with interest.

"Medico." Penn.: I had rather have a policy of a similar kind in the Travelers, of Boston. You are right in your comments on this style of insurance, but so many impositions are constantly practiced that the utmost care is necessary in the payment of losses.

"P." Racine, N. Y.: Your friend's anxiety has some foundation for it. It would contribute to his ease of mind if he had a policy in one of the strongest companies that he could find. The concern to which you refer has not thus far demonstrated either its permanence or its solidity. It seems to be managed, however, with some care.

"S." Chicago: While the company is not one of the largest, it appears to be doing a fair business. Its excess of income over disbursements shows a shrinkage during the past year. If dividends are satisfactory, it might be well to take them. I presume the company will make a satisfactory settlement, but everything depends upon the terms of your policy.

"I." Mobile, Ala.: Your friend has made a fair offer to the concern. He should read his contract carefully, however, and see if he is at its mercy; if so, he must make the best possible compromise. I advise him to get what cash he can, and quit. His experience only proves my repeated assertion that cheap life insurance is a dangerous thing to have, and in the end is always the most expensive.

"Reader." Independence, Iowa: Your inquiries are such as are constantly made. Under the terms of your policy you will find that you must accept the conclusion of the company, and that it will only act within its legal rights. Whatever it offers you, therefore, you will be obliged to accept. It must, however, treat you as favorably as it treats any other policy-holder. If it does not, you will have just cause for legal action. The

returns ought to be satisfactory, and I would write directly to the company for the information you seek—I mean as to the exact figures. The legal questions are barred out by the provisions of the policy, I think you will find.

AMERICAN CATTLE FOR ENGLISH CONSUMPTION  
LANDING AT DEPTFORD, ENGLAND.UNLOADING AMERICAN BEEF AT LONDON  
DOCKS

## Beef Is Dearer in England, Too

THE ADVANCE in the price of beef has become an even more serious matter in England than it is in the United States. The Britishers are great meat eaters, the consumption per capita in the United Kingdom of that article of food being in excess of one hundred and twenty pounds per annum, or a total for the whole population of 2,220,781 tons, and they are dependent to a very large extent on other countries for their supplies. The best cuts of native beef are now 1d. (two cents) per pound higher in the English markets than they were a few weeks ago and there seems to be an apprehension of a further rise. Various reasons are given for the increased cost, one of these being manipulation by the so-called American meat trust, but admittedly the principal cause of it is a real scarcity of beef cattle. The production of beef in England has, of late, been below the normal, owing to a poor grass season and a deficient crop of roots last year, and the falling off of the English supply has not been offset by the plentifulness of

Scotch beef. There has, moreover, been a great decrease in the importations of beef cattle.

In the first quarter of 1902 there was a shortage of imported cattle of 12,252 head, as compared with the first three months of 1901. Imports of beef cattle into England so far this year have been exclusively from the United States and Canada, Argentina, formerly a large importer, having shipped no such cattle to England since January 1st, and there being, also, a noticeable shrinkage in the American supply.

The outlook for the Englishmen in this respect would be much darker were it not for the fact that the importations of sheep and lambs are steadily increasing. During the first three months of 1900, 36,814 sheep and lambs were imported from the United States, but during the first quarter of this year the number had risen to 96,563, and the imports of the same class of animals from South America likewise show a considerable increase.

## Business Chances Abroad

NOW that the American manufacturer is trying to gain a fair share of trade in the world's markets, our consul at Bombay, Mr. Fee, suggests that he give more attention to India. On this peninsula, which is about half the size of the United States, reside 300,000,000 people, or about one-fifth of all the inhabitants of the earth. The exports of India exceed its imports. A careful examination of its foreign trade will show that, with few exceptions, India sells raw material and buys finished products, and therefore is substantially a consuming nation. During the fiscal year 1900-1901, the foreign trade of India amounted to over 20,000 lakhs of rupees, or about \$692,000,000. Of this \$383,000,000 represented exports and \$300,000,000 imports. The continent of Asia and its islands have a population of perhaps 800,000,000 people and a trade worth probably \$2,000,000,000 a year. Of this trade the United States does not receive a fair share—less, indeed, than some nations which, to reach it, have two seas to our one to cross.

Replying to inquiries in regard to the outlook for American agricultural implements in Siam, our commercial representative at Bangkok submits a letter which he has received from J. S. Sanitwongse, acting director-general of the Siam Canal, Land and Irrigation Company, in which that gentleman dwells at length upon the primitive methods of agriculture in Siam, and concludes by saying that, before introducing any machines, it would be best to send out some competent person to study thoroughly the manner in which rice is cultivated in Siam, the condition of the soil and water, etc. Such a person would then know exactly what machines will be able to do the work required. If it can be shown, says Mr. Sanitwongse, that rice can be cultivated successfully by machinery, there will be a demand for such machines, not only in his consular district, but in other rice areas of Siam, which will mean a considerable market for these manufactures of America.

The demand for American footwear of all kinds in Europe and other lands still grows apace. A prominent morocco firm of Lynn, Mass., recently shipped to Australia a consignment of 3,500 skins, said to be the largest single shipment to any foreign country ever made by a Lynn firm. It has dawned upon foreign shoe manufacturers that a great deal of the

popularity of American shoes is due to the quality of the material of which they are made. Shoes made with French kid have been driven almost entirely out of the market, and American kid is being imported into France. A German commission merchant was in Lynn recently for the purpose of securing an agency for the product of the leading factory of the city for Germany and Switzerland, and orders are filled every day for Mexico, Germany, England, and other countries, and requests for samples have come from Spain, Cuba, and many other places.

The field for the sale and exploitation of railway material and appliances was never so large and promising as it is at present in Japan. A recent report on

### Valuable Book on Eye Diseases.

This editor of this paper has received and carefully examined a valuable book on eye diseases by the noted Chicago Oculist, Owen Owsen, M. D., entitled "Eye Diseases Cured Without Surgery." It is profusely illustrated and very accurately describes all of the hundred or more diseases which attack the precious organ of sight, in a very comprehensive manner, and also carefully describes Dr. Owsen's method of treating these diseases without the knife by The Owsen Dissolvent Method.

Inasmuch as Dr. Owsen sends this book free on request, any one who has an eye trouble in any form—or has a friend who is thus afflicted—will do well to write and secure a copy. It will probably describe your own trouble and assist you in determining what course to pursue in effecting a cure. This paper knows Dr. Owsen to be a gentleman of unquestioned integrity, and he has built up a splendid reputation through the numerous marvelous cures he has effected. His address is Suite 157, 52 Dearborn St., Chicago.

## BEST FOR THE BOWELS

If you haven't a regular, healthy movement of the bowels every day, you're sick, or will be. Keep your bowels open, and be well. Force, in the shape of violent physic or pill poison, is dangerous. The smoothest, easiest, most perfect way of keeping the bowels clear and clean is to take

Pleasant, Palatable, Potent, Taste Good, Do Good, Never Sicken, Weaken, or Gripes. 10c, 25c, 50c. Write for free sample, and booklet on health. Address: Sterling Candy Company, Chicago, Rastatt, New York. 322a.

KEEP YOUR BLOOD CLEAN

# Schlitz

THE BEER THAT  
MADE MILWAUKEE  
FAMOUS

Beer is barley-malt and hops---  
a food and a tonic. Just a touch  
of alcohol in it.

Not a beverage known to man is  
more healthful, if the beer is right.

'Tis the national beverage, from  
childhood up, with the sturdiest  
peoples of the earth.

To the weak, it's essential; to  
the strong it is good.

BUT—the beer must be pure.

Impurity means germs, and germs multiply rapidly  
in any saccharine product like beer.

And the beer must be old.

Age means perfect fermentation. Without it, beer  
ferments on the stomach, causing biliousness.

Schlitz beer is brewed in  
absolute cleanliness.

It is cooled in a plate glass  
room, in filtered air.

Then it is filtered; then  
aged for months in refrigerating  
rooms. After it is bottled  
and sealed every bottle is  
sterilized.

Not a germ can exist in it.

These costly precautions  
have made Schlitz the stand-  
ard for purity wherever beer  
is known.

You can get it just as well as  
common beer if you ask for it.

Ask for the Brewery Bottling.

### Business Chances Abroad.

Continued from page 141.

railway development in that country shows that since the Japanese government constructed its first line of eighteen miles from Yokohama to Tokio, in 1872, a great trunk line of 1,200 miles has been built and the total mileage in the country increased to 4,021; 1,059 miles being owned by the government, which in 1900 handled 113,000,000 passengers and 14,000,000 tons of freight. No private construction was done until 1883, when the government had 181 miles of railway under operation, and it was not until 1889 when private enterprise began to lead governmental effort. At the end of 1901 the state had 1,017 miles of new line under construction and the private companies had 817 miles projected.

An important new industry has been opened in France in the making of bricks, or briquettes, from petroleum, another use for this product which has a special interest for Americans just now from the opening of new oil fields in various parts of the country, and the consequent enormous increase of petroleum. Our consul at St. Etienne, France, Mr. Brunot, describes the making of these briquettes as very simple. They are made without heat and no danger attends the operation. The briquettes are mostly composed of petroleum, crude or refined, and possess all the advantages of coal and petroleum without the inconvenience of either. They weigh one-half as much as coal, do not form clinkers, do not melt or run, burn without smell or smoke, do not absorb moisture, produce twice as much heat as coal, can be used in any kind of furnace, and are easy and agreeable to handle. After the careful experiments made by French authorities, the fact that these briquettes are likely to be adopted by the government would indicate that they are considered a success.

You may talk about your Champagnes, but I know of none as popular as *Codé's Imperial Extra Dry*.

**Advice to Mothers:** Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhea.

At the exhibition of the California Fruit-growers' Association, at Chicago, the Solitaire Piano was chosen in preference to all other makes, thus again showing the high estimation in which these popular instruments are held by the public.

JUDGE COMPANY, 110 FIFTH AVENUE, NEW YORK CITY

### Atlanta Doctors versus the Census Bureau.

IN THE issue of April 3d, 1902, LESLIE'S WEEKLY published an article by the eminent statistician, Professor Edward D. Jones, of the University of Michigan, reviewing the chief social and vital statistics of the twelfth census at that time available. In that article some attention was given to the very carefully prepared report of W. A. King, chief statistician for vital statistics, in the course of which the causes of deaths in Atlanta, Ga., Allegheny, Penn., and Denver were compared. The Atlanta Constitution has chosen to say some hard things regarding these statements, and Professor Jones sends us this statement:

We propose in reply simply to give our authority, which is Census Bulletin No. 83, issued by the Census Bureau at Washington, August 20th, 1901, and giving mortality statistics for the census year 1900. The information of which we made use when speaking of Atlanta is found between pages 44 and 51. We supply this information regarding our authority in this particular manner because the Constitution attacked statements made in this paper on the basis of a clipping repeated at second hand, and without looking up the original article to see upon what authority the statements were made. But even considering the careless character of this procedure we are a little surprised that when it comes to discussing death rates the Constitution has not heard that a census has been taken which has covered the causes of deaths in the chief cities of the United States, so that it is not necessary for any one who desires to know the facts for any city to run around to Doctors X, Y, and Z to find out whether they can remember having had cases of this, that or the other disease resulting fatally in their practice. The census figures relating to the causes of deaths in Atlanta, Allegheny, and Denver, a portion of which we used, are as follows: (We shall not indicate every cause of death for the census classification is too extended to reproduce here.)

Total number of deaths from all causes in 1900: Atlanta, 2,387; Allegheny, 2,385; Denver, 2,484.

	Atlanta.	Allegheny.	Denver.
Diphtheria	9	30	35
Malaria	39	2	4
Typhoid	98	134	57
Diarrhoea	28	16	3
Alcoholism	6	12	29
Rheumatism	9	23	19
Consumption	300	209	436
Cancer	35	43	87
Paralysis	66	24	28
Diseases of the brain	58	22	30
Croup	31	7	10
Pneumonia	189	337	257
Bronchitis	36	65	34

On the basis of these data we said "Atlanta was pre-eminent among the three for malaria, diarrhoea, paralysis, croup, and brain diseases." There were probably inaccuracies in our article due to the difficulty of working with the large original tables of the preliminary census report, but there was not one inaccuracy of any sort in the statements made with reference to Atlanta. Our article contained no statement to the effect that Atlanta was an unhealthy city so far as its general death rate is concerned, nor did we say that other cities in the United States did not have a larger number of deaths from malaria; we did not make a great variety of other statements that might be imagined, and we don't care to be told that statements we did make are the "height of exaggeration," "falsehoods," etc., etc.

The Constitution says that these data which have just been compiled and published by the Census Bureau are prepared "without investigating the facts" and are "exaggerated hearsay statements." All we have to say is that the census data for Atlanta is, if we understand the matter rightly, simply a publication of the local records of Atlanta of the registration of death. For the rest we can safely leave criticisms to the census officials.

## GREAT WESTERN CHAMPAGNE

The New York Com-  
mercial Journal says:  
“There is one merit in  
American champagne  
which should find it a  
special favor as compared  
with the French. It  
makes and carries its  
own lowest flavor, where-  
as the French champagne  
has 80 flavor until it is  
added through the me-  
chanism of other liquors at  
the end of the fermenting  
process. In other words,  
the French flavor is  
made, the American is  
born.”

Hence the popu-  
larity of “Great  
Western,” the  
gold medal winner  
at the Paris Expo-  
sition.

## The Issue Made for 1904.

THERE IS no longer any doubt as to the predominant issue in 1904. It is to be tariff reform, and the Iowa Republicans have made it. Whether they have also made a fatal mistake remains to be proved. That level-headed, self-poised, observant leader, President McKinley, saw the situation clearly when he said, at Buffalo, in the last and most significant speech he ever made, that "the period of exclusiveness is past." That brainy statesman, James G. Blaine, saw it still earlier than his contemporaneous party leaders, when he made his memorable and emphatic demand for the broadening of American markets as a part of the protective policy, and when he insisted that reciprocity was consistent with protection, because the fundamental purpose of the former, as of the latter, was to extend American trade, to keep American factories busy and American workmen employed at good wages.

The emphatic pronouncement, emphatic though hesitant, of the Iowa State Republican Convention lands the Republican party of the middle West, at least, squarely on its feet in this matter. It is for reciprocity and protection, but it is willing to sacrifice the latter, in a measure, to the former, and support tariff reform. The precise language of the platform should be borne in mind: "We favor any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly." This may not be elegant, but it is eloquent of purpose, for the words "any modification" are all-embracing. This is the platform of Iowa, the home of the Secretary of the Treasury. It is fair to infer that Secretary Shaw had a good deal to do with its formulation and that it voices the conclusion—up to date—of the Roosevelt administration.

The Iowa platform signalizes a decisive change in the views of the Republican party leaders. Last January, when Mr. Babcock, chairman of the Republican Congressional Committee, introduced his bill for a reduction of certain iron and steel duties, because he believed they favored a formidable and unpopular trust, he created a marked sensation, and with much difficulty was persuaded to abandon his purpose. Yet he simply foreshadowed the policy of the Republicans of Iowa as now proclaimed. He started the blaze and ran, in affright, from the fire, but the ashes have been rekindled in Iowa.

The Republican party is for tariff revision! What this means in Iowa is explained by the statement of Congressman W. I. Smith, in taking the temporary chairmanship of the Iowa State Convention, when he said that the Republican party would fearlessly use every means in its power to reach the great evil of the trusts, "and where modifications of the tariff will be useful to that end, without serious injury to the laborers of this country, will not hesitate to resort thereto." He said further: "The Republican party is wedded to the general principles of a protective tariff, but not to any specific schedule." In other words, it believes in the theory of protection, but not altogether in maintaining the tariff schedules which that theory has produced. It is a theory and not a condition that now confronts us.

The Republican party in Iowa is for tariff revision! The Democratic party is for tariff reform. How shall we differentiate? Who shall say how much of a revision of the tariff is required? What protected industry is willing to surrender a part or all of its protection? What American industry, built up and maintained by protection, can continue to thrive if the tariff is reduced or removed? How far shall we go in this matter? Senator Cullom, of Illinois, who also sees the new light and says that Cuban reciprocity and tariff revision are the two foremost questions in the minds of the voters of his State, indorses the declaration of the Iowa Republicans and says: "It is the way the Republicans of my State feel, and I am convinced that the sooner we take this matter up and dispose of it, the better it will be for the country and the party. The Democrats are free-traders, tariff smashers, regardless of the struggling interests that should be protected, and of others that are not yet sufficiently well established to get along well without some attention from the government, but we Republicans are not wedded to any schedule." This is illogical and unfair.

Senator Cullom speaks of "this tremendous task" which awaits the action of Congress. The adjective is abundantly justified, for an exciting tariff discussion in Congress a few months hence will do more to disturb prosperous business conditions than almost anything else could do at this juncture. It will be the worst possible thing for the party in power to have, as the result of this disturbance, a paralysis of industrial activity. It was our closed factories that gave a keen edge to the demand for protection in 1896. It would be a strange evolution of fate if a Democratic outcry for tariff reform in 1904 should be coupled with a promise that it meant renewed industrial activity and higher wages, and if that promise should catch the fugitive voting masses. The demand for protection was made when times were hard and dinner-pails were empty. We have had since 1896, thanks to a protective tariff, abundant prosperity and dinner-pails filled to overflowing, but the masses, like some of the leaders, are forgetful, and in this day of prosperity remember no longer the hardships of adversity. With prosperity they have become independent, self-assertive, easily stirred to wrath, and too often revolutionary in spirit.

President McKinley, who was as able a politician as this country has ever produced, saw the storm clouds gathering over his party, springing from the new question of the trusts. His counter-irritant was reciprocity, to open the doors for an expansion of our trade abroad, to keep our factories busy and our labor employed at remunerative wages. Under such conditions the new trust issue could not be made a factor in the presidential campaign. He saw the difficulties of the situation, for he realized what it meant to undertake to reduce tariff duties in any direction. But he realized also that, as the greatest living exponent of protection, his leadership would continue to be accepted by the friends of that policy, and that no one would dare to accuse him of betraying a cause that had been nearest his heart and that had won for him the lasting gratitude of the working masses and in the end the Presidency of the nation. His plans, revealed in the sacred confidences of a profound friendship, were made known to Senator Hanna and to Charles A. Moore, the president of the American Protective Tariff League. If either would unseal the lips of the dead, we believe he would have to confess that President McKinley was for protection first, and next for reciprocity.

The Republican party cannot be a tariff-reform party, in view of the history of the past, any more than it can be for State rights or for free silver, but the Iowa convention has raised the issue, and it will stand. How successfully it will be met depends upon the sagacity as well as the audacity of Republican statesmen. The people had sublime faith in William McKinley. The party would have followed him for reciprocity as it did for protection, and he would have made the former the corollary and sequence of the latter. But, fortunately, or unfortunately, reciprocity is not made the naked issue by Iowa Republicans. A revision of the tariff to kill off the trusts, is their demand. This is a new issue, not the one that President McKinley created, but one far more troublesome. Whether it was necessary or not may be questioned, but that it complicates the situation is beyond doubt. The administration seems to have no fear, but thoughtful Republicans dread the approaching session of Congress and are scanning the political horizon in vain in search of a new Moses.

Wanted: a leader!

## No Pensions in Politics.

THE ANNOUNCEMENT appears in the public press that Private Dalzell and some others are planning the formation of a political association which shall include all who were soldiers in any of our wars, and which shall strive to control in all parts of the country the nomination and election of legislators, using its power in all cases to secure the election of men who will promote legislation for the benefit of those who have been in the army. A more mischievous and utterly superfluous organization than that here proposed could hardly be conceived, and we sincerely hope, for the good name of the men whom it is designed to include within its membership, that it will not be called into being. An organization existing for the purpose stated would be simply a huge blackmailing scheme, a renewal and a perpetuation of the spoils system at its worst, with the result, if successful in its avowed aims, of putting into legislative office a set of mercenaries and corruptionists of whom our legislative assemblies, at the best, have now far too many. No honest, high-minded and truly fit man would accept a nomination from a body avowing such principles.

Our existing pension laws are liberal and expansive enough to provide adequate recompense for all who have suffered in person or in purse by reason of war, and any further generosity in that direction, for the present at least, is utterly uncalled for. Our present enormous and ever-increasing outlay for pensions for military service and the persistent clamor for larger outlays of the same sort coming from certain elements, together with the vindictive assaults upon every public man who dares to lift voice or hand against such extravagances—all these things have gone far to create a widespread feeling that the pension business is degenerating into a proceeding which completely subverts the old ideas of self-sacrifice and patriotic devotion in the country's service, and gives them a hollow and farcical sound. If this new scheme, as announced, for securing further benefits for war service is carried out it will confirm this impression and make it an absolute certainty. If the men whose interests it is designed to promote know when they are well off, they will promptly repudiate the proposition.

## The Plain Truth.

IT HARDLY needed the positive denial of Vice-Governor Wright, together with the confirmation to the same point vouchsafed by Archbishop Ireland, that progressive Roman Catholic leader, to set at rest the silly and mischievous story that the teachers employed by our government in the Philippines are nearly all "Protestant bigots" who give up a part of the time to proselyting work. No intelligent American citizen of any faith would believe a tale so obviously absurd. To suppose that the American officials in the Philippines would ever tolerate such proceedings, much less encourage them, is to suppose that they have left their common sense, together with their Americanism, behind them, a supposition more incredible even than the charges of gross inhumanity thrown up against the army. The facts show that the native teachers are Roman Catholics, almost without exception; that on the administrative staff of the public school system Roman Catholics are found, and finally that nobody in the Philippines sees any indications of a proselyting spirit governing the instructions brought over from the United States. Our government has enough difficulties before it in the Philippines without stirring up the fires of religious prejudice and animosity, and none is more sensible of that fact than our officials at Washington.

OUR BELIEF in the goodness and unselfish feeling of our fellow-men in general is so steadfast and strong that we cannot believe that there are many fortunate and happy enough to find relief from the sweltering heats of summer in the mountains or by the seaside, who are not moved at times to extend some small share of their comforts and delights to the vast numbers of people, no less worthy than themselves, whom sickness, poverty, or other circumstances has compelled to remain within the hot and stifling confines of city tenements and blistering streets. For all thus moved we know of no better medium to put their philanthropic desires into immediate and practical effect, no investment of kindness that will reach and help a larger number of deserving persons in a better way, than the Fresh Air Fund conducted by the New York Tribune. This fund has now been in operation for many years, and by means of it tens of thousands of poor children have been given a season of happy, healthful living away from the heat and squalor of the town, and to hundreds it has brought opportunities which have changed for the better the whole course of their lives. The fund is administered on a responsible, business-like, and economical basis, and all who give to it may be certain that every penny of their money is expended in a way to do the most good to the largest possible number.

THE TIME is still far distant, we suppose, when the process of evolution will carry man so far away from the petty vanities and the love of gewgaws and idle frippery which possessed his savage ancestry that he will care no longer to convert his noble breast into a spacious sign-board whereon to hang cabalistic medals, badges, and various other insignia testifying to the brave deeds he has performed or to the illustrious orders of which he is an honored member. It would be indeed a needless cruelty that would deprive a man of the privilege of calling himself the worshipful high-muckey-muck of the jujims if by so doing he can add anything to the joy of existence. It is for this reason that we fail to agree with some of our contemporaries who are disposed to criticize somewhat severely both the giver and the recipients of the three hundred decorations which the German Emperor is about to distribute among Americans who entertained Prince Henry during his visit here. As there is no likelihood that the acceptance of these little gifts from the Emperor will infect any American citizen with the virus of monarchism, what serious objection can there be to it? Since the prince was entertained while here by many thousands of our citizens, the only point over which we are exercised is as to the selective process by which the lucky three hundred have been singled out for the Emperor's favor. Did he draw the names blindfold from a box?

IN THE same proportion that a street brawl figures more largely in public print than a Hague peace conference, so a threatened labor trouble settled by arbitration makes less "news" than a strike among a band of bootblacks. It is for this reason that comparatively little space has been given to the fact that a long and disastrous teamsters' strike in Chicago has been ended by arbitration, and that a similar difficulty among the street-car men of Richmond, Virginia, has been averted by the same means. Neither has public attention been called in any considerable degree to the much greater and far more significant and momentous fact that on September 1st the arbitration tribunal organized by The Hague peace conference will hold its first formal session at Brussels to adjudicate the dispute referred to it by the governments of the United States and Mexico over what is known as the Pius Fund Claims. The two men selected as arbitrators in this particular case for the United States are Sir Edward Fry, formerly chief justice of the Court of Appeals of England, but now retired from the Bench, and F. de Martens of Russia, the well-known international law writer; Mexico named Paganos Guinias Cheill, a judge of the Court of Cassation of Italy, and Savornin Lohman, a judge of the highest court in Holland. These four men will name a fifth to complete the number constituting the tribunal. The assembling of this court may be well and justly regarded as one of the greatest and most epoch-making events in modern history, the turning over of a new leaf in the annals of our race.

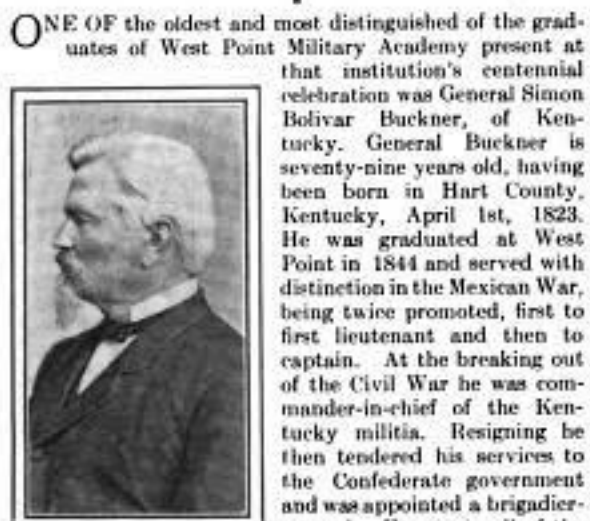

## PEOPLE TALKED ABOUT

HON. JOSEPH CHAMBERLAIN.  
Severely wounded in a cab accident.

ALTHOUGH THAT most stalwart of British imperialists, the Right Hon. Joseph Chamberlain, Secretary of State for the colonies, who has been charged with fomenting the war with the Boers, now happily ended, never went into battle, he should now have a realizing sense of what it means to be severely wounded. The other day, while Mr. Chamberlain was riding in a cab in London, the horse slipped, the speed of the conveyance was suddenly checked, and the statesman was thrown forward violently, his head striking and shattering the glass front of the vehicle. The contact with the broken crystal was equal to a blow from a ragged sabre. A bad crescent-shaped cut, three inches long and penetrating to and bruising the bone, was inflicted on the Secretary's forehead; there was a slighter wound under the left eye, and he bled as profusely as an injured soldier on the gory field. Mr. Chamberlain, however, showed all a soldier's nerve and made light of the injuries which caused his detention for several days in the hospital to which he was at once taken. The accident has had no lasting bad effects and so this interesting character, the most American-like of all English public men and the husband of an American woman, will probably continue to enliven the politics and the statesmanship of the empire, in his usual vigorous fashion, for many a long day.

GEN. SIMON B. BUCKNER.  
One of West Point's oldest and most famous graduates.

ONE OF the oldest and most distinguished of the graduates of West Point Military Academy present at that institution's centennial celebration was General Simon Bolivar Buckner, of Kentucky. General Buckner is seventy-nine years old, having been born in Hart County, Kentucky, April 1st, 1823. He was graduated at West Point in 1844 and served with distinction in the Mexican War, being twice promoted, first to first lieutenant and then to captain. At the breaking out of the Civil War he was commander-in-chief of the Kentucky militia. Resigning he then tendered his services to the Confederate government and was appointed a brigadier-general. He was in all of the prominent battles fought in Kentucky, Tennessee, and the South. At Chickamauga, military critics say, "he was second only to Longstreet." He was captured at Fort Donelson, and being exchanged a few months later was promoted to major-general. After Chickamauga he was made a lieutenant-general. He helped to arrange the terms of surrender at Appomattox, and being paroled returned to Kentucky. In 1887 he was elected Governor of the State. At the end of his term he returned to his farm in Hart County, where he has lived ever since. He was selected by General Grant to be one of his pall-bearers. In 1896 he was the candidate for Vice-President of the sound-money Democracy.

MADAME TERESA CARRENO.  
The famous pianist, who has had four husbands.

NOT MANY of the leading figures of the musical and dramatic world have had a more romantic experience than has Madame Teresa Carreno, the world's most distinguished pianiste, known as "the lioness of the pianoforte," who has just been married in Berlin to her fourth husband. This gentleman is Arturo Tagliapietra, of this city, who has been Madame Carreno's manager, and who is a brother of her second husband, Giovanni Tagliapietra, the baritone, from whom she was divorced. Her first spouse was Emile Sauret, a famous violinist, and her third Eugen D'Albert, a pianist, to whom she was wedded in this country some eight years ago. Both these marriages were unhappy and also ended in legal separations. But aside from her matrimonial ventures Madame Carreno is a personage of interest. She is a grandniece of Simon Bolivar, the liberator of Venezuela, and her father was formerly minister of finance in that country. The latter lost his wealth during the war for freedom, and brought his family to New York

in 1862, when Teresa was only eight years old. The next year Teresa first appeared in public at the Academy of Music as a singer, and soon afterward went to Europe, where she gained many triumphs. In 1867 she made her debut in opera. Later she gave up singing and devoted herself to the piano. Madame Carreno has frequently appeared in the United States, and has played at 2,000 concerts.

IT IS THE expected that has happened both in the resignation of Lord Salisbury as Prime Minister of England and the selection of his nephew, the Hon. Arthur J. Balfour, to succeed him. The retirement of Lord Salisbury has been imminent ever since the death of Queen Victoria, whom he served so long and faithfully, and would have occurred then, had it not been for the urgent solicitation of King Edward. The close of the Boer war and the formal accession of the King have furnished a fitting occasion for the present step. Never has any nation, ancient or modern, had a wiser, more sincere, unselfish, and faithful guide and counselor than the man who has just put aside the chief administrative office in the gift of England. A born aristocrat, and a politician, a statesman, and a diplomat by virtue of inherited tendencies and lifelong associations, training and experience, Lord Salisbury stands as a foremost type of the kind of men fitted to determine the policies, to shape the legislation, and administer the political affairs of a government like that of England. With the exception of Gladstone, no man has been so conspicuous in public affairs in England during the past fifty years as Salisbury, and none other has wielded an influence so great. He first became premier in 1885, and alternated with Gladstone in that office for several terms, according as the Conservative and the Liberal parties, which these men led, were in the ascendant. At the time of his resignation Lord Salisbury had served altogether fifteen years at the head of the British Cabinet, three more years than Gladstone. Unlike his illustrious rival, the philosopher and statesman of Hawarden, Salisbury is not a man of winning personality, and had his official preferment depended on elements of personal popularity, he probably never would have served England in any capacity. He has always been cold and reticent in the extreme, with all the disdain of his Elizabethan ancestors for "the persons who live in small houses." He is a plain and blunt, but powerful public speaker, never

HON. A. J. BALFOUR AND LORD SALISBURY,  
England's brilliant new premier and his distinguished predecessor.

courting public favor and caring little for the opinions of his fellow-men. He has always hewn to the line of his convictions and beliefs, letting the chips fall where they might. He is the very soul of honor and unselfish patriotism, and no suspicion of wrong-doing has ever attached to either his public or private life. As for Salisbury's successor, Mr. Balfour, it will be universally conceded that no living Englishman is better fitted to assume the mantle than he, and none more worthy of it. Mr. Balfour is fifty-four years of age, a Scotchman by birth, an Englishman by education and training, and a scholar, a philosopher and a statesman by natural tastes and acquired gifts. He has been prominently identified with public affairs from his early manhood, being successively privy counselor, Secretary for Scotland, chief secretary for Ireland, leader of the House of Commons, and for the past seven years first lord of the Treasury. As Irish secretary, Mr. Balfour got himself more cordially hated in the ever-turbulent isle than almost any one who has held that position for a century; so much so that the late Father Healy once remarked to him: "If the people hated the devil as much as they hate you my occupation would be gone." Nevertheless, he administered that office, as he has all other like trusts, with energy, fidelity and simpleness of purpose, and in a manner that increased public esteem for him everywhere except in Ireland.

THE REV. HARLAN P. BEACH, Secretary of the International Y. M. C. A. Committee in the educational department of the student volunteer movement, is to be the superintendent of the new mission which Yale University has initiated and which, it is hoped and believed, will extend to other colleges in manifold forms. Amherst College, for instance, might arrange to support not a mission nor a missionary, necessarily, but an educational institution. The movement is most likely to extend among those colleges that were Congregational in origin, and have been Congregational in alliances and sympathies. The movement at Yale has been originated and is to be conducted in North China, in conference at home and co-operation abroad with the American Board of Foreign Missions, Boston. Mr. Beach was its missionary in Tungcho, North China, eighteen

miles from Peking, from 1883 to 1891. He is a Yale graduate in the class of '78. He is the author of several outline text-books for mission study classes. He holds that the higher educational institutions are the strategic centres for the study of missionary lands and conditions. He has done much to present to all students in colleges a comprehensive course of study on missions. "Once in a college generation," he says, "we hope to bring all these [missionary] fields before the student's view. We are a help to the sociological and anthropological departments, and to the comparative study of religion; and in other lines we broaden the horizon of the student and quicken his spiritual life. In smaller institutions we are doing something to give the active interest in missions a broad, practical, and enlightened basis." The first missionary of Yale is to be the Rev. John L. Thurston, of Whitinsville, Mass., a recent graduate of Yale University and of Hartford Theological Seminary. This movement really originated with him and some of his fellow students in that seminary, where more instruction on missions calling for increasing attention is given than in any other seminary in the world.

THE REV. HARLAN P. BEACH,  
Head of Yale's new missionary movement.

WHILE THE railroad business, as a rule, demands the services of capable, alert, resourceful and well-balanced men, it is not commonly regarded as the shortest road leading to honors and dignities in the learned professions, but rather as a stepping-stone to positions of power and influence in the commercial or financial world. However, to him who has the spirit in him, the ambition and the energy, railroad employment in any rank may serve excellently well as a preparatory school for any still higher pursuit. It all depends upon the individual. In the case of Professor S. P. Brooks, recently elected to the presidency of Baylor University, at Waco, Texas, it proved that the humble position of a railroad section hand, held by him some twenty years ago, was a sufficient vantage ground for a start on the upward career that has terminated for the present in the executive chair of a great and successful educational institution. Early in the 'eighties young Brooks was a member of one of the section gangs employed on the Santa Fé Railroad. But he was trustworthy and diligent, and abstemious in his habits. A small portion of his earnings was carefully laid aside. In the section house at night, and when prevented by the weather from work on the road-bed, he spent his leisure in study, and thus prepared himself for college. He was graduated from Baylor University in 1893 and from Yale in 1894, receiving the degree of M. A. at the recent commencement of the latter institution. Baylor University is one of the older schools in the South, having been chartered by the republic of Texas in 1845.

PROFESSOR S. P. BROOKS,  
Once a section hand, now a college president.

THAT QUEEN Alexandra of England should, at a high function, openly administer a snub to a prominent peeress hardly comports with the prevalent idea of her graciousness and tact. Yet such an act she is accused of committing at the latest court. The object of the Queen's displeasure was the beautiful Countess of Warwick, who was arrayed in a white dress with a rose-colored velvet train and who wore a Marie Antoinette curl down her neck, a combination that must have been extremely bewitching. In fact, it is recorded that, in her stately beauty, the countess outshone all the other ladies present, including the handsome daughter whom she presented. King Edward, who is not insusceptible to feminine good looks, was most gracious in his reception of the countess, but the Queen merely bowed to her in conventional fashion and then gave the next comer her attention. Later, when the King and Queen walked through the gallery where the guests were in line, the King spoke to the countess, but the Queen did not notice her at all. The cold reception of the countess was in sharp contrast with the Queen's cordial greeting to Mrs. George Keppel. Her Majesty's antipathy to the countess is of long standing, having originated in the days when she was Princess of Wales.

THE COUNTESS OF WARWICK,  
Who was snubbed by Queen Alexandra.

## A GRAND EXAMPLE OF MODERN BRIDGE-BUILDING SKILL.

THE GREAT WILLIAMSBURG BRIDGE, OVER THE EAST RIVER, NOW RAPIDLY APPROACHING COMPLETION.—Photographs by R. L. Dunn.

## What the Building of a Big Bridge Means.

THE BUILDING of one of the world's great bridges is an immense and difficult undertaking, of which most people have but an inadequate idea. To be a successful bridge-maker on a large scale requires the highest mechanical ingenuity and skill, the capacity to assemble and combine big and varied aggregations of material, and the faculty of efficiently directing the efforts of a regiment of men. For proof of all this New Yorkers do not have to go far, for they find in the new East River bridge a fine and the latest example of the art of construction in this line.

The Williamsburg Bridge—for such is its official name—has of late been advancing toward completion with remarkable rapidity. The first contract on the structure was let on October 28th, 1896, and actual work was begun soon afterward. The expectation is that the bridge, on which 700 men are employed, will be finished and usable by October 1st, 1903. It will cost about \$20,000,000, considerably more than the Brooklyn Bridge, but it will be larger and more convenient than the latter. The bridge will be 7,264 feet in length between the terminals, and it will be 118 feet wide. The main span will be 1,600 feet long, and the height above high water for 200 feet on each side of the centre of the main span will be 135 feet. The centre of the cables at the top of each tower will be 333 feet above high water, but the apex of each tower will probably reach up to 350 feet. The bridge is to be a double-decker, with carriage-ways, trolley and elevated railway tracks on the first level, and foot-walks and bicycle-tracks on the second. The masonry work of the approach on the Manhattan side will begin at Clinton and Delancey streets, and the Brooklyn terminus will be at a plaza just beyond Driggs Avenue and bounded on three sides by South Fourth Street, Havemeyer Street, and Broadway.

The four huge cables from which the main body of the bridge is to be suspended have already been spun and workmen are now engaged in wrapping them tightly with wire, preparatory to fastening on them the rings from which the suspender rods will hang. To bring the cables to their present stage took only seven

months, and it is claimed that the work was done three times as rapidly as any similar work has been performed. Each cable is 18½ inches in diameter and contains 7,796 wires, each 3,000 feet long, making 17,432 miles of wire in the four cables. These have a total strength of 98,000 tons, but the load they will have to sustain will not much exceed 16,000 tons, so that there is a vast margin of safety. Some 40,000 tons of steel, structural and cable, will be used in constructing the bridge, and the approaches at the two ends will absorb mountains of building stone. On the Manhattan side thirteen blocks of buildings have been condemned and razed to make way for the approach; the people who were thus obliged to seek homes elsewhere numbering many thousands. The same thing, but to a lesser extent, has taken place on the Brooklyn side. In fact, nothing has been omitted in the way of making the new bridge a safe and commodious passage-way, and it is believed that when it is completed the congestion in the passenger traffic between Manhattan and Long Island will be materially relieved.

MINE OFFICIAL WARNS UNION PICKET OFF COAL COMPANY PROPERTY.

## A Great Oil Gusher on Fire.

ONE OF the most spectacular oil fires ever seen in the United States took place recently in the Jennings oil field, in Louisiana. A 1,200-barrel tank was struck by lightning, and both it and an adjoining tank of the same size were speedily consumed. The derrick at the Jennings No. 2 well soon ignited from the blazing tanks, and at once the oil flowing from the well caught fire. The flames shot up seventy-five feet, while gas explosions sometimes sent them much higher, and the dense smoke rose in great volumes about 1,000 feet, making of the phenomenon a miniature Mont Pelée.

Successful precautions were taken to save adjacent property. A train carrying a chemical engine and several experienced oil men hurried to the scene from Beaumont, Tex. It was decided to use steam as the extinguishing agent, and many boilers were sent to the spot. The steam from these, with sal ammoniac in quantities, was focused on the flames, and the latter were extinguished.

## The Coal Strike Trouble.

LONG DEFERRED though it was, the inevitable riotous outbreak came in the anthracite coal regions of Pennsylvania the other day, when a mob of enraged workmen at Shenandoah attacked a deputy-sheriff who was escorting a non-union miner to the colliery, and precipitated a fight, in which hundreds of shots were fired, scores of persons wounded, and three men fatally shot. Within six hours after the riot national guardsmen were on the scene, and within twelve hours two regiments and part of a third, with a troop of cavalry, under command of Brigadier-General J. P. S. Gobin, had encamped in Shenandoah. Peace has been restored by the presence of the troops. Coal operators say the coming of the soldiers marks the beginning of the end of the big strike. The union leaders assert that the situation is in no wise changed, and that the workmen will win.

# Turning Vast Deserts into Gardens

THE RECLAMATION OF THE ARID WEST UNDER THE NEW IRRIGATION LAW

By L. A. Maynard

IT IS an hypothesis of a certain section of the East that the development of the West must subject the older States to injurious competition and that the reclamation by Eastern farmers of their own lands relieves them of obligation for the betterment of other communities. It is the Spanish theory of the working of a federa-

A WIND-SWEPT STRETCH OF UNIRRIGATED PLAIN—AN ISOLATED DWELLING IN THE DISTANCE. (See opposite col.) (By permission Thomas Y. Crowell & Company.)

tion of States, in which each unit strives fiercely against the others. It has appeared in all the legislation for the expansion and development of the West—in the first term of Andrew Jackson as in the attacks upon the irrigation act a few weeks ago. It was Foote's resolution of inquiry respecting the sales and surveys of Western land which brought out Hayne's accusation that the New England States desired to check the growth of the West, replied to by Webster on January 26th, 1830, in perhaps the greatest speech ever made in the Senate.

The fallacy and selfishness of this assumption have frequently been pointed out. No unit in a federation can be benefited without profit, direct or indirect, to the other members. The development of the great States of the West and South, which was to bring ruin to those of the East, has contributed most of the country's greatness, and given it first rank among the nations. Western competition has proved an illusion, pure and simple. The peopling of the West has enormously increased the domestic demand for Eastern manufactures, which, in turn, has increased the market for Eastern farm-products for the use of the factory and commercial population. The sudden disappearance of Western farms would, in fact, mark the ruin of many Eastern communities.

It is thus a narrow and fatuous view which would retard the further extension of our productive boundary. It is the more short-sighted if the territory developed will furnish larger markets for Eastern manufacturers, while devoting its soil to products differing from those of the Western and Middle States. Yet it is precisely such a region the reclamation of which is contemplated by the irrigation act just passed by Congress. It is that portion of our territory acquired as the result of the Louisiana and Gadsden purchases, the war with Mexico, and the annexation of Texas. It comprises one-half of the United States, that lying west of the 100th meridian—that is, of a line drawn south through the Dakotas, Nebraska, Kansas, Oklahoma, and Texas. It is an immense domain, including, in whole or in part, seventeen States and Territories.

But it is arid or semi-arid, the Sierra Nevada, the Rocky Mountains, and other ranges intercepting the rain-laden clouds from the Pacific. Nowhere is there an assured rainfall sufficient for the success of agriculture. As a consequence, the arid region is sparsely settled. The westward movement of emigration has largely stopped at the eastern borders of the Great American Desert of the old-school geographers. Yet there is little doubt that the western half of the continent is, in climate and natural resources, the better half. Already it has become the national sanitarium. Of the raw materials contributing to national wealth, gold and silver, iron, coal, oil, and lumber, many of the arid States possess more than those of the East. Moreover, the soil is richer, and with adequate water supply will return more to the cultivator. The investigation of Professor Hilgard shows that the soils of the arid States are vastly more fertile than those of the eastern half of the country, a fertility "inherent in the aridity itself."

The earth has retained the plant-feeding substances which are washed out in regions where the rainfall is abundant. It is doubtless due in large part to this superior productiveness that the ancient civilizations sprang from arid lands.

To insure the success of agriculture, however, water must be drawn from the streams having their sources in the mountains, which condense the moisture of the clouds into snow and hold it for the summer's need. Even if fully utilized, this sup-

ply will be insufficient for the reclamation of more than one-fifth of the area, though, were it adequate, the mountainous character of the country would prevent general cultivation. Thus far private enterprise has reclaimed about 7,000,000 acres, but the limit of its endeavor has practically been reached. No great general system can be carried out by the States—though within limits that inaugurated by Wyoming is a model for the world—for the watersheds to be treated may extend beyond their boundaries. To commit the task to great corporations would be to promote land monopoly. The work must be undertaken by the Federal government, which is the largest holder of arid lands, and which alone can inaugurate and maintain an adequate system.

What is to be done is to construct reservoirs in the most available places for the storage of the waters which during the flood season now run to waste, and through large canals and the dry channels of the streams bring the water within reach of the settlers' ditches. It is estimated that, of the 600,000,000 acres of public lands in the arid region, 60,000,000 acres, scattered from the northern boundary to the Mexican line, may be thus reclaimed. The construction of large irrigation works will, however, only be necessary for about one-third of this area, the remainder being gradually reclaimed

MAP OF DRY FARMING, WHERE IRRIGATION IS NEEDED. From Frederick Haynes Newell's "Irrigation in the United States." (By permission Thomas Y. Crowell & Company.)

through the extension of the various systems by individual enterprise. Under the irrigation act recently passed, the selling price per acre is to be so fixed as to return to the reclamation fund created from the sales of arid lands

MAP OF HUMID, SEMI-ARID, AND ARID REGIONS OF THE UNITED STATES. (By permission Thomas Y. Crowell & Company.)

the amount expended in any irrigation project. A perpetual fund is thus provided, to be applied over and over to the work of reclamation without taxing the public.

DREDGE CUTTING A LARGE CANAL THROUGH DRY DISTRICT TO BE IRRIGATED. (By permission Thomas Y. Crowell & Company.)

As the lands are to be sold only to actual settlers, and in tracts not exceeding 160 acres, not only will all danger of land monopoly be prevented, but a new social condition created. For, owing to the increased productiveness of irrigated land, and thus the fewer acres which can be cultivated by one family, it is probable that the average farm

THE SAME SPOT AFTER A SYSTEM OF IRRIGATION, SHOWING RESULTS ATTAINED. (See opposite col.) (By permission Thomas Y. Crowell & Company.)

will not exceed from twenty to forty acres. This will mean that population will be from four to eight times as dense as in the farming district of the East, and that life on the farm will give place to life in the farm village. Each half-dozen sections of cultivated land will have its farm hamlet, with schools, libraries, postal facilities, etc., to be connected with other villages by electric railways. Thus occupied, the 60,000,000 acres of irrigable lands will furnish homes for ten millions of people. Add to these the farm hands, the artisans, commercial and professional classes, living indirectly upon the farms, and the number should easily reach twenty millions. With the extension of the irrigable area certain to follow, the culture of forests, the development of the grazing, mining, and lumber industries, we may expect even this population to be doubled. That is to say, a new empire will be built up in the heart of the United States, drawing its manufactured goods from Eastern factories, and shipping its food stuffs to the Orient, and so adding enormously to the strength and wealth of the nation.

It is the development of this empire of the arid land in the heart of America, where it will be of the greatest value, that a section of the East attacks as a waste of national resources. Forty years hence it will look back at the opposition to the irrigation act as the opponents of the homestead act must now look back upon that beneficent measure, and wonder at its blindness. For the same proof—a vast, fertile, and fruitful domain, peopled by prosperous millions—will have justified its passage.

VACANT AND RESERVED AREAS IN THE WESTERN PUBLIC LAND STATES.

State or Territory.	Total Area.	Vacant.	Per cent.	Reserved.
	Acres.	Acres.		Acres.
Arizona	72,268,800	48,771,000	67.5	18,285,000
California	99,827,300	42,049,000	42.1	16,064,000
Colorado	66,332,800	39,116,000	59.0	5,994,000
Idaho	53,945,600	42,475,000	78.7	1,747,000
Kansas	52,288,000	1,085,000	2.1	988,000
Montana	92,998,400	65,803,000	70.8	12,348,000
Nebraska	49,177,600	9,927,000	20.2	70,000
Nevada	70,233,600	61,322,000	87.3	5,983,000
New Mexico	78,374,400	55,589,000	70.9	6,385,000
North Dakota	44,924,800	16,956,000	37.7	3,370,000
Oklahoma	24,851,200	4,654,000	18.7	7,168,000
Oregon	60,518,400	33,784,000	55.8	5,500,000
South Dakota	49,184,000	11,869,000	24.1	12,803,000
Utah	52,601,600	42,516,000	80.8	5,488,000
Washington	42,803,200	11,913,000	27.8	10,765,000
Wyoming	62,448,000	47,657,000	76.3	7,995,000
Total	972,777,600	535,486,000	55.1	120,643,000

The greater portion of the vacant lands tabulated above may be made fertile and productive under the new irrigation law.

## Land at \$1,800,000 a Lot.

IT IS a long jump in value, if not in time, from the twenty-five dollars which, it is said, was originally paid for the possession of the whole of Manhattan Island, to the two hundred dollars paid the other day by a real estate broker for a parcel of ground within the same limits containing just forty square inches. At this rate an ordinary city lot would bring \$1,800,000. It happens, however, that the forty square inches spoken of is a diminutive "corner lot" giving the shrewd owner a five-foot-line privilege on two streets, which, he estimates, will give him property rights above ground and below having a rental value of \$1,000 a year, in which case the investment in real estate, even at five dollars per square inch, will turn a handsome profit.

A FINISHED IRRIGATION DITCH.

# Why Hanna Hates General Wood

IS THERE AN AMERICAN DREYFUS CASE?

BRIGADIER-GENERAL LEONARD WOOD.  
Photograph, copyright 1899, by Purdy.

THE ASSERTION by friends of Senator Hanna that he would bitterly oppose the appointment by the President of General Leonard Wood as manager of the construction work on the Panama Canal, in the event of the government's getting control of that property, has invited attention anew to the cause of the Senator's hostility to the general, who is so close to the President. This feeling is believed to be an outgrowth of the treatment received in Havana

by Major Estes G. Rathbone, Senator Hanna's friend and formerly director-general of posts in Cuba under the military government. If Major Rathbone's statements are well founded, his case contains several features suggestive of the Dreyfus affair. He has made charges against General Wood, who was lately military Governor of Cuba, which are so grave and specific as to warrant investigation by a committee of Congress or a military court of inquiry.

Major Rathbone, after discharging the duties of director-general for a time with seeming acceptance, was suddenly accused of dishonesty in office. He was tried at Havana with Neely and Reeves on the charges of conspiracy to defraud and of embezzlement of the postal revenues of the island, was found guilty, and was sentenced to ten years' imprisonment and to pay a fine of more than \$35,000. Major Rathbone claimed that he was innocent and that the trial was grossly partial and unfair. President Roosevelt, on the appeal of Senator Hanna, directed that a new trial be held, but before that came about Cuba became an independent republic. The Cuban Congress passed an act granting amnesty to all Americans im-

prisoned in Cuba, and under this statute Major Rathbone was released. He does not rest content with mere freedom, however, but demands that something be done to remove the stain from his name. He returned to this country just before the adjournment of the late session of Congress, seeking a vindication, and his petition for

ESTES G. RATHBONE, FORMERLY DIRECTOR-GENERAL OF THE CUBAN POSTS.

an investigation was presented by Senator Teller, but was not acted upon, probably for lack of time.

Major Rathbone alleges that the proceedings resulting in his conviction were improperly and illegally influenced and controlled by the military Governor, General Wood, through various official orders and instructions to the

trial court, the judges of which were the Governor's appointees, and that the impression was thus created that the Governor desired the conviction of the defendants. A most serious charge is one to the effect that General Wood authorized the trial court to admit as evidence for the prosecution *ex parte* depositions taken in the United States, thus repealing the Secretary of War's instructions excluding such depositions.

Major Rathbone also maintains that he was not allowed sufficient time to prepare for trial on the charges on which he was finally convicted, and that he was convicted on charges graver than those on which he had been indicted, the original indictment having been amended after it was sent to the trial court. He declares that Reeves, the State's principal witness and virtually the only witness against Rathbone, did not testify at the trial under oath. Reeves, the major says, being a defendant, was not required under the laws of Cuba to swear to or affirm the truthfulness of his statements and could not be punished for perjury if his testimony was false. Major Rathbone avers that during the trial Reeves contradicted testimony given by him in the preliminary proceedings. In addition, Major Rathbone insists that he was convicted on insufficient evidence, his conviction resting almost entirely on Reeves's practically uncorroborated testimony, which was contradicted by that of both Neely and Rathbone.

In thus holding General Wood responsible for the method and the outcome of the trial, Major Rathbone has taken a bold step. General Wood's high standing, his splendid work in Cuba, and his close intimacy with the President all tend to weigh against the major's allegations. But the latter are made by a man who, prior to his trouble in Cuba, was regarded as one of the most faithful of public officials. His friends state that while he was assistant postmaster-general he could have become a millionaire had he slackened his prosecution of the lottery companies, against which he waged vigorous war and to whose business he dealt a deadly blow. Accusations from such a source as this cannot lightly be ignored merely because of the judgment of a court which is claimed to have been inequitable. The fact that United States Senator Hanna, shrewd and level-headed as he is, has been Major Rathbone's chief and most zealous champion lends weight to the major's demand for an investigation.

The country will deplore another unsavory controversy involving men of prominence. But if it was fitting to settle formally the Sampson-Schley difficulty, much more needful is it to settle the Rathbone case.

CENTENARY BANQUET OF THE LIVERPOOL AMERICAN CHAMBER OF COMMERCE, AT WHICH THE HON. WHITELAW REID (X) WAS GUEST OF HONOR.

"MAY KING EDWARD'S REIGN BE ONE IN WHICH CHAMBERS OF COMMERCE RULE AND NOT COUNCILS OF WAR," WAS THE TOAST PROPOSED BY THE DISTINGUISHED AMERICAN EDITOR.  
Photographed for Leslie's Weekly by Augustin Rischgitz.

# Santos-Dumont Tells About the Coming Air Ship

By Harry Beardsley

"MY PLAN is to make the air ship a practical means of conveyance," said Santos-Dumont recently.

"How?" he was asked.

"Next year," he said, "I expect to build a large air ship; large enough to carry twenty people in its basket. This ship will make regular trips between two points, to be selected, either in the United States or in France; it has not been decided yet which. In order to make the voyage less dangerous this five-mile course will extend over water. A voyage will be made from one point to the other and then back. A certain fare will be charged for this."

"Do you think you will find people who will care to make such a trip with you?" I asked the little Brazilian inventor.

"Ha! there won't be any trouble about that," he replied with a laugh. "I have already had hundreds of people beg me to take them with me on trips that I have made. Some of them want to take the ride out of curiosity, some want the adventure, and some want to write their experiences—tell how it feels to ride in an air ship. I am sure there are plenty of people who would want to make the trip. They say that air ships will never be practicable. Didn't they say the same things about automobiles?"

"But," I suggested, "even if an air ship should come to be handled as easily as an automobile, isn't the cost so great that very few could afford to own one? Now, for instance," I asked, "how much did your ship in which you propose to fly around the statue of liberty cost?"

"About \$70,000," replied Santos-Dumont. Then in reply to my questions he told me its dimensions. The entire machine, air chamber, motors, and all, weighs 1,200 pounds. It is 120 feet long and carries a sixteen-horse-power motor. This motor, which is the perfection of the inventor's mechanical genius, furnishes one horse-power of force for every seven pounds of its weight. One average horse of flesh and blood weighs more than a thousand pounds. Another fact that would prevent the general private ownership of air ships is the fact that they cannot be made small, and hence are pretty sure to continue to be costly. The navigator of the air has the problem of overcoming a force that is an aid in all navigation on the earth's surface. That is gravitation. To conquer this it is necessary to have a chamber filled with the lightest substance. The Santos-Dumont No. 6, the latest air ship, is stored with hydrogen, which is only a very small percentage heavier than mere space, than nothing. Santos-Dumont says that although his No. 6, which is now on exhibition in this country, cannot be controlled and guided in a high wind, a larger machine built on the same lines could be governed in flight in any breeze short of a gale.

"The new machine which I have planned will be so large that it can fly in all kinds of weather," he said. "It would always be sailed over water and not more than 100 feet above the surface of the sea or lake, wherever the trip was made. In these circumstances an accident

AERONAUT SANTOS-DUMONT, WHO PROMISES TO BUILD A PRACTICAL AIR SHIP. Lucky.

would not necessarily be fatal. The passengers would only get a good soaking. It is rather odd," said Santos-Dumont, "that Americans have never gone into the making of air ships like the French have. Many companies have been organized and millions of francs have been spent in France in building air ships. Besides that, a large number of private fortunes have been spent."

Two things make Santos-Dumont, the latest and most successful of all the aeronauts, a most interesting person. In the first place the world is always interested and has watched for 4,000 years the efforts of men who have tried to navigate the air. These men have attracted attention because their exploits were spectacular and daring, resulting often in fearful fatalities; and none of these has run greater risks than Santos-Dumont. In the second place he is an interesting specimen of the species, as all those men are whose whole thought and effort and life are devoted to the accomplishment of a single aim. Santos-Dumont was an aeronaut from childhood. He is twenty-nine years old and unmarried. During all the years of his activity he has studied and worked to construct a machine that would fly. He said the other day that when he was a small boy, living down in a city of southern Brazil, he was constantly making kites. He had a great variety of them, some that were even large enough to carry the weight of a man. But he never tried to ride through the air on such vehicles. He waited until he began building air ships.

"They were only toys," he said, "and some of them wouldn't fly." Nevertheless the slender little Brazilian boy made them better and better. Santos-Dumont has spent a fortune for air ships. He has no definite plan for means to recover any of this money. His ambition is only to build more air ships and build them bigger and better. His family and friends have begged him to turn his attention to something else, to experiment no longer with air ships. They have thought that each accident would teach him, as they said, a lesson, would cure him of the irresistible tendency which was born in him. It requires unnatural physical courage, an indifference to death that is hardly normal, to undertake what Santos-Dumont has done. But the matter of fear has had very little to do with the course of this man's life. In his peculiar broken English, the combined dialect of the Brazilian and the Frenchman, the inventor said:

"What's the use of being afraid? You can never do anything if you are afraid."

He is a very small man, short, slender, with thin chest and narrow shoulders. He has the white skin and the black hair and large, dark eyes of the Castilian. He is very polite, wearing an air of reserve. He answers questions with the manner of one who is on the witness stand. When he talked of his plans he did not become enthusiastic, but conversed as though the subject were commonplace, in a tone which a man would use in telling another that he expected to build a new fence. He is the exact type in which one would expect the absence of physical and personal bravery. He has a retreating chin, a broad mouth, and full lips. There is nothing to suggest what is usually called "bull-dog determination," and which is usually expressed in some bull-dog feature. It is not so much a matter of will and determination and fixedness of purpose that has made the efforts of this inventor so persistent, as a certain strong, innate tendency like that of the artist who will paint even though he starve.

## A Word or Two on Current Topics

SINCE WE have been spending over a hundred million a year in pensions for some time, the \$4,000,000 more which a law passed by the recent Congress in its closing hours adds to the pension budget may seem in itself too trivial for comment, but certain provisions of this law open doors into such new and boundless fields of pension liberality that we may well pause to consider once more whither we are tending in these outpourings of a nation's gratitude expressed on a cash basis. The new law gives a pensionable status to soldiers who were conscripted into the Confederate army against their will and afterward enlisted and served in the Union army of their own volition. The legislation in question supercedes a ruling of the commissioner of pensions some years ago denying a pensionable status to such soldiers, and affects about 30,000 veterans. Another section of the same measure gives a pensionable status to deserters from the Union army who afterward enlisted again of their own free will, served in the Federal army, and were given an honorable discharge. The first of these provisions may fairly be regarded as the nearest possible approach to a law granting pensions to Confederates, and it will only need a little extra push of generosity and good feeling to send the pension ball rolling on the other side of Mason and Dixon's line.

THOSE USEFUL persons, the statisticians, whose work usually makes us wiser, if not always happier, have figured up that our last Fourth of July celebration cost this country the lives of not less than 377 men, women, and children, the wounding and maiming of about 2,000 more, and a property loss estimated at about \$3,689,000. If this sacrifice of life, limb, and property were really necessary in any sense, or if it contributed in the slightest degree to our national well-being, we might cheerfully submit to it as a patriotic duty; but when we realize, as all must, that this annual holocaust, with all the misery and suffering consequent upon it, is only a concession made to the pure love of noise and hullabaloo which possesses small children and savages in common, it may well be asked whether it is not high time that a stop was put once for all to these barbaric and destructive proceedings. In view of the actual results of our Independence Day

orgies, we might well apply to it, in paraphrase, the saying of Madame Roland, "O, patriotism! How many nuisances are committed in thy name!"

M. BLOCH, the Russian savant, who has written so much and so effectively on the horrors of warfare, might find a fitting text for another dissertation on the same subject in the fact that Herr Krupp, the famous German gun-maker, is to-day the richest man in his country, and one of the richest in all the world. His present income is estimated at the equivalent in our money of about \$4,760,000 a year, an income that measures up well to that of our own billionaires and "octopus" magnates. It is not distinctly stated that all of Herr Krupp's wealth is derived from his cannon factories, but since the products of these shops have been, sad to say, in large and constant demand all over the world these many years, it is safe to believe they have been his chief source of income. But since Herr Krupp himself is said to be a man of benevolent and peaceful instincts, who is exceedingly kind and just to his army of employes, we suppose that rational persons generally will not begrudge him his 20,000,000 marks a year.

WE OBSERVE that the New York Tribune is not pleased at the prospect of having whistling introduced as a feature of church music. The announcement does shock one's religious sensibilities a little when it is put down as "whistling," but let the thing go into the programme under some new and euphonious musical title, and it would be all right. It would be equally shocking to think of a "fiddle" in a church choir, but few are heard to object when you spell it "violin."

THE ANNOUNCEMENT that a good-sized alligator has been caught in the Chicago River comes too late to furnish an argument for another appropriation under the River and Harbor Bill this year, but Senator Mason and his fellow-representatives from Illinois ought to keep the gentle saurian in stock for future uses. A river big enough to grow a real alligator is certainly entitled to a generous contribution of "pork," a kind of meat, by the way, of which alligators are said to be fond.

A WISE and learned judge in England has lately declared his disapproval of the peroration as a set feature of public addresses. He goes so far as to say that "if the profession of law and the practice of rhetoric could be freed from the peroration, a great public service would be performed." This reminds us of the warning note which a certain noted lay preacher and revivalist used to sound when he invited the brethren and sisters to give their testimony in meeting: "Now, my friends, if you've got a nice long speech ready, just cut off both ends and give us the middle."

THE VENERABLE Senator Hoar evidently believes that one is never too old to learn about housekeeping, for he has just purchased a residence in Washington, having spent the larger portion of his thirty-three years of public life in that city in hotels and boarding houses. His long and loyal adherence to an itinerant life, its discomforts and vicissitudes, could not have been from financial reasons, for the Massachusetts Senator has an extensive and successful law practice, and has for years enjoyed a comfortable income.

WHAT COULD furnish a more satirical if not a melancholy comment on the present unhappy divisions of the Christian Church than the news of a fight between Greek and Latin monks at Jerusalem over the right to sweep out the Holy Sepulchre, the combatants being separated finally by Turkish troops after several monks had been killed? If such scenes are not enough to make angels weep, then we know of nothing that could bring their tears.

### If You Feel Irritable

TAKE HORSFORD'S ACID PHOSPHATE.

It makes a refreshing, cooling beverage, and is an invigorating tonic, soothing to the nerves.

A WELL-APPOINTED home is scarcely complete without telephone service. Rates in Manhattan from \$48 a year. New York Telephone Co., 15 Dey St., 111 West 38th St.

T. DART WALKER  
WITH NORTH ATLANTIC SQUADRON

# MANŒUVRES OF OUR SPLENDID NAVY.

THE NORTH ATLANTIC SQUADRON SALUTING A FRENCH MAN-OF-WAR.—AS THE GUNS ARE FIRED THE AMERICAN BATTLESHIP ON THE RIGHT UNFURLS THE TRI-COLOR OF FRANCE, WHILE THE FRENCH BATTLESHIP RAISES THE STARS AND STRIPES.—*Drawn for Looker's Weekly by T. Dart Walker, from the bridge of the United States battleship "Kearsarge."*

# George Harcourt, the English Painter

GEORGE HARCOURT.

His picture, "Good-bye," taken from life, is founded on an incident of the departure of British troops for South Africa; the good-bye of an English girl to her soldier-lover. In speaking of the incident Mr. Harcourt mentioned that the young man, who had already said good-bye, turned suddenly for a final leave-taking, removing his helmet, contrary to military custom, in this last poignant, sacred moment.

The painting is nine feet in height by six in breadth. In the misty, smoke-laden background is the train; past it and down the platform the soldiers are marching, some with a happy-go-lucky expression, others pensive, and some waving a jovial good-bye at the crowd. The variety of individual moods is deftly and forcibly expressed; nothing is overwrought, there is no touch of insincerity for the sake of effect. Against this background or more properly as the central figures mingling with it, are a girl and her soldier-lover, a tall yeoman of full youthful development, just passing into manhood. By a sudden impulse he has started back to say good-bye again—possibly a last good-bye, his yellow khaki helmet in his hand, his head bared in this moment holy in its solemnity. She has caught his hand and is looking

up at him with an agony in her eyes as if her life instead of her heart were going out. The expression on the man's face is one of noble tenderness and solicitude for the woman he is leaving, who in this final poignant moment lets him see all that her bravery had before helped her to hold back.

For the last four years, and until the assumption of his present position, Mr. Harcourt was the head master at the Herkomer Art School at Bushey, near London. A native of Dumbarton, Scotland, he obtained a scholarship in 1889 which enabled him to study in London. Prior to that he had received his first commission, which was to decorate the first-class saloons of the Union Steamship Company's New Zealand liners and channel steamers. After study with Professor von Herkomer, whose school was then in the metropolis, he first exhibited at the Royal Academy in 1893. The following year he made a striking success with his picture, "Psyche," a work of haunting beauty. For his picture, "Thought Reading," Mr. Harcourt received a medal at the Paris Salon in 1896, and since that time has received marked attention in these exhibitions. In 1900 he was granted a medal at the Paris Exposition.

In his picture, "The Leper's Wife," the painter repeated a quality so evident in his "Psyche," and a quality that may be said to be his pre-eminently among British painters, sympathy in portraying nobility and tenderness in women. The picture shows the wife gladly and eagerly leaving the world and all it offers, to share the fate of her husband, doomed as a leper. The husband is draped in gray and the wife in glowing crimson. As she springs forward with all the motion of a figure by Tintoretto, flowers bloom at her feet; back of him the fluff of thistles is ready to scatter in the wind. The symbolism is further carried out by the dark shadows full of foreboding, and a background of glowing light showing between the trees, the joys of the world that she is leaving for him with the words ascribed to her by Tennyson in "Happy, or the Leper's Bride": "Kiss me; in the name of the everlasting God I will live and die with you."

The versatility of the painter, who is represented in some of the most important municipal collections in England, shows him equally happy in landscape, portraiture, and figure work.

Harcourt is a Scotchman that Barrie would rejoice in. He looks out on things with a sympathy, a sentiment, and a freshness of heart that contact with the world and success in it have not rankered. He paints with a desire to portray what he feels, and without any thought as to whether the picture will sell or not. Some of his pictures have traveled from one exhibition to another for five years, and then returned to the studio where they first took shape; others have found a place in some of the choicest collections in Great Britain and in national galleries in the colonies.

WILLIAM ARMSTRONG.

## Trusts and Cant.

IN THE course of a lengthy editorial relative to the Atlantic steamship combine, the London *Spectator*, while professing a dislike for huge combinations of capital, advises its readers to clear their "minds of cant even about trusts," adding that about trusts "there is always a liability to cant." Of the truth of this observation an immense amount of striking testimony has recently been afforded in the United States.

"TOO LATE."—FROM THE PAINTING BY GEORGE HARCOURT.

"Too late, too late!  
You loitered on the road too long.  
You trifled at the gate."

Her heart was starving all the while  
You made it wait."  
Christina G. Rossetti.

"Kiss me; in the name of the everlasting God,  
I will live and die with you."—Tennyson.

"GOOD-BYE!"—THE THIRD BATTALION GRENADIER GUARDS LEAVING WATERLOO STATION, OCTOBER 21ST, 1899.—FROM THE PAINTING BY GEORGE HARCOURT.

# Awful Poverty in New York

THE MOST DENSELY POPULATED SPOT IN THE WORLD—3,000 PERSONS IN A SINGLE BLOCK

ON THE north is Canal Street; on the east, Forsyth Street; on the south, Bayard Street; on the west, Chrystie Street;—within the block which these four streets surround live 3,000 men, women, and children, the children outnumbering the others more than two to one. It is the most thickly peopled block in the whole world, with a population more dense than that of any spot in China, India, or London; and it is the heart of the Jewish quarter of the great, teeming East Side of New York. Whole families live in rooms like closets. Children have no play-ground but the dark hallways, the narrow stairs, and the pavements. There is so little space that few of the merchants occupy stores, most of them selling their goods from push-carts in the streets.

We walked, a guide and I, through a narrow way between two buildings, a passage not more than three feet wide and paved with cement. Several little, slender, barefooted girls straightened themselves against the walls to let us pass, and then we entered a doorway and began climbing the unsteady stairs to the home of Mrs. Gabrowsky. Children were on the landing as we turned to climb still higher. They were suddenly silent when we appeared and then stepped out of the way, staring at us. One of them was a very little child with fine yellow hair matted like the packing of an old chair cushion. Its head and face were smeared with dirt, but its large brown eyes were beautiful. One of the boys in a sudden movement ran against this baby and it fell to its hands and knees. The boy, however, paid no heed to it, and the baby did not cry. The expression of its face was unchanged. We went two flights higher and walked to the end of a narrow hall, which seemed dark in contrast to the light of day outside.

In a niche in the wall on one side was a short pump and a girl was filling a bucket of water. Suddenly a door opened, lighting the hallway. A short woman with red hair that was like a great brush on her head, with arms naked to the shoulder, with neck and chest bare, with hollow cheeks and large eyes, called loudly to the child at the pump. She spoke in Yiddish, part Hebrew, part Russian, a jargon containing something of both languages. Then she discovered the strangers. She shut her door violently without waiting for an answer to her call. We were left again in half darkness. Then we knocked on a battered door at the end of the hall and waited.

In the air was the combined smell of cooking, of dark rooms poorly ventilated, of many persons crowded together with little opportunity to be clean. And there rang in my ears constantly the wail of babies, reminding me of a visit to an infants' hospital, a sound more pitiful than any other, telling the helpless sorrow of the little child. And wherever I went that day in that block with its 3,000 lives I heard always the sound of children crying. Sometimes it would break out suddenly and loudly in a room near by, then I would hear only a distant wail, perhaps from houses several doors removed. But it never ceased, continuing till nightfall—like a dirge, it seemed, mournful and desolate.

The door opened and we were in a home of poverty. The room seemed crowded, it was so very small; yet there was very little furniture in it. The floor was bare excepting for the litter of paper and bits of rags. A table was covered with a tattered oilcloth. A few dishes and a pile of soiled clothes were on it; the chairs were plain, unpainted, of rough wood. On the floor was a tub half filled with water. At one side stood a stove, and upon it a gas burner connected by a tube with the gas jet suspended from the middle of the ceiling. On the stove a pot of water and a kettle of soup were boiling. Against the wall were some baskets filled with rags.

In this room were an old man, a woman, and five children, the eldest of whom was not more than twelve years old. They stared at first at the visitors, the children gathering about their mother's skirts. The old man sat in the corner of the room, sewing together the large leaves of a book in Hebrew. He was working at his trade, that of a bookbinder. At his side was a heap of unbound volumes yellow with age. The woman, recovering from her first astonishment, offered a chair to her visitors, but without a bow or smile, for smiles are rare in this part of New York. You do not hear in homes like this a hearty, ringing laugh. The men and women are eager and earnest, almost void of humor; voluble, but without a smile, their life wholly serious. In their eyes is a peculiar brightness and an expression half of fear, half of suspicion. Even the children seldom laugh, but tantalize and abuse each other, mildly, without fighting.

On each side of the main room of this dwelling, the room which we had entered, was a smaller room. I looked into one of these and was startled at what I saw. The place was small, not more than eight feet square, and half of it was filled with an old bed. On this was the prostrate body of a man fully dressed, his arms outstretched, his mouth wide open. His face under-

AN OLD SHOEMAKER AT WORK BY THE DIM LIGHT OF A COURT WINDOW.—G. B. Luekey.

neath the ragged beard was so white that I thought at first that he was dead. This was the husband of the woman, the father of the five children. He and his family had been in America seven months and he had obtained work as a sponger of clothes in a tailor shop, for which he received three dollars a week. But he was sick that day and could not work.

Like most of those of his race his first employment in the new land was in the great industry of the needle. The new corner to the Ghetto usually obtains work in some capacity in the business of making clothes. If he cannot sew he can use the sponge and learn to press.

In the third room of the home of Mrs. Gabrowsky was another bed. This room was eight feet long and eight feet wide, and the bed filled two-thirds of it, a bed which seemed to consist only of old, faded comforters, hardly more than a heap of filth-stained rags. And this room, only eight feet square, was the home of an entire family, a woman and her three children; Max, fourteen years old; Ida, seven; and Abraham, three. Their mother was away at her work. She was a washerwoman, doing this sort of household work for the most prosperous of her neighbors, leaving her home often at five o'clock in the morning and returning only at nightfall. Toiling like this six days in the week, she made hardly enough to keep her children in food. Her pay was usually thirty cents a dozen pieces, washing and ironing, and her customers, taking advantage of this system of charging, usually included about three shirtwaists and two skirts in each dozen, so that they would get full compensation for their money. While their mother worked, the children were on the streets, no one knew where. They usually came around at lunch time and Mrs. Gabrowsky gave them some bread. Sometimes they picked up something to eat outside. I saw a little child of this district dig out of the gutter a filthy watermelon rind and run away with it to a corner of two buildings, where the faint remnants of the pink flesh of the rind could be eaten in quiet. The child was greatly delighted with what it had found and was holding it in both hands, looking at it with a pleased expression of face.

The father of these three children, Max, Ida, and Abraham, the husband of the washerwoman, had gone away one night and had never returned. His family did not know whether he had wearied of the struggle of supporting

them or had transferred his affection to another woman.

Desertions are common in these crowded tenements. The reason is plain. There is no real home. Rather than remain in the stench and darkness of the living rooms the children are on the street, the father is away. There is no family circle, no hearthstone; the man is not the sturdy, independent householder, with his own roof over his head. This greatest of incentives to nobility of character is absent. The dwellers of the tenements have no privacy. Their doors are side by side; they use the halls in common, several families obtaining their water from one pump, sometimes carrying it from the ground all the way to the sixth story. In such circumstances, the barriers which surround a home are easily broken, and men too readily abandon their families. And so it was with this husband, whose wife now washed for a livelihood.

I wondered how so many persons could find a place to sleep in three such tiny rooms. It was customary, I was told, for the children to sleep on the floor, their parents occupying the beds. Mrs. Gabrowsky, realizing all at once that she had not perhaps made the proper preparation for the visit of strangers, put a dingy white frock on one of her smaller children, and then took the youngest, a baby in arms, to the washtub which was on the floor, and washed its face with her bare hand, dipping her hand in the tub. Later she found a rag somewhere and wiped the infant's face, wearing all the while a sort of a smirk of apology.

These three rooms comprised not only a home, but were the apartments of a boarding-house as well. This woman was the landlady. The old bookbinder was one of her boarders, the washerwoman and the children were the others, and all twelve of them lived together among rags. For the three rooms Mrs. Gabrowsky paid \$7.50 a month rent. To the washerwoman she sublet one room, eight feet square, for \$3 a month; the old bookbinder paid what he could, and the husband's wages, \$3 a week, completed the income of the family.

The people of the Ghetto do not lack industry. They rise in the morning at 5 o'clock. They remain at their stands or push-carts in the streets or over their needles in their rooms until near midnight. They snatch sleep at odd moments. They cannot afford to waste in idle slumber the early half of the night or the first hours of day. Yet with all their industry few of them earn barely more than a living, as was the case in the home of Mrs. Gabrowsky. They have little food aside from soup and bread and coffee.

I thought of the future of the girls and boys in such a home as this. I thought of the time when the daughters would be young ladies and would like to entertain the young men whom they admired. Would they bring them to hotels such as this? And I realized again that the moral influence of the home was sadly wanting. The young girls go to the streets.

As we walked down the stairs I heard loud talking. It was a young woman's voice with a note half of anger and half of lamentation. She was a young Jewess, slender and pale, with blue semicircles under her eyes. She was talking of her husband:

"He don't do nothing to support me," she cried; "then he comes here and wants to beat me. He'd 'uv hit me just now if it hadn't been for my mother. He come in while she was out and just as he threatened to strike me she come in. I had him arrested once. And he said he just give the captain \$5 and got out. At the court they wouldn't let me testify. He laughs and says, go ahead and arrest 'em. He says he knows all the officers and captains, he says, and they won't bother him. I want to get a divorce so I can go out and work. I went to the legal aid society, but they said they had so many cases they couldn't do nothing. I'm afraid to go out anywhere, cuz he follows me to beat me. What am I going to do?"

As we passed down the hall I could still hear that ringing voice telling the sorrows of a life. Cats were constantly darting from the black shadows in the hallways. As we visited other homes the yellow feline eyes glowed from the rayless interior of the unlighted rooms. Cats scampered under the chairs when the door was opened. Outside they were digging in the cans of kitchen refuse for food. A cat, sleek, smooth, and smiling, with a dainty ribbon around its throat, curled up comfortably in a big chair before the fire, is a pleasant thing to see. But the cat of the tenement creeps rather than walks. It is gaunt, ugly, cowardly, and starved.

This block of houses in which 3,000 people live is solid on four sides; most of the buildings are five or six stories high, and the way to reach the interior court is through doorways leading from the streets. Strangest of all, most of these houses have two fronts. One front is on the street, the other is on the small interior court. Those who live in the front series of houses have no back door, and those who live in the houses which face on the court

# The Mystery of the Trained Goose

## Explained . . . By Oliver Shedd

gave evidence of possessing a "human brain," as the bill said. Two strips of wood were laid on the floor of the stage near the footlights, and large white cards, each of which bore a number, were placed in three wooden frames in

ON THE stage of a New York roof-garden recently, a common, gray, barn-yard goose was seen to perform some remarkable feats. She indeed

"Any other goose would have learned to do just as well what this one has done," said Mr. Hampton. "The first thing to teach her was that she must pick out one of

distance, and if "Walk" made a step in the wrong direction, Hampton would lift his hand quickly and "Walk" would immediately change her course. It could be seen, also, that the bird kept her eye constantly on the man. A goose can see what is going on behind her, and she has to turn her head sidewise to fix her vision on an object squarely in front.

ENTER "WALK."

full view of the audience. The goose was commanded by her trainer to tell the number of days of the week. She walked to the frame and, with her bill, pulled out the number 7. She was given problems in addition, subtraction and multiplication, and she always selected the correct result in the same way. She told the time by pulling out of the frame the cards representing the hour and minutes. Then flags of various nationalities—English, Irish, German, French—were placed over the cards, and while the orchestra played a national air the fowl selected the corresponding flag. After each feat the goose was rewarded with a nibble of corn. It was a remarkable exhibition. One thought that the goose not only understood what was said to her, but was a musician as well—exceptional for a goose.

"Professor" Hampton explained to me later something of how all this had been brought about, and I then gave credit for the performance to the man instead of the goose. The bird had learned only one thing, and that was to select a card when she was driven in that direction. The trainer guided his pet so cleverly that the audience did not suspect it.

"TELL THE AUDIENCE HOW MANY DAYS THERE ARE IN THE WEEK."

the numbers from the frame as soon as she approached it. I used to sit right down near the frame with "Walk"—that's what I call her—in my arms and hold her head to the card until she had plucked it out. Whenever she did this I would give her a nibble of corn. I have a particular brand of corn; it's sweet corn, and she likes it better than any other kind. She never gets it unless she has performed some trick well. Her usual fare is common field corn and oats. But it is a good idea to have

"HOW MANY WORKING DAYS SHOULD THERE BE?"

her fairly hungry when she is to perform, so that she will appreciate the sweet corn.

"Gradually I trained her to go and select a card while I stood farther and farther away from the frame. At last I merely started her. I stood, as I do now, on the stage, several feet back. From that point I can have her go toward any number I choose."

It was observed that the "professor" gave his pupil

"HOW MANY DAYS WOULD YOU WORK?"

a certain sly hint by turning the fowl's head quickly with his hand. Then he saw to it that after the goose had started for any number she should continue in the right direction. He followed the waddling bird at a

A TRELL OF PATRIOTISM.

"Perhaps you noticed," said Hampton, the trainer, "that when the goose first walked out of her box on the stage I told her to flap her wings to the audience. Of course she did it; she would have done it anyhow. She always does whenever she comes out of her crowded cage. I can send her to any one of the numbers in the frame that I like. I simply start her in the right direction and see that she gets there."

Professor Hampton had confessed. It was not the goose, after all, who had a knowledge of language, mathematics, and music. It was Hampton.

"Many animals," continued Mr. Hampton, who has trained all sorts of beasts for the stage during the last twenty years, "are taught with the whip. Horses and dogs are made to mind

by a crack of the lash. But other animals can never be handled that way. You can't whip a cat and do anything with her, and I wouldn't punish this goose. It would scare her, and then you couldn't induce her to move. I've got to pet her and reward her with something to eat. You must be patient and never get nervous or angry with animals. An animal learns tricks very slowly.

THE REWARD FOR GOOD WORK—A NIBBLE OF SWEET CORN.

"NOW TELL THE TIME."

### An American Diplomat's Mistake.

THE RULES of official etiquette are very exacting, especially in a court like that of Spain, where punctiliousness in all such matters is regarded as a cardinal virtue, and much may be justly granted under such conditions to a diplomatic representative who is bound to conform himself to local usages, so far as possible, in dress and conduct and thus to avoid all occasion for offenses. But, notwithstanding all these considerations, it seems to us that Dr. Curry, our representative at the recent ceremonies in Madrid, might have drawn the line on the bull-fight gotten up "in honor" of the occasion. Bull-fighting is a relic of medieval cruelty and barbarism, a brutal, bloody, and revolting sport, and its present survival in Spain is a burning disgrace to the country and a standing indication of the low and backward state of its civilization. If the court officials in Spain had no more sense of the fitness of things and no more knowledge of the prevailing sentiment among civilized people elsewhere in

regard to this disgusting pastime than to expect our representative to take it in as a part of the regular programme, the quiet abstention of that gentleman from this feature of the festivities would surely have been entirely justifiable. He might, at least, have refrained from taking his wife to be shocked and terrified at the bloody spectacle.

### Learn How

TO FEED YOURSELF SKILLFULLY.

It is easy to use good food and get well and keep that way, but a person must go about it.

A lady says, "I had a dreadful time of it before I learned how to feed myself properly. I suffered with stomach trouble for about ten years and finally got so bad that terrible pains would set in, followed by nauseating sickness in the stomach and bowels."

"Sometimes I would bloat up and would have to lie

flat on my back. My stomach finally got so bad that it would throw up everything I ate and, of course, I lost weight and strength very rapidly. I became pale. Blood was out of order and I looked like a skeleton finally.

"One day neuralgia set in in the stomach and liver and I went right down to death's door. I got so bad that even warm water was thrown off the stomach, which would hold absolutely nothing until I began taking Grape-Nuts in small quantities.

"My father had been accustomed to Grape-Nuts and knew of the value of the food and began giving it to me. I immediately began to improve, and the stomach retained the food and digested it. I gradually grew well again, and now I can eat a hearty dinner of almost anything. I have gained thirty pounds in weight. My brain is clear, skin beautifully white, and my eyes as bright as crystal, where I used to be sallow and with lack-lustre eyes. I owe something to Grape-Nuts. Please do not publish my name." Name given by Postum Co., Battle Creek, Mich.

A New Edition of  
M. de Bloch's  
"The Future of  
War"

## In the Realm of Letters

By La Salle A. Maynard

Are There  
Not Too Many  
Books at the  
Present Day?

IT IS a tremendous task now set before the world more prominently than ever before, that of transferring the emphasis in literature, art, politics, diplomacy, and in the still wider field of human ambition, from war, its superficial glamour and its meretricious glories, to peace and the nobler victories and achievements that belong to peace. Thus to make a stand against a current of thought and feeling coeval with the history of mankind, to turn it aside into new and unaccustomed channels, into saner, loftier, more humane ways, will be the work of slow and weary years, filled though they may be with the most intelligent, energetic, and persistent effort to that end of many gifted and devoted men and women. All the vast literature of the world, as it exists to-day, its poetry and its prose, its history, its biography and its romance, are imbued with the martial spirit, with the pomp and circumstance of war. Everywhere it is the warrior who figures as the hero of his time, as the idol of the people; everywhere it is the deeds of the sword, the clash of deadly combat, the roar of battle, that sounds what seems to be the sweetest music in the ears of men. To change this note in literature, to put the dominance on the heroics of peace, will in itself be a mighty undertaking, demanding the finest thought, the highest gifts, and the noblest energies of men for many years to come. And the great work cannot begin too soon nor be pressed too vigorously to save the world from adding further to the awful load of woe and agony which war has piled upon it.

A better beginning in the specific work of building up the literature of peace and thus educating public sentiment in favor of settling civil and international disputes by other arbitrament than that of the sword could hardly be made than that undertaken by Ginn & Co., the well-known publishers of Boston. This firm proposes to issue from time to time, in cheap and substantial form, all the great writings of the past and of the present which tend distinctly to emphasize peace as the true aim of nations, and to show the folly and waste of war. The first volume in the series is a condensation of the great work of the late Jean de Bloch on "The Future of War," without doubt the most remarkable work in deprecation of war, from the economic as well as the humanitarian point of view, ever written; a work which, it is believed, induced the Czar of Russia to issue his famous rescript summoning the peace conference at The Hague, which in turn has led to the organization of The Hague tribunal for the settlement of international disputes by arbitration, in itself one of the most notable and epoch-making events in human history. The original work of M. de Bloch consists of six volumes, which have not yet been translated into English, a fact which obviously puts it beyond the reach of all except special students and investigators. The work issued by Ginn & Co. is a volume of only three hundred and eighty pages, but it contains practically all the "meat" of the original work, the facts and figures on which M. de Bloch bases his arguments and conclusions against war, as well as the substance of these arguments and conclusions themselves. It is furnished with a valuable introduction by Mr. Edwin D. Mead, editor of the *New England Magazine*.

The volume thus published may well stand as number one in the library of anti-war literature. It is certain to be for all time to come the leading authority on this subject, a classic work in its line. The next volume in this series which the Messrs. Ginn & Co. propose to issue will be made up of Charles Sumner's three famous speeches, "The True Grandeur of Nations," "War System of the Commonwealth of Nations," and "The Duel Between France and Germany." The first of these speeches, that on "The True Grandeur of Nations," has often been printed in school readers and elocutionary manuals as an exercise in oratory, and it is justly regarded as one of the finest examples of forensic eloquence in modern times. Aside from its features as a specimen of finished oratory, the speech furnishes one of the strongest arguments against war and the war spirit ever uttered, and it deserves to be still more widely known and studied for this reason alone. The price set by the publishers upon M. de Bloch's work is only fifty cents, and it is expected that the price of the Sumner volume will not be more than twenty-five cents. These prices will barely cover the cost of publication, for Ginn & Co. have not taken up this work from any mercenary motive whatever, but with a sincere and genuine desire to promote the cause of peace, so far as possible, by the circulation, at cost, of the best available writings on the subject, both new and old. To this end they ask the support and co-operation of all who have this cause at heart. The way to give them support and co-operation is to send for de Bloch's book, now published, and the others to follow in the series, and help secure for them the widest possible circulation. This is a direct, positive, and practical service in the interests of peace, costing but little money

or effort, a service, therefore, which lies in the way of every one who is minded to do anything toward promoting the coming of the happier day when war shall be no more.

RUINS OF TINTERN ABBEY, WHICH IT IS PROPOSED TO RESTORE.

THOUGH IT has been prematurely stated that one of England's beauty-spots and historic abbeys had been bought by the English government from the Duke of Beaufort, it is hoped by all lovers of literature the world over that Tintern Abbey and thousands of acres adjoining may become public property. Founded in the twelfth century, Tintern Abbey recalls the glorious days of architecture when skilled artisans had leisure, without thought of strikes, to complete those lofty fancies which are the admiration and envy of modern decadents. In a fairly good state of preservation, the ruins of Tintern Abbey, situated in the picturesque and beautiful valley of the Wye, are delineated in the photograph here printed.

THERE IS nothing in literature easier to write, after a fashion, than such little essays, such meditative and discursive sketches, as those which go to make up Mr. Hamilton W. Mabie's little volume, "Works and Days" (Dodd, Mead & Co.), and few things more difficult in the form and spirit in which they appear from Mr. Mabie's hand. Such themes as "The Contagion of Faith," "Personal Atmosphere," "The Lesson of Life," and "The Grace of Goodness," in the hands of literary hacks and most other writers would yield only a succession of vapid and dreary commonplaces with no life or uplift in them, no reason for being. As treated by Mr. Mabie they yield a rich flow of fresh, inspiring, suggestive thought and wise and helpful counsel; they are full of grace and power. True and genuine essayists have ever been as rare as true poets. Montaigne, Addison, Burke, Charles Lamb, Macaulay, of the older time, and Emerson, Whipple, Lowell, and George William Curtis, of nearer days—when one has named these there are not many left who may be accounted among the masters in this field of literature. Mr. Mabie belongs distinctively to this high and rare order of writers, and among living essayists he stands in the foremost rank. His writings, as in this volume, have a wealth of allusion, a delicacy of expression, an unflinching optimism, a sweetness and clarity of thought, seldom to be found among the prose writers of our day. To these writings of Mr. Mabie we may, indeed, justly apply the characterization which Walter Pater applies to the writings of Charles Lamb, as being made up of "glimpses, suggestions, delightful half-apprehensions, profound thoughts of old philosophers, hints of the innermost reason of things, the full knowledge of which is held in reserve; all the varied stuff, that is, of which genuine essays are made."

SINCE AMERICANS have been roughly divided by some European wit into those who make speeches and those who are preparing to make them, such a work as Mr. Cuyler Reynolds's "Banquet Book" (G. P. Putnam's Sons) ought surely to meet a long-felt want and enjoy quick and large sales. The work consists of a carefully classified collection of quotations from the wits and wisacres, the poets, philosophers, and essayists of all lands and ages, suitable for inscription on a menu along with other tarts and sauces, or for the still higher and more dignified use of giving zest and piquancy to after-dinner speeches. Men who are likely to be called upon on such occasions for a "few remarks"—and who is not?—will find this volume specially valuable for ready reference and for such rich, apt, and suggestive aphorisms and sententious bits of philosophy as may make their discourse delightful to hear, and earn for them the choicest rewards of post-prandial oratory. As implied in its title, the book is designed primarily as an auxiliary to the joys of the banquet-table, but it will serve fully as well for addresses on any occasion. The selections have been made with rare taste and good judgment, and are arranged and indexed in a way to make them serviceable at a moment's notice.

WASHINGTON IRVING once said that the time would come when there would be too many books in the world—too many really good books. Certainly no one could say now, as a great reader of a former age declared, that if God would spare him to be eighty years old he would read all the books in the world that were worth reading. Some present-day readers are so bewildered by the multitude of books being constantly published that they hardly know what to do. A few reflections may help to relieve their confusion. Many of these publications are books of reference only. Others treat of passing questions and perish in the using. Few will outlive the time of their publication. As for fiction, we stand breast-deep in a flood of novels, good, bad, and indifferent. Do not be discouraged. It is quality, not quantity, that tells in the matter of reading. Much thought is repeated over and again by different authors, only in varied style. Read the best. Do not read a book because everybody is talking about it. Wait a little. It may soon repose in the great literary mausoleum. Who reads "Trilby" now? What has become of "Robert Elsmere"?

IN A RECENT volume of reminiscences by Dr. John Kerr, a Scottish school inspector, are several anecdotes racy of the soil. One of them relates to a minister who was expostulating with a beadle for objecting to do some small piece of extra work, and telling him what good wages he got just for ringing the bell on Sunday and for laying the Bible and Psalm-book in the pulpit—"and that is all you do." "Ay," replied Robert, "and ca' ye't naething to be forced to gang to the kirk ilka Sunday?" Another tells of a Highland "man"—a layman prone to unctious, and often regarded with superstitious respect. "Among other petitions, he prayed, 'O Lord, we ask Thee to send down more light on Thine ancient handmaid, Mary Cameron, that she may understand the Scriptures.' Mary, smarting under the double wrong of the mean advantage he was taking when he had it all his own way, and the reference to herself as 'ancient,' sprang from her knees to her feet with, 'It's just like your impudence to speak of me in that disrespectfu' way to my Maker.'"

ASIDE FROM their intrinsic merit and their sustained charm as true and faithful delineations of certain phases of lowly life, the succession of stories threaded together in Mr. William Furbey Gibbons's "Those Black Diamond Men" (Fleming Revell Company) has a timely value and interest for the side-light it throws upon the social and industrial conditions prevailing among the mining population of the region where the great coal strike has been in progress. The noble, the attractive, and the heroic elements in the lives and character of these people, as well as the meaner and baser qualities, the sordidness, the brutality, their petty hatreds and absorbing vices, are here brought out in striking relief. The book will not only furnish a fund of genuine entertainment for its readers, but will enlighten them greatly as to the surroundings and manner of life of a hard-working, deserving class of people engaged in an industry on which all the civilized world depends to a large degree.

EDWARD FREDERICK BENSON'S "Scarlet and Hyssop" (Appleton) is a remarkable story of London society, and may or may not afford reasons for identifications. Mr. Benson is only thirty-four years old, but his range of acquaintance and his knowledge of the subject are exceptional. Mr. Benson is the third son of the late Archbishop of Canterbury, and is perhaps the best-known member of a large family, all of whom have had distinguished careers. He was only twenty-six when he wrote "Dodo," which at once established his literary reputation. His other books, "Mammon and Co." and "The Luck of the Vails," are both successful, the latter being something of a departure from his regular work, but considered by many to be his strongest. In "Scarlet and Hyssop" he has returned to his original field and has therein even exceeded "Dodo" in brilliancy.

MR. FRANK L. STANTON'S first book, entitled "Songs of the Soil," was published some years ago by D. Appleton & Co. His many admirers will be glad to learn that a second book of verse will, in the fall, be brought out by the same firm as a holiday offering. Mr. Henry C. Appleton recently had a conference with the distinguished author with the above result.

## DESTRUCTION OF AN HISTORIC LANDMARK.

THE CAMPANILE OF ST. MARK'S, WHICH, WITH LITTLE WARNING, FELL IN RUINS ON THE SPOT WHERE IT HAD STOOD FOR CENTURIES.

## Emperor William and Peace.

EMPEROR WILLIAM, of Germany, has been charged on numerous occasions since his accession to the throne with being an egotistic and hot-headed person, ambitious above all things for the extension of German interests at home and abroad without regard to cost or the rights of others. It is becoming more and more evident, however, that the Emperor has been misjudged and misunderstood in many ways, and that he is, on the contrary, a man of remarkable sagacity and far-sightedness, and that his policy, on the whole, is of a peaceful and benevolent character. That the Emperor himself has been cognizant of the feeling entertained toward him in some quarters is made clear by his recent speech in reply to the address presented to him by the provincial committee of Alsace-Lorraine, thanking him for the abolition of the "dictatorship clause." Speaking of the period of his accession, the Emperor referred to the groundless, though sincere, mistrust which was entertained of him abroad, because it was assumed that he was striving after the laurels of victorious war. It was therefore his task to convince foreign countries that the new German Emperor desired to devote the empire and her power to the maintenance of peace. "The German people now knows along which road I have decided to travel for its welfare. Its princes stand loyally by my side with their counsel and their deed. Foreign countries, so far from discerning in us a menace to peace, are accustomed to count upon us as a bulwark of peace, firm as a rock." All this is, of course, perfectly true. The German Emperor understands, with a vividness that is most remarkable, the absolute and imperative need of his empire for peace.

It is, indeed, this feeling that peace must be secured at all costs that has made his diplomacy toward this country often so tortuous. But to keep the peace, in the case of the German Emperor, means to prevent the growing up of conditions which would render it easy or possible for Russia to go to war with Germany. As long as Russia and England can be kept at loggerheads Russia can have neither leisure nor inclination to think about a cause for quarrel with Germany.

## We Are Progressing.

PESSIMISTS OF the American school and those few Jeremiahs among us who are always insisting that we are in a decadent state as to almost every phase of our social, industrial, and political life will find it hard to stand up against the astonishing figures recently put forth by the Treasury bureau of statistics, relating to our exports to Asia and Oceania. In 1892 our exports to these countries were \$35,000,000. At the end of the last fiscal year they were \$120,000,000, nearly a four-fold increase in ten years. To China in 1892 we sent \$5,663,497 worth of exports; in 1902 they will be nearly \$25,000,000, supposing the present rate to be maintained. To Japan the increase has been from \$3,290,111 to \$23,000,000. To British Australasia the increase has been from \$11,386,677 to \$30,000,000. This is a rapid pace, but who shall say that it will not be more than proportionally increased in the next ten years, with peace in the Philippines, and the prospect of early completion of an isthmian canal? And if to these influences is added generous provision by the government for up-building of our merchant marine, the rate of progress will be greater still.

## Suspicion

LEADS TO THE REAL CAUSE.

THE question of coffee disease or Postum health becomes of the greatest importance when we are thrown on our own resources. Many a woman when suddenly left without means of support can make a comfortable living if health remains.

A brave little woman out in Barnes, Kansas, says, "I feel that I owe you a letter for the good Postum Coffee has done me. For years I was a great sufferer with nervousness without ever suspecting the cause. Two years ago I came down with nervous prostration. My work was light but I could not do it, I could not even sew or read."

"My sleep was broken and unrefreshing; I suffered intensely, and it seemed only a matter of time till I must lose my reason."

"My mental distress was as great as my physical, when one day a friend brought me a trial of Postum Coffee and urged me to use it instead of coffee for a few days, saying that Postum had cured her of liver trouble and sick headaches. I replied that I thought I could not give up coffee, I had always used it as a stimulant; however the Postum Food Coffee proved to be pleasing to the taste and I used it and was surprised to see that I was resting and getting better."

"My husband bought several packages and insisted on my using it altogether. Gradually, but not the less surely, I fully recovered. I never used coffee afterward, and when I was left a widow, a year later, I was able to open a dressmaking shop and support myself and little girls." Name given by Postum Co., Battle Creek, Mich.

H. L. DOHERTY, ONE OF THE ENGLISH TENNIS CHAMPIONS NOW IN THIS COUNTRY.

account of a prize-fight if he has to carry the newspaper down to the barn to assure secrecy. It was not many years ago that a certain newspaper in New York City determined to find out just how low an order of humanity visited prize-fights, to show to its sensible readers the next morning what a worthless crowd of hoodlums, thugs, pick-pockets, murderers, gamblers, and scamps generally made such fights possible. The society reporter, the Wall Street reporter, the racing reporter, and the religious reporter, besides the advertising manager, were sent to the fight to collect, as far as possible, the names of the people present which each might know, at least by sight. Each returned to the newspaper office that night prepared to give a truthful report of that part of the fight assigned to him. The list, when turned in, was not printed. The newspaper on the following morning contained a tame report of the scenes at the ring-side, but did not mention any names except those of the principals in the encounter, their seconds and the referee. That composite report, when put together, furnished reading which would have boomed the circulation of any publication, but which few papers would dare to print. The list of names turned in, of course, included some of the scoundrels of the great city and many gamblers. It also included those of men well known in the business, social, and professional worlds, including at least two priests and one well-known Presbyterian minister. Two members of the Cabinet were there also. This is told for the first time to illustrate that the fighting instinct in man will show at times, no matter what the texture of the cloth he wears. The recent fight between Jeffries and Fitzsimmons was hardly pre-arranged. Two men do not pummel each other in the way they did when a "fake" is on the tapis. The transparently made-to-order performance at Madison Square Garden between Corbett and McCoy bears this out. While the bout between the "Kid" and "Pompadour" Jim was a "fake" pure and simple, the battle between Fitz and Jeffries cannot be looked at in any such light. Fitzsimmons was the better sparrer, but he did not have the strength to knock out his gorilla-like opponent. Jeffries is a mountain of muscle and bone and it will require either a similar human mass, dissipation, or old age, to take the championship away from him. No man of the average prize-fighter physique can hope to do it as long as Jeffries remains in perfect physical condition. Here, at least, is one case where brute strength can overcome science.

**COLLEGE ATHLETES IN TRAINING.**—While most of the college sports are over for the summer the young athletes at the different universities or on their summer vacations are not idle. The preliminary work of the football men has already begun and it will be kept up until the latter part of November. The leaders or captains of the various branches of sport have been elected and the first work toward arranging the different teams for next season has already been completed. In baseball the college year surprised the critics, and it is occasionally heard from an expert that while Harvard defeated Yale and won the championship and Yale defeated Princeton, the Tigers really had the best team of the year. Princeton, however, did not play up to her record, while Yale played better than her handlers expected. While Harvard played first-class baseball there is no denying the fact that in Clarkson the crimson had the best pitcher in the college world, and his work did more to win the pennant for Harvard than did the work of any other three men on the team. It is an interesting fact that the two Wright boys, who have won so many lawn-tennis trophies this year, are the sons of George Wright, of Boston, who was one of the first professional ball players in this country, and one of the best shortstops at the time when A. G. Spalding was a pitcher, working for \$1,000 a year. While there is no chance that Yale and Cornell will come together on the water this or next year, there are rowing critics who think that the Yale crew might defeat the Cornell champions. Coach Cameron says that the Yale crew was not only the fastest that ever represented the New Haven university, but that it could have broken the record had Harvard been able to push the sons of Old Eli toward the finish. Some of the men in the Harvard boat have expressed similar opinions in private among their friends.

**AS TO WEIGHT OF RACQUETS, BATS AND CUES.**—Many an ambitious youngster who seemed likely to make

## In the World of Sports.

ARE MOST FIGHTS PRE-ARRANGED?—COLLEGE ATHLETES IN TRAINING—INTERNATIONAL COMPETITION HELPS TENNIS.

**ARE MOST FIGHTS PRE-ARRANGED?**—While the better element of society frowns on prize-fights, there is no doubt but that a meeting between the aspirants for the championship is watched with interest throughout the civilized world. There is a certain percentage of animalism in every human being, and he will read the

a name for himself in some particular branch of sport has had that ambition shattered through the bad advice of his friends and mentors. I heard a conversation in a big sporting-goods house the other day which convinced me that the expert who spoke knew what he was talking about. The salesman is an old-time ball player, a good man behind a tennis net, and he is up near the top as an amateur billiard player. A young man insisted on buying a 164-ounce tennis racquet and the salesman strongly advised him to do nothing of the sort, advising the customer to take a racquet weighing 14½ ounces. This is what he told the young man, and there is a lot of common sense in it, too: "You are just beginning tennis and you want a racquet which few of the strongest experts can handle. It is the same with many young ball players and billiard players. As you become proficient in any branch of sport, increase the weight of the implements as you find you can use them. Veteran baseball players can increase the weight of their bats and generally do it, but I never saw a youngster start out using the heaviest bats and make much success. An ordinary billiard player will do much better work with an 18-ounce billiard cue than he will with one weighing 22 ounces. After using that 14½-ounce racquet a week you will come in and thank me for not selling you a heavier one." In just about a week the prediction came true. Many young men, and young women too, for that matter, make the same mistake when entering the gymnasium. They select the heaviest dumb-bells and weights instead of taking up the light ones and gradually increasing the weights as their muscles develop. A competent instructor will tell you this, but then such advisers are not always handy.

THE "TRIVIA," HAROLD VANDERBILT'S NEW YACHT, BUILT BY THE HERRSHOFFS THIS SUMMER.—TODDS.

**C. H. MACKAY, THE SPORTSMAN.**—The lively interest taken in the various branches of sport during the last few years abroad and in this country, by titled noblemen in the former and men of wealth and position in the latter, is bound to react to the benefit of outdoor sports and recreations of all sorts. The man of the world no longer wince when his friends refer to him as a sportsman, and there never was any reason why he should—but he did, not so very many years ago. The running turf of America has benefited by the personal interest taken in the race-horse by such men as William C. Whitney, August Belmont, and others of that mould. Clarence Hungerford Mackay, who has just inherited the Mackay millions, is one of the best types of the American sportsman, but he is the sort of man who will not allow sport to interfere with business. Mr. Mackay is one of the best racquet players this country ever produced, and he is proficient in a polo game, with the tennis racquet and the golf club. He has sparred in private with his friends and is said to be able to give and take cross-counters with the best of the gentlemen amateurs. It is during the last two years only that Mr. Mackay has taken much interest in the running turf, but his friends are of the opinion that before many more years he will own one of the finest stables of thoroughbreds in this country. Horses belonging to him which have won honors this year are Mexican, Heno, His Eminence, Kamara, and Gold Boy. Mr. Mackay won the international stallion race at Paris with Sweza, an American-bred horse for which he had paid only \$2,500, this being his introduction to the running turf.

**INTERNATIONAL COMPETITION HELPS TENNIS.**—International competition helps all sports, and the presence in this country of the Doherty Brothers and Dr. Pim will be sure to help the net game, which staggered last year somewhat under golf pressure, but has revived materially on its own merits this year. The leading American players have been doing good work this season, but

admit that they will have their hands full in the international competitions at Bay Ridge, L. I. While the Englishmen say they will stick pretty closely to their own style of play, lobbing, there are those who have seen the Englishmen play who say that the visitors have carefully practiced the more energetic American smashing, and that the visitors will be better able to meet this style of work than they were when Ward and Davis visited England and astonished the foreigners with their more dashing play. H. L. Doherty, the holder of the English championship, is six feet one inch in height and resembles Malcolm D. Whitman. While slender, the Englishman shows plenty of muscular activity at the net. R. F. Doherty is two years his brother's junior, and is only five feet five inches high. The visitors admit that England has sent over her best three players, and if they do not take back the cup with them they will have no other excuse to offer than that the Americans have surpassed them in a game in which the Englishmen have been proud of their superiority for so many years. The tone of the Englishmen, from their arrival in this country, shows their utmost confidence in their ability.

**OARSMEN IN TROUBLE.**—There seems to be a chance that the National Association of Amateur Oarsmen may get into trouble before the present year is out. There has been much discussion recently in the East over the case of an oarsman who may be disqualified by the N. A. A. O. for doing something which the Amateur Athletic Union and other powerful organizations permit. The oarsman in question was disqualified simply because he rowed for one of the clubs belonging to the association and also rowed for his college crew. He had been a member of the particular rowing club for five years, and he was at the same time a sophomore at Columbia College. According to the rules a man cannot compete for two different clubs within ninety days. The A. A. U. rule is only sixty days. The friends of the oarsman in question argue that his rowing on his college crews does not count. The A. A. U. and other organizations take no cognizance of what the college men do until after they leave their college or university. Possibly the N. A. A. O. may find it to its own interest to make similar concessions to college men. College athletic associations conduct their sports under their own rules, regardless of the rules of any other association, local or national. The A. A. U., the League of American Wheelmen, and the National Cycle Association all tried to dictate to the college men, but wisely saw their blunder and stopped it.

**BALL PLAYERS PROTECT THEIR HONOR.**—While much has been done in professional baseball in this country during the last two years which would better have been left undone, it must be admitted that the club owners themselves are almost entirely responsible for most of the trouble. Many players have jumped their contracts and broken their word, but always because tempting offers came from the owners of rival clubs. Now the Players' Association has come to the front and has decided to black-list all players who have broken their contracts. This will cause trouble in the ranks of the players, but it will rid the association of players who could at the best bring only discredit on the organization. Now, if the National League and American League club owners would meet and take similar action, the game at large would be benefited. Thomas Daly, the re-elected president of the Players' Association, is not only one of the best ball players in the country, but he is a straightforward fellow, an honor to his profession and a fitting man to be at the head of the players' body. When Daly left the Brooklyn Club, he did it honorably, giving that club a chance to offer him the same salary paid him by the American League.

**AUTOMOBILE DIPLOMACY.**—One hears less about arrests of drivers of automobiles at present and indications point to less friction among the owners of the motor machines, the general public, and the officers of the law. The clubs throughout the country have done much to stop promiscuous scorching by irresponsible or indifferent drivers of the horseless vehicle. The stopping of racing on the public highways was another move in the right direction. As a result many of the prominent clubs are arranging meets to be held on tracks, where only the participants themselves are in any danger.

GEORGE E. STACKHOUSE.

### Sporting Queries Answered.

**J. A. M., St. Louis.**—The machines used in pacing on Eastern bicycle tracks vary as to horse-power. The popular machine at present is of ten-horse power. **G. E. S., W. C. A., Louisville.**—When the ball is hit to fair ground the man on first is forced and must make tracks for second base as quickly as possible. If on third, no other base being occupied, he is not forced to run.

## In Watermelon Time.

WHEN broadly on the melon patch  
The silver moonlight shines,  
Dark shadows glide on noiseless feet  
Among the trailing vines,  
And laden with the stolen spheres,  
A dozen at the least,  
Retire behind a friendly fence  
To hold a midnight feast.

The man of millions dreams again  
Of such a boyish raid,  
When rosy slices at his plate  
Are temptingly displayed,  
And Boney at his cabin-door,  
Where morning-glories climb,  
Forgets to pick the banjo-strings  
In watermelon time.

Both rich and poor, and old and young,  
And black and white enjoy  
The sweets of this enchanted fruit  
That never seems to cloy,  
For Nature gathers all the dews  
And roses she can find  
And yearly serves them up to us  
In watermelon rind.

MINNA IRVING.

is certain that there was some hitch in the proceedings, and that the syndicate had some sort of an extension of time granted it. It is not surprising that London capital, tied up as it is by over-speculation in highly unprofitable mining shares, hesitates to embark in extensive and extravagant new ventures. Mr. Morgan has not had as clear sailing as usual, of late. His Northern Securities Corporation is still before the courts; an extra session of the Tennessee Legislature is threatened, to prevent his proposed Southern Railway merger with Louisville and Nashville and other roads; the courts hesitate to approve of his proposed steel trust bond conversion scheme, and the public is becoming more and more timid as each new gigantic corporate enterprise seeks for its support.

The eminent Japanese financier, Count Matsukata, after his recent visit to this country, confirmed what I have repeatedly said in this column, that we have been growing at too rapid a rate in this country and that we are therefore likely to experience, to use the count's own words, "a serious setback in the near future." He finds that we have been doing too much business on borrowed capital, and that this, coupled with the magnitude of our commercial operations, "will probably lead to a panic at the first untoward circumstance, such as a bad harvest or similar misfortune." He adds: "While there are many strong banks in the United States, there are also many weak ones, whose failure will render a crash inevitable. I fear that some of these banks are lending too much money to aid business enterprises." And Count Matsukata adds, more truthfully than is generally recognized, "Some of the most prominent financiers in America share these apprehensions."

Note a few of the things that are not bull arguments, namely: the constant and heavy decrease in our exports; the acknowledged over-production in our cotton business, both in the North and in the South; the steady increase in the importations of foreign iron, which have abruptly reversed the foreign movement in this branch of trade—for, two years ago, our exports of iron and steel were causing alarm in Europe. Now European exports are increasing, week by week, and this blow at a great American industry is strengthened by the strikes in the coal and iron regions of the United States. Railroad earnings are diminishing, while railroad wages, at the demands of the employees, are being increased. Crop conditions are far from settled, with drought in some sections and too much rain in others; and, more significant, perhaps, than anything else, are the figures of the Treasury Department, indicating a heavy deficit at the close of the current fiscal year. Secretary Shaw, it is said, believes this may reach \$100,000,000. How would it be met? Does it portend another draft on our gold reserve, another financial agitation, and possibly a political upheaval, with all that these imply in their possibilities of evil and in their destructive influences on trade and commerce?

I have had many inquiries from holders of United States Steel regarding the probabilities of the continued success of this tremendous industrial combination. I consider the man fortunate who does not find himself burdened with its common stock or with too much of the preferred. The truth of the matter is that the recent bond issue had for its main purpose the relief of the great financial interests that have been carrying the burden of this property ever since its organization. These interests labored indefatigably to induce the public to buy the steel shares, but all efforts failed. They accordingly arranged the ingenious plan by which they can unload their preferred on the company and take in its place a bond which, next to the Carnegie bonds, will be the first lien on the great property.

The holders of the preferred and common shares of the steel trust are only entitled to dividends when earned, but holders of the bonds must be paid their interest regularly, or they will have the right to foreclose and take the property. The steel magnates estimate that the trust will be able, in bad times, to pay the interest charges on the \$300,000,000 of bonds given to Mr. Carnegie, and on the \$250,000,000 to be issued to take up 40 per cent. of the preferred stock. If I were a holder of preferred shares I should certainly replace

them with the new bonds, and if I held the common I would close it out at the first favorable opportunity.

It has not escaped public attention that two of the prominent directors of the steel corporation, William E. Dodge and Percival Roberts, Jr., have resigned from the board recently and that their places have been filled by some of Mr. Morgan's associates. When the billion-dollar steel trust was financed, the conservative bankers of this country stood aghast. They were appalled at the magnitude and audacity of the venture. They have not dared to express themselves publicly, but it is no secret that they have feared that this great industrial monstrosity might some day, when we again fall on evil times, menace the financial stability of the entire country. The fact that some of the bondholders of the steel trust have instituted proceedings to prevent the proposed issue of \$250,000,000 bonds, must not be overlooked. Unless this litigation is speedily disposed of, it may prove to be a very serious embarrassment to the great corporation.

"W. H. C." Parkman, O.: (1) Highly speculative. (2) These are local securities, regarding which I cannot advise.

"W." Duluth: The managers of the property you speak of have been quite successful, but of course the venture is speculative.

"F." Manatee, Mich.: (1) I do not advise on grain speculation. I deal only with Wall Street matters. (2) No; they do not appear to have a very high standing.

"R." Brooklyn: Jacob Berry & Co., 44 Broadway, trade in small lots on the Consolidated. Mr. Berry was formerly a member of the New York Stock Exchange.

"Hoboken," N. J.: Unless prosperous conditions greatly abate, you should be able to realize a profit on your Toledo, St. Louis and Western, but I would not hold it too long. No stamp.

"H." Mt. Carmel, Penn.: (1) It is a speculative proposition and in no sense an investment. (2) As mining properties go, it may be an honest affair, but it is too speculative for me to recommend.

"Reading," Providence, R. I.: I always believe in taking a good profit. Reading is so strongly held that a further advance is generally expected. What will be done about the dividend has not yet been decided.

"Lake View," Milwaukee: Much depends upon future developments in the respective territories, but at this particular time I would rather buy Toledo, St. Louis and Western preferred than Wisconsin Central preferred, considering the relative prices.

"J. S." Brooklyn: While Pressed Steel Car is reporting ten or twelve per cent. earnings on the common, the fact remains that it is meeting now competition on every side. Considering present earnings and dividends, the stock is a fair speculation. I would not buy it for a long pull.

"T. F." Pittsburg: I do not regard Crucible Steel preferred as strictly an investment stock. I should be inclined to sell at the first favorable opportunity and put the money in some secure investment until business conditions were more settled. Anonymous communications are not answered.

"G." Chicago: (1) I would not sacrifice my American Canning preferred at present. Possibilities of a favorable combination still exist. (2) The earnings of the Chicago and Alton show very little applicable to dividends on the common. From the investment standpoint, I do not advise its purchase.

"A." Altoona, Penn.: I do not see what else you can do in the Asphalt reorganization matter. It is the height of assumption for the trustees, however, to insist that they shall control the stock by a voting trust for ten years. They are not entitled to such a favor, and the stockholders should not agree to have their hands tied for ten years.

"K." Albany, N. Y.: The Anglo-American Oil Company has a large acreage in Texas and leased oil lands, which include, at last reports, one flowing well. The expectation of a new gusher has affected the stock favorably. If your friend is well posted and reliable he should be able to advise you better than I can. It has always been regarded as highly speculative.

"H." New Orleans: The fact that Marconi acknowledges that an Italian naval officer is entitled to credit for a wireless telegraph invention is significant. Rear-Admiral Bradford says that none of the so-called inventors of the wireless patent systems has anything that will give him an exclusive right. I do not advise the purchase of the Marconi or any other wireless telegraph stock.

"H." Jefferson, O.: (1) Whether dividends will be paid on the Black Copper Company's stock or not, remains for the directors to say. (2) The directors are mostly responsible business men. (3) It is not quoted on the New York exchange. Ask the officers. (4) Ditto. (5) I know too little about it to advise. (6) No rating. (7) It is safer to deal with somebody who has a business that justifies public confidence.

"Banker," Hartford, Conn.: (1) I would not sell my Standard Oil shares. The report of a world-wide combination of this company has been denied but there is sufficient truth in it to advance the stock still higher. (2) You can sign and then send me your blank proxies for the Colorado Coal and Iron Company's election, and, if possible, I will place them where they will do some good, if I am unable myself to attend the meeting at Denver.

"D." Oshkosh, Wis.: The Wabash road is reporting wonderful earnings, and is extending its line in a manner that leads to the belief that it will become a greater property than ever. Many therefore believe in the preferred for a long pull, but as the 10 debentures, standing ahead of it, and entitled to six per cent. interest, have never received any interest payments, it looks to me as if the preferred were high enough. I had rather own the debentures.

"S. S." New York: Four dollars received. You are on my preferred list for one year. The Consolidated Tobacco four per cent. bonds were exchanged for the common stock of the American and Continental Tobacco companies. Two hundred dollars in bonds was given for \$100 American Tobacco common, and \$100 for \$100 in stock of the Continental common. The preferred cannot be exchanged for the bonds. The statement should have said that this applied only to the common. At present prices the preferred stock looks high enough for a seven per cent. stock.

"S. S." Jacksonville, Fla.: (1) The talk about an opposition to the Cohn Products company reads as if it were printed for the purpose of depressing the price of the shares. Do not be in a hurry to sacrifice your stock. (2) The aggregate annual saving by the refunding of the New York Central's high interest-bearing bonds, maturing in the next few years, is estimated at about a million and a quarter dollars. (3) I would sell my General Electric and take my profit. It is significant that the great German electrical companies, which were reporting enormous profits a year or so ago, are now showing heavy losses. (4) I do not advise the purchase of Chesapeake and Ohio. The run in this stock, after the road had been twice bankrupted, is one of the remarkable incidents of the recent boom.

## Dividends 1% per Month

on Par are now being paid by the

## OHIO & CALIFORNIA REFINING OIL CO.

from the sales of Oil from its producing wells.

STANDARD OIL COMPANY BUYS ENTIRE OUTPUT. Enormous acreage yet to be developed. The safest, surest, and best of proposition ever offered the public. PRODUCING WELLS GUARANTEE INVESTMENT.

Company in the hands of bankers and men of integrity and experience in the oil business. To raise funds for further development of the property a limited number of shares are being offered at

\$1.00 PER SHARE.

This Company now owns 33 Producing Oil Wells and 1 Gas Well. Has 52,145 acres Oil and Gas Land, mostly in West Virginia, adjacent to the 40,000 acres recently purchased by Standard Oil Co. In January last we predicted that this stock would be selling for \$1.00 per share in June. This prediction has been fully verified. We now predict \$3.00 per share this time next year.

Send remittances, or for further information write to the Company.

## Hints to Money-makers.

Continued from preceding page.

"E. W. T., Michigan: Your question is not clear.

"D., Hartford, Conn.: Nothing is known about it on Wall Street.

"C., Portsmouth, O.: They are not listed and are all speculative.

"E. I. B., Allentown, N. J.: I regard it as a reasonable speculation.

"R., Chasaburg, Wis.: Not listed. Would not advise its purchase.

"D., Warren, R. I.: Four dollars received. You are on my preferred list for six months.

"B., Allentown, N. J.: Neither is an investment. United States Rubber is the better speculation of the two.

"S., Aurora, Ill.: Two dollars received. You are on my preferred list for six months.

"H., Richmond, Va.: Keep your Manhattan Elevated. Many believe it is worth as much as Metropolitan.

"M. E., Evansville, Ind.: All the stocks of the grade you mention are far removed from the investment class.

"B., Baltimore: I hesitate to advise you to sacrifice your stock at a loss, particularly such a heavy loss. The cotton goods trade is not in the best condition, however. You might wait a little while and see the effect of the reorganization.

"J. H. W., Cleveland, O.: I think well of Toledo, St. Louis and Western because of its strategic position, which must some day make it in demand as a Vanderbilt or other connection, and also because of its increasing earnings, running, as it does, through a very prosperous part of the country.

"C. N., Cleveland: Two dollars received. You are on my preferred list for six months. (1) Both the propositions you speak of look well, but the trouble with them is that in an emergency, if you wanted your money, you might not be able to sell the shares, though this difficulty would be overcome if they were listed.

"B., Louisville, Ky.: (1) Union Pacific common has been talked of for a rise for a long time. Perhaps new developments will warrant it, but I believe in taking a profit whenever you can get it, when prices generally are near their highest. (2) The bonds ought to be satisfactory. (3) At present I do not advise the purchase of any speculative shares.

"W., Detroit, Mich.: (1) It is a speculative proposition, of course, and if you needed your money at any time it might be difficult to dispose of the shares until they were listed. I would not be in a hurry. (2) I would not take any stock in the Consolidated Liquid Air Company. I was against the original company and I advised against the purchase of the Tripler shares.

"M., Salt Lake: (1) I am unable to advise you from a knowledge of inside facts, because these are most carefully withheld, but most of those who bought at higher prices are evening up now at prevailing low prices. (2) I would prefer Kountze Bros. (3) I know of none at present. (4) Buy a bond of the Kansas Southern Railway, paying 8 per cent. and selling around 70.

"V. C., Norfolk: Some of the old American Ice crowd appear to be identified with the New England Consolidated Ice Company. For that reason I would have nothing to do with the latter, though if the clique is as successful in advancing its new specialty as it was with the old, the shares of the former may go higher. The public sometimes gets tired of being fooled. No stamp.

"D. B., Springfield, O.: (1) The report of the Old Dominion is far from complete. The stock has sold this year as low as 15 and as high as 25. With the copper market unsettled I am not advising the purchase of copper shares. The trouble is that these mines are mostly handled by an inside clique, who get all the cream and leave the skimmed milk to the stockholders. No stamp.

"M., Chicago: One dollar received. You are on my preferred list for three months. The earnings of Missouri, Kansas and Texas and of Texas Pacific have furnished reasons for the advance in these shares. It is said that if conditions are ripe for launching the comprehensive scheme which is to embrace all the Gould roads, Texas Pacific is to be especially benefited. Cautious investors generally regard the market as too high.

"A. X., St. Joe, Mo.: The New York and St. Louis Mining and Manufacturing Company has \$1,000,000 capital and its officers include several men of excellent business standing. It is engaged in the mining of zinc, lead, and phosphate rock, and claims to control valuable tracts of lead and zinc territory in Missouri and a smelter and factories. An issue of \$500,000 5 per cent. bonds has been authorized, which, of course, must take precedence over the stock. Everything depends upon the conservatism of the management.

"H., Brooklyn: I have had several inquiries about the Globe-Boston Copper Mining Company. Mr. W. F. Kennedy, the secretary, informs me that the officers, directors, and a number of the stockholders will leave Leavenworth, Kan., this week for Arizona and will inspect the various properties of the Globe-Boston group and while there direct the placing of the new machinery purchased from the funds secured by the sale of the 40 cent stock, which has now been withdrawn from the market.

"G., Binghamton, N. Y.: (1) All mining companies' shares, even those that pay dividends, sell on a lower basis than railway shares or bonds, for the obvious reason that while mines are constantly being exhausted the railroad can expect its business to continue to grow with the growth of

the country. (2) I would rather buy Continental Tobacco preferred than the Consolidated Tobacco bonds, from the investment standpoint. (3) Chicago and Great Western preferred A is a fair investment, but not gilt-edged.

"Investor," Chicago: (1) It depends upon which direction the slump comes from, and what class of stocks is most severely depressed. On declines the safest purchase would be dividend-paying stocks, but from the speculative standpoint you have named a good list, including, as you do, Reading, Texas Pacific, Ontario and Western, and Toledo, St. Louis and Western preferred. American Chicle common is paying 1 per cent. dividends per month and has been selling at 105. Very little of it is sold, and I doubt if a slump would affect it materially. (2) It all depends upon the conditions and the severity of the shock. (3) You are on the preferred list.

"T., Elizabeth, N. J.: (1) The Wabash is a pretty safe investment. (2) The White Knob Copper Company has a heavy capital, namely, \$12,500,000. Its mines have been somewhat remote from railroad connections, but this difficulty is being overcome. Good reports are given out concerning its future prospects, but it is still speculative. (3) I think you would be safe in buying the Kansas City Southern 3s, which are a first lien on the property, and the Toledo, St. Louis and Western 4s. (4) Until the American Ice people make a frank and candid statement, for examination and analysis, I shall not feel like advising speculation in the shares. No stamp.

"Wallow," Newark, N. J.: (1) I repeat the rumor that I printed some time ago, that heavy financial interests are becoming interested in the Hackensack Meadows property. Do not sacrifice your shares. (2) It is said that the readjustment plan of the Mexican Central Railway involves a heavy assessment on the stock. (3) Over a quarter of a billion of new securities has been listed on the New York Stock Exchange by prominent railways, during the past six months, besides \$150,000,000 of new industrial securities, and yet some bulls are talking as if there were not enough stocks to go around. (4) I prefer Norfolk and Western to Chesapeake and Ohio, on the basis of earnings and capital.

"Banker," Seattle, Wash.: You are right in your belief that the new railroads now being constructed, including the Moffat road, from Denver to the Pacific coast, can be built at a cost far less than the enormous over-capitalization of existing railways. With the maintenance of rates, the new roads should begin to pay dividends promptly. The trouble is that rate-cutting will be bound to follow as competition increases, and then we shall have to go through another period of bankruptcy and reorganization. (2) The sharp trick played by the Osgood faction, in the fight with the Gates crowd for control of Colorado Fuel, was to have been expected. On the very last day, just as the books were to be closed, the Osgood people issued \$3,000,000 additional of bonds convertible into stock. It looks as if the Gates crowd were on top, however.

"H., Portland, Me.: (1) The absorption of Kansas City Southern by the Chicago and Alton, or some other strong railway, is still anticipated. (2) I would leave the shares of the New England Ice Company alone. It is being exploited by some of the men who deluded the people into buying American Ice stock. (3) Arthur M. Ross, who was recently arrested, was charged with having conducted the blind pool firm of Stuart, Davis & Co., Nos. 31 and 33 Broadway. It is said that he made more than \$100,000 by his so-called "investments" with the money of his customers. I constantly advise my readers against traders who offer to divide their profits but not their losses. (4) The recent disappearance of an officer of the Union Building and Loan Association of Brooklyn, with \$10,000 of its funds, shows that the success of all such organizations must largely depend upon the integrity as well as the ability of the management.

"B., Little Rock, Ark.: United States Steel Trust is never safe from a big strike. You cannot eliminate that element. It is said that foreign interests are about to examine the steel trust's property with a view to making larger investments in it, but foreigners just now have all they can handle at home. (2) The American Tin Plate Company has been closing some of its plants and, it is said, intends to reduce wages. A similar reduction is being sought in the window-glass factories of Pittsburgh, or rather a demand for an advance is being vigorously resisted. (3) There is talk of renewed opposition to the bribe trust by the independent manufacturers. (4) The government tests of wireless telegraph apparatus do not include Marconi's. (5) The reduction of half a million dollars from the net earnings of Lackawanna, the past fiscal year, shows how seriously the strike is affecting the anthracite roads. On declines Lackawanna is regarded as a good investment purchase, however.

"Harold," New York City: Two dollars enclosed. You are on my preferred list for six months. I agree with you that the time has come for stockholders in corporations, and especially in industrials, to refuse to give their voting proxies to insiders who only use them against the outside stockholders. (1) Your condemnation of the financial papers that boomed Amalgamated Copper while the Standard Oil crowd were unloading the shares at high prices is absolutely justified. (2) I recently saw a comparative statement of the earnings of the Pennsylvania lines east of Pittsburgh, with those of the New York Central. It seemed to justify the expectation that the former should sell as high as the latter. Passenger traffic has not been as good

this season as last, I am told. Whether these investment stocks will continue to advance this summer is therefore questionable. They look as if they were pretty high. (3) In this market it is impossible to predict the movements of stocks days in advance. The monetary situation is far from reassuring. I do not advise purchases at present.

NEW YORK, August 7, 1902.

JASPER.

## Should Laws Be Enforced?

IT IS about time to inquire whether, in the City of New York, laws are to be enforced or not. In reprimanding Captain Foody, whom Police Commissioner Partridge found guilty of neglect of duty, the latter defines his notions of the duties of policemen. He directs that members of the force should observe that there is no flagrant, open, notorious, or public violation of the law, especially in Sunday liquor selling, and he points out that there must be an outward evidence, by the closing of bar-room doors and the unscreening of the windows, that no liquors are sold on the Sabbath day; but he leaves the obvious impression that if Sunday liquor selling can go on, as it has been going on, without attracting public attention, the police need not take pains to suppress it. In other words, Commissioner Partridge proposes to modify the excise law of the State of New York to meet the requirements of the situation as he sees it.

The impression prevails that public opinion in New York City is opposed to the strict enforcement of the law against Sunday liquor selling, though, if this question were put to the test of a vote, we believe a decided majority would uphold the law, just as it stands. No matter how this may be, however, if it is the law it must be enforced. If it cannot be enforced by Commissioner Partridge, then some other commissioner should be appointed to undertake the work. If the enforcement of the law demonstrates its inexpediency, then it should be modified or repealed. But to have a police commissioner take upon himself the responsibility of interpreting a statute and thus usurping judicial prerogative is to establish a precedent of the worst possible kind. Tammany's police commissioner, the unspeakable Devery, undertook to do this sort of thing, and was roundly and properly denounced for it. The principle—or lack of principle—involved in it is clearly wrong.

The only excuse for Commissioner Partridge's action lies in the constantly repeated assertion that the excise laws of New York City cannot and will not be enforced by our police because of peculiar local conditions. If that be so, the sooner this condition is changed by the establishment of a State police force and the complete wiping out of the present body of incompetent, undesirable, and wretchedly organized policemen, the better it will be for all concerned. In case of riot, when the police are unable to cope with a situation of disorder or danger, the militia are called in to maintain public safety. It would appear from Commissioner Partridge's utterance as if such a condition confronted us to-day, and it is a condition and not a theory which we are called upon to meet.

## Books Received.

## Shameful Waste of Public Money.

THE SALE for \$20,000 of useless ordnance at Sandy Hook, which cost the government nearly \$1,000,000 only nine years ago, represents a loss not to be explained away by the rapid improvement in war enginery in recent years. That might serve as a plausible excuse for a piece of Tammany foolishness and extravagance, but it is not enough to justify a department of the general government wherein we have a right to look for wise foresight and the judicious expenditure of public funds. To be plain about it, it was a piece of sheer carelessness and wasteful stupidity, if it was nothing worse. It is bad enough to feel obliged to spend millions of public funds every year in armor tests, gunpowder experiments, and other accessories of the art of killing, but to spend a million or more on ordnance to be thrown away in a few years for old junk is to pay more dearly for the war passion than present conditions warrant. Some day we shall wake up to the supreme foolishness of all this business of spending dollars for defense against foes who never come, while we pinch the pennies necessary to protect ourselves against the enemies of our social, civic, and municipal life, who press upon us from every side.

### Awful Poverty in New York.

Continued from page 155.

have no front door, unless they choose to  
give that name to the opening into the  
bare cemented ground of the court.

Although I visited one place where a  
beggar lived, a woman with two children,  
one of them with eyes sore from filth and  
with a constant cough, and a sickly, indolent  
husband, who attended to the children  
while his wife begged on the streets, a hole  
of two rooms where stench was thick, where  
putrid beef, fly paper, and rags were con-  
spicuous amongst the litter in the place—  
although I saw such depravity, such degra-  
dation of poverty and wretchedness and  
want as I could scarce believe, there were  
bright spots in this block with its thou-  
sands of people. I saw homes where in-  
dustry had brought cleanliness and all the  
daily necessities, homes which would have  
been pleasant but for the ever-present odor  
of which one is aware even in the streets  
and which is intensified within doors.

These districts of the Jewish quarter are  
visited regularly by agents of the United  
Jewish Charities, who bring relief to those  
who suffer most, but the problem is grow-  
ing more serious constantly, as the immi-  
gration continues and thousands monthly  
make their homes in the tenements already  
choked with human life. And as I came  
away from the block of 3,000 people three  
impressions clung to me more strongly than  
all the rest—the odor, the crawling, stealthy  
cats, and the never-ceasing wail of the  
babies.

### Special Prize for Amateur Photog- raphers.

LESLIE'S WEEKLY offers a special prize of \$10  
for its amateur contest in the Christmas number.  
The pictures should, of course, be appropriate to  
the holiday and especially interesting to children.  
For Christmas is above all things the festival of  
childhood. Competition open until November 1st.

LESLIE'S WEEKLY was the first publication in  
the United States to offer prizes for the best work  
of amateur photographers. We offer a prize of  
five dollars for the best amateur photograph re-  
ceived by us in each weekly contest, the competi-  
tion to be based on the originality of the subject  
and the perfection of the photograph. Preference  
will be given to unique and original work and  
for that which bears a special relation to news  
events. We invite all amateurs to enter this con-  
test. Photographs may be mounted or un-  
mounted, and will be returned if stamps are sent  
for that purpose with a request for their return.  
All photographs entered in the contest and not  
prize-winners will be subject to our use unless  
otherwise directed, and one dollar will be paid for  
each photograph we may use. No copyrighted  
photographs will be received, nor such as have been  
published or offered elsewhere. Many photo-  
graphs are received, and those accepted will be

utilized as soon as possible. Contestants should  
be patient. No writing except the name and ad-  
dress of the sender should appear on the back of  
the photograph except when letter postage is  
paid, and in every instance care must be taken to  
use the proper amount of postage. Photographs  
must be entered by the makers. Silver paper  
with a glossy finish should be used when possible.  
Mat-surface paper is not suitable for reproduction.  
Photographs entered are not always used. They  
are subject to return if they are ultimately found  
unsuitable in making up the photographic con-  
tent. Preference is always given to pictures of re-  
cent current events of importance, for the news feature  
is one of the chief elements in selecting the prize-  
winners. The contest is open to all readers of  
LESLIE'S WEEKLY whether subscribers or not.  
N. B.—Communications should be specifically  
addressed to "Leslie's Weekly, 110 Fifth Avenue."  
When the address is not fully given, communications  
sometimes go to "Leslie's Magazine," or other pub-  
lications having no connection with "Leslie's  
Weekly."

### Cheaters Never Prosper.

IT IS difficult to see how but one opinion  
can exist among people of sane minds  
and sound morals over the practice of  
cheating at college commencement exam-  
inations. If considerations of honor and  
truthfulness are not to be held up before  
men at such times and at this period in  
their lives as imperative and paramount,  
then surely no such occasion can ever arise.  
Vain and ineffectual must all our educa-  
tional forces be to build up a true and noble  
citizenship, unless honor and truthfulness  
are urged and enforced as the basic ele-  
ments of right character.

### Blindness CURED The Oneal Dissolvent Method

Not only cures cataracts, scums,  
granulated lids and all other  
causes of blindness, but it  
strengthens and invigorates the  
eye. It has never caused an in-  
jury and Dr. Oren Oneal, its dis-  
coverer, has become famous  
through the thousands of mar-  
velous cures he has effected by  
its use without the knife.

Mrs. S. C. Willard, Libertyville, Ill.: "I was  
cured of cataracts, 20 years' standing." Write her.  
CROSS-EYES STRAIGHTENED; no knife or  
pain; a new method, successful in over 5,000 cases.  
Illustrated book, many testimonials and Dr.  
Oneal's advice, Free.

### The Zim Collection of Original Water Color Reproductions of sketches By ZIM

Zim has been characterized as the  
Mark Twain of picturedom. His figures,  
while always broadly comic and some-  
times grotesquely exaggerated, are nev-  
ertheless truly

#### Artistic Caricatures

of actual types, selected with fine humor-  
ous discrimination.

#### The Pictures in this Collection

were done specially for it, and have  
never been published in any other form.  
The elaborate color-work, reproduced in  
fac-simile by the famous Grignard pro-  
cess (the same employed in the Christy  
pastels published by Scribner's), shows  
Zim in several of his happiest moods.

Copyrighted, 1900, by Judge Company

### The Stanlaws 1900 Collection

consists of eight of Stanlaws' pictures, printed  
in colors. The size of each picture is 11 x 14  
inches.

#### For Decorative Purposes they Cannot be Surpassed

Nothing will more effectively lend to a room  
an air of good-breeding and cultivated taste.  
In selecting the pictures the aim has been to  
most fully meet the varied decorative require-  
ments of an artistically furnished American  
home.

Price, \$2.00 Per Set, 8 Pictures

### Beautiful Poster Pictures By STANLAWS

REPRODUCED in colors from the  
original water-color drawings  
and printed upon high-grade  
plate paper. The series is made up of  
three pictures—two of the subjects in  
panel form are shown herein. These  
new Stanlaws poster effects make most  
beautiful pictures for home decorative  
purposes. They are sold at

**50 Cents Each**

or the complete set of three will be for-  
warded, charges prepaid, for

## Biliousness

"I have used your valuable **CASCARETS** and find them perfect. Couldn't do without them. I have used them for some time for indigestion and biliousness and am now completely cured. Recommend them to every one. Once tried, you will never be without them in the family." EDW. A. MARX, Albany, N. Y.

Pleasant, Palatable, Potent, Taste Good, Do Good. Never Sicken, Weaken, or Gripes. 10c, 25c, 50c.  
**CURE CONSTIPATION.**  
Selling Everywhere, Chicago, Montreal, New York, St. Louis.  
**NO-TO-BAC** Sold and guaranteed by all druggists to **CURE** Tobacco Habit.

## A Dramatic Star in Vaudeville

MISS VALERIE BERGERE AT KEITH'S.

VALERIE BERGERE, who is best known to the theatrical public in connection with the rôle of "Madam Butterfly," a one-act tragedy presented by her upon the vaudeville stage, has essayed another vaudeville tour and is at Keith's this week with a play called "Billy's First Love." This is from the pen of Miss Grace Griswold, an actress of some note, and is said to combine comedy with the element of tragedy which gave Miss Bergere such an opportunity in "Madam Butterfly."

Miss Bergere, French by birth, made her first appearance upon the stage when still a child, playing in German at the old Thalia Theatre. She afterward did newspaper work in San Francisco, and drifting back to stage life became leading woman for various stock companies, and was starred upon the road, scoring successes as Carmen and as Madame Sans-Gene. Her great opportunity came with "Madam Butterfly," which was adapted from the original play of that name, in which Blanche Bates starred. No one who saw Miss Bergere as the broken-hearted little Japanese girl has ever had any doubt of her ability as an interpreter of tragic rôles.

### Life-insurance Suggestions.

IT IS an evidence of the uncertainty of life that 435 policy-holders in one of the greatest of our life insurance companies died within a year after receiving their policies, and their heirs were paid nearly a million dollars in cash for the comparatively nominal first premiums turned in. Eighty-five of this number died within three months after the issue of their policies, and sixteen within thirty days. This is one of the most striking illustrations of the vicissitudes of fate that have been called to my attention. How many of the families of those who died would have been left without support but for their insurance policies. In this strenuous age no man who thinks of his family and who has not made abundant provision for them should be without life insurance, and every man who thinks of himself and who has not made provision for his future can, and should do so, by having an endowment insurance, payable in ten, fifteen, twenty, or more years. An endowment policy for a thousand dollars, which was carried in one of our great companies for thirty-seven years, was recently paid to the policy-holder, according to stipulation, when he reached the age of sixty. He had paid an annual premium of \$23 on this policy, and its total cost was therefore \$851. The company turned over to him almost exactly twice this amount, or \$1,611.29. Thus he received all his premiums, with 3½ per cent. compound interest, and meanwhile had life insurance for \$1,000. This is a game in which it is not necessary to die to win.

"G. C." Lynn, Mass.: If you are insensible elsewhere I would advise you to take a policy in the strongest and best company you can find. The record of the company you mention is not altogether favorable.

"T. H. D." Detroit: If you are able to afford it, an endowment, say, for twenty years, would be most profitable and satisfactory. It would be well to secure the estimates of the leading companies and make your own choice.

"D." Wisney, N. Y.: There can be no doubt about the high standing and security of the Prudential. It has been managed with great care and enterprise, and if its business continues to grow at the present rapid rate it will soon outstrip many great competitors.

"C. H. D." Pittsburg: (1) In the end I think it will. (2) I do not believe the company is as strong as some of the larger ones. Any agent will give you the figures you ask. (3) A good insurance publication is the Insurance Press, of New York. (4) I like the accident policy of the Travelers very well. The simpler, the better.

### The Hermit.

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.

**Advice to Mothers:** Mrs. Winslow's SCORPION SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

The Schmer Piano is the prize favorite for artists for both concert and private use.

## What Will the Harvest Be?

IF THE Des Moines, Iowa, correspondent of the New York Evening Post is reliable, and we presume he is, Congressman Cousins, of Iowa, denounced the tariff plank of the recent Republican platform of Iowa as "a dirty, lousy lie." This is not elegant or refined, but it is emphatic. Stripping the expression of its inelegance, the question remains whether the clause in the platform to which Congressman Cousins chiefly objects is a lie. This clause calls for "any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly." The strongest argument of the Democratic free trader and tariff reformer against a protective tariff has been, and always will be, that it "shelters monopolies." James G. Blaine, James A. Garfield, William McKinley, and every other Republican leader have denounced this allegation; perhaps not in the forcible and indelicate language of Congressman Cousins, but they have certainly stamped it as plainly as the human tongue could do so, a thousand times over, as the rankest kind of an unblushing falsehood.

What has happened to the protection sentiment of Iowa, that the director of the mint at Washington, Mr. Roberts, of Iowa, and the eloquent Senator Dolliver, of Iowa, and the young and ambitious Governor Cummins, of that State, have all agreed (in opposition, we are told, to the views of those conservative and experienced Republican leaders, Senator Allison, Speaker Henderson, and the Secretary of Agriculture, Mr. Wilson, also all of Iowa) that the Democratic argument was, and still is, right, and that Garfield, Blaine, McKinley, and the mass of the voters of the country, who have sustained the protective principles so earnestly during the past decade, were all wrong?

A bill in the line of the Iowa declaration was introduced shortly before the adjournment of the recent session of Congress. It proposed to reduce the duty on any article manufactured in the United States and sold more cheaply abroad than at home, and its purpose, as declared in its second section, was "to remove the indirect tariff bounty." Was this bill introduced by a Republican? No; it was the work of the Democratic leader of the House, Mr. Richardson, of Tennessee. Did any Republican favor this measure? Not one. Did any Republican Congressman oppose it? Every one! What will the harvest be at the approaching session of Congress, when this bill, or one much like it, is again introduced? Will the Iowa leaders, who succeeded in declaring their State convention for "any modification of the tariff schedules which may be required to prevent them becoming a shelter for monopoly" agree with Mr. Richardson's schedule, or will he agree with theirs? So far as the principle is concerned, they are in accord. The difference between them is only a difference in schedules.

Heretofore, principles have been at stake. The Republican party under McKinley's leadership was for protection. The Democratic party under Cleveland was for a revision of the tariff. Only a small minority favored free trade. The declaration of the national platform was for tariff reform in Cleveland's time, and it was for tariff reform in 1900. But in 1900 it had this, also, to say about the latest protective tariff measure, the Dingley bill: "We condemn the Dingley tariff law as a trust-breeding measure." The Republican platform of 1900 explicitly declared that "we renew our faith in the policy of protection to American labor." In the brief course of two years have economic conditions so changed that the Democratic national platform of 1900 on the tariff question is more satisfactory to Iowa Republicans than the vigorous pronouncement of the Republican National Convention?

It will not do to say that the action of the Iowa Republican Convention was hastily taken. It was a long and severely contested struggle, and the feature of the platform which so directly antagonizes the McKinley platform of 1900 was drawn, we are told, by the director of the mint, who holds his place under the present administration. Nor will it do to say that the Iowa platform does not affirm the Democratic contention. Whatever politicians may say or believe, or think they believe, the issue has been made, and the public understands it.

The proof lies in the recent action of the national convention of the retail butchers and meat dealers, in adopting a resolution in favor of abolishing the tariff on meats. A delegate, well-informed and fair-minded, objected to the resolution, on the ground that it opened a political discussion. But another delegate pointed out the attitude of the Republican State Convention of Iowa, "a State," he said, "that had more to do with the fattening of cattle than any other, and where a Republican convention had recently made a declaration in favor of tariff revision." It is not surprising that the resolution was thereupon unanimously adopted.

What followed? The adoption of another resolution, instructing the local bodies of the Butchers and Meat Dealers' National Convention throughout the country to make an active campaign for the election of Congressmen pledged to vote for the removal of the tariff on meats. How near these butchers and grocers reach into the families of this country and how great their influence with the voter, we need not point out. Sufficient for the day is the evil thereof. If the agricultural State of Iowa can ask for the removal of the tariff on beef and manufactured products, why should not those of Minnesota demand the reduction of the duties on lumber; and the wealthy purchasers of foreign luxuries in New York, New England, and the Western States ask for the removal of the tariff on silks, laces, and fine linens?

Who shall revise or reduce the tariff? Shall the Republican party, which for nearly half a century has been fighting the battle for a high protective tariff and consistently opposing every demand for "tariff reform" and free trade? Or shall the Democratic party, which has quite as consistently and persistently opposed a tariff for protection, and advocated a tariff only sufficient to provide the necessary revenues of a properly administered government? The Democracy has always denounced the protective tariff, as the protector of monopolies and not of the people. Do the Republicans of Iowa, if they believe that a protective tariff has fostered monopolies, expect Republican voters in the great manufacturing States of New England, New York, and Pennsylvania to change the views they have held for half a century? Or do the Iowa Republicans expect relief from the advocates of Democracy and tariff reform?

Secretary Shaw, in his able campaign speech at Manchester, Vt., touching altogether too lightly on this question, said, truthfully, that no revision of the tariff made by Republicans "would satisfy our opponents, who have no revision policy of their own." But Secretary Shaw must remember that it is quite as difficult for a majority party to reduce the tariff schedules as it was for it to increase them. The Iowa Republicans demand a reduction of tariff rates and especially those which "shelter monopolies." The development of the protective tariff was the work of many years and of infinite patience on the part of our most skillful leaders. Can our ablest administrators, at the approaching short session of Congress, by any possibility of time or effort satisfy the public clamor against the "trusts," which the Republicans of Iowa have so awkwardly transformed into an outcry against the protective tariff? If there is not danger in such a situation for the Republican party, then it has never been in danger.

The lamented McKinley proclaimed principles; he did not formulate fallacies. The Democratic party of his day challenged protection as the friend of monopolies. McKinley met this challenge with the assertion that protection fostered our industries, and he won his case with the people. The proof is before any thoughtful man to-day. The two greatest trusts in the country, the Standard Oil and the Anthracite Coal trust, exist not because of a tariff on petroleum or anthracite coal, for both are on the free list. What has protection done for them, except in the indirect benefits all the people have derived from the splendid prosperity of the nation since the adoption of the McKinley tariff bill? Do the Republicans of Iowa realize that America is losing its trade balance, and that our exports to Europe, during the past fiscal year, shrank by over a hundred millions of dollars? The home market is ours, and, thanks to the policy of protection, we are just beginning to enter the markets of Europe. But the battle of commerce is not ended. At this critical juncture, when the warfare between nations is not for territory but for trade, shall we assail the protective tariff which has placed this nation commercially where it is; which has driven out the foreign manufacturer, and which is about to enable the domestic producer to follow the foreigner across the seas?

If, within three months, Congress is to be in the throes of another heated tariff discussion; if a halt on manufactures and every protected industry is to be called; if importations are to be restricted, awaiting the outcome of the tariff discussion, and the treasury receipts are to be thereby diminished to the danger point of a deficit, what sort of a Merry Christmas will greet the nation? As for the Republican party, it might as well hang its harps upon the willows and weep for the daughters of Jerusalem.

## Coronations and Inaugurations.

IT IS said that the most remarkable gathering of Americans on the Fourth of July this year, outside of the United States, occurred at Paris. It was held under the auspices of that wide-awake institution at the French capital, known as the American Chamber of Commerce, and the principal speaker was Senator Chauncey M. Depew. Reviewing, as he did, recent notable events in American history, his eloquent oration attracted the widest attention and was most favorably commented on by the leading newspapers in all the capitals of Europe. Senator Depew paid felicitous tributes to England, France, and Germany, and the leading newspapers of each of these countries appropriated with great pleasure the special

compliments the great American orator bestowed upon them. One of the best parts of Senator Depew's oration was that in which he made a comparison of an English coronation with an American inauguration. There is so much of timely interest in what he said that we reprint this part of his spirited address. It will be read with quite as much interest at home as it was abroad. Senator Depew said:

"While in London I studied the liturgy and ceremony of the coronation. The first thought which struck me was the enormous advance and separation in about one hundred and thirty-five years of America from Great Britain on the subject of sovereignty. The coronation ceremony is a religious one, with all the pomp, pageantry, and splendor of its feudal origin. It is in its most solemn form a recognition of the unity of the church and state and of the consecration of the headship of the church and sovereignty of the empire in the King. The King swears to maintain the church and its relations with the state; the church in its homage offers to the King its services and its lands, recognizing him as its head; the royal family pledge to the King their lands, their limbs, and their lives; the nobility do homage, offering him also at his behest their lands, their limbs, and their lives. Without a dissenting voice there is a recognition that all the liberties of the press or people have only been such as have been given or surrendered by the crown, and that all other sovereignty not so delivered still remains intact in the throne. No Englishman disputes this; no subject of the British crown all over the world, with its many races, tongues, and peoples, but acknowledges it.

"One hundred and thirty-five years ago, ten years before 1776, Washington and every signer of the Declaration of Independence would have cordially assented to the doctrine that the sovereignty of the nation was in the throne. In the United States all that is now absolutely reversed. It is difficult for an American of to-day to appreciate or understand it. It has been my privilege to listen to the inaugurations of most of our Presidents from Lincoln down, and the tone of every one of them was deference to the people. Speaking to the multitude from the east front of the Capitol, the President says to those present and to the whole country which will read it the next day, 'This is my message. It embodies the commission which you have given me to execute. I promise to do so with all my strength and mind, and at the end of four years to surrender to your sovereignty the authority which you have temporarily conferred upon me in order to carry out your commands and your will.' There is no religious ceremony; the oath of office is not administered by an archbishop or priest, but by the chief justice of the United States. This precedent, established at the time of Washington and continued ever since, embodies no disrespect to the church, but simply emphasizes in the most emphatic way the separation of the church and state. But while there has been this absolute reversal of all ideas of sovereignty with us, the mother country and what were her colonies have grown together in the liberalization of law. It has been largely the example of the United States and the beneficent results of its liberty which have produced this result. When Washington was inaugurated there was in Great Britain little freedom of the press, the libel laws were infamous, there was persecution of Catholics and Jews, there was capital punishment for the slightest offenses, there was a limited and corrupt electorate, there was no popular suffrage. To-day all these things have been swept away and with the exception of those retained, which the Englishman loves, in his throne and in his nobility, he has the same liberties as a citizen of the United States."

## The Plain Truth.

SEVERAL BULLS of true Hibernian flavor were perpetrated by certain speakers during the closing debates of the recent Congress. Representative Corliss, of Michigan, for instance, asked: "Shall the wheels of progress be shackled by the cable octopus?" One critic suggested that an eight-armed cephalopod would have a difficult task if he should undertake to shackle a wheel at the bottom of the Pacific. Senator Proctor spoke of "holding out the butt end of the olive branch."

A HIGHLY suspicious odor arises from the frequent reports which have appeared in the public press of late concerning volcanic disturbances on or near the proposed route of the Nicaragua canal. It is a remarkable coincidence at least, hardly explainable on scientific grounds, that so many such things are happening, or about to happen, precisely at the period when the selection of the Nicaragua route is still among the possibilities. Remembering the facility with which certain Panama persons were once able to put a padlock on the lips of a large number of influential Frenchmen, it seems possible that a like influence may be at work now on the seismologists in another direction. We have never subscribed to the cynical statement of Horace Walpole that "every man has his price," but we are ready to swing the door pretty wide when it comes to anything relating to Panama.

IT IS all very well for poets to sing about "the rain, the beautiful rain," but when it is not a poem but a condition that confronts us, with an average rainfall in June and July over sixty per cent, higher than ever before known in this latitude, with rain six days in every week, and some more on the seventh, the aesthetic side of the rain business is not so apparent. Such rain may, indeed, be a thing of beauty and a joy forever for ducks, umbrella dealers, frogs, and weather prophets on space rates, but for mortal man, generally, it spells misery, and for farmers and summer-resort keepers in particular, it spells misery and ruin too. Meanwhile the public will derive what consolation it can from being told by the "oldest inhabitant" that nothing like it was ever known before, while those ever-cheerful persons, the statisticians, will proceed to give us the figures showing how we have "beat the record" here as well as in many directions. It is a glorious thing to be ahead of the rest of the world, even in the matter of rain!

SECRETARY SHAW'S recent ruling in regard to the belongings of incoming passengers on the ocean liners is as refreshing in its common sense as a breeze from his own Iowa prairies. "They can bring over haled hay," said the secretary in a subsequent interview, "if they wish to do so, if the value is not over \$100." Hitherto this limitation as to value has been construed as applied to articles of wearing apparel only, everything else under that sum, as well as above it, being made subject to duty. This application of the law has been the source of endless annoyance to ocean travelers, by whom it has been generally regarded as a petty and needless exaction unworthy of the government of an enlightened country. Our policy in this matter has, in fact, been making free traders of Republicans by the ship-load, ever since its odious, super-serviceable enforcement; and Secretary Shaw has attempted a good service for his party as well as for the traveling public by sweeping away all unnecessary red tape and other superfluities, and his order should be obeyed.

## PEOPLE TALKED ABOUT

A MARKED indication of the healthy and sensible change of view coming over social circles in England

LADY ESSEX,  
The American countess, who has  
opened a fashionable laundry  
in London.

and America with respect to one's sources of income and methods of earning a livelihood is seen in the large number of women of high social standing, in both these countries, who have in the past few years embarked in business for themselves and have not apparently suffered thereby in a social sense. For example, one English noblewoman, whose fortunes have become impaired through no fault of her own, has endeavored to make good her losses by opening a first-class millinery shop in a fashionable quarter of London, and another practicable and sensible lady of the same class has ventured into the confectionery business with the same object in view. And

now comes the announcement that the Countess of Essex, formerly Adela Grant, of New York, is seeking to repair her family fortunes by joining with Mrs. Hwfa Williams in starting a fashionable laundry, holding out the special inducement of having its laundresses brought over from Paris. Lady Essex, whose taste in dress is considered to be of the highest, is consulted by Paquin on new styles, and gets a handsome fee for such service, adding materially to her means from that direction also.

THE FOLLY of being too outspoken on important matters in the informal private letter has been demonstrated many times in the cases of prominent public men in this country. The latest American of note to get into trouble in this way is General E. S. Bragg, our new consul-general at Havana. General Bragg was installed in office but a few weeks ago, and yet he has already succeeded in disturbing the self-complacency of the entire young republic of Cuba. He is accused of saying in a letter to his wife, which she showed to gossiping persons, that "Uncle Sam might as well try to make a whistle out of a pig's tail as to try to do anything with the Cubans." The general denies using this exact language, but admits that he said that when Uncle Sam got through trying to make a whistle out of a pig's tail he would report whether he could make an Anglo-Saxon out of a Cuban. This amended remark, however, is also uncomplimentary to the Cubans, and it is not surprising that they are greatly irritated and are demanding the general's recall. The latter may yet have to resign in order to prevent the relations between the United States and Cuba from becoming strained. But whatever the outcome of the commotion, General Bragg is likely to be more careful hereafter in inditing letters.

CONSUL-GENERAL E. S. BRAGG,  
Whose unguarded remark has  
excited the Cubans.

IT IS rare that any public official merits special notice by reason of simply doing his duty, but Mr. Joseph W. Folk, circuit attorney of the city of St. Louis, is a notable exception to the rule.

HON. JOSEPH W. FOLK,  
Fearless foe of municipal cor-  
ruption in St. Louis.

Mr. Folk, a young lawyer of little prominence, was elected in November, 1900, as a Democrat, to an office whose duties correspond to those of the district attorney of New York. Nothing more was expected of him than performing his duties in a perfunctory way. But within eighteen months he has, by shrewd management and indefatigable labor, brought about the indictment of sixteen persons, eight charged with bribery, four with perjury, one with corruption in office, and three with misconduct in office. One of those men is a professional lobbyist, seven were members of the municipal assembly, three are business men of high financial and social standing, and two are city officials. One of the indicted men is Edward Butler, who for twenty years has dominated local Democratic politics. One prominent man has been sentenced to the penitentiary for three years for attempted bribery of the local Legislature, and another, who was abroad, has never dared to return home. Two of the indicted assemblymen fled the country. The indicted persons were all accused of being concerned in the alleged attempt of a street railroad

company to secure by corrupt means valuable franchises from the municipal assembly. Mr. Folk's action aroused a storm of denunciation from his party associates, and for a time he was in danger of personal violence. But he went about his duty fearlessly, yielding neither to threats nor to money influences, with the result that to-day St. Louis has a clean and able municipal government.

FEW MEN in the present United States Senate are farther "up" in modern English literature than Senator Quay, of Pennsylvania, and he has something more than a passing acquaintance with Wordsworth, Tennyson, Carlyle, and Ruskin. For Herr Teufelsdröckh and his philosophy of clothes he has a special liking, and Ruskin's "Ethics of the Dust" is one of his favorite works. The Senator is rarely without a book in his pocket. On railway journeys he always takes up a book as soon as he has finished looking over the newspaper. Thus it will appear that Mr. Quay is not, as he has seemed to the general public, exclusively immersed in politics.

THE PROCESS of drawing Germany and the United States into closer and more cordial relations, signalized by the visit of Prince Henry to this country, has been continued by various acts of Emperor William since that event, including the gift of a statue of Frederick the Great to the city of Washington, and latest of all, by the act of conferring the order of the Red Eagle upon the Messrs. Peter A. B. Widener and Clement A. Griscom, two distinguished citizens of Philadelphia, and also among the foremost of America's financiers and business men. The honor was bestowed upon these two gentlemen by Emperor William himself during a recent visit which they made at Berlin while on a tour of Europe in the interests of the Morgan shippers' combine.

PETER A. B. WIDENER,  
Decorated by Emperor William  
with the order of the Red Eagle.

While in Berlin, where they went in company with Mr. Morgan, they were entertained extensively and held several conversations with the Kaiser. The order of the Red Eagle was founded by the Margrave of Bayreuth in 1705, and after several reorganizations was adopted in 1792 by Frederick William II, of Prussia on succeeding to the principality. The present insignia of the decoration are quite different from those of the original order. The badge is an eight-pointed cross having in the centre a medallion with a red eagle bearing the arms of the Hohenzollern family. The arms of the cross are of white enamel with an eagle of red enamel between each two arms. The ribbon is striped orange color and white.

STRANGELY ENOUGH, Vermont, about the only State in the Union which has not at one time or

another been carried by the Democrats, furnishes the political sensation of the year through a split in the Republican party. The division in the latter organization is not over national, but over strictly State issues. General J. G. McCullough, of Bennington, the regular Republican nominee, is running on a platform which favors a popular vote on the question of whether the existing prohibitory law shall be continued or a local option law adopted. Mr. Percival W. Clement, of Rutland, who bolted the Republican State Convention, has been nominated as an independent candidate on a liquor-tax platform. He and his followers allege that money was improperly used in the caucuses which chose McCullough delegates, and that gross corruption is practiced in the spasmodic prosecution of liquor sellers and drinkers. Mr. Clement's candidacy is an expression of the growing opposition among Vermonters to the prohibitory system, with its attendant hypocrisy and iniquity. The statute has admittedly been enforced in a farcical and fraudulent manner. The substitution for it of the liquor-tax plan would add to the revenue of the State and to the self-respect of its people. Whether or no the desired change will result from the campaign now on, it is certain to be effected at no distant day. The present system does not suppress the liquor traffic in Vermont, and it has led to a system of blackmail as bad as that which has rendered Tammany Hall so infamous.

MR. PERCIVAL W. CLEMENT,  
Independent Republican candi-  
date for Governor of Vermont.

THE SONS of "Old Eli" have new reason to rejoice and be glad over the latest benefaction to their beloved alma mater, which has come in the shape of a gift of not less than a million dollars from Frederick W. Vanderbilt, of the class of '79, the sum to be used for the establishment of a dormitory system for Yale's famous scientific school. The directors of the school have already purchased almost an entire city block in New Haven, adjacent to the university, for the purpose of erecting the dormitory which Mr. Vanderbilt will build and for use

in locating more dormitories. Mr. Vanderbilt recently gave Yale \$25,000 for the bicentennial fund. His brother, the late Cornelius Vanderbilt, erected a dormitory for the university that cost over \$1,000,000. Cornelius, Jr., and Alfred, the sons of the late Cornelius Vanderbilt, have also done much for Yale.

THAT LIFE in the Philippines still has its perils is proved by the cruel fate which it is now known befell

the four American school-teachers recently reported missing in the island of Cebu. These young men left the capital of the island on June 10th for an outing in the hills and failed to return. Nothing was heard of them for weeks, but on July 23d the War Department received definite news that the missing men had been captured, robbed, and murdered by some of the ladrones still infesting portions of the country. The innocent victims of the treachery and greed of the native bandits were Clyde A. France, of Beres, O.; John D. Wells and Lewis A. Thomas, of Providence, R. I., and Ernst Heger, of Philadelphia. Their bodies were recovered by the native constabulary, who killed the leader of the murderers and arrested eight of his followers. The murdered teachers were all college graduates, and had been doing good work in enlightening and training the youthful Filipinos. Everybody in this country will regret this unhappy ending of the young men's peaceful and useful mission, and doubtless the better class of the people of Cebu also sincerely deplore it. It is hoped that this will be the last case of its kind in the Philippines.

CLYDE A. FRANCE,  
One of four American teachers  
murdered in Cebu.

THE RESIGNATION of the Hon. Andrew D. White, American ambassador to Germany, which has been sent to the President and which will go into effect on November 7th, Mr. White's seventieth birthday, will retire to private life one of the ablest and most highly respected public men of this country.

HON. ANDREW D. WHITE,  
Who has resigned the post of  
ambassador to Germany.

Mr. White does not give up his eminent position because of any political pressure or the weight of years, but in order that he may devote himself entirely to literary work. He is a great scholar and thinker and he has already produced several successful books. He has just completed a volume relating his experience as a diplomat at Berlin and St. Petersburg, which will without doubt prove intensely interesting, and is said to contemplate writing a history of The Hague peace conference, of which he was an important member. Other valuable works will doubtless be composed by him if his life is spared, for his mental activity is notable. Mr. White, after his return from Europe, will, it is believed, reside at Ithaca, where he has a home on the campus of Cornell University, of which institution he was formerly president. In view of his long years of honorable public service, his fine character, and his well-used intellectual gifts, Mr. White has an enduring title to the esteem of all his fellow-countrymen.

SKILLFUL NURSING is more and more valued as an auxiliary in the service of both physicians and surgeons, and in cases of a certain kind it may be fairly regarded as equally indispensable. It is doubtless, therefore, not too much to say that King Edward of England owes his early and rapid recovery from the operation performed upon him to the ministrations of Miss Tarr, his chief nurse, during his recent illness. Miss Tarr was a hospital nurse in South Africa during a part of the Boer war, and while there naturally acquired a great deal of invaluable knowledge concerning the dressing of wounds. This is the first time, it is said, that King Edward has ever had occasion to avail himself of professional nursing. During his terrible illness in the autumn of 1871, the then Prince of Wales was nursed entirely by his devoted wife and by his sister, Princess Alice, who had had a great deal of actual experience during the course of the Franco-Prussian War.

NURSE TARR,  
Who attended King Edward  
during his illness.

JOHN W. MACKAY, the Irish-American multi-millionaire, who died recently in London, had a fine tribute paid to him once by a friend. "Mackay," said he, "is one of the few rich men I should like to know if he were poor."

# The Perils of Over-Crowding

## A Great City's Hard Problem . . . By Harry Beardsley

HERE IS a situation in New York that approaches a crisis.

Along the East Side, the Jewish quarter, is the most thickly populated district in the world. Last year more immigrants came to the United States from Europe than ever before in the country's history. Since the first of the year 1902, 40,000 Jews alone have landed in New York, and more than 70 per cent. of those who entered the port of the metropolis took up their homes in the choked East Side. In June the Jewish immigration was nearly 8,000. Of these, 6,000 are now living in New York's Jewish quarter. The population, already so dense as to be a menace to the health and happiness and well-being of the people, is thus rapidly increasing in this particular spot. There is no reason to believe that the stream of immigration will decrease. On the contrary, as this country comes to assert more and more its supremacy among nations the flood will swell. Then what is to become of the East Side in New York?

The danger of this over-population was recently shown in a striking way. At the funeral of Rabbi Joseph, who was the recognized head of the orthodox Jews in the United States, a crowd of 50,000 mourners gathered, following the bier through the streets of the East Side. In a district where half a million of this one race reside within the compass of a few square miles, where there are half a dozen blocks each the home of more than 2,500 persons—in such a district it is easy for a crowd of 50,000 to gather quickly and concentrate at one point. Such an enormous assembly in the streets was too unwieldy for the police to control or protect. The Jewish mourners were insulted by factory employes. They resented the insults with violence. There was a fight, and then a riot, and then the city was shamed by the spectacle of policemen armed with heavy clubs beating unprotected men and even women and children. Several, severely injured, were taken to hospitals; others less seriously hurt, only bruised, stunned, and beaten, were guided to their homes to be nursed by their own families. Then the Jews of the East Side held great mass meetings, organized for their own protection. But these people are not belligerent. The violence ended with the riot on the funeral day.

Here is another instance: The head of the health department of New York City has made a discovery which shows that disease revels in these fearfully congested tenements. Fully twelve per cent. of the school children, he reports, are suffering with trachoma, a contagious disease of the eye. This disease is like a granulation of the lids. If it is not cured in its early stages it will produce blindness. It is an affliction which has its origin in uncleanness and is prevalent among the lowest immigrants. All immigrants who have trachoma, exposed by inspection at Ellis Island, are deported. Nevertheless, the affliction is more and more prevalent in New York.

These two facts, the mob and the eye disease of the school children, have recently emphasized some of the dangers which lie in the concentration of population in New York's East Side tenements. The immigrants are not to blame. Each man has a right to improve his condition and that of his family, if possible.

The troubled little European country of Roumania once agreed that it would persecute none of the races of the world. It has a law, also, that no alien will be permitted to pursue the common trades, such as that of machinist and painter. Nearly all of the Jews of Roumania are aliens. To become a citizen of that country requires the passage of a law in each individual case by a body of the government corresponding to the Congress of the United States. It would be the same situation here if a foreigner in order to become a citizen were obliged to go to Washington, have a bill passed by the House of Representatives, by the Senate, and signed by the President. Very few of the Jews of Roumania have succeeded in becoming citizens and securing all the privileges of the country's industrial system. The result is that thousands of them have come to the United States with the continued stream of Russian Jews and the many more thousands of Italians, Hungarians, Slavs, and Poles. They are dumped, the largest portion of them, into the swarming East Side.

This intense congestion in one spot causes want, and men and women who are eager to work have difficulty in finding employment. Their first work provides such meagre remuneration that the family can scarcely subsist. Another circumstance that makes the problem more serious is that the poorest people have the largest families. The average family in the United States is five, including father and mother. In the Ghetto the family averages seven or eight. Thus the population is not only increasing by immigration from without, but also from the natural growth. And this circumstance, too, makes more imperative the finding of profitable employment for men. It costs money to feed many mouths.

The solution of the problem would be the reduction of the population of the East Side. If seventy per cent. of the new arrivals are going to take up their residence there, the only way to make room for them is to find residences in other parts of the country for those who have preceded the new comers. One organization is

already engaged in this work. It is the Industrial Removal Office, which finds employment for New York's Hebrews and sends them to every State in the Union, and even to Canada and Mexico. Since January 1st the removal office has sent out of New York 2,000 persons; and during that time 30,000 arrived from Europe and had gone to live in the East Side! So the situation is not relieved to any extent by the removal office. Nevertheless, it is a practical plan in the right direction.

Undoubtedly the result of a full appreciation of the situation will be the restriction of immigration, but a proper and fair restriction is a most difficult matter to define and determine. Many immigrants coming from abroad and taking up their residence in the nest of human life of the East Side find conditions even worse than those from which they fled. I encountered in the Ghetto a family of beggars. The mother asked alms to support her two sickly children. The father was unable to get work which his feeble physical condition would permit him to do. So he tended the children while his wife went out to beg on the streets. This family had not found America the land of promise. They were anxious to go to London. Another father, who earned only \$3.50 a week in a sweat shop and was responsible for the support of a wife and five children, was not happy. He and his wife and children, living in tiny, evil-smelling rooms, were sickly, pale, and unutterably miserable. Yet this man is industrious, shrewd, and intelligent; and there are thousands like him.

When they are given the opportunity these men almost invariably succeed. This is shown by the records in the removal office. This enterprise is the result of the philanthropy of the late Baron de Hirsch, whose wealth has been used in this and other ways for the benefit of the Jewish race. The original purpose of the system was to distribute Jews from the crowded East Side to the farming sections of the United States.

"How many Jewish farmers do you suppose there are in the United States?" queried Mr. Cohen, manager of this department of philanthropy in New York. And his own answer was, "Not more than 2,000 at the most. The reason is this," he said. "It takes capital to be a farmer. A man must have money to buy machinery and stock. How is a man who has no money going to be a farmer? If he is going into that business, he must first be a farm-hand, and that is the most poorly paid labor in the country. The work is hard, the hours are long, the pay is small, and the job lasts usually only a part of the year. A man who has intelligence will see these things and will get work in a town where the employment will be steady and the pay larger. The Jews are not an agricultural people—although there are many Jewish farmers in Russia—and they do better at other pursuits. Last year we established forty farmers, and the removal office found employment in towns and cities for 2,000 men. So you readily see which is the more effective in solving the problem of congestion in New York."

The Industrial Removal Office is a free employment agency. It keeps four men on the road constantly, looking for places where idle New Yorkers may be sent. When one of these travelers reaches a city or town he visits at once a leading citizen of his race, the head of a Jewish congregation or society, and through him becomes acquainted with employers. He finds the need of a certain number of a particular trade—machinists, painters, carpenters, jewelers, factory hands—and he sends to the office in New York lists of the opportunities for labor which he has found. Then, as men apply who are in need of employment and are capable of doing the work, they are sent to the cities from which the requisition has come. They are given their railroad fare by the removal office, provided with clothing, if it is needed, and given food to keep them until they arrive at their new place of employment.

There are more openings for skilled labor than there are applicants to fill them. What are needed are places where men can learn the work and where, when they have attained knowledge and are progressing, their industry will be rewarded. Nearly every day a wagon-load of place-seeking Jews is taken from the removal office to the trains. When the father who has found profitable employment in another city writes that he is able to support his family, the removal office sends to him his wife and children.

To live in the fresh air of some Western town, with grass and trees and flowers, and plenty to eat, plenty to wear, plenty of room for play, is like taking up a residence in fairy land for the children who were born and have lived in the heat and stench, the narrow confinement of the tenements, in dirt and rags and misery. I read the other day a letter that had been received at the removal office, written by a girl thirteen years old, who signed her mother's name. Her father had preceded his family to Natchez, Mich., and when he had become established he had sent for them. Following is the letter of the little girl of the tenements, written in her new home:

57 LINCOLN AVENUE, NATCHES, MISS.  
DEAR MAMAM—Your surprise will be as great as ours when you find out that our welcome here was a great surprise. When we came to our home the house was furnished most beautifully. We

had a dinner-set of beautiful decorated flowers, four wash-stands, and a set consisting of basin, large and small pitcher, a soap-dish and small vase, a bureau, all house utensils, such as tubs, pans, washboard, iron, wash-line, baking utensils, and everything in grocery that can possibly be imagined; four large new beds with mosquito netting and frames, three pretty lamps, beautiful mantel-piece ornaments, flower-vases, chairs, curtains, bedding, tables, trunks, and all things which may be found in a nice comfortable home. You have no idea how beautiful our home is furnished.

We have a pretty house consisting of four rooms, large spacious yard, and piazza. The houses here are quite far apart. Everything is very expensive, and nothing can be purchased for less than five cents. Papa has been doing better all the time, and in a very short time papa hopes to take a man to help him. We are all very happy, and we thank you very much and will appreciate your kindness as all our future prosperity is due to you. Hoping you are well and wishing you success I am, Yours truly,  
MAX E. GOTTLEK.  
Per M. G.

The houses seemed very "far apart" to her, and their little front yard was "spacious"! The letter is eloquent, for it shows how unnatural and unhappy is the life of the tenements. Here is a letter from a husband who had found employment in the West, sending for his wife:

HANCOCK, MICH.  
DEAR WIFE JENNIE—I let you know that I have arranged a house and I earn \$3 a day. As soon as you receive this letter you should sell everything except the kitchen things and go to the office and ask them to send you here. Write when you leave New York.  
SOLOMON MESTEL.  
Care Gardner's Store.

And following is another, from New Orleans:

NEW ORLEANS, LA.  
DEAR SIE—I am now in New Orleans and ask you to send my family. I am making a living but with double expense which I have if I cannot bring them. I beg you to send them as soon as possible, as they are suffering in New York. In Chattanooga I could not remain, but I thank you that you sent me out of New York.  
A. LICHTER.

### Fostering Education in the South.

IT IS encouraging to know that a better day is dawning for the cause of public education in the Southern States. A comprehensive plan has been formulated, which deserves to be ranked with the truly great undertakings of the new century. What the Federal Government cannot do in the matter of fostering common education will be done by the "General Educational Board", recently organized, which will operate throughout the United States under authority of a Federal charter. Its purpose is to develop the district school and help the higher institutions wherever there may be need. It will not confine its benefactions to any one locality or race. The South is receiving first attention. Whites as well as blacks will be helped. Great care is taken not to develop pauperism. To avoid this evil the Southern communities will be called upon to levy school taxes, collect and distribute the same impartially, and then for every dollar given by private parties the board will give another dollar. The movement has been inaugurated with a fund of \$1,000,000 in cash, which was given generously outright by John D. Rockefeller, to be spent as the board thinks best. Further donations are expected from the same source and from other wealthy men. They should give millions, because this board, with its careful management, will do much to solve the great problems of race and ignorance in the South. The General Educational Board was projected by William H. Baldwin, Jr., president of the Long Island Railroad, who has enlisted a number of far-seeing students of social conditions, among them being Dr. Albert Shaw, Dr. Daniel C. Gilman, Morris K. Jesup, Robert C. Ogden, Walter H. Page, and Dr. J. L. M. Curry. Rev. Dr. Wallace Buttrick is executive secretary, with headquarters in New York City.

### Hit a Soldier.

THE EXPERIENCE OF ONE OF OUR MEN.

THE soldier boys who fought during the Rebellion went home as a rule in pretty bad shape, caused by exposure and improper food and the use of quantities of coffee which left its mark in the wreck of many a stomach. Merrill Hutchinson, of Reading, Mass., tells his experience.

"I am an old soldier who served all through the war of the Rebellion, and my coffee-drinking commenced when I enlisted. I drank it three times a day and at the close of the war returned home almost a wreck.

"For years I had dyspepsia of the worst kind and could not drink anything but warm water or warm milk, nor eat enough to hardly keep a man alive. After suffering this way for years, and half living, I was told by a friend of your Postum Coffee.

"At first I refused to even try it, for I thought it meant more suffering for me, but at last I consented and it did taste mighty good, for I was a dear lover of coffee.

"I waited for the distress in my stomach that always had come with common coffee, but it never came. I drank it at first very carefully and then got reckless and wanted it every meal, and for over five years now have been drinking nothing else. I have no dyspepsia now, no trouble about eating anything. My weight, when I began using Postum Cereal Food Coffee, was 125 pounds. I am now 62 years old and weigh about 160 pounds, and am solid as a rock and able to do a day's work with any of the boys. Now I do not claim that Postum Cereal is a medicine, but in my own case it is both victuals and drink. I think that when Postum Coffee is properly made it is far ahead of coffee."

THE CROWN PRINCE OF SIAM.

## Two Princely Visitors from the Orient

PRINCE CHEN OF CHINA.

AS THE United States increases in power and importance there is naturally a growing desire on the part of "the great ones of the earth" to visit it, to observe its greatness at short range, and to seek to establish closer and more friendly relations with its people. The recent coming here of Prince Henry of Prussia may have been but the beginning of a series of visits by royal personages to this country. The recovery of King Edward makes it possible that the Prince of Wales will again consider seriously the idea of testing our hospitality. But for the failure of Congress at its latest session to authorize the President to extend a formal invitation to King Chulalongkorn, of Siam, that monarch would now be contemplating a tour in the near future, embracing the Philippines and the great American republic. State etiquette prevents the King from becoming this nation's visitor unless he is officially invited to do so. But in lieu of the King the crown prince of Siam will, of his own motion, come to the United States in September.

While more interest would doubtless be manifested by Americans in the personality of the King, who has abolished slavery and decreed religious toleration in his realm, yet the prince, both in his personal and his representative capacity, will deserve, and will, of course, be

given, a cordial welcome. The Hon. David B. Sicks, of this city, who was for six years American consul at Siam, and who is an authority on matters appertaining to that kingdom, states that the crown prince, Maha Vajiravudh, is about twenty-two years old, and has been in England for the past eight years engaged in study, successively, under a private master, at Sandhurst College and at Oxford University. His proficiency in military studies at Sandhurst gained for him the rank of first lieutenant. He developed a taste for history at Oxford, and has written a volume on "The War of the Polish Succession," which has elicited favorable comment. The prince has visited the principal cities of Europe, where he received every attention. He is a handsome, well-balanced, thoughtful young man, an excellent English scholar, and a neat speech-maker. He will take in this country on his journey back to his native land. He will make no attempt at display, as has been alleged in some of the daily papers, but will be accompanied only by his brother and two aides-de-camp. He will come here simply as a student of men and of institutions, the prince, like his father, being liberal-minded and in sympathy with Western civilization. While he will call on the President and the Secretary of State, and will no doubt be entertained in good style, he will not be the guest of the nation. After his return to Siam the prince will have some of the duties of government imposed

on him by his father.

Another distinguished personage of royal blood has recently visited the United States in order to receive that enlightenment which this country alone can furnish. This eminent visitor was Prince Chen, special ambassador to the coronation of King Edward from China. Owing to the postponement of the great function, his mission to London was disappointing, but he doubtless saw enough novel and remarkable things in the American republic to make his long journey from the Celestial Kingdom worth while. The prince was not a guest of the government, but he lunched with President Roosevelt at Oyster Bay, and he was well entertained in this city, though his stay was brief. Sir Liang Chen, the newly appointed Chinese minister to the United States, who was secretary to the special embassy, was a member of the prince's party. Prince Chen and the present Emperor of China, Kwang-su, are great-grandsons of the Emperor Chia Ching, who died in 1821, and the prince is the nephew of the Emperor Taoukwang, who died in 1850. The prince's father, Prince Ching, is prominent in Chinese affairs. Prince Chen, before going to England, had been attached to the Emperor's person as a kind of chamberlain. The prince, while here, created an excellent impression.

THE FLATIRON BUILDING AT BROADWAY, FIFTH AVENUE, AND TWENTY-THIRD STREET.

BIRD'S-EYE VIEW OF SIDEWALK AND STREET FROM THE ROOF EDGE OF THE TWENTY-ONE-STORY STRUCTURE, 245 FEET ABOVE THE STREET.

### The Huge and Novel Flatiron Building.

ON THAT swirling centre of trade and traffic, the triangular plot formed by the intersection of Broadway and Fifth Avenue at Twenty-third Street, New York, there has just been erected a remarkable building, which has attracted the widest attention and which is already one of the chief landmarks and points of interest in the city. The structure is known as "the Flatiron," its shape being that of a colossal domestic implement of the name, but without a handle. The building's pointed end is at the south line of Twenty-third Street, and a fine view of it in all its gigantic proportions may be obtained from Madison Square, where it is daily gazed at and admired by thousands of persons.

The Flatiron was designed by D. H. Burnham & Co., the Chicago architects, and was built for the Fifth Avenue Building Company by the George A. Fuller Construction Company of this city. It is twenty-one stories in height, towers 245 feet above the pavement, and has an area of 8,600 square feet on each floor. It is made of white stone and steel, is fireproof, and cost \$1,500,000. It is claimed that the structural steel, furnished by the American Bridge Company, which forms its framework, is the heaviest ever used for a similar purpose in New York city, 4,000 tons of that material being wrought into the building. The basement and sub-basement are very spacious, each containing 2,200 square feet, and advantage has been taken of this to make the foundation unusually strong, to add to the rigidity of the structure, and thus to provide it with ample resistance against wind pressure.

The process of erecting the Flatiron was rapid beyond precedent, the actual building time being only about twelve months. It will be utilized as an office building, and its location is such as probably to insure an urgent demand for accommodations in it, even at high rentals.

### Six Millions for the Y. M. C. A.

NO ORGANIZATION devoted specifically to the welfare of young men is doing a work comparable in its extent, thoroughness, and efficiency with that performed by the Young Men's Christian Association. The service it renders is characterized by practicality, keen business judgment, and wise recognition of the needs and demands of the hour in the education and training of young men. It aims at the development of a robust, all-around manhood, the building-up of character founded on physical, mental, moral, and spiritual healthfulness, on sanity and soundness of mind and body. Its supreme aim is to fit men for any and all duties to which they may be called in the far-reaching and complex relations of modern life. It is because of its practical aims and wise purposes that the Young Men's Christian Association has enlisted the hearty sympathy and generous support of the most progressive and wide-awake men of the day, of large employers of labor, and the heads of great and powerful industrial and commercial enterprises. How genuine this interest is may be judged in part by the magnificent financial support which the association is receiving in the shape of endowments, bequests, and

other gifts. The associations throughout the United States alone are preparing to spend nearly \$6,000,000 in new buildings in the near future, costing all the way from \$25,000 to \$800,000 each. At thirty-three railroad points buildings will be erected to cost \$462,000. Of this amount the railroad companies have contributed \$357,000. At least one new building a week will be opened during the next year. Newark, N. J., will soon have its \$275,000 building completed; New Haven, Conn., one costing nearly \$300,000; Scranton, Penn., \$260,000. Last year the Sioux Indians in the Dakotas built eighteen log buildings for Young Men's Christian Association headquarters, and a large work is being done among the colored people, North and South, in Cuba, Porto Rico, India, China, Japan, and throughout Europe.

### A Great Piece of Railroad Work.

WITH the completion of work on the western division, the Chicago, Burlington and Quincy Railway Company will have practically a new double-track main line through the State of Iowa. For several years an enormous work has been going on, and millions of dollars have been expended in reducing grades, taking out curves, building double track, and putting in new steel bridges.

# Spending \$50,000,000 for Our Coast Defenses

By Waldon Fawcett

THE PREPARATIONS for the coming war game along the New England coast, to be participated in by army artillerymen and the navy, have aroused new discussion as to the adequacy of our coast defenses. It has been alleged that a bad state of affairs prevails in these fortifications, the men in them being insufficient in number and poorly trained, and some of the guns being defective.

and granted appropriations commensurate with the magnitude of the undertaking, the opening of the century nevertheless finds the whole great system fully one-half completed. More than two dozen of the principal ports on our oceanic frontier have a sufficient number of heavy guns and mortars mounted to enable an effective defense to be made against the fiercest naval attack.

were characterized by their extremely heavy armament and great thickness of armor. With the rapid development of the "quick-firer," however, and the tremendous increase in the resisting powers of armor by reason of the discovery of the Harvey and Krupp processes, there has followed a material change in ship construction which has naturally necessitated a corresponding revision of

A TEN-INC H RIFLE ON PNEUMATIC DISAPPEARING CARRIAGE, IN POSITION TO BE FIRED AT A HOSTILE FLEET.

HUGE TWELVE-INC H CANNON, ON GRAVITY RETURN PROOF CARRIAGE, ABOUT TO BE LOADED WITH ITS BIG PROJECTILE.

But General Randolph, head of the artillery corps, while not claiming that the defenses are at present capable of successfully resisting attacks by foreign fleets, maintains that they will give a good account of themselves. He admits that the coast artillery force is composed mostly of green men, who have enlisted during the past year, but he says that they are gaining in efficiency as rapidly as conditions will permit, Congress having made too scant provision for practice with the guns. The fault found with the big cannon relates mainly to the disappearing carriage, which is said to be unreliable at critical moments. Congress is expected, as a result of the war game, to make more liberal appropriations for the coast defenses.

In fact, the close of the first decade of the new century is likely to find the United States encompassed by the most perfect system of national defense ever devised by any nation. It was more than a dozen years ago that this gigantic project for guarding the greatest coastline in the possession of any country on the globe was first proposed. The war with Spain

DANGEROUS TO VESSELS FAR OUT AT SEA—A TEN-INC H RIFLE ON GORDON DISAPPEARING CARRIAGE.

opinions with regard to the character of coast defenses.

When the distinguished army officers who had been intrusted with the work of mapping out the new coast defenses for the United States first entered upon their task years ago they thought that it would be quite the thing to mount a considerable number of the heaviest guns at the more important harbors, in armored works. As the contest for the reduction in calibres of heavy guns grew apace, and the successful disappearing carriage for the 12-inch gun was devised, however, they gradually came to the conclusion that there might be a better way of arriving at the desired end. With proverbial Yankee foresight the American officers arrived at this conclusion much more quickly than their confreres abroad, and as a result the scheme for armored defenses was abandoned as unnecessary at a time when practically all the European governments still stood committed to armored casemate and turrets for their land defenses. The military authorities of the Old World have since, however, indorsed the judg-

SIDE VIEW OF MAXIM MACHINE-GUN, WHICH HURLS THOUSANDS OF BULLETS UPON AN ENEMY.

pending war will ultimately cost Uncle Sam more than \$50,000,000, even if the present programme is not enlarged and no provision is made for defending our new possessions.

In order to greet any invading host with a wholly plentiful shower of missiles of iron and steel it has been planned to mount nearly five hundred guns of the heaviest type, about eight hundred and fifty rapid-fire guns, and upward of a thousand mortars. Congress has already set aside the money to pay for about half of this formidable array, although, of course, it is not nearly all in position yet. This armament, with which our national waterfront is to bristle, includes a wide variety of weapons. The heaviest guns include ordnance of 8, 10, 12, and 16-inch calibre, while the rapid-firers range all the way from six-pounders to guns of 6-inch calibre. The collection of gun-carriages is almost as varied in its make-up. There are mortar carriages, disappearing carriages, barbette carriages, gun-lift carriages, rapid-fire pedestal mounts, rapid-fire carriages, and rampant mounts. Each has been chosen by reason of an especial adaptability to some special location.

At the time the scheme of coast defense was first formulated the rapid-fire gun was in its infancy and ships

AN ARMSTRONG QUICK-FIRE GUN—A MOST FORMIDABLE WEAPON IN LOADING POSITION.

was a most excellent thing, in its way, for the efficiency of the American defensive system. True, it necessitated a temporary suspension of the striving for the main object, but it gave the workers an invaluable fund of experience and, more practical still, has provided a chain of entirely serviceable temporary defenses which can now be held in reserve for an emergency, and from which the armament may later be transferred to permanent works. Finally, the whole effect of the war has been to hasten the work on the coast defenses.

Although the inauguration of the modern system of seacoast defenses only dates in reality, from 1890, and it was fully half a dozen years later ere Congress awoke to the importance of the project

A SINGLE CHARGE OF SMOKELESS POWDER FOR THE EIGHTEEN-INC H GATHMANN GUN.

THE WRECKER WRECKED—REMAINS OF A TWELVE-INC H CAST-IRON MORTAR, WHICH BURST WHILE IT WAS BEING FIRED.

ment of the revolutionists on this side of the Atlantic.

With the reduction in the number and calibre of the heavy guns and the reduction of the number of mortars, the rapid-fire gun—that weapon of terrible and perpetual destructiveness—came into its own in America. In 1896 the officers in charge sketched a definite programme as to the quick-firing armament to be installed at the various fortifications, and since that time every effort has been made to get it in place just as rapidly as possible, the American fighting men regarding an adequate equipment of these active little "dogs of war" as an essential of the first importance. Constant improvement is being made in the rapid-fire guns and

(Continued from preceding page.)

of late it has been found possible to give them an increase of power far beyond what was thought practicable or advisable only a few years ago.

That there is still much work to be done before Miss Columbia may bid defiance to the world may be imagined when it is stated that a number of sites for fortifications still remain to be acquired before the approved project for seacoast defenses can be carried out in its entirety. It is estimated that at least half a million dollars will have to be expended to bring the desired property into the hands of the government. Among the important sites yet to be acquired are one in Boston Harbor and another at the southern entrance to New York Harbor. Other tracts of land which the War Department is ambitious to control, including two on the Pacific coast, will have to be acquired by condemnation proceedings, which are bound to be slow and tedious. It is not expected, however, that these delays will materially retard the completion of the whole great system within the time promised.

As the most effective way of illustrating the great scope of the United States coast defenses it may, perhaps, be pardonable to burden the readers with a list of the points at which permanent seacoast defenses are under construction. Beginning on the north Atlantic coast the locations comprise: Penobscot and Kennebec Rivers and Portland, Me.; Portsmouth, N. H.; Boston and New Bedford, Mass.; Narragansett Bay, R. I.; the eastern entrance to Long Island Sound; New York City; Philadelphia; Baltimore; Washington, D. C.; Hampton Roads, Va.; Wilmington, N. C.; Charleston and Port Royal, S. C.; Savannah, Ga.; St. John's River, Key West, Tampa Bay, and Pensacola, Fla.; Mobile, Ala.; New Orleans; Galveston and Sabine Pass, Tex.; San Diego and San Francisco, Cal.; the mouth of the Columbia River in Oregon and Washington; Puget Sound in Washington; and Lake Champlain. Preliminary projects have also been outlined for a number of other places, including among others a plan for the defense of the entrance to Chesapeake Bay at Cape Henry. It is quite possible, however, that some of these schemes will wait a while for realization, owing to the importance of immediately taking active measures for the seacoast defense of Hawaii

and Porto Rico. A detailed plan for the defense of San Juan, Porto Rico, at a cost of nearly two million dollars has already been laid out, and the engineers are at work on the specifications for the work at Honolulu.

Uncle Sam now has on hand for the use of the heaviest guns in time of war more than twenty thousand armor-piercing and deck-piercing steel projectiles, and the stock in the national magazines is increased by nearly six thousand of these heavy missiles every year. The government also purchases each year more than a million pounds of smokeless powder.

Perhaps the most interesting features of the United States coast defenses are found in the unique forms of equipment which have lately been introduced. Among these was that strange weapon, the 18-inch Gathmann gun, for the construction of which Congress appropriated \$65,000, but which, when tested, proved a complete failure. That the United States practically stands committed to the policy of making a thorough trial of high explosives in coast defenses is evidenced by the large appropriations made by Congress for the installation of dynamite batteries. Work has already commenced on the installation of a number of these terrifying weapons at Sandy Hook, and plans are being made to provide similar batteries at Fisher's Island, New York, Port Royal, S. C., and other ports. Then, too, special efforts are being made to equip all harbors with a full complement of torpedo material and the other apparatus necessary for submarine mines. Indeed, it is stated by the officers in charge that there is not, even to-day, a harbor of any importance but what is prepared to make a quick and effective defense by this method.

Finally, the whole military world has awaited with interest the completion, for use in our coast defense, of what is not only the heaviest and most costly piece of ordnance in the United States, but is probably the most powerful weapon in the world. This is the 16-inch army rifle which has been constructed at the Watervliet arsenal, and which is so large that a new heating furnace had to be constructed to accommodate it. The cost of the monster was in the neighborhood of \$120,000, and the carriage on which it will be mounted will cost nearly as much more. The big gun weighs over one hundred and twenty-six tons, and will hurl a mass of iron miles farther than any of the old-style guns, its extreme range being estimated at twenty-one miles.

### The Opium Curse in China.

THE STATEMENT that a German firm has offered the Chinese government \$15,000,000 annually for the exclusive rights to sell opium throughout the empire is significant for the evidence it affords of the hold which the opium curse has upon the Chinese people. It is quite as consistent for the Germans to secure a monopoly of this miserable traffic in the future as it was for the English to force it upon China in the first place, but in neither case is the transaction creditable to a professedly Christian nation. The use of fifteen million dollars' worth of opium per year will go far toward offsetting all the good that all the missionary forces of other nations can do in China, and the fact that a traffic in the drug of such dimensions can be carried on successfully is not a hopeful augury for the future of the celestial empire.

### Man Housekeeper.

TRIED IT NINETY DAYS.

THERE is one case on record where a man had a good easy time of it while his wife was away, and she tells the tale.

"Circumstances made it necessary for me to leave husband for a month to pursue his bachelorhood as best he could. He resolved to give Grape-Nuts a thorough trial as he had for years been subject to bilious attacks and indigestion.

"During my absence he gained in weight and his health seemed perfect, therefore I give you for the benefit of suffering men in particular, and women in general, his menu for the 90 days: four teaspoonfuls of Grape-Nuts sprinkled with a little salt and covered with good cream, one slice of bread and butter, one large cup of Postum Cereal Coffee (made according to directions), and all the fruit he wanted.

"He worked during the time nine hours a day and never realized he possessed a stomach. This diet my husband earnestly recommends to office men, students, and all people of sedentary habits especially; and let me tell it to all wives, this meal can be prepared by an inexperienced servant, a young son or daughter, thereby saving yourself hours of labor. Try it. It will make your work lighter, your purse heavier, your body healthier, and all of you happier." Name given by the Postum Co., Battle Creek, Mich.

## J. P. Morgan's "Light Cure"

THE REPORT that Mr. J. Pierpont Morgan, the eminent millionaire and financier, has decided to undergo, at Copenhagen, Professor Niels Finsen's electric-light treatment for a cutaneous affection revives interest in the young Danish scientist's curative method. Photo-therapy, a corollary of the X-ray discovery, is proving a boon for persons suffering from far graver ailments than Mr.

Morgan's, for it is said to be effective in cases of tuberculosis, small-pox, eczema, and lupus. Professor Finsen's system first came into public notice about two and a half years ago. Under the will of Alfred Noble a prize of \$50,000 was received by Finsen for distinctly advancing the science of medicine. Eminent physicians and scientific men in Europe have indorsed the Finsen process, which is based on the theory that light, applied in a proper way, will cure all germ diseases.

Professor Finsen has established at Copenhagen a hospital for the cure of tuberculosis and lupus. In the operating hall there are large electric arc lights surrounded with red cloth, which deadens the rays that inflame eruptions of the skin. The healing light passes through big reflecting tubes, which intensify it. A patient, attended by a nurse, lies on a stretcher right under the end of each tube, and all in the room have their eyes protected from the glare by dust-colored spectacles. The light-rays from an illuminating power of 20,000 candles only two feet away are concentrated on the patient's skin at any required place. There is a device by which the powerful heat-rays which would injure the patients are absorbed.

About one square inch of the surface of the patient's body is treated daily, the term of treatment depending on the area of the tract affected.

Professor Finsen claims that nearly eight hundred of his patients have been cured. Out of 462 cases of lupus, 321 were cured and only four proved refractory. Sunlight also has been employed in the treatment of various maladies with beneficial results.

PATIENT.

## Trees Older than Civilization

CALIFORNIA FOREST GIANTS WHOSE AGE DATES BACK TO NOAH'S FLOOD

By L. A. Maynard

PUBLIC SENTIMENT throughout the country will heartily sustain the efforts to secure legislative action, both on the part of the national government and of California, to insure the preservation of the mammoth trees which are the pride and glory of the California forests. The threatened conversion of these marvelous forest giants into lumber would be an irredeemable loss to science and the natural wonders of the world. Such a calamity should by all means be averted if possible.

We reproduce herewith photographs of a number of these marvels of the California groves. Two of these are of a gigantic redwood cut down in Humboldt County. The total height of this tree when standing was three hundred feet, and its diameter at the butt sixteen and a half feet. It was estimated to contain 160,125 feet of timber, board measure. It took nine logging cars to haul to the mill the logs cut from this tree. The bark on the trunk was six inches thick. For the photograph of this forest giant we are indebted to the courtesy of the Vance Redwood Lumber Co., of Eureka, Cal.

Other trees represented in the photographs are aptly named the Fallen Monarch and the Grizzly Giant. The size of the Fallen Monarch may be judged from the fact that it is used as a parade-ground by Troop F of the Sixth Cavalry, U. S. A. The base circumference of the Grizzly Giant is ninety-three feet and it is two hundred and seventy-two feet high, but a better idea of its enormous girth may be gained by observing the grouping of the cavalry troop above mentioned about its foot. Eleven feet above the ground this king of trees has a circumference of sixty-four feet. The first limbs of the Grizzly are one hundred feet above the ground, and with a diameter of six feet compare favorably with the size of the main trunks of the largest trees in an ordinary forest. It stands in a grove of a dozen trees or more, the smallest of which is seventy feet in circumference.

The age of these trees has long been a matter of curious as well as scientific speculation. In some cases the concentric rings marking the successive stages of growth give a fair basis of estimate as to their age, but, in general, much is left in uncertainty. The age of some of the middle-sized trees felled in the Calaveras grove is given at about thirteen hundred years, but the stately monuments of forest growth shown in our photographs are believed to have a record running back over forty centuries. A writer in the *Sunset*, a monthly publication issued by the Southern Pacific Company, in referring to the age of these trees puts the matter in happy phrase by saying: "Some of these trees were giants when the houses of Hanover and Hohenzollern were as yet unknown to history. When the Queen of Sheba visited Solomon they were braving their first winters; when Demosthenes

was delivering his splendid philippics these trees had assumed the stature of giants. The ides of March that saw the death of Caesar may have looked upon the spring

### The Soldier's Prayer

(SENT TO LESLIE'S WEEKLY BY AN AMERICAN OFFICER IN MANILA,  
and reprinted by request.)

NEAR the camp-fire's flickering light,

In my blanket-bed I lie,  
Gazing through the shades of night  
At the twinkling stars on high.

O'er me spirits in the air  
Silent vigils seem to keep,  
As I breathe my childhood's prayer,  
"Now I lay me down to sleep."

SOFTLY sings the whip-poor-will  
In the boughs of yonder tree;  
Laughingly the dancing rill  
Swells the midnight melody.  
Foemen may be lurking near  
In the cañon dark and deep;  
Low I breathe in Jesus' ear,  
"I pray thee, Lord, my soul to keep."

MID those stars one face I see—  
One the Saviour took away—  
Mother, who in infancy  
Taught my baby lips to pray.  
Her sweet spirit hovers near,  
In the lonely mountain brake;  
Take me to her, Saviour dear,  
"If I should die before I wake."

FAINTER glows the flickering light  
As each ember slowly dies;  
Plaintively the birds of night  
Fill the air with saddening cries.  
Over me they seem to cry,  
"You may no more awake."  
Low I plead: If I should die,  
"I pray thee, Lord, my soul to take."

of their maturity. When Mohammed was offering the world its choice between the Koran and the sword, some had attained middle age." One might proceed in this fashion, indeed, through all the annals of the world during the thousands of years since these trees first peeped from the soil and began their upward way toward the sky.

The most remarkable photograph in our collection is that giving a panoramic view of the giant redwoods of the Big Basin, the first picture of the kind ever produced. Strange to say, this particular grove of colossal wonders was practically unknown up to a year or so ago, although it stands within twenty-two miles of San José and only forty miles from San Francisco. In the spring of 1900, a movement owing its inception chiefly to the energy and enthusiasm of Mr. Andrew P. Hill, a public-spirited citizen of San José, was started to induce the State of California to purchase a tract of several thousand acres in Santa Cruz County, including this grove of redwoods, and set it aside as a State park, thus insuring the preservation of the trees. The co-operation of the prominent newspapers of California, the Santa Cruz Board of Trade, Stanford University, and other civic bodies and educational institutions was secured, and the result was that the California Legislature last winter passed a bill appropriating \$250,000 to purchase the Big Basin and convert it into a public pleasure-ground to be known as Sempervirens Park. The tract consists of about 14,000 acres. Some of the redwoods found here have an age estimated at 7,500 years. Many of them are from twenty to twenty-three feet in diameter at the base and three hundred feet high. The largest tree in the series shown in our photograph is one hundred and seven feet and six inches in circumference. The term Sempervirens has been applied to these trees, a variety of the sequoia, because of their apparent ability to withstand the ravages of time and live forever. Even the oldest members of the group are seemingly as vigorous as in their far-off youth, and good for several thousand years more.

GENERAL LEW WALLACE, WHO HAS GIVEN PUBLIC READINGS OF HIS BOOK, "BEN-HUR."

SHOULD A poet read in public from his own works is a question which has been discussed somewhat of late in literary circles. We should say that it depended chiefly upon the poet's gift as a reader. We are wont, indeed, to think of real poets as being by temperament and disposition shy and timid creatures, preferring to bask in the light of the moon rather than in the glare of footlights; and there is a seeming incongruity in the appearance of a bard twanging the lyre in public places to the accompaniment of his own music, although we have some excellent examples of that kind in literary history. But aside from such purely sentimental objections, which can hardly be allowed to stand in this materialistic land where poets, poor things, are not pensioned off by the government nor any one else, but must earn their bread and butter like ordinary mortals, we see no good reason why Mr. Edwin Markham, Will Carleton, or any other writer of verse should not edify the public and incidentally add somewhat to his cash account by reading his own compositions on a fifty-cent admission basis, reserved seats extra. Genuine poets are such rare ones now and always, that it is worth half the price asked just to see a real live one on exhibition. And there is also a valuable consideration that in this way only are most people likely to absorb any poetry at all into their intellectual being. Even "Paradise Lost" might get into general circulation if it were served out now by Milton himself on public platforms, and it can be imagined that people would at least make a desperate effort to understand "Sordello" should Browning himself try to interpret it for them.

As we have said, it depends chiefly upon the poet's ability to read his own verse with spirit, grace, and power. Tennyson, as we are just now told by a writer in *The Century*, had a singularly musical voice, and recited his own poems, in strictly private circles, with charming effect. Scott and Wordsworth were fond of a like exercise in the company of chosen friends and excelled in it, and the same may be affirmed of our own Longfellow. The latter, by the way, expresses his own opinion on this subject in a passage in "Michael Angelo," where the great artist is besought by Fra Sebastiano to attend a supper with his fellow-craftsmen with the additional inducement of hearing Berni read a canto of his "Orlando Innamorato." To this Angelo replies:

That is another reason for not going.  
If aught is tedious and intolerable,  
It is a poet reading his own verses.

But it need hardly be said that the elocutionary gift in men of letters is by no means the inseparable accompaniment of creative genius, this being true of novelists and other writers as well as poets. A striking illustration of this fact came under our observation some years ago when we were privileged to attend a series of "authors' readings" in New York for the benefit of the Copyright League. James Russell Lowell presided on one of these occasions, and among the readers were Charles Dudley Warner, George William Curtis, William Dean Howells, Thomas Nelson Page, and Frank R. Stockton. Warner excelled as a public speaker, and his reading of one of his best adventures in the Adirondacks was captivating, and Curtis's selection from "Prue and I" was equally so. But as for the other three they went from poorer to poorer still. Page struggled bravely with a selection from "Meh Lady," but it was not edifying; Howells made a manly effort to be entertaining, but failed miserably; and as for poor Stockton, he could hardly be heard beyond the footlights, and few in the audience would have known, except for the programme, whether he was reading from "The Lady or the Tiger" or "Rudder Grange." Doubtless these excellent gentlemen realized their shortcomings more than any one else, and it was truly a noble and heroic act of self-sacrifice on their part to make the effort *pro bono*. On any other grounds such "entertainment" as they afforded would have been almost unforgivable.

General Lew Wallace has added considerably to his exchequer, if not to his fame, by his public readings from "Ben-Hur," and he always draws paying houses. But we have heard his "chariot race" read or recited on several occasions by public entertainers in much finer spirit and with better effect than when given by Wallace himself. The scene is one requiring a measure of dramatic energy which the general lacks. One of the best combinations of readers ever seen before the American public was Mark Twain and George W. Cable, who "starred" together for a time, about eighteen years ago. With Twain to supply the humor and Cable the pathos—and tragedy too, if necessary—no element was lacking for an intellectual repast of the highest order. Twain has abjured public readings, it is understood, since he came back from his debt-paying campaign around the globe, but Cable is still a popular favorite on the lyceum platform. The author of "Bylow Hill" is a little man with a small but penetrating, rich, and finely

modulated voice, specially well designed to render selections from such writings as his "Old Creole Days" with taking effect. "Ian Maclaren" made a success of his public readings when he toured this country two or three years ago, and the "Bonnie Briar Bush" stories lost none of their tender pathos and delightful humor when heard from his lips. But it could hardly be said that either Conan Doyle or Israel Zangwill fulfilled public expectations in like measure. Taking it all around, the best and most popular reader among American writers of the day is probably F. Hopkinson Smith. In this, as in everything else which Mr. Smith undertakes, whether it be civil engineering, painting, or story-writing, he seems to have the gift of a master. His selections are usually from "Colonel Carter of Cartersville" or "A Day at Laguerre's," and these he renders with an ease and naturalness, an exquisite grace and charm of manner, which capture an audience from the start and hold it to the end.

READERS WHO look to the writings of the late Frank R. Stockton first of all for humor of the sort that pervaded "Rudder Grange" and "Pomona's Travels" will be disappointed somewhat in "Kate Bonnet." Mr. Stockton's last novel (D. Appleton & Co.), although if they will read the book through they will find, on the whole, that it is a capital and satisfying story and fully up to the best Stockton standard. It has more of the adventurous spirit of the author's "Captain Horn" mingled with elements of love and romance such as become the period, the scene and characters of the story. Kate Bonnet is the lovely and dutiful daughter of a rich gentleman of Barbadoes who is metamorphosed into a fierce and bloodthirsty buccaneer, one among the number of that class who terrorized the Spanish Main in the seventeenth century. Kate shares his evil fortunes though not his evil life, and remains throughout all vicissitudes an influence making for sweetness and light, a veritable

NEW YORK STUDIO OF F. HOPKINSON SMITH.—FROM "AMERICAN AUTHORS AND THEIR HOMES."

guardian angel to her reckless and misguided father. Other characters in the story are a pious and humorous Scotchman; a fierce and reckless captain in the royal navy; a dilettante pirate captain; other pirates of high and low degree; and the renowned king of pirates himself, the great Blackbeard, who plays a leading part. Contrary to what one might think, with such characters and surroundings, many humorous situations present themselves, and the story, like all of Stockton's tales, ends up well and has a wholesome, cheery flavor. For even Stockton's villains are never wholly villainous, and even a pirate in his hands becomes a person who has some redeeming qualities and leaves some pleasant memories behind.

AMERICAN READERS will always give a joyous welcome to a volume of short stories by Bret Harte, such as that just issued by Houghton, Mifflin & Co. We could never understand why a man so intensely and unequivocally American as Bret Harte was in all his instincts, predilections, and sympathies could voluntarily expatriate himself as he did; but as that was his business and is not ours we shall pass no harsh judgments, particularly since the exile held true to his early loves in literature, and was truly American to the last so far as the atmosphere, scenery, and unique flavor of his stories are concerned. A certain similarity between one of Harte's early productions, such as "The Heathen Chinee," and John Hay's "Little Breeches" has led some people to confuse these two authors, but while the literary orbits of the two men did come pretty near together at one time, they swung far apart in later days. Harte was first and last of all a man of letters with a gift of portraying the rough, unconventional, and picturesque side of humanity such as few writers of his day possess, while our accomplished Secretary of State bids fair to shine on the pages of history not so much as a man of letters as a diplomatist, orator, and statesman of the first rank.

IT MUST be granted that at first flush a proposal to teach the "Art of Life" emanating from a French source would not strike a reflective person as being altogether in comport with the higher and finer aims of human existence. The impression prevails, at least, that the art of life as practiced too generally in France to-day does

not make for pure morals or genuine happiness. How ever this may be, the book under this explicit title written by R. de Moulde la Claviere and translated from the French by

George Herbert Ely (Putnam) teaches only what is true, beautiful, and good. In this volume the highest and noblest ethical principles are set forth in words where sound wisdom is re-enforced by sparkling wit and gentle satire, and by that light, brilliant, and captivating style which belongs to French writers as to no others. M. Claviere urges women to fulfill their function of "moral maternity," to impart moral nourishment to the world, to transform it through the influence of moral beauty. Written for Paris, this book is good reading in New York, and wherever women are insured in materialistic aims and enjoyments.

THE QUESTION is sometimes raised, Why so many new books? There are more good books now in the world than we can read, and why not let them suffice? There are several answers to this question. New issues are constantly coming up, and these require treatment. History and science must be brought up to date. Every generation must largely make its own literature. This fact grows out of changing styles. We can no more think just the same thoughts that our fathers did than we can wear their clothes. What if the great mass of books is ephemeral, dying within a few years? If they have supplied a passing need they have not lived in vain. The last word on all the great themes and problems of life will never be spoken. When men ceased to think for themselves and fell back upon the "classics," a great blight fell upon the intellectual life of mankind. The Renaissance broke the fetters of authority, and led men to think for themselves. Hence, the Reformation, the wonderful achievements of the last century, and all the progress, discovery, and invention of modern times.

ROBERT SHACKLETON, author of "Many Waters: A Story of New York," published by D. Appleton & Co., abandoned the practice of law to enter the literary field, in which he has already achieved a reputation. He is forty-one years old and a native of Wisconsin. Almost all of his early life was spent in Cleveland, Ohio, where he obtained his preliminary education. He studied law at the University of Michigan and was admitted to the Bar in Ohio. Following a natural bent for investigation, he was attracted to newspaper work, in which he was successful, serving from 1895 to 1900 on one of the great New York dailies. For the last two years Mr. Shackleton has occupied an editorial position on the *Saturday Evening Post* of Philadelphia.

### Why He Voted for Lincoln.

NO INCIDENT in the life of Abraham Lincoln better illustrates the greatness of his nature than the following, which has probably never before been related: At the time of the national election of 1864, when President Lincoln was a candidate for re-election, some of the soldiers who were encamped about Washington were allowed to go home to vote. The men soon discovered that those who were in charge of the arrangements were facilitating the movement of the men who were expected to vote for Mr. Lincoln, and that the movement of those who would probably vote for General McClellan was being correspondingly retarded. This discrimination occasioned a good deal of anger, and after much discussion one soldier, having in mind the well-known fairness of President Lincoln, proposed that three or four get into a carriage and present the case to him. The suggestion was accepted and they were soon in the White House, where they were very cordially received.

They told their story, explaining that they were Democrats and wished to vote for General McClellan, and that it seemed to them that they were not to be allowed to get away in time to vote. Mr. Lincoln asked a few questions and then wrote and handed to them a message, addressed to their commanding officer, but did not acquaint them with the contents. As the men were returning to camp it was suggested that it might be well to read the message, in the fear that it might be an order for their punishment, but the suggestion was quickly dismissed. When the message was delivered to the officer, he read, "You will see that these men and their friends are given every facility to leave for home immediately in order to vote." The order was obeyed promptly, the men reached home in ample time, and the veteran who tells the story says, "I believe that each of us voted for Mr. Lincoln, although we were Democrats, and this was the only time that I ever voted for a Republican candidate."

## In the World of Sports

SMASHING OF WORLD'S BICYCLE RECORDS EXPLAINED—ROUGH-RIDING  
JOCKEYS—CRUISE OF THE NEW YORK YACHT CLUB

**THE SPRINT AND HIGH GEARS.**—The manner in which world's records have been smashed on the bicycle tracks throughout the country has apparently mystified everybody, and yet the reason is plain enough to those who make a close study of bicycle racing. Singularly enough, however, nobody up to date has attempted to explain the reason in a sensible way. The unbelievers scoff that all records should go so fast and the makers swell up with pride and intimate that they are making a better wheel than ever before. The track managers smirk and say that their tracks have been improved. The real reason is that the men are training more faithfully and the fact that the American riders have followed in the footsteps of the Frenchmen and have adopted higher gears. Most of the unpaced and competition records this year have been made by two men, Frank L. Kramer, the professional champion, and M. L. Hurley, the amateur champion. So I determined the other day, when down at Manhattan Beach, to sound those riders. Each admitted that he was riding a much higher gear than ever. Hurley is now riding a 106 gear, never heard of before in unpaced work. When "Jimmy" Michael rode that gear three years ago when following a pacing machine people thought it was wonderful. The unpaced riders at that time were riding gears from 72 to 82. Now Kramer is riding a 104 gear, while Hurley goes two points higher—probably the highest gear ever ridden by an amateur in unpaced work in any country. Both champions are wonderfully strong-limbed fellows and few of their rivals dare to use such high gearings. Last year Kramer used a 96 and Hurley a 92. It is not an uncommon sight at present to see one of the paced riders using a 120 gear, and before the season is over I would not be surprised to see men of the Elkes, Walthour, Champion, Michael, and Freeman class using 140.

**ROUGH RIDING JOCKEYS.**—With the remarkable interest in the thoroughbred and the record-breaking crowds at the various tracks in the East it is only natural for the trainers and jockeys to think it necessary for them to become more strenuous in their efforts to give satisfaction to the owners, the track officials, and the general public. The result has been that there has been more rough riding on the tracks this year than ever, and the officials of the Jockey Club have been considering for some time the advisability of enacting stringent rules to prevent such tactics in the future. While the meeting at Brighton Beach and the early days at Saratoga showed improved sport and greater crowds than usual, the races were made positively dangerous by reckless jockeying by some of the youthful knights of the pigskin. That so few accidents happened is remarkable. The judges have been instructed to keep a sharp eye out for flagrant cases of rough riding, and to discipline the owner and jockey by disqualifying the horse whenever the offense seems to warrant such severe measures. A case in point was the disqualification of Burns on Ethics during the closing week at Brighton. Ethics was the favorite and by far the best horse in the race at the weights. Ethics won by fully three lengths, but was placed last for palpably fooling himself, Tom Kenney, and Numeral in the run up the stretch. The action burned up a lot of money for the public, but the result has been good. The calling of a jockey is dangerous enough at best, but when he endangers the life of other jockeys by foul tactics it is time to bring him up with a sharp turn. To be disqualified for fouling hurts a jockey much more than a heavy fine. Shaw has been a dismal failure so far this season. The best work to date has been done by Odom, Wonderly, and O'Connor. If Odom continues to improve he is likely to be considered America's best-jockey at the close of the present racing season.

**A CRUISE OF THE MILLIONAIRES.**—All yachtsmen agree that the cruise of the New York Yacht Club, just ended at Marblehead, has been the most successful in point of racing, and socially, of any that have been given by that popular organization. More money is represented by the yachts and their owners than at any other annual sporting and social event held in this country. It is a greater display in its way than anything they have in England or in any other country. The prizes offered during the cruise for the various runs from port to port are valuable and artistic, and it is doubtful if any yacht club expends more money for this purpose than the New York Yacht Club. Some idea may be formed of the wealth represented in this club when it is known that the yacht owners include such men as William K. Vanderbilt, Cornelius Vanderbilt, August Belmont, George J. Gould, Edwin Gould, Howard and Frank J. Gould, James J. Hill, and John Jacob Astor, the latter being the donor of the Astor Cups every year, the schooner prize being valued at \$1,000 and that for sloops at \$500. The races for these cups off Newport this year were witnessed by most of the wealthy residents of that fashionable resort on August 6th. During the cruise, which this year began at New London, the owners of yachts live on board with their guests and often entertain at dinners given on board

apparent, declined to meet Scholes, the Canadian, just prior to going to Europe, the criticism a so stinging that Titus at the last minute decided to row the Canadian, although his friends knew that he was not in shape to do his best work. He was defeated by Scholes, but had his revenge by easily beating the Canadian in their preliminary heat for the Diamond Sculls in England. Those who know Titus laugh at the stories of professionalism and say that the champion will be cleared of the charges if the officials think it necessary to take official cognizance of the silly rumors. J. S. Kelly, the winner of the Diamond Sculls, is boyish of face, but has a physique which shows plainly through his street attire. J. H. Gibbons, the stroke of the Third Trinity, winner of the Grand Challenge Cup, is an ideal-looking athlete. Both Titus and Scholes are at present determined to have another try for the rowing classic next year. Still, there is a livelier interest in rowing in America at present than for several years, and a new phenomenon may appear before the present season is over who will demonstrate his superiority over the others and will be the logical American selection for next season.

**IMPROVEMENT IN AUTOMOBILES.**—The remarkable advancement made during the last year in automobiles, especially in this country, illustrates the possibilities of the horseless vehicle. The up-to-date machine to-day is really a remarkable piece of mechanism, and it is astonishing how few accidents happen compared with the number of a few months ago. A prominent member of one of the most important clubs said the other day: "Last year I took a seat in an automobile with almost fear, and if the journey was to be a long one I always looked up the railroad trains before starting. Now I have not had a hitch in one of my automobile trips in several months. The mechanism of the modern vehicle for business and sport seems to have been brought pretty close to perfection. The American carriage builder has done his part too. The machine to-day can get over almost any kind of an obstruction in the road with practically no vibration to the occupants of the vehicle. The location of the springs and the proper adjustment of the weight has accomplished wonders. An obstruction that would throw a railroad train into the air and cause a frightful accident and loss of life can be surmounted by an automobile with scarcely a jar to its passengers."

JAMES R. MCCONNELL, AGE FIFTEEN, AND GEORGE W. GARRETT, AGED SEVENTEEN, WHO RECENTLY MADE AN AUTOMOBILE RUN FROM NEW YORK TO CHICAGO IN ELEVEN DAYS, ACTUAL RUNNING TIME.—Wright.

for friends who visit them at Newport and at other points. Many courtesies were exchanged in this way at Marblehead, where the club as a whole was the guest of the Eastern Yacht Club, which is the prominent and wealthy yachting organization of New England.

**ROWING CLASSICS AND THE RESULT.**—The rather undignified attempt of some of the club mates of the American champion, C. S. Titus, to impeach his standing as an amateur has met with the just rebuke such conduct deserves. Long before Titus sailed for England to try for the Diamond Sculls the feeling of hostility against him was manifested on the Harlem River at New York. There was constant wrangling over raising the expenses to defray the actual cost of the trip, and when Titus, for reasons

**YOUTH TO THE FRONT IN SPORTS.**—Youngsters have come to the front in competitive sports this year in remarkable numbers. This applies to nearly every branch of outdoor sport. On the race-tracks several young jockeys have forced their way to the front, while in professional baseball no previous year has turned out so many successful youngsters. In cricket the younger members of the clubs are taking a livelier interest in the old English game, while many new riders have made names for themselves on the bicycle track and in road racing. W. J. Clothier, of Philadelphia, who won the recent tennis tournament at Longwood, was the tennis surprise of recent years. The youthful Quaker is only about twenty years of age and his defeat of Larned caused the critics to shout in their amazement. Louis N. James, the present golf champion, is only nineteen years of age. It is this constant infusion of young blood that makes sport what it is to-day.

G. E. STACKHOUSE.

### Queries Answered.

**M. A. C., LOUISVILLE.**—The shotgun should be fitted to you by an expert. With your admitted inexperience your own selection of a gun would not give you satisfaction when you really learned how to shoot.

**L. O. G., CHICAGO.**—The speed limit for automobiles differs in localities. It would be best to inquire about local ordinances beforehand and make careful notes when passing through towns and cities. Some country constables eke out a handsome income by lying in wait for strangers on the road.

**J. A. W., BROOKLYN.**—A very preliminary movement made by the pitcher with intent to deceive the baserunner, when the ball is not delivered, can be called a balk, and the baserunner is entitled to one base. G. E. S.

# The Pioneers of Arizona

## and the Romance of the White Horse Mine . By E. C. Rowe

THE HISTORY of that portion of northern Arizona which was organized as Yavapai County at the first session of the Arizona Legislature in 1864, claims an important place in the romantic story of the conquest and difficult and dangerous process of civilizing the great Southwest. The courage and endurance of those men of iron who first flung "Old Glory" to Arizona's fervent breezes, and, defying every stratagem of fate, kept it aloft for us fortunate ones of later days, is a tale which, could it be fully told, would rival in thrilling interest the annals of King Arthur's mythical knights, or the achievements of the immortal "Three Guardsmen" of Dumas the elder.

The fathers of Yavapai—those dauntless pioneers who hewed out standing-room in an unknown and inhospitable wilderness, disputing the ground inch by inch with savage beast and still more savage men—were given more to action than to contemplation; and it probably never occurred to them that the dangerous episodes of their daily lives would one day be the romance of unborn generations.

But for a first historical glimpse of the region now embraced within the boundaries of Yavapai County, we must glance back far beyond the advent of the American pioneers. More than 374 years have passed since the first European set foot on the soil of what is now Yavapai County. From 1537 to 1540 four separate expeditions of Spaniards traversed these familiar mountains and plains. Fortunately these ruthless invaders made no permanent settlement; for they found no peaceful population which they could enslave, and they did not propose to do any work themselves. They wondered greatly, however, on finding numerous crumbling ruins and other evidences that the land had been occupied at some distant date by a numerous and industrious people. We wonder at the same ruins to-day; but no voice comes out of the past to tell us the history of this vanished race.

They were undoubtedly a powerful people, and of a race that was industrial rather than warlike. Evidences of their labor can be seen in every fertile valley and by every water course. They constructed vast systems of irrigating canals and built citadels and walled towns; but here our knowledge of them ends. The farmer, driving his plow across the broad valleys of Yavapai, turns up polished implements of stone and highly glazed and decorated pottery that surpass the work of the modern Indian; the prospector marvels at the leveled ruins of former habitations, while the scientist theorizes in vain over mysterious hieroglyphics and elaborate picture-writing cut deep into the gloomy walls of mountain cañons. The departed race has left no message that we can read. Their voices are hushed in the silence of the centuries.

Indeed, we cannot doubt that this entire southwestern region was once densely populated; and if we may judge from the number of ruined habitations that can be seen on almost every square mile of Arizona, the population of this region in that unknown past was far in excess of its present numbers.

Prescott, herself, is believed to be built on the site of a prehistoric city, and many relics of its former inhabitants have been unearthed. In Chino valley, twenty miles to the north, many interesting stone ruins are still extant, and several human skeletons have been exhumed from them, as well as a number of large ollas (earthen jars) filled with charred corn and beans. The doors and windows of these dwellings are of the same size as the openings to modern buildings, but in nearly every case they have been walled up by their former proprietors. Some have accounted for this walling up of the doors and windows by supposing that these people were inhabiting the land when Arizona was visited by the tremendous volcanic outburst that deluged the entire region with rivers of fiery lava, and that, stifled with the heat, the natives walled themselves into their houses and died of suffocation.

Many theories have been advanced by ethnologists and historians as to the identity and origin of those ancient dwellers in the land; and numerous have been the conjectures as to the mysterious agency that so completely blotted out the numerous and powerful race. But in spite of all, their history remains as carefully hidden as the riddle of the Sphinx. Speculation on the matter, though fascinating, is utterly fruitless.

How interesting the thought that at that distant day—a century before the grim Pilgrim Fathers landed on their bleak Plymouth Rock—the broad level stretches of Chino valley resounded to the clank of mail-clad cavaliers, advancing sword in hand and arquebus on shoulder, mounted on their armored steeds; while black-robed Jesuits, journeying through the valley of the Verde, crossed themselves as they glanced fearfully up the shadowy cañons on either side.

Happily for the nineteenth-century pioneers, and for us of the twentieth century, the bloody Spaniard and the wily priest did not linger to exploit the hidden treasures

of this smiling mountain land. The Spaniard was not wont to prospect for treasure that could only be obtained by toil. He found it much easier and more to his taste to prospect for persons who already had the gold, and then he merely took it from them. Thus it was that when our American pioneers arrived they found the golden and silver treasures of gulch and mountain-side all untouched.

As one old-timer puts it, "there was just enough going on in those days to keep a man from gettin' idle and goin' to seed." Here, for instance, is a little episode in the every-day life of the Lynx Creek miners that was too much a part of the routine to cause more than a momentary ripple of excitement. In the winter of 1863-4 three men started on horseback from the Granite Creek settlement to the placers at Lynx Creek. The men were Dr. J. T. Alsap, S. C. Miller and Con. Moore. As grass was plenty on the mesa just this side of Lynx Creek basin, and there was none in the bottom where they were to camp, they dismounted, and drawing their butcher knives, commenced cutting, each of them, a bundle of feed for his animal during the night. While thus employed, a party of Apaches sneaked up, stampeded their horses, and simultaneously another portion of the band opened fire on them at a distance of less than fifty yards.

WHITE AND HIS WHITE HORSE

Of course there was nothing to do but break for the nearest timber, a few rods distant; and there they stood off the sneaking foe successfully for an hour or more, dropping meanwhile two or three men out of their saddles.

But this state of affairs was not to be endured forever; and as the sun dropped out of sight and the air began to get chilly, Sam Miller proposed to the others that they should make a break for the creek bottom, where there was an old log cabin of his, in which they could be much more comfortable. Miller had already received a bullet wound just above the knee, and though he was feeling "pretty sick," he did not "let on" to his companions for fear of adding to their discomfiture. They made a successful rush for the cabin, but found it barred up from the inside, and there they were, a good mark for the Indians, who were not more than fifty or sixty yards behind them, yelling like fiends and keeping the air filled with whistling arrows, and an occasional musket ball for variety. The cabin was a dug-out, built partially into the bank, and as Miller had built it he "knew the ropes." Telling his companions to hold their ground a moment, he ran up the steep hill-side, got on the roof and climbed down the wide stone chimney. In a moment more he had unbarred the heavy door and admitted his two companions. Here they were comparatively safe, though the Indians still kept up the attack. Sam Miller and Dr. Alsap knocked out chunks between the logs and gave the attacking party better than they sent. Finally the "boys" working at Miller's placer camp, three miles up the creek, hearing the shooting and suspecting the cause, came down in a body, and the Apaches, with yells of rage, retreated. Before this happened, how-

ever, Sam Miller had the pleasure of dropping a big ugly buck from off the fine black horse which had been stolen from old man Moore when they were first jumped. The boys had not come any too quickly, for Sam Miller, weakened by the loss of blood, succumbed as soon as the danger was over, and had to be packed up to his camp on an improvised litter. His wound laid him up several weeks.

Though Prescott was the nucleus of civilization in northern Arizona, it is not to be supposed that all of her citizens settled down within the safe limits of the community. Most of them were scattered all through the mountains, in parties of three or four, prospecting for mines, and dodging Apaches between times. Meanwhile new parties of emigrants were constantly arriving to keep up the population. Lynx Creek was one of the first placer camps discovered, and the quantities of coarse gold obtained there created quite a stampede in that direction. The creek received its name through an adventure of Sam Miller with a lynx on its bank, not far from the present site of the White Horse mine. Mr. Miller saw the animal skulking along the creek bottom, and forthwith shot it with his rifle. The lynx fell in its tracks and lay so still that Mr. Miller thought it dead and ran forward to turn it over. He had no sooner touched it than the treacherous beast seized him by the wrist, and it was impossible to shake it off. He finally solved the problem by drawing his revolver, while its teeth were yet fastened in his wrist, and putting three balls through its head.

It was the very next day that he made the important gold discovery. His brother and a third companion went out hunting, leaving Miller to keep camp. To kill time he took a pan and went down the creek to try for gold. In the very first pan he washed out, he got \$4.80 in coarse gold. Of course he lost no time in staking out claims, and the news of the find caused a rush of population to the newly-named Lynx Creek, where hundreds of thousands of dollars were taken from the gravel with gold pan, rocker and sluice boxes. Since then the bed of the stream has been worked over many times—always with a profit. Including its tributary waters, over \$60,000,000 is said to have been extracted from the auriferous gravels of the creeks which find their heads among the mines of that district.

One of the characters familiar to the placer miners working the bed of Lynx Creek was a prospector named White—no less familiar was his old white horse, the two being practically inseparable. White was a typical prospector; he wanted to discover something and would only work the placer sands when it became necessary to replenish his stock of tobacco and bacon. During one of his periodical visits, one night, his horse became untethered, and White in the morning, when he discovered his loss, was pretty well broken up. He was, however, determined to find his quadruped friend, and started alone on the trail over the Bradshaw Mountains. For weeks nothing was seen of White or his white horse, then occasionally he would come into Prescott for stores, and at such times seemed to be well supplied with "dust." On one of these visits White met a gentleman from New York City, to whom he showed some exceedingly rich specimens. In a few hours this New Yorker was in the saddle on his way to inspect White's wonderful mountain of riches.

For a distance of five miles they kept to the chaparral road, then struck into the mountains. After about an hour on the winding mountain trail they entered a ravine which led to an almost level plateau of perhaps 200 acres, one side of which gradually sloped to Lynx Creek, a distance of about two miles. The mountains on three sides rising about six hundred feet above the air so rarified that the different mineral ledges, some white, some red, could be plainly seen running up and down and over the slope of the mountains. A natural spring of water bubbled from the rock, and near by, under an immense juniper tree, White had pitched his tent. Here was a picture, here contentment. "Now," says White, "I will show you my new 'White Horse.' I have named yonder peak White Horse Hill, for there is where I found my old white horse, and there is where the specimens I have come from. That hill is my bank; it contains more gold than any national bank in the Territory, and all I have to do is pick it up." This was found to be almost literally true, for a great part of the surface was a veritable network of veins, showing free gold. An old adobe had been erected, and in this crude manner White was producing gold to such an extent that it fairly staggered his visitor. That night White's visitor was hurrying east to consult with his associates. Since then a corporation has been formed—modern machinery is at work developing the property, and near the old juniper tree is a whole row of substantial houses, occupied by the miners. Everything is changed excepting the name, the corporation taking the title "White Horse." New companies are being formed on adjacent properties, and in time White Horse City may rival its prosperous neighbor Prescott.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

**EVERYBODY** FAMILIAR with the workings of Wall Street knows that all the life the market possesses has been put into it by a daring Western clique of speculators, who have startled the old, conservative leaders by their new methods and the success with which the latter have been applied. It seems to be within the power of this Western combination—which has been enormously enriched by its successful manipulation of industrial properties—to take up almost any railroad, great or small, in the West, East or South, secure control of it in the open market, and then unload it either on some greater property, directly, or upon the public, indirectly. There must be an end, however, to all suc-

cesses, even the greatest. A trick that works well the first time, and possibly the second or third, may fail on the fourth attempt. The resources of the most skillful manipulator, are eventually exhausted. When the Western crowd get all the juice out of the orange on the bull side, what will it do? The only money-making side of the market will then be the bear side. What the Western plungers have done to uplift, they can do to destroy.

We have seen this sort of work in the industrial field in a number of instances. Amalgamated Copper was a notable one. While insiders were employing paid writers in their financial columns to predict that Amalgamated would be another Standard Oil and would surely and speedily sell at 150, then at 200, and then at any old price that might be asked, they were quietly selling every share they held, around 120. They knew perfectly well that the condition of the copper market did not warrant the payment of 8 per cent. dividends, but they paid 2 per cent. quarterly, until the trick was done. The stock was unloaded on the public, and the Amalgamated crowd then proceeded to pick it up, as I have been told they have been doing, at half the price at which they sold. So with American Ice. Lies, bold, audacious lies, were given out from headquarters as to the earnings of the company. They were given out even to those who did not speculate or want to speculate, but who simply sought the honest facts, with which to fairly enlighten the public. While dividends of 6 per cent. on the preferred and 4 per cent. on the common were paid, while statements of handsome earnings were being circulated and predictions made that the shares would sell much higher, insiders were sneaking out their holdings, ready to grab them back at their lowest level.

Was ever the trick of a bunco-steerer more detestable? But how many stocks are now paying increased dividends and promising higher prices, and reporting enormous earnings, as a cover for insiders to sell out? How long will it be before the Western crowd, as I have said, will be working for a decline rather than an advance in prices? They knew when to buy the shares they manipulated so handsomely for a rise, and they will be in prime condition to know when to sell and to take advantage of the opportunity they themselves will make. What chance has an outsider in such a one-sided game as this? Suppose the crowd which expects to make \$50,000,000 on the bull side of the Rock Island reorganization scheme decides to make the same amount on the bear side? The new plan of reorganization gives these speculators the power, if not the authority, to do so. They virtually tie up the stock for ten years in their own control, and have a right to use the surplus funds of the company for the purchase and sale of the company's stock. They dominate, and no one else has anything to say. Even the books need not be opened to the stockholders, unless with the officers' consent. The Western plungers are truly wonderful and mighty smart. And the penitentiary is full of smart men.

The struggle to maintain stocks at a high level is continued with desperation, and will be until the leaders have unloaded their burden upon the public. The crop reports are discounted, prosperous conditions are magnified, great imaginary combinations are fancifully portrayed; yet the public keeps out of the market, and is quite as anxious to unload what little it has left as are the big guns of the Street. One financial writer, who is trying to work up a bull sentiment, wants Wall Street to take note that Congress proposes to provide large expenditures for the irrigation of the arid lands of the West, and that some of the Western railroads will profit greatly by this public work. Others presage great things on the completion of the Panama Canal. Still others tell of the magnificent future of the New York local traction shares, growing out of the completion of tunnels and bridges across the East and North rivers. All these are future events, several years ahead of us. Meanwhile many things may happen to the stock market. Already railroad earnings are diminishing. Crop prospects are not as extravagantly good as they were. Anxiety regarding the future condition of the money market continues to grow. Gold exports are

threatened. Our domestic exports of merchandise and agricultural products are diminishing, and in some branches of the iron and steel trade prices are not as buoyant as they were.

"M." Buffalo: Nothing is known of it on Wall Street.

"W. O. S." Fall River: I do not understand you. Please write more plainly.

"W. L." St. Louis: Two dollars received. You are on my preferred list for six months.

"H." Uxbridge, Mass.: I would hold my Manhattan. (2) From the investment standpoint, Baltimore and Ohio looks high enough.

"H." Pittsburgh: (1) Not rated as such. (2) It is difficult to get large concerns to take up a small deal. If you will explain its nature, confidentially, I will give you my best opinion.

"H." Montana: Railroads which are eligible for consolidations and combinations include Toledo, St. Louis and Western; Kansas City Southern; Wisconsin Central; Chicago and Great Western; Ontario and Western, and the Delaware and Hudson.

"Transit." St. Louis: (1) They are not particularly conservative. (2) This is their claim, but I doubt it. (3) Difficult to advise. One of the strongest men in the direction promises much higher prices, but I am unable to confirm his statements.

"S." Vineland, N. J.: The National Oil and Development Co. is an Arizona corporation with a capital of \$3,000,000. The scheme is being promoted by a gentleman from Colorado, who declines to give very much information regarding the concern until later on. On the face of it, I do not recommend the purchase of the shares.

"Ceil." Baltimore: I have thought that conditions were favorable for the future of Toledo, St. Louis and Western. Have always advised its purchase only for a long pull. When large interests get ready to move a stock, there is little time to get aboard. The shares can be traded in with safety until that time arrives, and then they should be held for a long pull.

"D." Birmingham, Ala.: (1) The only form in which the "Hints to Money-Makers" is published is in *LESLIE'S WEEKLY*, as a part of the paper. It is not printed as a circular letter. (2) Does a large business but has no rating. (3) Yes; but firms which are to be recommended include Spencer Trask & Co., 27 Pine Street, New York; Rhoades & Richmond, 20 Broad Street, who deal largely in corporate and railroad bonds, and Harrison & Wyckoff, 21 Broadway, who deal in small lots and shares. These are all members of the New York Stock Exchange.

"Constant Reader," Harman, Colo.: If the bull leaders and manipulators do not get scared off by a crisis in the money market, or by the fear of disturbing tariff discussions at the December session of Congress, and if the safety of the corn crop is assured, no doubt an effort will be made to lift up all of the cheap railroad shares and perhaps some of the cheap industrial shares. But you are gambling, with the chances against you. For a long pull, Ontario and Western, on reactions, ought to be among the best of the cheap stocks. Some day a movement in Wisconsin Central is also due. The same has long been predicted of M. K. & T.

"H." Detroit: The Black Hills Copper Company, of South Dakota, has a capital of \$2,000,000 and the par value of the shares is \$1 each; 750,000 shares are in the treasury. It has twenty-seven lode claims near the border line of Wyoming. Its officers include several prominent business men and bankers of Michigan, and they tell me they do not claim that the proposition is an absolutely sure one as yet, but they do claim that it is perfectly legitimate and honest. The company's report shows that much development work is being done and that an ore body of considerable value is being worked. Just how much value there is in such a property can only be determined after exploration work has been extensively continued.

"Tarheel," Charlotte, N. C.: (1) Suddenly announced combinations, deals, or new developments, may change the relative prominence and value of both industrial and railroad shares at any time. As conditions now are, I think as well of Toledo, St. Louis and Western common, and of Kansas City Southern common for speculative purposes. But as of almost any of the stocks you mention. (2) I am not advising the purchase of stocks. (3) I know little about grain speculation, but a few weeks ago one of the heaviest, cleverest, and most successful speculators in corn, presented a long array of facts and figures to show that September corn must sell much higher. I will not undertake to contradict him.

"Butte," Mont.: Two dollars received. You are on my preferred list for six months. (1) The principal crop, the corn crop, is certainly not yet out of danger and will not be for over a month. You will observe that the great consolidations have not advanced shares very much after the consolidations have been announced. Insiders have usually unloaded before the announcement was made public. (2) With good crops and a promising business outlook this fall, no doubt other consolidations may be expected, unless money market conditions forbid. (3) The copper situation is not regarded with favor and will not be better until Amalgamated interests dominate the situation more completely. The demand for copper abroad is not as great as it was, and the tendency is to over-production and over-supply. (4) Biased. (5) Generally fair.

"A. B. C." Cincinnati: Two dollars received. You are on my preferred list for six months. "Safe things" are not always as safe as they might be. The man who calls himself a banker and broker and guarantees you 12-1/2 per cent. on your investment does not appear to have any rating in the financial world. Who guarantees him? (2) It is an industrial and always is in danger of competition. (3) There are fair prospects for the Toledo railway shares. (4) Speculatively, I believe in the more active railroad stocks which are listed on the exchanges. (5) The situation changes from day to day. The best way is to keep track of this column.

"T. C. and I." Syracuse: (1) I am not a believer in the sustaining power of this market for a year to come. If I am wrong, then Ontario and Western probably is a good thing to buy and hold, perhaps as good as anything at its price. (2) The future of all the steel properties is problematical. An effort will be made, no doubt, at the approaching session of Congress to reduce iron and steel duties, and the effect will be depressing on steel and iron stocks. As a rule, I believe it wise to take a profit when you can get it. On such a market, with its ups and downs, you can generally buy back what you have sold, if you are patient. (3) Rubber has had a severe decline, and it might be wiser to hold it for a while and see how the industrial situation stands.

"J." Akron, O.: (1) The president of the Seaboard Air Line Railroad declares that it will continue as an absolutely independent line, but this does not preclude its accepting an offer to join any combination that might enhance its interests. The possibilities of such combinations always add largely to the speculative value of these properties. (2) The statement that the United States

Steel trust's charter has been so framed as to deprive a majority of the stockholders of the power to change the direction and control is a revelation to those who are not familiar with the carefully prepared plan of control which the organizers provided. The apology of the Gates crowd for fixing the new reorganization plan of Rock Island so as to give them a ten years' lease of power, is that it is no longer easy to secure control by the possession of proxies. I am glad to see that shareholders in corporations are beginning to realize that when they give up their proxies to insiders they are surrendering their highest right and best privilege to those who do not always concern themselves about the stockholders' interests.

## Flood-swept Texas.

FOR THE third time in four years the rich Brazos bottom lands in Texas, from Waco to the Gulf of Mexico, were swept recently by a disastrous flood. Four years ago—in the latter days of June, 1899—came the most appalling disaster in the way of floods and overflows that ever visited Texas within known annals. That year the loss on fixed property and growing crops, along the Brazos River alone, was estimated at fourteen million dollars. Forty lives were lost by drowning, and a large population of farm laborers was left destitute, many without homes. In 1900 came the second overflow, which did immense damage, but this year's flood was the second greatest of the three.

Away up at the foot of the plains, a thousand miles from Bryan, Brazos County, measured by the tortuous course of the stream, where the waters of the Brazos begin to gather, the rains fell in torrents and flood conditions existed there before they were thought of far down the river. The flood tide swept down the valley, inundating the rich plantations from two to six miles out from its banks.

The railroads that traverse the bottoms were tied up in many places, with their road-beds inundated and greatly damaged; many costly bridges fell in ruins after the waters receded, and over a stretch of country for two hundred miles the damage to crops of cotton, cane, rice, and corn was enormous.

This latest rise in the Brazos differed from that of 1899 in the fact that ample notice of it was had by all the farmers and plantation managers, and they were prepared for it. But few cases of loss of human life were reported, and the live stock were driven to the high lands and saved. To levee the Brazos is now the hope of the planters who have fortunes invested in the rich lands and in live stock, implements, and permanent improvements pertaining thereto.

INUNDATED COTTON PLANTATION ONE AND ONE-HALF MILES FROM THE BRAZOS RIVER.—Carter.

## Hints to Money-makers.

Continued from preceding page.

"B." Newport, R. I.: They have no rating.  
 "C." Saratoga: The change has been made.  
 "R." Wilmington, N. C.: Two dollars received. You are on my preferred list for six months.  
 "S." North Dakota: The mining proposition looks to me simply like a speculation, with the chances against it.  
 "S." Worcester, Mass.: It is very heavily capitalized and is not quoted on any of the exchanges. I have not much interest in pure speculations.  
 "W. G." Condensport: (1) Does a large business, but has no rating. (2) Has had several suits brought against it. That ought to be enough.  
 "M." New York: I have no doubt of the safety of an investment in the four per cent. bonds of the Third Avenue Railroad guaranteed by the Metro-

politan Traction Company, but they are not gilded.

"T." Cornwall-on-Hudson, New York: The company has mines which are being worked, but the shares, considering the capitalization, are pretty high. If they were cheap, as you say, the wealthy men in the concern would buy them themselves.

"K." Utica, N. Y.: The first company to which you refer is enormously over-capitalized and I am unable to verify many of its statements. A responsible business man has been placed at the head of it, but this has little significance. The second concern is in the hands of clever manipulators who are not too scrupulous in booming their property. The so-called financial paper which they print, merely for the sake of helping their mine, is unworthy of notice.

"G." Buffalo: Monroe, Rogers and Haynes have agencies in various cities with headquarters at 20 Broad Street, New York, and deal in well-known securities, mostly mines. They seem to be doing a large business and are well rated. They are largely interested in the White Horse Mine, near Prescott, Arizona, upon which development work is being pushed rapidly, according to Prescott papers. No doubt if you write the home office, full particulars will be given you.

"S." Chicago: You are right. The par value of the shares of the American Pneumatic stock is \$50. The earnings do not show much of a margin for the common shares, but promised extensions of the pneumatic service give speculative value to the stock. Clever men are identified with the property and they are clever enough to unload whenever they think the time is ripe. (2) Both are highly speculative. (3) No charge is made for special answers to those who are subscribers to LESLIE'S WEEKLY at the home office at full rates.

EDWARD M. GROUT, Comptroller.  
 City of New York, July 24, 1902.

## Mayor Low Doing Well.

IT MIGHT go without saying that Mayor Low would be a target for incessant abuse, fault-finding and misrepresentation, from the beginning to the end of his administration, by the Tammanyites and other enemies of good government and public decency, but he had a right to expect more just and considerate treatment from the professed friends and advocates of reform and civic righteousness, some of whom are now complaining loudly that Mr. Low has been false to his pledges and derelict in his duties. He is charged by the local Women's Christian Temperance Union with a desire to amend the excise law in such a way that he and his "friends and supporters might revel at their club or de-

bauch themselves at will in the wide-open saloon on Sunday," and by an eminent clerical reformer with being less "impressive" than a "healthy devil." Such attacks as these are wholly unjustifiable and betray a surprising lack of patience, moderation, and courtesy on the part of those who make them. These persons seem to have no realization of the heavy burdens Mayor Low is carrying nor the many difficult and perplexing problems he has had to face at the very outset of his administration, com-

ing, as it has, after three years of extravagance and misrule under Tammany. Mayor Low has done nothing whatever to forfeit his right to the confidence, sympathy, and support of those who elected him, and we have no doubt that, in the end, he will meet every just and reasonable expectation. He has a tremendous task on his hands to properly govern a city of four million people, and he needs and deserves the hearty co-operation of all right-thinking men and women.

## Hints to Money-makers.

Continued from preceding pages.

"G. R. V." Birmingham, Ala.: Four dollars received. You are on my preferred list for one year.

"M." Ottumwa, Ia.: I would not be in a hurry, but a handsome profit is always a good thing to take.

"K." Utica, N. Y.: Both are speculative propositions. I will endeavor to secure a special report.

"Apollo," Penn.: The record of the so-called banker is such that I do not recommend anything that he favors.

"S." Vineland, N. J.: One dollar received. You are on my preferred list for three months. I will make inquiries.

"A. C." Brooklyn: Your inquiries should be addressed to "Jaeger." (1) Nothing is known about it on Wall Street and no quotations are available.

"M." St. Louis: (1) No. (2) A company was organized in Philadelphia some time ago, to utilize corn stalks for various commercial products, but its stock has about gone out of sight.

"S. S." New York: I think if I had a large amount of money to invest, I would prefer to put it on interest with some safe trust company, which would probably allow you three per cent., and wait until the inevitable reaction in the market occurs. It certainly is very nearly due.

"S." West Albany: (1) I do not advise the purchase of Mr. Powderly's Black Diamond Coal Company's shares on the information regarding the property thus far disclosed. (2) Opinions are divided as to the future of the market. If the corn crop should fail to meet present expectations, prices would no doubt decline. With a good corn crop, provided stringency in the money market does not occur, the prices of investment securities will probably be maintained.

"S." Jamaica, L. I.: American Car and Foundry shares have been very skillfully and quietly advanced on continued reports of increasing earnings. It is now rumored that the common shares are to receive 3 per cent. per annum instead of 2.

We had the same sort of quiet manipulation in American Ice, however, and I am not advising, therefore, the purchase of any industrial common shares that represent little more than water.

"S." Bethlehem, Penn.: Four dollars received. You are on my preferred list for one year. (1) I have repeatedly said that the position of the Toledo, St. Louis and Western is such that its absorption by the Vanderbilt interests is extremely probable. The price at which it should be bought depends entirely on the general market conditions.

(2) If the market should have a break, all stocks no doubt would suffer. (3) The report has been repeated several times. I have been unable to confirm it, but it has an air of probability. It probably would signify increased interest in it and better prices. (4) It all depends upon whether the insiders are ready to unload.

Continued on opposite page.

## Life-Insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *Leslie's Weekly*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *Leslie's Weekly*, 110 Fifth Avenue, New York.]

I AM often asked if it is more advisable to take out a life policy than to put one's money in a savings-bank at 3 or 3½ per cent. interest. It all depends upon a man's ability to save. Some men spend all that they can earn, no matter what their income may be. For these the savings-bank has no attractions. Life insurance offers to such persons an incentive to save. The fact that the premiums must be met creates a necessity for saving. If one has dependents, he provides for them; and if he has an endowment policy, he provides also for himself. Some forms of policy return, in addition to the protection of insurance, about as much as the savings-banks pay on a deposit. Recently a gentleman in Milwaukee, acknowledging the receipt of a life insurance company's draft, in settlement of his policy, said: "I wish to state that my total deposits amounted to \$2,128. The settlement was for \$3,670.75, besides having had \$5,000 protection for twenty years." Figures of this kind are not uncommon. They are a matter of record in all the great, strong life insurance companies.

"D." Wiscay, N. Y.: You are not a subscriber on the books at the home office and are therefore not on my preferred list.

"B." Glenwood, Minn.: The company you mention does quite as well as the other old-line concerns, but it is neither as large nor as strong as the best.

"S." Cordoba, Ga.: If you mean the National Life of Vermont, it stands very well. Some of its investments have been criticized, but the company is an old one and makes a good report.

"Y." Woodstock, Ill.: I would have no hesitation in dropping an insurance membership with any fraternal association and taking a policy in the strongest old-line company I could find. In the end, all the satisfaction and security would be with the latter.

"B." Anna, Mo.: The Northwestern Life and Savings Company, of Des Moines, was organized in 1896, and has therefore not had much of a chance to grow. It is an old-line company, making a good report, but my preference would be one of the older and stronger companies.

"Inquirer." Red Bank, N. J.: Everything depends upon your circumstances. If they are moderate, a straight life would be cheaper and ought to be entirely satisfactory. If you are looking for an investment as well as insurance, the endowment feature would suit you.

"D." Evansville, Ind.: Among the largest life insurance companies are the Equitable, the New York Life, the Mutual Life of New York; the Prudential of New Jersey; the Traders, the Connecticut Mutual, the Aetna of Connecticut; the Northwestern Mutual of Wisconsin, and the New England Mutual of Massachusetts. There are other companies of equal standing, however, but these are among those showing the largest amount of business for the past year. (2) An endowment policy would suit you if your circumstances justify it. Twenty years would be a good limit at your time of life. (3) The New England Mutual makes a very good report.

*The Hermit.*

"Oh, What Rest and Comfort!" **MOTHER GRAY'S SWEET POWDER**, the best medicine for Feverish, Sickly Children. Sold by Druggists everywhere. Trial Package **FREE**. Address, **ALLEN S. OLINSTEAD, Le Roy, N. Y.**  
[Mention this paper.]

## Hints to Money-makers.

Continued from preceding page.

"Banker," Minneapolis: The Rock Island reorganization plan jumps its \$75,000,000 of stock into a possible liability of \$225,000,000, makes a fixed instead of a contingent charge of \$5,000,000, and virtually fixes control of the property for ten years in the hands of minority holders. Conservative financiers regard it as a very venturesome proposition.

"Caution," Louisville, Ky.: (1) You are right in your judgment that banks all over the country have increased their loans to abnormal figures. The loans of the New York banks have reached a total of nearly a billion dollars. The moment these institutions begin to discriminate against collateral not of the highest class, the latter will be forced upon the market at a sacrifice, and the break in these will probably lead to a general decline. (2) The passage of the dividend on Reading first preferred would indicate, if this step should be taken, that the voting trust is afraid to have itself dissolved. Is it possible that outside interests have been buying Reading in the open market to secure control? This would lead to an interesting situation.

"Investor," Cohoes, N. Y.: Reports about the reorganization of United States Leather are again heard. It is said that its timber lands can be sold at a handsome profit and that the preferred stock may be retired, to the advantage of the common. From the investment standpoint the preferred would be the better purchase. Speculatively, many regard the common as cheap. (2) All the express stocks are strong. I would not sell my United States Express stock. (3) The decline in the Calumet and Hecla to the lowest price in three years emphasizes the demoralization of the copper trade. When the copper shares get to a proper level I look for a combination under the lead of the Amalgamated. They are good stocks, therefore, to watch. (4) Keep your Standard Oil.

"L," Philadelphia: The steel trust is not to have things all its own way. The proposed combination of British and Canadian interests, in the organization of an opposition trust across the border, where there are rich deposits of iron ore and coal, is significant. But more significant is the fact that the new Lackawanna Iron and Steel Company, at Buffalo, with \$40,000,000 capital and no water in the stock, has declined to combine with the steel trust and will shortly begin the operation of its plant, the finest in the world, and the most modern, with 8,000 employes, abundant capital, and large orders already booked. The so-called monopoly of the steel trust is a myth. Even its grip on the foreign market is being loosened. Foreign competitors are adopting our improved methods of manufacture and with their cheaper labor are sending us iron and steel manufactures practically of every class. Our exports of iron and steel in the fiscal year just closed are \$24,000,000 below 1900, while our imports have increased by \$14,000,000 above those of 1899, our total imports of iron and steel for 1902 being the largest during the past nine years. In the face of these facts what nonsense it is for us to talk about "capturing the iron markets of the world!"

New York, August 14, 1902. JASPER.

Our sales are enormous and continually on the increase: *Cook's Imperial Extra Dry Champagne*. It is the best on the market.

**Advice to Mothers:** Mrs. Winslow's *Soothing Syrup* should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

**Souther & Co.** find it almost impossible to keep pace with the insupportable torrent of orders. The fame of the *Souther Piano* is now world-wide, and the demand for the instrument is almost universal.

## SEPTEMBER IN THE ADIRONDACKS

No finer place in September can be found than the Adirondacks. The air is cool and bracing, the fishing fine, the scenery beautiful, and they can be reached in a night from Boston, New York or Niagara Falls. All parts of the Adirondacks are reached by the

## NEW YORK CENTRAL LINES

## Stanlaws Menu and Dinner Cards

BEAUTIFULLY PRINTED UPON HEAVY BOARD WITH BEVELED EDGES

No prettier novelty has been published than these Stanlaws cards. The subjects are all reproductions of copyrighted drawings by Stanlaws.

The cards come in three sizes, viz.:

Size 5½ x 8½, ten subjects to a set, 25 cents apiece or \$2.50 for a complete set, suitable for a dinner service for ten persons.

Size 4½ x 7, twelve subjects to a set, 20 cents apiece or \$2.00 for a complete set.

Size 2½ x 4½, ten subjects to a set, 10 cents apiece or \$1.00 for a complete set. This last-mentioned size can be used either for a dinner card or for a presentation card to accompany a gift.

Any of the cards in the two larger sizes can be most appropriately used for Easter cards; and if hand-painted in water colors make beautiful gifts. We can furnish them colored by hand in aquarelle (if desired) at 50 cents apiece; or they can be hand-painted by the purchaser. The study of the art of water coloring has been extensively taken up by the fashionable world; and these cards furnish delightful subjects for practicing the art.

## THE STANLAWS TALLY CARDS For Progressive Euchre and Whist

The Tally Cards come in either oblong or diamond shape and are printed in colors, each card bearing one of Stanlaws' unique designs. The Tally Cards are sold at 40 cents per dozen.

Copyrighted, 1902, by Judge Company

## The flagg Menu and Dinner Cards

Printed like the Stanlaws cards, upon heavy board, with beveled edges, and making most beautiful souvenirs for private dinners.

The Flagg cards come in three sizes, viz.:

Size 5½ x 8½, ten subjects to a set, 25 cents apiece or \$2.50 for a complete set, suitable for a dinner service for ten persons.

Size 4½ x 7, twelve subjects to a set, 20 cents apiece or \$2.00 for a complete set.

Size 2½ x 4½, ten subjects to a set, 10 cents apiece or \$1.00 for a complete set. This last-mentioned size can be used either for a dinner card or for a presentation card to accompany a gift.

## BOTH THE Flagg and the Stanlaws Cards

## Fair Play for the South.

THE MOBILE *Register*, Nashville *American*, Memphis *Commercial-Appeal*, and other prominent newspapers of their section, are beginning to protest against the continuance of the barrier which has shut out the South from the prizes of the national conventions of the party which is dominant in that part of the country. For forty years the Democratic party has gone elsewhere than to the South for its candidates for President and Vice-President. In all this time the vast majority of the South's votes, when they were cast, went to that party, and in much of the time four-fifths or nine-tenths of its votes went there. In some of the elections all of its vote did this. Yet virtually the South has had no voice, in all this time, in the selection of that party's presidential or vice-presidential candidates.

All this was strikingly different in the earlier days of the government. From 1789, when Washington was elected, to 1837, when Jackson finished his second term, the South furnished the President, except for eight years, during the service of the two Adamses. It furnished two Presidents by election (Polk, Democrat, and Taylor, Whig) and one (Tyler, who was chosen Vice-President) through the death of the executive between that time and 1861. In every convention, from the beginning onward to and including 1860, the South was a big factor in the choice of the candidates. In 1844 its opposition to ex-President Van Buren, who was opposed to the annexation of Texas, the dominant issue in that year, defeated that aspirant, although he had a majority, but not two-thirds, of the votes of the convention, and had ex-President Jackson among his advocates.

The South in 1860 put up a candidate of its own (John C. Breckinridge, then Vice-President) rather than accept a Democrat who had offended it (Douglas). On most of the great issues onward to 1860 the South dictated the policy of the country. During the administrations of Van Buren, Pierce and Buchanan, Presidents who were furnished by the North, the South's influence was supreme in the executive branch of the government, as it was during most of the time in the legislative branch. But for more than a third of a century the South's power in national conventions has been nil. It was natural, of course, that for a few years after the war of secession, during the troubles of the reconstruction epoch, the Southern States should be kept in the background. But the exclusion of the South from the prizes of the national conventions of its party through all the years which have passed since then is beginning to arouse much resentment among some of its leading newspapers and statesmen.

Two men (Blair, of Missouri, in 1868, and B. Gratz Brown, of the same State, in 1872, who was the liberal Republican candidate, but who was accepted by the Democracy) from an ex-slave State have been supported by the Democrats for Vice-President in the past forty years, but Missourians consider that their State belongs to the West instead of to the South. The Democrats, for President, had a New Yorker in 1868, 1872, 1876, 1884, 1888 and 1892, a Pennsylvanian in 1880, and a Nebraskan in 1896 and 1900. In all those years the South's wishes regarding the candidate have never been asked, nobody from its section has been thought of in connection with the nomination, but it has been expected to give the bulk of its votes to the candidate, and has done it. The Republican party, which has received comparatively few favors from the South, also slams it when selecting its presidential tickets.

Burke said he knew of no way in which to indict a whole people. In the case of the South, however, the two great parties of the United States have been doing this for more than a generation. At last a revolt is being sounded in that section against the maintenance of this vassalage. The surprise is that this inequality has been endured so long. Let the South divide its vote with a nearer approach to equality between the parties, and both of them, in and out of the national conventions, will become ardent bidders for its favors, and it will get its share of the prizes, which heretofore have been monopolized by the North and the West.

## A Letter for the Pigeonhole.

WE PRESUME that President Roosevelt, like some other men much in the public eye, has a pigeon-hole somewhere in which he files away the letters he

receives from cranks, visionaries, and other odd and impracticable people, to be brought out again some time in the future, perhaps, for the amusement of his friends. If he has no such depository, he should start the collection at once with the letter of the little "Anti-Imperialist" clique, addressed to him from Lake George, demanding another investigation of the conduct of our army in the Philippines. Barring the grammar and the spelling, which in this document are faultless, we doubt whether he will receive many epistles in the days to come more cranky and absurd than this, or less worthy of a courteous and dignified answer. As a contribution to the literature of boredom, the letter may be a shining success, but it has no other distinction. As an attempt to revive a dead issue, to rejuvenate a corpse, to rekindle the fires of an old controversy, which had little excuse for being in the first place, it will be an utter failure, as it deserves to be.

If there was the slightest reason to suppose that the investigation ordered by President Roosevelt and Secretary Root and already prosecuted had been a perfunctory and superficial one, that any really important facts had been withheld from the public, that any grave injustice had been done or was being done to any one in the Philippines or elsewhere, the case would be different. No evidence has appeared that any of these conditions exist, and Messrs. Adams, Schurz, Welsh, and Storey produce none. The American people generally, we are certain, are satisfied to let the case rest where it is, and rest it must and will, despite the belated and lingering foot from the camp of discontent at Lake George.

The war in the Philippines is over; military rule has given place to a civil government, and our forces in the islands are being reduced as fast and as far as considerations of prudence will permit. The record of our army, thus closed, has been on the whole highly creditable and entirely worthy of the American character and name. It has done nothing to be ashamed of, but, on the contrary, considering the peculiar and trying circumstances in which it has often been placed, it has conducted its operations with remarkable fortitude, patience, and forbearance.

We have had as high as 72,000 troops in the Philippine Islands at one time, and an average for three years of not less than 40,000. With this number of men under the conditions prevailing, a strange and trying climate, a treacherous and savage enemy, it is not surprising that some deeds should be committed by our soldiers contrary to the rules of war, some that were odious and criminal. It would occasion no surprise, at least, to any one except an anti-imperialist or some other chronic and predestinated fault-finder. That such misdeeds have been sufficiently numerous to affect the status of the whole army, or any considerable part of it, few of the American people have ever believed. Our troops, in other words, by transference to a strange climate and distant land, were not converted into beasts or monsters of cruelty, but conducted themselves very much as any other 40,000 American citizens would do under similar circumstances, being, on the whole, an intelligent, humane, honorable class of men who did their duty, as they saw it, nothing more or less. Their conduct has been investigated all, and even more than, it ever needed to be. The case as to alleged acts of cruelty is closed, and it will take a more powerful letter, backed by more powerful names than those signed to the Lake George letter, to open it again.

## The Fault with the Churches.

WE CANNOT believe that any thoughtful and observant person will charge Dr. George C. Lorimer, the eminent New York preacher, with being a vain alarmist when he declares, as he did in a recent sermon, that religion in America to-day is of "very low vitality" and that the attendance at church services is "shamefully small." Neither will these same persons be inclined to regard Dr. Lorimer's prediction as a vain one, when he says that "at the present rate at which we are living, in fifty years we will have no Sabbath." These tendencies are promoted, Dr. Lorimer thinks, by the large and constant influx of undesirable immigrants from the south of Europe, and also by the ever-growing desire for cosmopolitanism, by which is meant the desire to live according to the fashions and customs of other lands.

Whatever may be the causes of this state of affairs, Dr. Lorimer is undoubtedly right in pointing to these things as evidences of an approaching crisis in American religious life, a situation which the churches and all other religious forces in the nation must meet with renewed energy, earnestness, and determination, if they are to arrest the downward movement toward pure secularism, and beyond that to open infidelity. The present situation before the churches is not one calling for discouragement, alarm, nor despair, but it does call loudly for renewed efforts on the part of religious bodies to adjust themselves and their methods to the needs and demands of the hour, to cast off the mediæval spirit in forms and doctrines and abstain at once and forever from petty squabbles and noisy disputation over minor and non-essential things, over points of sectarian doctrine and Biblical interpretation which have no visible relation to daily life and conduct, and only weary and disgust intelligent laymen.

The American people, as a whole, are a believing and a religious people. They are not heartless, sordid, mercenary, and given to selfish and sensual indulgences. The vast sums of money they give annually to churches, charities, missions, and all manner of institutions for the uplifting and betterment of humanity prove incontrovertibly that they have a high and abiding regard for the loftiest and noblest elements and ends of human life and are quickly and generously responsive to all right and rational demands and requirements made in the name of religion and for the real good of their fellow-men.

If religious vitality is at a low ebb, as Dr. Lorimer says, attendance at the churches painfully small and the tendency to disregard the Sabbath on the increase, the churches and their chief leaders have themselves to blame for it. They have ample equipment, sufficient machinery, and every necessary resource, so far as men and means are concerned, to alter the situation if they will set themselves about it with the right spirit and the requisite energy, with their dominating and controlling motive the salvation of men rather than sectarian aggrandizement or the promotion of pet 'isms. What the people want and what they hunger for more than ever before is true spiritual food and not the dry husks of religious controversy; they want light upon the path of their every-day lives, comfort and consolation such as religion alone is designed to give for the sorrows, trials, sufferings, and bereavements common to humanity.

The people crave such help now, amid the worries and distractions of a restless and rushing age, more than they ever did before—the simple, inspiring, uplifting truth, freed so far as possible from the verbiage of a dead scholasticism and freed from the terrorisms and absurdities attached to it by overzealous sectarians of a dead and buried past. Given this kind of preaching, this direct, hearty, and sincere administration of religion in the churches, and we shall hear far less of empty pews and a decadent faith.

## The Plain Truth.

WHATEVER MAY be the real motive of the labor unions in demanding the forfeiture of the franchises of all the surface railroads in New York that are allowing an express business to be done on their lines, the outcome will be a benefit to the public if it tends to make an end of the abuse of public utilities. The street-cars are operated under a franchise for passenger service only, and it would seem to be clearly an illegal thing for them to conduct an express business also. The same might be said of the use of street-cars for advertising purposes. Let the labor unions attack this business also, and they will be conferring an additional benefit upon the community.

A REDUCTION of over four points in the tax rate as the result of Mayor Low's administration of New York finances thus far is a showing for reform government which will not fail to gratify tax-payers, however unimportant the rank and file of Tammany may affect to regard it. And to those who think deeper than a mere tax rate goes it will be still more gratifying when it is realized that this saving has not been effected by any cheese-paring economies or robbing-Peter-to-pay-Paul methods such as Tammany administrators have been wont to resort to for pre-election purposes, but that it has been effected by an administration that is giving the city better schools, better streets, better management of its fire department, docks, and parks, and more substantial improvements of other kinds than the metropolis has ever known before.

IT SEEMS quite evident that Richard Croker proposes to remain in England for an indefinite period, thus avoiding any possible annoyance that might come from a legal inquisition into the sources of his suddenly acquired wealth. As long as the community is relieved of his presence this is a better disposition of Croker's case than it would be to allow him to retain his possessions and retire him on a life pension besides, as is being done with a number of police captains who have been his faithful servitors in corruption in the past. Surely a system of police laws and regulations which makes it practically impossible to dismiss or to punish an unfit and unfaithful public servant, but at the same time makes it compulsory to retire him upon a pension at the end of a certain period, is in radical need of amendment, such as Mayor Low now proposes. It is bad enough to have an employé abuse your confidence and steal your money and then go scot free, but to be compelled by law to support him in idleness afterward bears a striking resemblance to the process known as "rubbing it in," and rubbing it in hard.

WHILE NEW YORK may rightfully boast that in the Bronx Zoological Park it has the most extensive and, perhaps, the finest institution of the kind in the world, so far as its natural features and possibilities of further development are concerned, that certainly needs some radical improvements in its local and official management before it can reach an ideal standard. It has been charged recently in public prints that the death rate among the animals confined at the park is abnormally large notwithstanding the fact that the location is particularly healthful and that most of the animals have a large range. Expert animal men are quoted as declaring that this high mortality is due to the fact that the park director and his assistants do not possess the best knowledge of the care and treatment of animals and birds. There are some lesser details of management in which it would appear that the present director might improve both his manners and his methods. We can see no good reason, for example, why camera operators should be driven from the park and the picaresque business of taking and selling pictures be retained by the management as a source of revenue. People using the camera are not so numerous, even now, nor their operations so obtrusive as to constitute a serious annoyance to the public or to any one else, while the privilege is one which many intelligent persons value and enjoy, and to whom the opportunity of buying photographs made by others is no compensation whatever. It looks as if some of the officers at the "zoo" were in it "for all it is worth" to them.

## PEOPLE TALKED ABOUT

IT IS NOT often that politics makes such strange bed-fellows as on the occasion of the dinner of the New

EX-GOVERNOR GEORGE S. BOUTWELL.

Who, it is reported, will join the Democratic party.

England Democratic League at Nantasket, Mass., July 24th, among the invited guests being the venerable George S. Boutwell, one of the organizers of the Republican party in 1854, and who served as Secretary of the Treasury, Governor of Massachusetts, and as a Republican in Congress and a Senator from the Jay State under the same party banner. At this dinner there were present such professedly stalwart Democrats as Edward M. Shepard, of New York; Senator Edward W. Carmack, of Tennessee; Senator Joseph W. Bailey, of Texas, and the Hon. Patrick A. Collins, Mayor of Boston, who presided. That Mr. Boutwell should be found in the camp of the political enemy which he once fought so long and well is not surprising when it is remembered that the ex-Governor went over some time ago to the anti-imperialists with all his heart and soul, and has been president of the American League, made up of people who think the same way, since 1900. In an interview in regard to his probable attendance at the Nantasket dinner, Mr. Boutwell went so far as to say: "So far as the Democrats are anti-imperialists, I am with them heart and soul. I shall not vote for a Republican candidate for President who is an imperialist." If this does not distinctly commit Mr. Boutwell to the Democratic cause it comes dangerously near it.

THE BEAUTIFUL home of Senator Hanna at Cleveland was the scene, on the evening of June 16th,

MISS MABEL HANNA, The Senator's daughter, who was recently married.

of one of the happiest events that can come to any home, a wedding, the contracting parties being the eldest daughter of the Senator, Miss Mabel Hanna, and Mr. Harry A. Parsons. Mr. Parsons has been the Senator's assistant secretary for a number of years, and it was while acting in that capacity that he and Miss Hanna formed that acquaintance which ripened into love and marriage. The ceremony was performed by Bishop Leonard in the presence of a large number of intimate friends of the family. A pretty touch

of romance is added to the affair by the statement that while the young couple had hesitated about marrying for a time on account of a prospectively small income, Mr. Parsons being dependent entirely on his salary, their fears on this score had been allayed by the assurance of Senator Hanna that he would "look after them" in a financial way. How well that promise was kept may be judged by the fact that among the gifts received by the happy pair on their wedding day was a check for the handsome sum of \$50,000, an amount sufficient, it may be believed, to keep the wolf from the door of the young people for some years at least. Mr. and Mrs. Parsons will make their home in Cleveland.

IN SPITE of the humane and benevolent tendencies of the present Czar of Russia, as instanced in his famous

STEPAN V. BALMASHOV, The Russian student who shot Minister Sipiaguine.

peace rescript and more recently in the abrogation of certain features of the Russian penal system, it has been made clear enough within the past year that underneath the surface of Russian society, high and low, still lie embers of discord, sedition, and rebellion that only wait the right occasion to break forth into a flame of civil war. As it is, this sullen sense of wrong and injustice manifests itself in such outbreaks as those witnessed during the past few months among university students in various parts of the empire, culminating on April 15th in the assassination of M. Sipiaguine, the Russian Minister of the Interior. The student selected to do this, young Balmashov, was incited thereto not only by the wrongs of the students, but by the ceaseless persecutions visited upon his father, who was finally banished without trial, by this same Sipiaguine. The deed was done in the Marinsky Palace, to which Balmashov, wearing an officer's uniform, had gained entrance. Accosting M. Sipiaguine as the

latter entered the building, the student handed him a document ostensibly from the Grand Duke Serge. As the minister took the document Balmashov fired four revolver shots at him. Two bullets took effect and M. Sipiaguine died within an hour. In vain Balmashov was tortured with a view to extracting from him the names of his accomplices and the details concerning the students' conspiracy. To every question he replied, "Why ask me, when all Russia knows why I shot him?" He was tried secretly and condemned to be hanged. There are conflicting reports concerning his actual fate. One news agency says that he was executed on Friday, May 16th, while another reports that he has been pardoned by the Czar and banished to the convict settlement of Sakhalin in the far East.

THE PROCESS of expansion which this country has lately undergone has been effective, to a gratifying degree, in bringing out the latent ability of Americans to cope with any situation or emergency, however difficult. Many new and enduring reputations have been made since the outbreak of the Spanish-American war. One of the most widely-known men who owe their prominence to that conflict and the events arising out of it, is the Hon. William H. Taft, Civil Governor of the Philippine Islands, who has recently been negotiating with the Vatican at Rome for the recall from the archipelago of the friars whom the Filipinos hate so intensely. Governor Taft did not definitely succeed in his mission to the Eternal City, but his conduct there added to, rather than lessened, his repute. The Governor sailed on July 24th from Naples for Manila, where a general welcome awaits him. He has won the confidence of the Filipinos, and so with his great ability and his mastery of the conditions, he may be trusted to handle the Philippine problem, in all its aspects, with complete success. It is well that Gov-

HON. WILLIAM H. TAFT, Leaving Naples for Manila after his interview with the Pope.

ernor Taft is an ideal administrator, for on the use he makes of his official position in this formative period depends to a great extent the prosperity and happiness of the people and the value of the islands to the United States.

JOHN G. MILBURN, JR., has made an athletic reputation on both sides of the Atlantic. When he was in the Hill School, Pottstown, Penn., he formed, with Bowman, the most formidable reversible battery in any American preparatory school. They were a pair of football half-backs which university elevens yearned for. Milburn cleared the bar at 6 feet 14 inches in the high jump and made a mark of 21 feet in the broad jump while at the Hill School. He ran the 100 yards dash in 10 2-5 seconds. Two years ago he went to Oxford University. Last spring he rowed on the Oxford University crew in the annual four-mile race against the Cambridge eight on the English Thames. He was invited to row on the Leander crew, which held the Henley championship for years, but returned to his home July 1st. He is spending his summer dividing his time between Saratoga and East River, Conn. He pitches for a baseball nine of college players in New Haven known as the Eclectics, and in Saratoga he is a member of one of the polo teams playing for the championship. He will return to Oxford next fall, row two seasons more on the university eight, and then go to the Yale law school. He is expected to make his mark as a Yale pitcher and track athlete. He is a son of the Hon. John G. Milburn, of Buffalo, who was director-general of the Pan-American Exposition last year. His father has been prominently mentioned as a candidate for the Democratic nomination for Governor of New York this fall. Young Milburn was on his way home to Buffalo from East River last September to meet President McKinley, at the time when the latter was shot. After the assassination President McKinley was removed to the Milburn residence, where he died. One of young Milburn's close friends is Horace Chittenden, the Yale varsity first baseman, who is a fellow-member of the Eclectics with Milburn this summer.

HENRY W. BLODGETT, ex-judge of the United States District Court, has just celebrated his eighty-first birthday in Chicago. The celebration was marked by a complete reunion of the family, a feature of which was the presence of the six brothers, all of whom have been more or less prominent in and about Chicago.

ONE OF the most interesting figures in our regular army is Colonel Edward M. Hayes, commanding the Thirteenth Cavalry, who has been for nearly fifty years in the military service of the United States. Colonel Hayes, who was born in New York, enlisted as a bugler in 1855 when only thirteen years old and was sent to the Southwest, where he saw much service in campaigns against hostile Indians. His troop commander was Kirby Smith, his first lieutenant John B. Hood, and his second lieutenant Fitzhugh Lee, all of whom were afterward Confederate lieutenant-generals. The young musician twice saved the life of Fitzhugh Lee in battles with the red men. He was honorably discharged in 1860, but enlisted on the Union side on the outbreak of the Civil War.

COLONEL EDWARD M. HAYES, One of the bravest and best of American soldiers.

He entered the army as second lieutenant and was promoted to captain and brevet major for gallant and meritorious services. He was mustered out in 1865, but in 1866 was appointed second lieutenant in the Fifth Cavalry, and served efficiently many years in Indian wars in the West. He was the first to place Buffalo Bill on the list of army scouts. He did useful work in Cuba after the war with Spain, and later was transferred to the Philippines, where he participated with great credit in some very hard campaigns. He now commands the Department of Dakota, and has been strongly recommended for a brigadier-generalship.

ONE OF THE most prominent of the young society leaders of Buffalo is Mrs. Norman E. Mack, who keeps closely in touch with the various interests which concern all public-spirited women. Mrs. Mack is a native of Buffalo, a graduate of the Buffalo Seminary, a member of the Graduates' Association, one of the leading culture clubs of Buffalo; of the Twentieth Century Club of Buffalo and the Eclectic Club of New York City, and is also on the Industrial School Committee of New York State. Her work as a member of the entertainment committee of the board of women managers of the Pan-American Exposition makes her well fitted to serve on the New York State commission to the world's fair of 1904, at St. Louis, to which she has been appointed by Governor Odell. She takes a keen interest in exposition matters and will undoubtedly make a most efficient commissioner. Mrs. Mack is the mistress of a handsome home in Delaware Avenue, the mother of two charming little girls, and the wife of a man who is conceded to be a most potent factor in Democratic politics in western New York, being the national committeeman from New York State. She is well informed regarding politics, has traveled extensively, has met many people, and has entertained at her home some of America's leading men and women.

MRS. NORMAN E. MACK, Member of the New York State Commission to the Louisiana Purchase Exposition.

AMONG THOSE who came to render homage to King Edward of England on the event of his coronation

there are doubtless many notable personages more deeply versed in the arts and more skilled in the graces of high civilization than Sir Madho Singh Bahadur, the Maharajah of Jaipur, but it may well be doubted whether any so coming have made better use of their opportunities than this dusky son of India, or any who have served their King more faithfully. That he is a generous and warm-hearted man is evidenced by the fact that during the last dreadful famine in India this Maharajah gave nearly \$2,000,000 of his own funds to relieve the sufferers. Sir Madho has an unblemished record for wise and beneficent rule. The Jaipur army transport corps, organized by himself, ranks high for the value of military services to the British empire. In time of famine its operations are inestimable, bringing relief to the sufferers throughout the Maharajah's wide dominions. The Maharajah adheres to the faith of his fathers. He cannot speak English.

SIR MADHO SINGH BAHADUR, A noted Indian prince at King Edward's coronation.

Black and White.

# The First Dining Car and Sleeping Car

By Eleanor Franklin

THERE IS no country in the world, perhaps, where the fascination of the word "pioneer" is so well understood and so fully appreciated as in this broad land of ours.

"Pioneer—one who goes before to remove obstacles and prepare the way for others," says the dictionary. "Pioneer," the word is fraught with the subtle odor of dead laurel leaves. It opens to our mind's eye volumes of living history and presents to us clear visions of the pathless wilderness through which our fathers hewed the way toward American greatness.

It is a word before which the present-day American youth uncovers in wondering admiration, for to him it is given to enjoy the realization of the dreams his father dreamt, and to view in perspective the onswamp of events which impregnated it with such potent meaning. Going west from Chicago recently, on the Chicago and Alton Railway, I picked up a time card, and was glancing through it casually when my eye was arrested by the words, "Pioneer Sleeping Car and Dining Car Line." "Pioneer, the first," I said half consciously, quoting from my school-time dictionary. I was sitting in a private compartment of a luxurious sleeper, built no doubt upon the latest and

We simply accept our marvelous America as we find it, and I doubt not we object more vigorously to the slightest imperfection than did our pioneer fathers to the hardships of path-finding.

When I returned to Chicago I called on Mr. George J. Charleton, general passenger and ticket agent for the Chicago and Alton, for the purpose of obtaining information concerning the first sleeping car and dining car.

"I understand you put into service the first sleeping car ever run on any road," I said. "We did," he replied, beaming with satisfaction, "and the first dining car also."

Your true railroad man loves his own particular railroad next to nothing nor nobody under the sun; and Mr. Charleton, being the son of the first general passenger agent of the Chicago and Alton, was cradled with the road, brought up with it, one might say, and he knows every inch of it, every bridge and culvert, every switch and sidetrack, every car and locomotive, and every train crew from the conductor down to "peanuts," and he loves them each and every one simply because "they belong to us." That is your true railroad man.

The first sleeping car was not called "The Pioneer," but, strange to say, the second one was. The first was remodeled from two old coaches, and put together in the shops at Bloomington, Ill. It was somewhat of an experiment and was greatly improved upon in "The Pioneer." It went into service in the fall of 1858, and it must have been a crude affair when compared to the palaces we ride in now. The berths were built lengthwise of the car, as they are now, the lower one being double, while above were two single ones, each half the width of the lower. In 1858 the word "rubber" had not yet become synonymous with impertinent curiosity, but inquisitiveness being a highly developed American characteristic, it doubtless had its beginning long before that; consequently the arrangement of the berths was found to be impracticable, and in consideration for the occupants of the lower one the present plan was adopted and used in "The Pioneer." An unusually genial old gentleman who was for forty-two years in the service of the Chicago and Alton said to me:

"Yes, I remember distinctly running the first sleeper out of the shops at Bloomington and down the road to Forest Grove, to warm it up and see if it would heat. I was engineer those days, and I recollect the engines were very light and objected seriously to pulling the light-toned heavy car on the tail end of the train. And, by the way, I showed George Pullman the first sleeping car he ever saw. He owned them all right. They were built by the Fields & Pullman Co., but George was out at Pike's Peak digging for gold dust and his brother looked after the affairs in Chicago. One evening as I was starting with my train out of St. Louis I see Mr. Pullman coming aboard with a little square box in his hand. It wasn't so little neither, and I noticed he guarded it pretty carefully."

"What is it, George?" I said.

"Lunch," he replied, winking in his good-natured way. It was gold dust. He took a berth on the sleeper, and that was the first time he was ever inside of one. After that he attended strictly to the car-building business, and it got so after a while we fellows didn't call him George any more."

An old railroad man is fuller of interesting reminiscences than an old soldier or an aged actor. He can regale one for hours with blood-curdling stories of narrow escapes from awful deaths, with hair-raising tales of train robbers and "spooks," and it must be a laggard imagination indeed that cannot derive the liveliest sort of entertainment from them.

"Yes," he continued, "there were great times in the railroad business along in the 'sixties. Everything improved so rapidly that it kept us fellows busy keeping next."

"Keeping next," I echoed in my mind. "Well, I venture you kept next. Railroad was not as safe a business in those days as it is now, was it?" I remarked.

"Well, it's no lead-pipe cinch yet," he retorted. An old man who can use slang like a school-boy and wear his clothes like a tailor model is an ornament to society and a blessing to be devoutly thankful for. "Yes," he continued, with a reminiscent twinkle in his eye, "I've stood at the gates of Paradise ready to pass in my checks a good many times. I remember once I passed through the valley of the shadow and came out five dollars to the good."

"Yes?" I said, curling my eyebrows up into unmistakable question marks.

"It was in 1856, along in February, I think," he continued. "Illinois was snowed under, literally covered up. There has never been anything like it in the State before nor since. For six weeks there was not a wheel turned on the road. The storm came up suddenly, and trains were caught between stations and snowed under. In some cases sleighs were brought to carry the passengers to the next town, but some of these towns were very far apart and there were no telegraphic communications, consequently relief was slow, and on our train it was found necessary to demolish one of the cars to provide fuel for the rest of the train. It is doubtful if ever before a railroad was called upon to go to such lengths to care for

INTERIOR OF OLD-FASHIONED SLEEPING CAR.

most approved plan. My elbow rested upon a down pillow, incased in spotless sweet-scented linen; my feet were perched comfortably upon the upholstered seat opposite, and I was immediately surrounded by every convenience necessary to human comfort. I turned and looked out of the window. We were running fifty miles an hour straight in the face of a beautiful sunset, and as we swirled around a long curve the sun threw slanting rays of once red light into my room, and out through the prettily curtained window opposite. The grass and trees were liquid green against the deep shadows falling eastward, and a quiet restfulness brooded over everything. Dreaming along under the subtle fascination of swift motion, one may forget even to dine, and the melodious negro voice that came floating through the train fell gratefully upon my ears.

"Last call for dinnah in the dining car. Dining car in the rear! Last call!" A few moments later, sitting in the diner waiting for my dinner to be prepared, I picked up a wine card from the table, and there it was again: "Pioneer Sleeping Car and Dining Car Line." I looked about me with interest. This particular dining car was, as I learned afterward, making its second trip, and had just come from under its maker's hands. It was undoubtedly beautiful. Severely plain, as a dining room should be, it was finished in dull red tapestry and polished oak. In little niches here and there were tucked away some rare old plates, exquisite vases, and quaint steins. I remarked with joy the absence of the usual fernery, and appropriated to myself at the same time a beautiful carnation from a cut-glass vase upon my table. The service, I noticed, was of the daintiest and the table appointments were faultless. All this is ordinary, commonplace, but this is just the reason it should "give us pause." Everything beautiful or wonderful made by man is the realization of some dreamer's dream. And it is our habit to enjoy without asking "Where?" or "How?" or "When?" It is ours; we pay for it. That is enough. We are too busy to ask questions.

LATEST STYLE OF PULLMAN DINING-CAR, ELABORATELY DECORATED, COSTING \$20,000.

INTERIOR OF THE MOST MODERN AND COSTLY SLEEPER.

its passengers, but we had to do it or freeze to death. Well, it took us just a week to get from Alton to Springfield, and from there to Chicago it was all right. It was on my return trip I made my five dollars. We were just ready to pull out of Bloomington, and as I mounted to my position in the cab I found the money hanging on the throttle. I picked it up and looked around to see if there was any more, when my eye lit on a nervous-looking gentleman standing alongside the engine. He looked like old Sleuth and he said, in a stage whisper: "I've got an engagement in St. Louis to-night and I must be there, so turn her loose, will you?" Well, I was young and you couldn't phase me, so about four miles north of Springfield we found ourselves running on a down grade sixty miles an hour. I saw a perfect glare of ice ahead of me on the track. The snow had melted, overflowed the ditches, and frozen hard. Immediately ahead was a long bridge across the Sangamon River. All at once I realized that we were leaving the track. I looked at my fireman, he understood, and we both prepared to jump. When the engine struck the ice the wheels and drivers left the track, but the following cars held her in safety and we crossed the Sangamon bridge without turning over."

"Glory!" I gasped. "I should think your hair would have turned white before you got across that bridge!"

"No, no," he answered with an innocent air, "but I lost all my front teeth."

"Why, how did that happen?"

"Well, you see, my fireman and I jumped just before we entered the bridge and—"

"Oh!"

"Yes; it was just a little too much for our nerves. You see, it had only been a little while since I had seen cars pass each other on the same track, going in the same direction, at just about that point."

"Yes?"

"Yes. We had a lot of money in the express car that was going to the mint at Philadelphia. A gang of robbers heard about it, and

# The Evolution of the Codfish-cake

AS SEEN AT GLOUCESTER, MASS.—ILLUSTRATED BY SNAP-SHOTS

By Roselle Mercier

A GLOUCESTER TYPE.

TO INVEST with romance or even interest the homely codfish-cake, the ordinary Sunday morning fish-cake, requires either imagination or a visit to Gloucester. For Gloucester, as every one knows, is the home of the codfish-cake. Kipling says that "four out of every five fish-balls served at New England's Sunday morning breakfast come from Gloucester."

And once you have smelled the Gloucester fish smell you are ready to believe that five out of every five fish-balls are made in Gloucester—and not only made there, but that they live a long useful life and die there; verily, all the odors of all the fish of all the earth seem concentrated there. With that fragrance in your nostrils you are convinced not only that Gloucester is the most important fishing town on the Atlantic coast, but that it is the only one—anywhere. If I had language strong enough to convey a real idea of that smell, this page would have to be disinfected. And if this sounds like exaggeration, it only proves that you have not been to Gloucester.

But strong as is the fish smell, the interest aroused by the actual processes in the evolution of the fish-cake is even stronger. And if you are a summer boarder (that other source of Gloucester's revenue) it is ten to one that you will not be satisfied simply to watch from the Cape Ann shore the big fishing schooners glide in and out of the bay, bound to and from the Banks; to hear Gloucester fishing statistics from your fellow-boarder, the learned professor; to read "Captains Courageous," by Kipling, and "A Singular Life," by Mrs. Ward—both dealing with the fisher folk of Gloucester; and finally to go home the owner of divers highly idealized water-colors from the brushes of the East Gloucester artists' colony, whose members season after season flock thither to paint the fisherman, his house, his boat, his wife and his child—as they should be according to the canons of art.

No; you will want to go yourself into Gloucester and visit the wharves—the ill-smelling wharves, where every few feet you will stumble over an artist or his easel, or a fellow summer boarder, asking "fool questions" (I quote a skipper) and pressing the button, and where you will have to wade through a fishy muck that makes you wonder if you ever did really care for codfish as an article of diet. But all these are soon forgotten in the interest of watching the schooners unload; of seeing the big piles of silver-white cod, averaging in weight from twelve to twenty

pounds, tossed out of the hold on to the deck, from deck to wharf and thence to the scales, where they are weighed—six hundred pounds at a time—and then turned over to the oil-skinned washers, who scrub them in dories or vats full of water, with all the energy and thoroughness that one expects of New England. Pretty soon you find yourself asking "fool questions" too. That is inevitable, you being a summer boarder. And the replies you get are like those of the Delphic oracle—indefinite, the heart of the fisherman being filled with contempt for the summer boarder.

"How many men does each schooner carry?" you begin.

"Wa-al, that depends upon the size of the boat."

"And the size of the average boat?"

"Wa-al, that varies."

"About how long is the trip from Gloucester to the Grand Banks?"

"Depends on the wind."

So it is only by slow degrees (degrees almost as difficult as those of the Freemasons) that you learn that the average modern fishing schooner carries seventy tons, eight dories, and a crew of eighteen men—two men to each dory, a cook and a skipper; that a good season will net each fisherman from two hundred to three hundred dollars, and the skipper, who often owns a fourth interest in the boat, from twelve hundred to two thousand dollars. The fishing is done both with hand-lines and trawls—a full set of the latter for a well-equipped modern schooner being about twelve miles of line and fourteen thousand or fifteen thousand hooks. The bait is "purty nigh anything that swims, if the fish is hungry," but principally frozen or salt herring, mackerel, capelin, and squid. The fish, as a rule, are beheaded (though let me say in passing that this is not the technical term), cleaned, and salted on board the schooner after each day's catch, but on short trips they are sometimes brought down on ice. The fishing season lasts from early spring to mid-autumn, during which time a schooner, if she be fortunate, can make three trips to the Banks and back, though the average is but two and a half—a "half trip" meaning one on which the boat is only half loaded.

I present this array of facts with conscious pride, and I refrain from telling you how I managed to extract them from a certain skipper, only because, as Kipling says, "that is another story." And, by the way, let me advise you not to mention Kipling or "Captains Courageous" to the Gloucester fishermen. I did. I said that in "Captains Courageous" I had read that the "fleet" went to the Banks in May and returned about September. The skipper turned on me a face whose expression made me long wildly to paint it, so full was it of contempt and deep disdain. His only comment was "Huh!" But that was expressive. And after that I observed that there were schooners coming and going every day, and that at every wharf there were boats loading and unloading; so my preconceived idea of a "fleet" coming and going at a specified time, after the manner of the White Squadron,

vanished into thin air.

Along the wharves are piled huge barrels in which the fish, after they are washed, are soaked in brine for a season; then they are taken out and laid in the sun to dry on the drying frames, after which they are taken into the sorting room and sorted according to size and color. Then they are

ready for the various other processes, which are to transform them into codfish-cakes for the delectation of your appetite and mine. A small army of men and women is employed in these processes at each of the many fish-houses,—in skinning, boning, shredding, cutting, and packing into the neat little square boxes in which they reach the consumer. Each step in the work is full of mystery to the uninitiated; but the workers are quick, sure and accurate, and in the fish-houses everything is very, very clean.

It is all interesting to the last degree to watch and see how the ingenious cod, which a few weeks ago swam happily in his native waters off the Banks of Newfoundland, is transformed before your very eyes—some of him into codfish-cakes (they call the little squares, which are cut to fit the small boxes, "enkes") and the rest of him carefully preserved to make oil, glue, and fish gunno. Verily, as a witty summer boarder remarked, "every part of the cod is used except the smell."

Certainly, after a visit to Gloucester you have an increased respect for the fish-cake. You realize the part it has played in the world's history: how it has brought about treaties between great nations—for American fishermen had to get from England the right to fish off the Banks—how it has erected lighthouses and placed buoys all along the cruel shore. You realize, too, the tragedies it has caused, the widows and orphans it has made, the loving hearts it has broken—for the cruel reef of Norman's Woe, where the wreck of the *Hesperus* occurred, lies in plain sight just at the entrance to the harbor; and you hear heartbreaking stories of boats that have gone down with all on board, in the very harbor itself, before the eyes of loving ones on shore. Truly, the romance of the codfish-cake is no idle sound—after you have been to Gloucester. But all the same, after you have made the acquaintance of the cod in the processes of evolution, and with the recollection of its odor still in your memory, you are quite, quite sure that you will not want any codfish-cakes for a very long time.

WHEN SAILING DAYS ARE OVER.

## The First Dining-car and Sleeping-car.

Continued from preceding page.

took a rail up just on the other side of the Sangamon bridge. When we struck it the cars simply flew over each other and turned bottom side up."

"And what about the robbers? Did they get the money?"

"Nary a cent. They had done more mischief than they had intended to. I guess they thought it wasn't safe to show up for the money."

The first dining car was called the "Delmonico," of course. It must have resembled our present beautiful diners but slightly. Built by the Pullman Company at their pioneer works in Chicago, it was put into service in 1866; and after a short but distinguished career, descended to the position of boarding car for constructors along the line, but it did not come to this of course until great improvements had been made upon it in subsequent models. It was built in two sections, with a kitchen in the middle. One end was reserved for ladies and here no smoking was allowed, but the other end was a buffet arrangement and got itself nicknamed "The Beer Garden" before it had been in service many moons.

The floor of the car was uncarpeted and the seats were ordinary low-backed coach seats, upholstered in leather. The car was finished in walnut, but the ceiling was covered with oilcloth. The provision supply store-room and refrigerator were under the centre of the car, and access could be had to them only by means of a little brass ladder suspended from the side of the car. It was rather a precarious adventure for dining-car employés to make a visit to the larder while the train was in motion, inasmuch as there were a great many covered bridges and other obstructions along the line in those days which would undoubtedly have swept them into eternity had they not timed their trips down the little brass ladder strictly according to schedule. The kitchen was supplied with an ordinary soft-coal range. Still, in spite of all these peculiar disadvantages, the bill-of-fare for that time was considered most elaborate.

The most interesting thing, however, about the "Del-

monico" was the way in which the employés kept tab on receipts. When a passenger entered the car the conductor handed the waiter, who was to take care of him, a small pasteboard ticket, which the waiter straightway deposited in a padlocked tin box in the kitchen. At the terminal station the ticket agent came into the car, unlocked the tin box, and with due ceremony "counted up the house." The conductor and other employés, while not being required to give an exact account, were expected to make an approximate check in accordance with the number of passengers served.

Talk about your graft! Are there any opportunities like that nowadays?

## Special Prizes for Amateur Photographs.

LESLIE'S WEEKLY offers a special prize of \$10 for its amateur contest in the Christmas number. Also for the Thanksgiving number, both contests to close November 1st. The pictures should, of course, be appropriate to the holidays and especially interesting to children, for Christmas is above all things the festival of childhood.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unavailable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not.

N. B.—Communications should be specifically addressed to "Leslie's Weekly, 110 Fifth Avenue, New York." When the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

## Annual Cruise of the Millionaires.

THAT GRAND sea outing of the millionaires of this city—the annual cruise of the New York Yacht Club, a combination of ordinary sailing and lively racing—was successful and enjoyable this summer in the highest degree. The course was laid from New London, Conn., to Newport, R. I., to Vineyard Haven, and thence to Provincetown, Mass. The nautical amateurs had excellent weather on their trip, and no serious mishaps occurred. There were races all along the route, and the interest in the various events was keen throughout.

Eighty-seven yachts, steam and sail, of all classes, assembled at the starting point at New London, and their captains reported to Commodore Lewis Cass Ledyard on board the flag-ship of the fleet, the schooner *Corona*, which during the races of the cruise won four first prizes. The fleet in movement made a fine appearance. Among the more notable of the many contests were those between Mr. J. Rogers Maxwell's 70-foot sloop *Yankee* and Mr. August Belmont's *Minerva*, the *Yankee* coming out ahead. Besides the daily runs and brushes there were the usual sociable activities and amenities which add so greatly to the attractions of a yacht cruise. The participants in the affair included most of the leading yachtsmen of the metropolis.

## A Chance for Americans.

ACCORDING to the Madrid papers, a new electrical company has been formed in that city, with a capital of 6,000,000 pesetas (about \$960,000), for utilizing for illumination, motive power, traction, heating, etc., the hydraulic energy of a waterfall in the Jarama River, situated at a distance of eleven miles from Madrid. About 3,000 horse-power will be developed. These facts should be of interest to manufacturers of electrical material in the United States, as the assurance is given by Consul Wood at Madrid that large quantities of such supplies will be needed. The managers of the new company have informed Mr. Wood that it is their intention to purchase most of the material required by them in the United States.

# American Trade With Canada

HOW IT MAY BE INCREASED

By Hon. John Charlton, Member of the Canadian Parliament and the Joint High Commission

HON. JOHN CHARLTON, M. P.

of the great problems in the future commercial progress of the United States will be how to secure outside markets, especially for finished products.

This necessity for markets has already placed the influence of the United States on the side of those nations that demand the maintenance and the integrity of the Chinese empire and the open door for an entrance into the Chinese market. The same influences will, in the future, make the United States government ever on the alert to secure entrance, upon the footing of the favored nations, into all foreign fields of commercial transaction.

While attention is directed to China and the Philippines, and to various other foreign lands, the commanding importance of a market near at hand seems to have been, in a large measure, overlooked. It will be found, upon examining the statistics of American trade, that Great Britain is the largest consumer the United States possesses for her varied products, that Germany ranks next to Great Britain, and that the Dominion of Canada occupies the third place on the list, and, as a consumer of American manufactures, it leads both Great Britain and Germany in the amount of its imports from the United States. The great trade with Canada is not divided in fair proportions between American exports to Canada and American imports from Canada. The great development of the American export trade to the Dominion has been due to a moderate and liberal tariff policy upon the part of the government of the last-named country, while the meagre proportion of the exports of Canada to the United States, aside from precious metals, is due to the repressive and illiberal policy of the United States toward Canada. These two policies on the part of these two countries have been working out their results since the abrogation of the reciprocity treaty in 1866, and during that entire period Canadian duties upon the imports of the products of the factories and workshops of the United States have been, on an average, less than one-half the duties imposed by the United States on Canadian imports.

In the last fiscal year the Canadian rate of duty upon the total importations from the United States was 12.5-100 per cent., and the rate upon dutiable imports from the United States was 24.83-100 per cent., while the duties

imposed by the United States upon total entries was, in round numbers, 25 per cent., and upon dutiable imports 50 per cent. Under these unequal conditions the American exports to Canada have risen from \$28,572,866 in 1866 to \$119,306,000 in 1901, while the exports of Canada to the United States have risen from \$44,143,000 in 1866 to \$72,382,000 in 1901. The exports, however, to the United States, in the last year, included \$28,331,000 of coin, bullion, gold nuggets, etc., leaving a net export to the United States, deducting precious metals, of \$44,051,000, or less than in the year 1866. This statement shows that while the exports of Canada to the United States have practically remained stationary, the imports from that country have, during the same period, increased 318 per cent.

A very striking illustration of the character of trade movements between the two countries during the period since 1866 is furnished by the statement of trade in farm products. In 1866 the export of farm products from Canada to the United States exceeded \$25,000,000, while the imports were practically nil. In 1901 the export of farm products from Canada to the United States, the produce of Canada, was \$8,239,000, while the import of farm products from that country amounted to \$25,000,000; or, to put the case broadly, we imported from the United States in 1901 three times as much as we exported on the total list of exports and imports, deducting from our exports coin, bullion, and precious metals, and we imported from the United States, of farm products, nearly three times as much as we sold to them.

Now, as to the question which forms the title of this article, the obvious and truthful answer is, "By striking off the shackles that impede trade between the two countries." With the character of the Canadian tariff, so far as the United States is concerned, there is no ground of complaint. Last year 62 per cent. of our total imports were from the United States. Last year we imported from the United States \$65,500,000 of manufactures, as against \$37,200,000 from Great Britain. Of the manufactured imports from the United States, \$22,000,000 were upon the free list. Of manufactures imported from Great Britain, \$7,000,000 were on the free list. Our importation of manufactures from the United States, for that year, probably was \$15,000,000 greater than from all the rest of the world. We give to the United States, exclusive of coin and bullion, a total free list of over \$53,000,000. We receive from the United States in return a free list, covering nickel matte, pulp wood, saw logs, and a few minor articles, which Canada would prefer retaining and manipulating within her own borders.

The question which will confront the American statesman in the near future, when deliberating as to the conditions that should be applied to trade with Canada, will be a serious one. The existing conditions of trade between the two countries the great mass of Canadians thoroughly believe to be essentially unfair as relates to their own interests, and the feeling is becoming well-nigh universal that unless the United States will extend to

Canada a degree of liberality in commercial affairs somewhat approaching the character of the Canadian policy toward the United States, Canada will be driven to the adoption of a policy expressly designed, as it is believed was the case with the policy of the United States toward Canada, to decrease the volume of imports from that country, and if the United States desires to retain the hold upon the Canadian market that it at present possesses, and to share in the advantages that will come from the approaching development of the Canadian Northwest, which will proceed with marvelous rapidity, a change in the American policy toward this country must be made. If American trade with Canada is to increase, the American government must permit Canada to sell something to the American people in payment of purchases. What is wanted is reciprocal free trade in all natural products. Nothing short of this will put the trade relations of the two countries upon a satisfactory and enduring basis. The United States wants Canadian lumber, barley, pulp wood, saw logs, farm products, ore, nickel matte, and many other articles. The Canadian wants to exchange these articles for his purchases, and if reciprocity in natural products is permitted, the interchange of farm products between the two countries would hardly leave a balance against the United States, as Canada now imports three times more from the United States than she exports to that country, and the Canadian people would be, through increased prosperity resulting from increased markets in the United States, enabled to purchase from that country largely in excess of their present transactions.

The admission of Canadian natural products into the United States free of duty would not produce any appreciable effect upon prices there, because the importation from Canada for consumption would be an exceedingly small fraction of the domestic product of the United States. The Canadian farmer and lumberman desire free access to the American market, not for the purpose of depressing American prices, but for the purpose of enabling the Canadian producer to add the duty to the price he receives.

The policy of the near future will be either reciprocity in trade or reciprocity in tariffs. Canada will not continue to impose duties of one-half the amount that is imposed by the United States, with the result of giving the latter country command of her market for manufactures, while she is debarred from access to the markets of that country. Free trade in natural products and a moderate revenue tariff upon imports other than natural products, would be a policy that Canada would probably be prepared to adopt. Failing to obtain this, the demand will speedily become irresistible for reciprocity in tariffs and for an increase of our duties from 25 per cent. to 50 per cent., followed by the expansion of our manufacturing interests, and the shutting out from our market of no less than three-fifths of the manufactures at present imported from the United States. The entire case may be summed up in a single sentence. Canada will say to the United States, "You let down your bars, or we will put up ours."

## The Utilization of Public Buildings.

WE ARE thoroughly in sympathy with the movement in New York City having for its object the opening of public-school buildings for various useful purposes on Sundays and at other times when they are not in use for regular school exercises. We believe that the principle underlying this movement is entirely sound, reasonable and just, and applicable also to other public buildings than those occupied by schools. The latter, however, offer a peculiarly advantageous and desirable field for such work as that contemplated in this opening proposal; school buildings are generally more numerous in towns and cities than other public edifices, are usually closed for longer periods, and in their interior arrangements generally offer better facilities for service than any others. These structures are built and maintained at the public expense; they belong to the people in the fullest sense of the term, and there is no good reason why they may not be freely used for any object clearly within the lines of general public benefit, and not prejudicial in itself to the chief object for which the buildings are designed.

Educational service is a broad and comprehensive term, and if the school buildings are restricted to such service alone, it may rightfully include a wide and varied range of activities. Education is not alone for the young; neither is it restricted to the knowledge gained from books or any other benefits to be derived from a strictly pedagogical system of instruction. Everything is educational that tends to the development of mind and body, to the broadening of thought, to the uplift and betterment of humanity. In this wider sense of the term education and to this larger service our public-school buildings should be opened and utilized far more than they are now.

In New York and some other cities and towns it has been the practice to open these buildings at night for a portion of the year for night schools and public lectures. This is excellent, and the practice ought to be generally adopted. There are other uses equally good to which they may be put at night and on days and seasons when the schools are not in session. They may be used for free reading-rooms, for debating clubs, for the meetings of literary societies, local improvement associations, and

other organizations distinctly devoted to some legitimate line of mutual or general benefit.

It should be sufficient to know that the uses to which the school buildings, or any part of them, are put are not exclusive of any class, creed or sect, but open to all who have a rightful claim as citizens of the locality; also that the uses are clearly beneficent and not such as to interfere with the regular work of the schools. The extra labor and expense of cleaning, repairing, and keeping in order which the opening of the buildings must necessarily involve should not be allowed to stand in the way of this enlarged service. Adequate allowance for these things should be made in the budget for the schools, as a regular and legitimate part of the fund for educational purposes.

A special and urgent need for the opening of school buildings for the purposes suggested exists in the crowded quarters of cities like New York, where the agencies for good are usually few and the agencies for evil far too many. Those who labor for the improvement of conditions in these localities have constantly to meet the difficulty of finding convenient rooms and other facilities for carrying on their work. The school buildings in these quarters are ready at hand for many of these purposes; they are commodious, well lighted and warmed, and well suited in every way for evening assemblies, mothers' meetings, sewing circles, summer classes, and other assemblies of this character. Some of them have space also that may be converted into play-grounds or other recreative purposes for the children of the neighborhood, a feature of as much vital importance as any other, and as truly educational in the best sense.

The school buildings represent a large investment of public money, and by utilizing them for such purposes as we have named they may be made to pay much larger dividends than before—dividends represented in the enhancement of useful knowledge and the moral and physical well-being of the people among whom they are located.

TELEPHONE Service is not used so often in the home as in the office, but its value in emergencies is great. Rates in Manhattan from \$48 a year. N. Y. Telephone Co.

## Out of Sorts.

PLEASANT WAY TO DRIVE AWAY THE BLUES.

A FOOD that will bring back health and rosy cheeks to the sick as well as please the palate of the healthy is a pretty good food to know about. A lady in Minneapolis says, "I am such an enthusiast upon the subject of Grape-Nuts that I want to state a few instances of its value that have come under my personal experience."

"I was taken ill with a serious stomach trouble, so ill that the slightest movement caused me pain, and could take nothing into my stomach or retain even medicine or water. I had been two days without nourishment when my husband suggested trying Grape-Nuts."

"The nurse prepared some with warm water, sugar and cream, and I took it hesitatingly at first until I found it caused me no pain, and for ten days I took no other nourishment. The doctor was surprised at my improvement, and did not resent my attributing the speedy cure to the virtues of Grape-Nuts. He said he had a case on record of a teething baby who grew rosy and fat on the same diet."

"Grape-Nuts is so dainty and delicious that it appeals to the whole household, and when either husband or I feel generally 'out of sorts' we try confining ourselves exclusively to the food for a day or two, with the happiest results."

"For a year I have had for a neighbor a delicate girl—an epileptic. When I first knew her she was a mere shadow weighing 70 lbs. and subject to fearful attacks, having as many as 12 and 16 convulsions in a day. At such times she took no nourishment whatever. She had never tried Grape-Nuts, and as any food seemed to increase her trouble at such times it was with difficulty I persuaded her to try it. But I told her of my experience and induced her to try a few spoonfuls."

"The taste delighted her, and ever since she has made it her chief article of diet. The result has been wonderful; her improvement is the subject of remark with all who know her. The attacks are less frequent and violent and she has gained 20 lbs. since last November, and her family attribute her improvement solely to Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

# The Summer Desertion of New York

By Tom Thorne

DESERTED MADISON SQUARE—THE CUSTOMARY THRONG DISAPPEARS IN THE HEATED TERM

NEW YORK used to be a good enough place to live in all the year 'round," said the big man who sat with a cigar in his mouth in the smoking-room of an apartment house looking out into a vacant street. He was grumbling because he felt restless and uncomfortable. The trouble was that he was lonely. His friends, with whom he was wont to spend the hours of his relaxation, were absent—at the seashore, in the mountains, or dwelling in cottages on the borders of picturesque lakes. He had determined to remain in New York for the summer. It was a sort of stubborn resolution born partly of his loyalty to the city twelve months in the year and partly because he was opposed to being a mere follower where others led. He preferred to stand by his resolution and remain uncomfortable. He did—and was.

It has long been an evidence of calamity, a cause, it is said, for whispered gossip, for New Yorkers to reside in their city homes between the months of June and September. That part of the population which can afford the change—including some who cannot—rises from the city and flies away. The change was never more complete than this year. The town becomes a barren place. Fifth Avenue, which was glad with its tide of beauty, is a mere empty way, extending for miles between deserted houses. Broadway assumes a changed aspect. Those who pace along its hot pavements are not there for pleasure. Their presence is due to necessity. The Rialto is no longer a glittering parade ground of those who are prospering. You are told that many of the persons whom you meet there are actors thinking about engagements for next season. The little brilliancy which remains at night seems like a mockery. The very air is dry and dusty. Whole blocks of residences are silent. The doors and windows are covered close with rough boards. The postman comes along and whistles. A woman, plain of face and plain of attire, opens a door in the basement, receives some letters and papers and closes the door again. There is no other evidence of life. Such is the New York of June, July, and August.

But only a few miles away, where the water splashes against the rocks or slyly creeps along the sand, the bands are playing, there are singing and laughter and shouting, there are boats and bathers, flags and banners—beauty, life, and fashion, all in another setting. It becomes apparent at once what has happened to New York.

Alone and a stranger I wandered into a fashionable summer resort early one July morning. It was much earlier there, it seemed, than at the same hour in town, for although the sun had been in the sky for many hours the shaded walks, the gravel roadways, were empty. The harbor was filled with a maze of water craft, yachts with their sails furled, launches swaying with the waves, and row-boats rocking more rapidly than the others. Occasionally I would see some one moving about on board one of the yachts. Along the shore were a few boys, small boys not over twelve, playing upon the rocks. On the deck of a small cat-boat I observed three persons, two young men and a girl. The men were busy with the ropes and sails; the girl was reclining deliberately where the full beams of the hot sun beat upon her face. Her head

was bare and, so were her arms to the elbows. I thought that there was a sort of determination in her manner as she exposed herself thus to the discomforts of the burning sun, a determination born of the realization that one human being appreciates the evidence of health and bloom in another. Perhaps this accounts for the general popularity of the complexion tanned to the color of a new saddle.

As I turned again and walked through the shaded avenues I heard new evidences of life. A woman was singing with great energy and accompanying herself on a piano, which, like the voice, suffered from a certain inaccuracy of the vocal chords. A summer resort, it seemed to me, developed to an amazing strength and penetrating power voices that were not made for singing. I walked toward a large hotel and heard a sound of discordant humming, like a hive of monster bees. Then I caught a few words something like these:

"That little, old red shawl—that little, old red shawl—that little, old red shawl my mo—o—o—o—ther wore!" And I knew that the humming was from a hive of young men, not bees by any means, and that they were rehearsing what is commonly known as "close harmony," to be produced later with great effect on the water after the shadows had fallen.

On the broad veranda, where they could see all of the passing wagons delivering groceries and condensed milk to the cottages, sat many women of varied and uncertain ages. Some of them were working with hats, putting them through that mysterious process known as "making them over." Most of the women were talking, so that an innocent bystander caught only an occasional word or phrase. I heard one of them say, "The colonel was just lovely last night," and another, without looking up from the hat which she held in her hands, was asking, "Do you think they will ever be married?" On the same veranda, but on another side of the hotel, one woman was reading to two others. She was speaking very loudly and earnestly in a sort of monotone.

"The captain," she read, "is handsome. He is twenty-seven years old, about five feet nine inches in height, and—" It was a detailed newspaper account of a scandal which was just then attracting great interest in New York.

The male inhabitants of the place were confined to three classes—the little boys under twelve, the men who drove the delivery wagons, and old gentlemen, stocky, substantial, well-to-do, and of good circumstances. They were sitting on the verandas reading papers. Occasionally, as I glanced at the windows, I saw to my embarrassment feminine heads of hair drying in the sunshine, the owners

subjecting themselves to uncomfortable exposure in order to display their tresses to the direct light of the sun. And so the morning passed. The water laughed in the sunshine, and the green trees breathed the spirit of repose and comfort and consolation; but the wagons delivering groceries and condensed milk, the discordant piano and the misplaced voice, the tremendous interest in a pitifully unfortunate scandal, the busy gossip, the heads of hair in the cottage windows, seemed out of harmony with nature, and I came to the conclusion that there were better hours at a summer resort than the hours of the morning.

Afternoon—a transition period; a time of formalities and the display of clothing. On this day there was a programme of aquatic sports, arranged especially for "the ladies," and they did the occasion justice by appearing on dress-parade. The women met, smiled cordially, and then with a quick glance each studied the other's gown. The sports were of such a character that one could sit comfortably in the same seat on the shore and miss nothing that happened.

First was a race of launches, then a rowing race in which the sailors of the yachts contested, and after that swimming races, in which muscular young men plowed and splashed through the water. But even these attracted little attention. As the result of each race was announced through the megaphone there would be a faint clapping of hands. And the hours wore on. From groups of young men and women came the sound of loud talking and laughter, and I noticed occasionally among the others a silent pair, a brown youth and rosy maiden who seemed to have lost the power of speech. When the programme of sports was over the people rose, feeling greatly relieved; and soon the long, dark shadows, and the green of the trees and the grass were many dots of pure white. The picture was growing softer, more subdued and beautiful. And then the night came.

Magic had touched the place and filled the darkness with a thousand lights. I seemed to look through endless avenues bordered with yellow lanterns; the harbor was a vast plain illuminated. The music and softness of the air were one, soothing the senses, elevating the spirit, a mellow, gentle influence. Those who strolled about waiting for the dance were talking quietly, for more was left unsaid than spoken; felt, but not expressed. Behind me I could hear a young girl talking low in a tone that had in it something of the music of a song:

"Oh, I should love to live in a boat always," she said, "and just sail, and go anywhere I pleased." There was

no reply; only a long silence. A dainty creature in white passed by, bearing a huge bunch of roses. "Oh, see those flowers?" exclaimed the voice behind me, and then it added: "I love to have flowers on my dressing-table every day, but to carry them—Oh, it's so—I don't know—" The sentence was never finished; the idea was lost; it had melted into the softness of the night. The voice, instead, began humming softly. The other one, whom I knew was present, overwhelmed by the influence of the

# The Mysteries of Fireworks-making

A QUEER VILLAGE WHERE MILLIONS OF ROCKETS, CANDLES, AND BOMBS ARE PRODUCED, AND WHERE LIFE IS ALWAYS IN DANGER

By Tom Thorne

ONE OF the oddest establishments in the world is a great fireworks factory, and its oddity is the result of an effort to reduce the danger of death to a minimum. The maker of fireworks deals with some of the most highly explosive and most inflammable substances in existence. The striking of a spark or the careless bringing together of two chemicals which by their nature combine with sudden combustion would almost certainly be attended with a casualty. And more lives than one have been sacrificed to give the children a good time on the Fourth of July.

Not far from Manhattan Beach, on Long Island, is an unusual collection of buildings that might be taken for a village. This group of houses is bordered on two sides by rows of tall trees, and the houses themselves are arranged in three regular rows, each structure being exactly sixty feet from its neighbor. The wide avenues between the little frame buildings might be taken for the village streets. The houses arranged thus in regular rows are all small and all made of timber. Some of them are no bigger than woodsheds, and it is in these smallest houses that the greatest danger lurks. This strange collection of buildings is the factory of Pain's fireworks. It covers fifteen acres, contains forty-six houses, and during the working hours, winter and summer, is inhabited by ninety persons, thirty of them women.

The making of fireworks involves, roughly, three processes: making the "cases"—the paper tubes and shells; combining the materials which give the power and light and color of the fireworks, and putting the explosive and illuminating material into the cases, which completes the making of the pyrotechnics. One of the simplest of all fireworks is the Roman candle, yet it is one of the most dangerous in the making. The row of smallest buildings in the fireworks village, a line of tiny shanties not more than ten feet square, is on the outer edge of the odd collection of houses. There is room in each for only one man to work at a time. He stands facing a small window with a door behind him. On his right is a shelf loaded with powder and other inflammatory substances which are the component parts of the candle. On his left are the empty tubes of hard stiff paper and the shells for the candles. In front of him is the deadly machine at which he works.

This machine reminds one of a comb which moves up and down on two standards at the sides. The teeth are slender steel rods about fifteen inches long. The comb itself is not more than two and a half feet long. Each of the teeth of this comb is a ramrod for a Roman candle. There is a holder for the candles directly underneath, and as a load is put in the case the heavy steel comb is dropped and each one of its teeth is driven into a candle, packing the load just as a ramrod is driven into the barrel of a gun. In the operation of this machine, which works

with a good deal of force, there is danger of striking a spark through friction.

Surrounded by sensitive explosives, this spark at once causes an immense combustion; all the powder and the substances which combine to form the pretty colors of the candle ignite at once. There is a puff and a report and the little frame shanty becomes a chamber of death! The last fatality at the Pain village was in a Roman candle house. One of the teeth of the comb which loads the candle cases became loose. The young man, busy with his work, did not notice it.

Suddenly a spark was struck. The report was heard by those in the other buildings of the village. They heard a cry and saw a burst of flame; then a man blackened and his clothes aflame staggered from the burning building. He was blistered and charred so horribly from head to foot that he soon died. The severity of the explosion which killed him was increased by the presence of a barrel of explosive material which stood just outside of the door. As the man started from the shanty in the flame of the first explosion, the contents of the barrel outside were ignited, burst into his face and killed him.

Many others have been severely injured by the combustion of the explosives, but since the establishment of the Pain camp near Manhattan Beach only this one man has been killed. Nevertheless, great precaution is taken to prevent accident.

The separation of the buildings is a safeguard. When an explosion occurs it is confined to one shed and will spread no farther. Another precaution is an abundant supply of water. In front of each shed is a large barrel always filled to the brim. At one end of the fireworks village stands a huge water tank elevated on a tower, supplying water for the factory.

In each one of the separate buildings some particular detail of the manufacture of fireworks is done. In some buildings two or three girls are making stars—stuffing combustible compositions, that make a certain color light, into little rings like thimbles with the top cut off. At the same time into each star is put a short powder fuse. In other buildings men are working on the finishing of rockets or shells. There are never more than three or four in a shed.

And an interesting rule to prevent disaster is this: When an employé enters the building in which he is employed he must remain there until the day's work is finished at night. Employés are not permitted to leave the little houses even for lunch, and by no means to meet each other or to congregate during working hours. Each man and woman working among explosives brings a lunch and eats it in the building where he or she works. Employés are not permitted to meet until the day's work is over and they have changed their clothes, removing those which may have on them the dust of dangerous chemi-

cals. It is feared that one person might receive from the garments of another a bit of chemical, phosphorus, for instance, which, when it comes in contact with certain other substance, causes combustion at once.

The great set pieces of illumination, representing the portraits of prominent men or bouquets of flowers or fountains, which are so conspicuous in the fireworks displays, are only incidental, a side issue in the business of the fireworks camp. These show-pieces are all designed by an artist who is steadily employed in this particular branch of the work. He first draws in outline a portrait of Governor Odell, King Edward, or whoever is to be presented "in fire," and this drawing is transferred to a sheet of linen like that made in an architect's office for the use of contractors. The sheet is marked off in squares, and then a large frame is made and this is divided into squares by thin strips of wood, each square of the large frame being a certain number of times larger than the squares on the drawing. To these strips are attached the "gerbs," or little tubes of paper not much larger than a lead pencil and not so long, which are filled with the fireworks material.

All the paper used is manufactured at the "village," the waste paper from other departments being used to make the pulp. The "bombs" and cases are moulded by machinery. There is nothing more beautiful in fireworks, perhaps, than a great bomb, which sends out separate showers of colored lights that glow as they sink gently through the air. A large sphere is made first. It has a shell of hard paper and the largest of these bombs are twenty inches in diameter. This large shell is filled with smaller ones the size of coconuts, and in each of these is the material which, when ignited, makes a certain light. The big bomb is put in a mortar to be fired into the air. Attached to it is a long fuse. This fuse has two ends. One of them reaches the load of powder immediately behind the bomb and the other goes into a hole in the shell where it comes in contact with more powder.

The fuse is set on fire. One end of it, igniting the powder in the mortar, sends the great bomb far into the air. The fire, following the other end of the fuse, creeps inside the shell, ignites the powder there and bursts the shell into a thousand pieces while it is still in the air. The powder which explodes within the large shell sets fire, also, to the fuses of the smaller shells and each one of the latter explodes and sends out its shower of radiant sparks.

Another interesting bit of fireworks are the chains and festoons—strings of lights with a parachute of Chinese paper at each end. The whole festoon is fired into the air, and the explosion which throws it out ignites the fuses of the lights, called "lanes," which are attached to the string. As the string of lights starts to fall the air fills the tiny parachutes and the festoon floats slowly through space.

## Summer Desertion of New York.

Continued from page 199.

beauty that surrounded him, did not speak; for in the presence of the beautiful, admiration is dumb.

Upon the verandas of the big club-house there were talking and laughing and sociability, and in a pavilion near at hand were music and dancing, and still among the trees wandered the figures of white, like bodies of thin mist in the distance. A band of Neapolitan singers from one of the boats in the harbor suddenly burst into music—a loud song in a rich tenor voice, and the vociferous accompaniment of mandolins. It was a dramatic touch, foreign and romantic. As I walked away, down through the long avenue of trees, I turned a moment and waited. The myriad dots of light, the moving figures of white among the shadows, made a picture in my memory. I felt the gentle breeze against my face. I heard the rhythmic, swaying music, and suddenly above it all a ringing note of a girl's laughter, the sound of pure delight.

Then I thought of the big man who sat in the stifling atmosphere of an apartment house in New York, looked out upon an empty, seething street, and who wondered why people left New York.

## Senator Cameron's Accident.

WHILE FORMER United States Senator J. Don Cameron and Mrs. Cameron were driving, on the afternoon of August 4th, from Fort William, Inverness-shire, Scotland, to Inverloch Castle, Lochaber, which the Senator leased for the summer, the horses shied and the carriage collided with a cart. Both the Senator and Mrs. Cameron were thrown out and the former was severely injured in the groin. Mrs. Cameron was not hurt, and the Senator, it is reported, has completely recovered. Senator Cameron, known to the public as "Don" ever since he served as Secretary of War in the Cabinet of General Grant, has been rather out of the eye of the world since he retired from the Senate in 1897, at the time of the election of Boies Penrose. In the spring of this year there was some talk of his re-entry into politics to run for the governorship of Pennsylvania, but in May, while on a visit to Harrisburg, he himself put the quietus on that rumor. "I quit politics some time ago," he said, "and I will stay quiet. I don't want the nomination for the governorship or any other office."

## "Look Over the Harness First"

WHEN old Uncle John starts off to town  
He looks at the straps with care;  
"For you never can tell," says Uncle John,  
"What trouble there may be there.  
I've saved a runaway many a time  
Where worst might 'a' come to worst  
By simply not forgettin' to just  
Look over the harness first."

IS there not a lesson that he who starts  
To scatter wild oats away  
May learn from the plan of Uncle John  
Which will stand him in stead some day?  
In setting forth on the long trip where  
There's many a break and burst,  
Make sure, as nearly as mortal may—  
"Look over the harness first."

AND for him and for her who take the step  
That must lead unto joy or woe  
The plan that is followed by Uncle John  
Is a good one on which to go.  
There are many weary women and men  
Who are counting themselves accursed  
Because they didn't, before the start,  
"Look over the harness first."

FOR him and for her who have come to the place  
Where the ways appear to part,  
The lesson we learn from Uncle John  
May well be taken to heart.  
The joys they have lost may lie ahead;  
Perhaps when the bond is burst  
The eyes that are sad may brighten—but  
"Look over the harness first."

IN war and in love there are many defeats  
Which lead to shame and despair,  
That never had come if the buckles and reins  
Had only been kept in repair.  
Whoever you are, if it's glory or gold,  
Or power for which you thirst,  
Try Uncle John's plan, when it's time to set out—  
"Look over the harness first." S. E. KISER.

## Cuba's Conscientious President.

ONE WHO knew President Palma, of Cuba, intimately during his life in New York, says that while he was constantly handling large sums of money for the Cuban Junta the future chief executive was obliged to practice the most rigid economy to support his family, and that he often came to his New York office from Centre Valley without sufficient money in his pocket to buy himself a noonday meal.

## The Landlady's Son

SET RIGHT BY A BOARDER.

MOST people are creatures of habit. The person who thinks he cannot get along without his morning drink of coffee is pretty hard to convince unless he is treated like Mrs. Clara Hoffman, of Portland, Ore., treated her landlady's son. She says, "Having suffered with stomach trouble for several years I determined to discontinue the use of coffee and try Postum Food Coffee."

"I carefully followed directions for making and the result was a beverage very pleasing to the taste. I induced my husband to give it a trial and soon noticed the improvement."

"He complained of 'heart trouble,' but as he drank coffee I felt sure that this was the cause. It proved to be so, for after having used Postum for a short time his 'heart trouble' completely disappeared."

"Last year we went East, and while there boarded with a private family. Our landlady complained of sleeplessness and her son of obstinate stomach trouble. It was a plain case of coffee-poisoning in both. Knowing what Postum had done for me I advised a trial, but the son declared he wanted none of that 'weak, watery stuff.' Well, I had been making Postum Coffee for myself and husband, and next morning I offered him a cup and he drank it not knowing what it was. 'Well,' I said, 'you seem to like Postum after all.' 'What?' he exclaimed. 'That was not Postum; why, that tasted fine. Mother, if you learn to make it like this I will always drink it.' The next morning she watched me and I explained the importance of allowing it to boil long enough. After that we all drank it regularly, and our landlady and her son soon began to get well. They continued its use after we returned home, and recently wrote me that they are improving daily."

# A Famous Magician's Interesting Reminiscences of Himself and Others

By T. Williams

THE MODERN magician, although he does not excite the wonder and dread of mankind as profoundly as did his prototypes of yore, is yet not without honor for his skill. He puzzles and delights the intelligent, while the ignorant and superstitious regard him with a trace of the olden awe. The illusionist of to-day lays no claims, except facetiously, to an alliance with demons. He freely admits that his feats are triumphs of pure trickery, and he prefers to have his successes attributed to his own cleverness as a performer rather than to any supernatural agency. If this has tended to lower, in great degree, the estimation in which the "black art" was formerly held, making its practice only a form of diversion, the latter nevertheless deserves to be continued as one of the most innocent and pleasurable kinds of entertainment offered to the public.

The true magician of these times, however, does not look upon his profession as merely a legitimate mode of entertaining his fellow-men. He prizes it as an art to be loved, developed, and followed with lifelong devotion. He considers himself no less an artist than are the other lights of the stage. This view of the calling was set forth in clear terms by Kellar, the leading magic worker of America, in a recent conversation with a representative of *LESLIE'S WEEKLY*. When questioned as to the qualities which go to the making up of a successful magician, Mr. Kellar, who is both well-informed and fluent of speech, said:

"He must, of course, be born with a tendency in that direction. He must possess certain native gifts, but these he must cultivate with care and bring them up to their highest pitch of development. A magician requires more than usual manual quickness and dexterity. He needs thoroughly to understand human nature, so that he may readily read the character of his audiences and adapt his performance to their intelligence and taste. He should be a good, easy, plausible talker, capable of interesting his listeners and of diverting their attention, when necessary, from too close an observance of his methods at any part of a trick which he may be performing. He should be able with his little speeches to strengthen the illusion created by his feats while pretending to explain them.

"Professing to elucidate a mystery, he should manage to deepen it and make his efforts appear more puzzling than ever. The magician should also be a man of nerve and resource. He must calmly turn off the failure of any of his attempts with a story or a facetious remark. Moreover, he must be so adept that he will seem to be performing the most difficult tricks in an offhand way, as if they gave him no trouble and required no thought on his part. In other words, he must throw himself so completely into his work that his tricks shall appear a natural and spontaneous expression of his own self. He should not go about his task in a merely mechanical fashion. He should infuse all that he does with his own individuality."

This, certainly, is setting relatively as high a standard for the performer of legerdemain as for any other artist, on or off the theatrical boards. Continuing, Mr. Kellar still further emphasized the importance of his calling as follows:

"Magic is an art which requires a lifetime of study and practice in order to arrive at proficiency in it. The magician should begin his career when a boy and should pursue the calling assiduously from the start. At no time can he afford to be indolent and negligent. If I do not keep up my practice continually I begin to lose my facility, as surely as a musician who neglects his instrument. It is necessary for the efficient magician to be striving to discover new principles and methods from year to year, to the end of his days. The ambitious young magician is apt to be self-complacent and to fancy that he knows all about his art. But I, who have been a performer of magic for over forty years, feel that I am only beginning to learn the art."

Mr. Kellar also stated that in order to achieve the highest financial success a magician should be a good business man, or at least have at his right hand some trustworthy person gifted in that line. In response to inquiries as to how he produced his illusions he laughingly declared that he was not in league with the Evil One, and that his feats were all based on scientific principles, there being nothing in them which could not be completely explained. He very naturally declined to reveal any of the secrets of his art, but he talked at some length of his great levitation feat, in which a woman is apparently hypnotized and then is suspended in the air without visible means of support. This trick Mr. Kellar intimated he had learned from the leading fakirs of India, who, he stated, had discovered and acted on a simple fact of science. For three years his brother conjurers in this country have been trying in vain to detect the method by which he produces this effect. Mr. Kellar has been deluged with letters from them offering all sorts of explanations of the feat, but nobody except himself seems to have succeeded in performing it. Some day, he admitted, the right clew would be hit upon and then the feat would soon cease to be a novelty and a mystery.

As to the impression made by his performances on audiences, Mr. Kellar stated that in general they had caused no serious commotion at places of exhibition, although occasionally awe-struck women had been moved by them to hysteria and fainting fits. But he told some interesting stories of his experiences in lands where superstition is rife. In 1874 Mr. Kellar was touring Mexico in association with William Fay. Those were the days when railroads were few in the land of Diaz and when traveling was mainly done by stage or mule. Highwaymen were numerous, but although many other travelers were held up and robbed, Messrs. Kellar and Fay were never molested. The report that they were powerful wizards, who could command the services of the demons, went everywhere before them, and the bandits and all other evil-doers gave them a wide berth.

Their notoriety was greatly increased by virulent attacks made on them by church papers in the City of Mexico, which alleged that they were devils and had come into the country in order to overthrow the religion of the people. The articles in these journals stirred up a strong popular feeling against the two magicians, and it was necessary, to save them from mob violence, for the authorities to furnish them with a guard of troops on their way to and from the hall in which they gave their exhibitions. In spite of the hostility of the more bigoted

to make it known that he was an American, displayed his passport, and explained the sheep-killing transaction. The sentiment of the Boers was instantly changed in his favor, and they not only showed him all hospitality, but also sent letters to their friends in other parts of the republic commending Kellar to their good graces. Thereafter his tour in the Transvaal was a regular triumph.

Kellar's other reminiscences include an interesting tale of shipwreck and loss of fortune. After a successful professional trip through Mexico and South America in 1875, Messrs. Kellar and Fay set sail from Brazil for England in the Royal Mail steamer *Boyne*. The vessel touched at Lisbon on her homeward voyage and the Hon. Benjamin Moran, then United States minister to Portugal, came on board, as did four Portuguese priests attired in their peculiar clerical garb. Kellar, who was acquainted with Mr. Moran, remarked to the latter, as he pointed to the priests, "See the Jonahs." Mr. Moran replied, "They may not be Jonahs, but I certainly am. I have never sailed on a ship yet that did not meet with some accident. Either the propeller was broken, or she ran on a rock, or was dismantled, or something else happened." Kellar had previously told the minister that the voyage from Brazil to Portugal had been extremely placid and pleasant, but Moran predicted that owing to his presence on the craft all this would soon be changed. He was a true prophet. When the *Boyne*, after departing from Lisbon, had arrived in the Bay of Biscay, off Ushante Point, a mile from the island of Moleno, she became enveloped in a dense fog, lost her reckoning, crashed upon a rock, and sank so low that one of her rails went under the water. The two hundred persons aboard took to the boats and were finally rescued, and were carried from Moleno to Brest by a French war-ship, and thence sent to London by the French government.

Arriving in London, Kellar learned that Duncan, Sherman & Co., bankers, of New York City, to whom he had forwarded all his share of the profits of his Mexican and South American tour, had failed. He was penniless and was curtly refused accommodation at an English hotel where he had often been a guest and had in the past spent much money. Hunting up a friend he borrowed a sovereign and was thus enabled to get food and shelter. The next day he called upon the late J. S. Morgan, father of J. Pierpont Morgan. J. S. Morgan's London banking house was the correspondent of Duncan, Sherman & Co. To the elder Morgan Kellar told his story and the banker, after verifying it by cable at his own expense, loaned the magician \$500 to carry him back to New York. On reaching this city Kellar learned to his delight that all his wealth had not been lost. A draft for \$3,500 mailed from Brazil had reached London for collection, but the proceeds had not yet come into the hands of Duncan, Sherman & Co. This money Kellar afterward secured and out of it he repaid the loan to J. Pierpont Morgan. In view of the criticisms that have been passed on this foremost of American financiers and promoters, Kellar's opinion of him is worth quoting. The magician spoke of both Mr. Morgan and his father in the highest terms, declaring that they had been actuated in their lives by principles of probity, fairness, and benevolence. Of J. Pierpont Morgan, Kellar said: "There is a man who carries out the

Bible injunction not to let thy left hand know what thy right hand doeth. He gives away tens of thousands of dollars in charity every year and never publishes the facts. There is no better nor greater man alive in America to-day."

Mr. Kellar, who is an exhaustless raconteur, tells many other tales of his world-wide travels. He has performed in nearly all parts of the globe, including India, the reputed home of remarkable magicians. It is interesting to note that, while he credits the abler fakirs of that country with considerable talent, he wholly discredits the marvelous stories told of their superhuman powers. The trick of growing the mango-tree is, he says, clumsily performed, the fakir wearing a garment with large sleeves in which he conceals the appurtenances of the trick. As for the boy who climbs a rope thrown up into the air and disappears, Kellar, by the most diligent search, was unable to find the slightest evidence of any such performance.

When asked what portion of his career as a magician had most impressed and had been most valuable to him, Kellar replied that he would not part with a single one of all his experiences. All, he asserted, had been useful to him in different ways and he was philosopher enough to value them all. He spoke, however, with special fervor of his youthful endeavors in the great Northwest, when for years he struggled with poverty and hardship, exhibiting in school-houses and barns and glad, and proud when he had a four-dollar house. The magician has won his high place in his profession not through luck, but by means of exertion as hard as that which is requisite to success in any other department of life.

BRACES the nerves, builds up the blood, strengthens every way—Abbott's, the Original Angostura Bitters.

KELLAR, AMERICA'S LEADING MAGICIAN, WHO HAS CHARMED LARGE AUDIENCES IN MANY LANDS.

church people, however, big crowds gathered to witness and shudder at their every performance, and their journey through Mexico was financially most profitable.

Mr. Kellar also related with much zest an incident of his travels in the Transvaal. It was not very long after the famous fight of Majuba Hill, wherein a British force had been cut to pieces by the Boers, and although peace had been restored between the two countries, yet the Dutch farmers cherished a bitter hatred of the English. Mr. Kellar's party was short of fresh meat and he sought to purchase a sheep from a farmer whose home he was passing. The farmer, taking the stranger for an Englishman, refused to sell him any meat or to have any dealings whatever with him. Finally Kellar took advantage of an unwritten law of the Transvaal which permitted a person in need of food to kill a sheep, wherever he might find it, on condition of paying the owner a sovereign therefor. One of Kellar's black servants shot a sheep in the recalcitrant farmer's flock and proceeded to dress it for the use of his party. The enraged farmer refused to accept the proffered sovereign and the coin was placed on top of his gatepost. The Boer raved and swore and raised so loud an outcry that speedily twenty or thirty other farmers gathered on the scene and captured the leader of the intruders.

The injured farmer procured a rope and the amused magician was at once securely bound, as was supposed, the intention being to take him before a magistrate. In a twinkling Kellar, who was used to such tricks, had got free of his bonds. Then another Boer re-tied him more firmly than before, but the rope was quickly sent flying through the air and alighted on the roof of the farmer's house. The farmer then went into a frenzy of rage. He shouted that Kellar was a tool and protégé of Satan and he made bitter threats. Thereupon Kellar condescended

## Books for Nature Lovers

By La Salle A. Maynard

THE CRITICISM has been urged against some recent stories of animal life, and particularly against Charles G. D. Roberts's "Kindred of the Wild" (L. C. Page & Co.) and William Davenport Hulbert's "Forest Neighbors" (McClure, Phillips & Co.), that the authors have overdone their work, have allowed their imagination to carry them too far, and thus have done violence to the truth of nature by attributing to the *dramatis personae* of their stories qualities, feelings, and emotions entirely at variance with the known ways and habits of the animals depicted. Perhaps this is true, and we can quite understand how some professional naturalists, the specialists in zoology and other natural sciences, must view with indignation, if not with horror, the free-and-easy way in which some of the animal-story writers of the day handle the facts in order to make them serve the ends of fiction. Probably the tendencies and temptations here are much the same as those confronting the writers of ordinary fiction when they attempt to weave into a story the lives and characters of real personages whom they have studied or known, and have found it essential to literary effect to attribute some qualities or characteristics to these personages which they did not actually possess. We all know, too, what storms such departures from the literal truth and the material facts, innocent though they were of any real harm, have stirred up around the heads of some of the unlucky authors; how Cable has been roundly denounced in the South on the ground chiefly that his "Creole Days" and other early stories were not true to life in all respects, and how many Californians can hardly find a kind word to say of Bret Harte, even now, because of his alleged tendency to add a coloring to his tales of mining and camp life which the actual facts of the situation did not entirely warrant. It is difficult to speak patiently of criticism of this extreme kind, which allows no license to the imagination, nothing to the demands of literary art, but would judge fiction by the same hard and fast rules that apply to the measurement of cordwood or the weighing out of flour and molasses.

The writers of stories in which animals are endowed with speech and other human attributes are bound, it seems to us, by motives of self-interest as well as by ordinary considerations of truth and honesty, to keep as close to the law and the facts as possible, for only by doing so can they hope to gain and hold the respect and favor of the reading public. But when it comes to the ascription of thoughts, emotions, passions, to the creatures of the fields and woods, the range is necessarily wide, and one should not be too punctilious or insistent as to what should or should not be done. Providing the writer does not violate the ordinary canons of literary art and his spirit is true and genuine, he should not be quarreled with if his wild folk sometimes speak and act as we ourselves cannot imagine such creatures could possibly do. We have been unable to detect any grievous errors on the technical side of the books of Mr. Roberts and Mr. Hulbert, while we have found much in both to entertain, to amuse, and to instruct. Both writers have evidently drawn upon a fund of personal and intimate knowledge, and both betray not only a true love of nature but a deep and sympathetic insight into its processes. There is a kinship between the two books in the fact that the animal life which Mr. Hulbert depicts around "Glimmerglass," the little lake in the wilds of northern Michigan, his beavers, loons, lynxes, and deer, breathe nearly the same atmosphere as the eagles, elk, cats, and bears who figure in the pages of Mr. Roberts. That the latter has the gift of a true poet and a romanticist helps to lift his narrative to a higher level than the other, and to impart to it a grace and charm of style peculiar to itself.

So far as fidelity to the facts and the truths of nature are concerned, we have all this, and more besides in Ernest Ingersoll's "Wild Life of Orchard and Field" (Harper & Brothers), a work of a tone and character entirely different from the two we have been considering. Mr. Ingersoll is one of the best known and most popular of living American naturalists, and has written much and entertainingly concerning the ways of animals, both on the land and in the sea. Few men have done more through the press and on the lecture platform to develop the interest of all classes, young and old, in subjects of this character, and few have added more largely to the fund of common knowledge along these lines. In the present volume the creatures brought within the field of vision and study, in text and photographic illustration, are mice, weasels, squirrels, snails, swallows, woodchucks, and other inhabitants of our northern meadows and uplands, with most of whom we are all familiar after a fashion, but of whose ways and habits Mr. Ingersoll has many interesting and amusing things to tell which will

be new to most of his readers. Nothing could give greater delight and satisfaction to a genuine nature-lover than to follow this writer through such chapters as that on "How Animals Get Home," "The Way of a Weasel," or "A Gentleman of the Orchard," replete as they are with apt and illuminative anecdotes and the careful observation of a trained, acute, and sympathetic student of nature.

It requires no great effort or reach of the imagination to believe that a close and sympathetic kinship exists between the trees, the flowers, and other plant growths of the forest and road-sides, and the shy creatures who spend their lives amid such surroundings, who build their homes and rear their young among the whispering leaves. We all know how kind and helpful these things belonging to the animate and inanimate world are to each other, how the bees, the squirrels, and the birds scatter the pollen and distribute the seeds to perpetuate the race of plants; and how the latter freely lend not only their protecting shelter to their animal friends, but often through a close semblance of form and color shield them

ILLUSTRATION BY CHARLES LIVINGSTON BULL, FROM "THE KINDRED OF THE WILD."

from the eyes of their enemies. If there is such a thing as a mutual understanding between any two orders of existence in nature it must surely exist between the birds and flowers, which have so many attributes in common, are alike dowered with so much sweetness, grace, and beauty. Considering the comradeship of birds it may not

be so true after all that many flowers are "born to blush unseen" and "waste their sweetness on the desert air."

It is because of the real or apparent kinship of which we have been speaking that the transition from such scenes and characters as we have had in the writings of Mr. Ingersoll, Mr. Roberts, and Mr. Hulbert to the talks about flowers in Frances Theodora Parsons's "According to Season" (Charles Scribner's Sons) seems so easy and entirely natural. In this volume, as in the others, we are under the guidance of a true nature-lover, who finds among the wake-robins, the wood lilies, the milk-weeds, the coltsfoot, and the marsh-marigolds of our swamps, meadow lands, and waysides as many things to marvel over, to excite interest and curiosity, to touch the sympathy, and awaken sentiment as our writers on animal life. The aim of this book, as partly implied in the title, is to bring the reader into more intimate knowledge with the common wild flowers of our northern latitudes, by studying them as they appear in the procession of the seasons; for we all know how the flowers, like the birds, "tell the days" of the year, are nature's time-keepers that never need winding up. It would be a dull mind, indeed, that could follow Miss Parsons through the pages of this charming book and not be inspired by her enthusiasm and helped and enlightened by her suggestions and observations. A specially attractive feature of the volume are the thirty-two full-page plates by Elsie Louise Shaw, in which many of the flowers described are brought out in their natural colors with all their exquisite beauty so faithfully reproduced that one is tempted to believe that the perfume is there also.

To pass from such writings as we have just been considering to the "Brook Book" of Mary Rogers Miller (Doubleday, Page & Co.) is really to remain in the same sweet and delicious atmosphere and amid the same happy scenes and surroundings; for if there is anything more than another for which the birds, flowers, and wild creatures of the woods and fields must cherish an affection in common it must be the brooks which wander through their haunts and which offer to all alike their gentle ministrations, their coolness and refreshment. No bit of natural scenery can be considered ideal that does not include within its scope a brook, whether it is one that sings its way through the nodding grasses of a meadow or one that tinkles and murmurs over the pebbly shallows under the shadows of a forest or down a mountain side. Always and everywhere the brook has a joyous, cheerful note, a voice that speaks only of the sweetest, happiest things, in unison with the songs of the birds that nest above it or the perfume of the flowers that lean over its waters. In the orchestra of nature there is truly no lovelier note, none more delightful to the ear than that which sounds out from a brook as it habbles its way over the stones; and when one can hear it, as one sometimes may, near nightfall, along with the carol of the robin, the chirp of the cricket, and the sigh of the wind through the leaves, there is no music under the stars like to it in exquisite tenderness and melodious charm. In delicate suggestiveness it outrivals all the sonatas of Beethoven; as an improvisation it strikes a deeper chord and sounds a more perfect harmony than anything Mozart or Liszt has ever given to the world.

We do not shrink from confessing that we have always been in love with brooks—a love ardent and abiding; and our ideal of a country home is a spot where, along with the companionship of birds and flowers, we might always hear the soothing, restful murmur of a brook in summer afternoons and the long silences of the night. Because of this longing and affection we have found a special pleasure in this "Brook Book" by Mrs. Miller, written, as it is, by one who has evidently made a long and loving study of her subject and is in thorough sympathy with it in all its many fascinating, curious, and interesting phases. And one cannot well dissociate brooks from the life that crowds their banks and teems in their waters, for in no place do all forms in nature, animate and inanimate, all things that creep, fly, swim, bud, or blossom, appear in greater beauty, variety, and complexity than in and around little streams. It is for this reason that in this volume, both in text and frequent illustration, we are treated to glimpses and descriptions of mandrakes, pussy-willows, hermit thrushes, sand-pipers, triangle spiders, brook trout, water tigers, back-swimmers, and many other things, large and small, all of which have their habitat in the brooks themselves, or as near them as their nature will allow. To be a true lover of brooks one must be, indeed, a lover of all that goes to make up the life and character of a brook, and that includes almost everything that is marvel us, beautiful, and attractive in the realm of nature.

## In the World of Sports

INTEREST IN TENNIS REVIVED—RAIDS ON THE NATIONAL LEAGUE—TRICK OF BICYCLE RIDERS—THE L. A. W.'S CRYING NEED.

**THE REVIVAL OF TENNIS.**—The recent international tennis series has convinced the dubious of the positive revival of interest in this vigorous sport and pastime. The fact that over 25,000 spectators witnessed the three days' play at the grounds of the Crescent Athletic Club, probably the handsomest athletic field in the world to-day, is a rather convincing argument in itself. No such crowds were ever before seen at a tennis tournament, either in this country or in England. While Whitman captured the singles in handsome form and saved the Davis challenge cup for America, the Doherty brothers defeated Davis and Ward more easily in the doubles than the score indicated. Sincere regret was expressed at the dismal showing made by Larned, the American champion, who went all to pieces after making a sensational start in the first two sets. Whitman was the sturdy oak who saved the day for America, and with another player of equal ability beside him we need not fear the invasion of the Englishmen next year—for it is practically assured that the latter will make another attempt to lift the cup next August. The experts are still discussing the peculiar arrangement which kept H. L. Doherty out of the singles. He, the champion of All-England, is admitted to be a better player than his taller brother, who defeated Larned and then surrendered to Whitman. The Englishmen say they expected that Dr. Pim would be more than a match for Larned, whom, singularly enough, they did not fear, believing that he would weaken when the final strain came, just as he did. Consequently the smaller Doherty was saved for the doubles and it was his clever work that defeated Davis and Ward. In the first two sets Davis did remarkable work and then became erratic, as is his wont, and the steadier play of the brothers won the day. Ward is a consistent, earnest player, but is anything but brilliant. What America wants for the international tournament next season is a mate for Whitman, and more than one of the experts are looking toward one of the two brilliant young Harvard players, Clothier or Beals Wright, to be the man. Both are of the improving sort, as their work during the remainder of the season is pretty sure to demonstrate. Another conspicuous feature of the tournament was the splendid physical condition of the visiting Englishmen. The Doherty brothers, particularly, did not carry an ounce of superfluous weight, and the tightly drawn skin across their faces showed careful preliminary preparation for months previous to the matches. With the possible exception of Whitman, the Americans were not in as good physical condition.

**STEALING BASEBALL PLAYERS.**—The wholesale raiding of the National League for its high-priced players, followed more recently by similar raids by the old National to get its former players back, has furnished a spectacle neither dignified nor sportsmanlike. When the fight between the two major organizations was first started the American's chances were generally belittled by most persons conversant with professional baseball. The old League club owners had made fortunes out of the game and it was argued that they would spend money liberally to protect their stock in trade, the ball players. Internal dissensions, however, prevented any concerted move until it was too late, with the result that an association is now in the field usurped by the old League for so many years, actually making money, while the original organization, on the whole, will probably lose this year. Every well-wisher of the game hopes to see the two organ-

izations shake hands and live in peace hereafter, but the chances of an equitable arrangement of that sort at present seem further away than they did a year ago. Realizing this, the hustling club owners in the younger body are preparing to fight to a finish, and there are those, who ought to know, who predict that both the Pittsburgh and Brooklyn clubs will be found in the American League next year. A club in New York is also a possibility. If the Americans can bring about this arrangement and protect their players at the same time they will have won the fight and the old National League will become practically a minor organization of the scope of the Eastern or Western Leagues. The legislation of the old League during recent years has been bad and for that reason its ultimate downfall will not be deplored, as it would had the club owners kept their hands cleaner and their deportment closer to sportsmanlike lines.

**THE PRINCE OF STARTERS.**—There are some men in New York and many more in Canada who will remember "Chris" Fitz Gerald, the starter at all of the important race meets in the East and at New Orleans, when he was an operator-correspondent in New York for a Philadelphia newspaper. Later he became the horse-racing reporter on a New York paper, which led to his gaining his present remunerative position. That he is the best starter this country has ever seen is admitted by all, even those who remember Caldwell in his palmist days. Fitz Gerald is still a young man, but he handles the jockeys better than did any of his predecessors. Fair and honest, he shows favoritism to none. His work this year has been better than ever and, while he makes a bad start occasionally, the old cry, "robbed by the start," heard so frequently a few years ago, is now a rarity. Fitz Gerald is simply another case of a studious young man of good moral repute who has made a profitable position for himself in the busy world of sports. Fitz Gerald generally drives to the races in a light road wagon, but he can be seen out frequently in the morning and in the evening on his bicycle. The meet at Saratoga has been the success predicted, in spite of the increased admission fee, and the fall season about New York promises to make more records in point of attendance. The betting at the tracks has been heavier this year than ever. More millionaires are flocking to the sport, which is bound to add zest to the game and to its speculative adjunct.

**TRICKY BICYCLE RIDERS.**—Those who have given close attention to the bicycle track this year are becoming convinced that the future sprinting and distance champions will have to be tricky as well as fast. In many of the contests so far, on the national circuit, jockeying has outwitted speed and staying power. The day that the colored whirlwind defeated Kramer at Manhattan Beach, in the third of a mile championship, all the tricks of the wily sprinters who ride on the French tracks were brought into play. Taylor had been Fenn's team mate, while Kimble, the Kentuckian, who can draw a thicker color line than any other man on the track, naturally paired off with Kramer. In other words, Fenn was to help Taylor, and Kimble was to do his best to get Kramer first over the line. The four loaded for a hundred yards with Fenn in the rear and at the top of the incline. Suddenly Fenn darted down the incline with full speed, with Taylor at his rear wheel. It was a sprint for a full quarter mile. Kramer, taken by surprise, could never catch up, and

the colored man defeated Kimble by about a length. Those sudden and unexpected jumps have been imported from France and are bound to be popular here. The slow thinkers among the circuit followers might as well go into some other business.

**WHY BORALMA WAS RETIRED.**—It turns out that the actual reason for the retirement of Boralma had little to do with the cutting of his hock by that fast trotter in his match race with Lord Derby at Charter Oak Park, Hartford. Mr. Lawson intimates that certain practices permitted by the trotting officials are not conducive to strict propriety, and that he does not intend to allow any of his animals to race hereafter. Other horsemen have given utterance to similar opinions and have divorced themselves from participation in professional trotting matches. Many horsemen think that the trotting game would be improved if the betting were managed in the systematic manner in which it is conducted on the running turf. There has been much adverse criticism, also, of the practice of laying up in heats, but, like most other practices of this sort, there is a good argument on each side of the fence. Still, the attendance at the circuit meets this year, especially at the races conducted at the Brighton Beach track, has been so large that there need not be any fear of any dropping off in interest in the doings of the "sidewheelers." The horsemen will themselves right the little wrongs as they crop up, and need no outside suggestions as to what ought to be done. The trotting matches have, as usual, been the drawing features for the country fairs throughout the East and West, and the promoters are said to have full coffers.

**THE L. A. W. NEEDS A HUSTLING EXECUTIVE.**—If there is an organization in the country that needs a hustling executive head, that body is the League of American Wheelmen. The league began its downward career when it started its fight against racing, and it made another mistake when it drew the color line. The recent meet at Atlantic City ought to have been one of the best in the history of the organization—instead, it was a dismal failure. There is plenty of work for the L. A. W. to do, but it simply needs somebody to do it. Isaac B. Potter, of New York, would be the man to lead the L. A. W. back to life and power if he would accept the office. Some of the present officials of the L. A. W. simply allow themselves to be elected to office, see their names in the papers, and then forget all about it.

GEORGE E. STACKHOUSE.

### For Debilitated Men,

HORSFORD'S ACID PHOSPHATE.

DR. J. B. ALEXANDER, Charlotte, N. C., says: "It ranks among the best of nerve tonics for debilitated men." Renews the vitality.

FINANCIAL AND INSURANCE.

**DIVIDENDS**  
Risk a postal. Send us your name for prospectus of the Mayo Mining and Developing Co. of California. Every dollar invested in these shares will return you regular, handsome, dividends. MILLIONS of ore values ready to mine; Electric Water-Power Plant in connection. Not the ordinary mining proposition. Shares now selling at ground-floor price. Bank References.  
**ROANOKE INVESTMENT CO.**  
516 Marquette Building. Chicago.

**GOOD ENOUGH FOR THE RICH WITHIN REACH OF THE POOR**

(10 CENTS PER SHARE.)

**A**N INVESTMENT IN THE ILLINOIS-COLORADO OIL, GAS AND COAL CO. (full paid and forever non-assessable treasury stock), will insure you a permanent income for life. Greater fortunes have been made out of oil than any other product Mother Earth has yet given up. THE ILLINOIS-COLORADO OIL, GAS AND COAL CO. has 800 acres of rich oil, mineral, and coal lands on the line of two railroads in THE GREAT SOUTH PARK, Colorado. More money is needed to develop this rich territory, and for that reason we are offering another block of this stock at 10c. per share.

The above offer is good for only a short time, for we have only a limited amount of shares for sale at that price. This stock will be selling for at least \$1.00 per share by the first of the year. If you can not pay the full amount of your subscription in cash we will accept 25 per cent. with your order, 25 per cent. in 30 days, and 50 per cent. in 60 days.

Remember, when this allotment is sold the price will be 20 cents. We have no bonds or preferred stock. Everybody buying the stock will share and share alike. Invest a few dollars and reap the harvest with us. Send in your order. Write for prospectus. Address

W. P. GARRISON, President,  
1611-12-13 Unity Building, Chicago, Ill.  
(Please mention this paper.)

**Hints to Money-makers**

**NOTICE**—This department is intended for the information of the regular readers of LESLIE'S WEEKLY. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to LESLIE'S WEEKLY at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.

**T**HE wise man begins to see the signs of the weather when the east wind begins to blow. He does not wait until the storm clouds fill the sky, and the rain descends, before seeking shelter. It is possible that prosperous conditions may continue, with fairly good crops, this fall, until the close of the present year, but he who looks for a new bull movement at this time expects too much. Unless all signs fail, the coming session of Congress is to be perplexed with demands for stringent trust legislation, coupled with demands, on the Democratic side, for drastic legislation to reduce the tariff on all trust-made articles. What this sort of agitation means to the business interests of the country, I need not point out. It will not be compatible in any sense with a bull movement.

One of the natural results of the disclosure that officers of corporations too often use their official positions for their own advantage at the expense of the shareholders, is the disposition on the part of small stockholders to refrain from giving their voting proxies away. Many small stockholders are either themselves attending the annual meetings of corporations with which they are connected, or sending their own representatives to look after their interests. If this method were more generally followed, corporations would be compelled to pay greater attention to the interests of minority shareholders. It is a good rule, where one cannot attend a meeting of his company, to refrain from filling out the blank proxies which are regularly sent to all stockholders. It is better to be unrepresented than to be misrepresented.

What stockholders can do when they get together and make a fight, was recently shown in the case of the Burlington, Cedar Rapids and Northern Railroad. The majority interests undertook to handle the stock of the minority, without giving the latter's interests what they were entitled to. The shares were selling at about \$140, while the earnings disclosed that they were worth much more. Learning this fact, the minority holders organized a protective committee, retained counsel, and made a fight. The majority thereupon surrendered and agreed to pay \$220 per share for the stock, or \$80 more than would have been paid if the minority holders had not combined to make an aggressive fight.

"P." New York: Has no rating.

"S." New York: Your inquiry is not clear.  
"H." Apollo, Penn.: I am not favorably disposed to either, from an investment standpoint.  
"H." Philadelphia: (1) I do not regard them with the highest favor. Will write a personal answer.

"W." Shelter Island, N. Y.: You did not give your box address. Papers should hereafter reach you regularly.  
"J." Fall River, Mass.: I can give you no better assurances than I have given to all other readers of the paper.

"S." Vineland, N. J.: I regard the Atlantic and Pacific Oil Company and the Interstate Petroleum Company's shares as highly speculative.

"C." De Smet, S. D.: (1) No rating. (2) If the condition of the money market does not interfere with bull manipulation, the low-priced industrial will next stand a good show for an advance.

"S." Aurora, Ill.: (1) Error in address. You will get it regularly hereafter. (2) Both have had considerable advance, partly due to manipulation. The preferred is safer. It looks as if the market might reach.

"J." Dimond, Cal.: (1) The information ought to be worth a regular subscription. (2) The 4 per cent. bonds of the United Railroads of San Francisco, around 92 or 93, are a fair investment, but not gilt-edged.

"Bus." Illinois: I would advise Iowa farm mortgages, paying 44 per cent., if you know they are first-class and they are under your own observation. My second choice would be the Union Pacific Convertibles.

"R." Butte, Mont.: I thank you for your letter and I agree with you. Railroads and newspapers sometimes combine to give a fictitious popularity to mining districts, for the enrichment of the former, but always at the expense of the confiding public.

"S." Kansas City: (1) The Homestake has paid regular dividends for many years, but it is a mining proposition, and there is an end to all things under ground. Its future prospects are not disclosed by its annual reports or by anything that the directors say.

"H. H." New York: I have not advised, as a rule, the purchase of the shares of Mexican properties. It is a free-silver country and its finances are therefore peculiarly subject to vicissitudes. Mexican Central shares sold last year as low as 13. Forty would therefore seem to be a pretty high price for them.

"H." Trenton, N. J.: The reports regarding Southern Pacific indicate that it could pay dividends from present earnings, and at the same time it is also conceded that a very large amount of money must be expended on its improvement. If the public were in the confidence of the management it would know when the time was ripe to buy the stock. Without this knowledge, purchases must be made at a venture.

"G." Milwaukee: While no report of the earnings of the Corn Products Company has been made public, I am told that the promise of a large corn crop, if it is fulfilled, means very heavy earnings for the concern. In that event, the common should be a good speculation, though rumors are constantly repeated that the company is to have opposition in the West. Very strong men are connected with the management.

"B." Allentown, N. J.: (1) The concern has no rating, but does considerable business. (2) The future of such speculative stocks as Wabash, Texas and Pacific, Toledo, St. Louis and Western, and Norfolk and Western, depends on the condition of the money market and the possibilities of proposed combinations. I advised the purchase of Texas Pacific and of Toledo, St. Louis and Western at about half present prices. Then was your opportunity.

"S." Chicago: (1) I have frequently answered similar inquiries regarding Chicago Great Western common. It sold last year as low as 16 and as high as 27. The belief that it will be an advantageous addition to some other line gives it its chief speculative value. On its earnings, it is high enough. (2) St. Joe and Grand Island, Wisconsin Central, and Southern Pacific might be put in the same class. The Wisconsin Central has many friends in the Street.

"H." Danville, Quebec: (1) I hear excellent reports regarding Consolidated Lake Superior shares, and Philadelphia parties, who largely control it, have been buying it on reactions. It is an industrial proposition, however, and much depends upon future business conditions. (2) It is understood that the controlling interest in the Toledo Railway and Light Company's stock was sold at about 22 or 23. The par value is \$100, and offers good speculative opportunity. (3) Conditions not such as to enable me to recommend at present.

"A. H. C." Ogdenburg: One dollar received. You are on my preferred list for three months. (1) Has very low rating. (2) You can trade in small lots with Harrison & Wyckoff, 71 Broadway, who are members of the New York Stock Exchange.

OFFICIAL LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 9 to 21, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears of Assessments for LOCAL IMPROVEMENTS in the Borough of the Bronx.  
23D WARD, SECTION 10, MOTT AVENUE PAVING, from the north side of East One Hundred and Thirty-Eighth Street, to the south side of East One Hundred and Sixty-First Street.  
23D WARD, SECTION 9, FENCING VACANT LOTS on south side of One Hundred and Sixty-Fourth Street, from 100 feet East of Boston Road to a point 300 feet east of Boston Road.  
EDWARD M. GROUT, Comptroller.  
City of New York, August 8, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 1 to 14, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears of Assessments for OPENING AND ACQUIRING TITLE to the following-named streets and avenue in the BOROUGH OF THE BRONX:  
23D AND 24TH WARDS, SECTION 9, EAST 171ST STREET OPENING from Sedgwick Avenue to the United States bulkhead line of the Harlem River. Confirmed July 7, 1902; entered July 30, 1902.  
23D AND 24TH WARDS, SECTIONS 9 AND 11, CHROMWELL AVENUE OPENING, from Inwood Avenue to Macombs Dam Road or Highwood Avenue. Confirmed July 10, 1902; entered July 30, 1902.  
23D AND 24TH WARDS, SECTION 11, EAST 171ST STREET OPENING, from Brook Avenue to Crotona Park. Confirmed July 13, 1902; entered July 30, 1902.  
EDWARD M. GROUT, Comptroller.  
City of New York, July 30, 1902.

(3) I have pointed out heretofore, on a number of occasions, the reasons why United States Steel common, paying 4 per cent., can only be regarded as a risky speculation. Quarterly dividends of 1 per cent. are paid at present. Many believe that the Morgan syndicate will have to put the price up in order to unload.

"Tarheel," Charlotte, N. C.: As I pointed out long ago, the capital of Toledo, St. Louis and Western is so small that it can be readily manipulated for a rise. Furthermore, the line has great strategic value and offers an attractive proposition to the Western manipulators who have been securing control of eligible properties, in order to resell them. This is why I persistently advocated the purchase of these low-priced shares. Their advance came at a time, however, when the New York bank reserves were so low as to threaten a critical situation. Until this condition is relieved, a reaction is more than possible. On reactions the purchase of its shares seems advisable.

**CHARTERS PROCURED** under South Dakota laws for a few dollars. Write for corporation laws, blanks, by-laws, and forms to FREDERICK LAWRENCE, late Asst-Secretary of State, Huron, Beadle Co., South Dakota.

**THE WHITE HORSE MINING COMPANY.**

FIRST PUBLIC OFFERING:  
**50 CENTS PER SHARE.**

This is a 30-day offer only—for September 30th this stock will advance to 60 cents per share, and shortly thereafter to its par value of \$1—what it is now worth and what it should be.

This company's property is situated in the famous Walker Mining District, Yavapai County, Arizona, surrounded by bonanza properties, and consists of water rights, mill and town sites, and nine full mineral claims—in all, about 200 acres. The development work consists of 2,500 feet of shafts and tunnels sufficient to prove the character of the ore. The mines are equipped with necessary plant and buildings for active work, which is being pushed day and night. Enough of the best high-grade ore blocked out to supply an immense reduction plant. The White Horse Mining Company should appeal to you as a splendid conservative investment and should be in your strong box. The company's properties are fully paid. They have no debts, titles perfect, no preferred stock nor bonds. Stock is non-assessable. It makes mining a business instead of a stock speculation. Its properties are new mines with all the values intact, and, lastly, this company's mines are now in full operation.

**\$100 INVESTED IN WHITE HORSE**

will bring you 200 shares of the best mining security you have ever purchased.

The White Horse will eventually become one of the great gold mines of this country. Read what other mines have done for investors:

W. S. Stratton, a poor carpenter, discovered the Independence Mine, and is now worth \$15,000,000.

\$100,000 invested in the Gold Coin mining stock is now worth \$17,500.

\$100,000 invested in the Isabella mining stock in 1895 is now worth \$4,766.

\$100,000 invested in the Butte and Boston in 1896 is now worth \$5,600.

In addition, some of the above companies have paid dividends on these investments aggregating more than the original capital.

Best and Belcher stock rose from 50 cents to \$23.50 per share.

The Comstock, of Nevada, produced \$60,000,000 in twenty years.

The Granite Mountain has paid \$3,000,000. The latter stock advanced from 10 cents per share to \$25.00 in two years. The White Horse to-day is worth more than par and is sure to pay large dividends in the near future.

PUNISHING A MILITARY OFFENDER IN PERSIA BY THE BASTINADO.

## Worse Than the "Water-Cure"

THE "WATER-CURE," the use of which in isolated instances in the Philippines has excited much comment in this country, is mildness itself compared with other modes of torture practiced in the far East. To mention only one, the bastinado is still a favorite penalty for certain classes of offenders in Oriental countries. In the Persian army, for instance, it seems to be employed frequently in the enforcement of discipline. The offender's bare feet are tied to a pole, which is lifted from the ground until the legs are stretched full length, and then the sensitive soles are repeatedly lashed with a cruel whip. The victim suffers excruciating agony and he is sometimes disabled for months, or even maimed for life, as the result of the inhuman punishment. And this is but a climax to that general and unjustifiable ill-treatment to which the Persian soldier is subjected.

## A \$1.00 Magazine

And a High-Art Picture Supplement  
For Twelve Months for Only

# 30 Cents

Provided your subscription is received before  
October 15, on which date the price will be in-  
creased to 40 CENTS, and increasing 10 cents  
each month until the price of \$1.00 is reached.

You never before had an opportunity to get such a bargain in literature as this.

### The GRAPHIC MAGAZINE

Is cleverly edited, beautifully illustrated, and vividly interesting from start to finish. It is a dollar magazine in every particular. It is printed on the finest kind of paper, and its beautiful half-tone illustrations are bound to make a sensation. It fills a void in the magazine field.

Do not forget that you can get the magazine at this price only if your subscription is received before October 15. If you are wise, you will send it in at once and get the initial September issue, which entire edition is bound to become exhausted within a very short time. Look at this partial list of contents and then say whether you have ever before been offered so much supremely interesting and delightful literature for so little money.

#### A FEW OF THE GREAT FEATURES FOR SEPTEMBER.

**FOR LOVE AND GOLD**—A most fascinating story by AMELIA CROFT, whose own life's history has enabled her in this powerful narrative to touch the very root of human emotions, frailties and passions.

**NAPOLEON BONAPARTE'S FIRST LOVE**—Compiled from the notes of the one most closely associated with him in his intrigues. A true version of the romance that made him "the man of the world."

**THE ROSE-COLORED CASSET**—WYNNDIAN STOCKMAN's greatest literary effort, holding the imagination of the reader from start to finish.

**THE KING'S MAGICIAN**—Translated from the notes of the Spanish adventurer whose magic nearly won a throne.

**WHEN THE COAL IS ALL BURNED UP**, or when the people get tired of the Coal Trust's tyranny, what shall we do for fuel? A substitute is interestingly described in one of the novel articles in this number.

**VOLCANOES AND THEIR CAUSES**—Vividly illustrated, and in view of Mont Pelé's recent going an article of supreme interest.

**THE STORY OF THE STARRY SKIES**—A fascinating article by the famous astronomical authority, THOMAS M. UPP. Tells how you can locate and identify the planets yourself. Especially interesting to astrologers, students.

**GLIMPSES OF NEW YORK CITY**—Here are described and pictured the famous streets, avenues, drive-ways, boulevards, parks and historic spots of the Metropolis of the Western World, with graphic pen pictures of the bright and dark sides of life in the big city.

**NEW AND CURIOUS WAYS OF MAKING A LIVING**—In this article those who have to earn their own living will glean many ideas which will prove profitable. It tells about many new channels of employment which can be adopted.

**THE WOMEN'S, CHILDREN'S AND HOUSEHOLD CHAPTERS**, edited by experts, are full of new and novel suggestions for amusements and educating the young, as well as entertainment and instruction for the grown folks; also valuable advice for ladies who desire to improve their looks. Necessary information about health. Valuable recipes and ideas for the household and scores of other features.

**THE ILLUSTRATIONS**—in this second rank to none. Never before in the history of the publishing world has so beautifully illustrated a magazine been offered for such a low price.

## A Wonderfully Beautiful COLOR PICTURE SENT FREE!!!

As if giving One Dollar's worth of fine reading for Thirty Cents were not enough, **The GRAPHIC MAGAZINE** will give away each month exact copies of famous pictures FREE of charge to every subscriber, the supplement alone being worth the price of the entire subscription. For September the subject will be a reproduction in colors of a famous picture called "A Bowl of Roses." We are not allowed to mention the name of the famous artist who painted it. Suffice it to say that it is one of the world's great masters.

Please remember that this beautiful picture costs you nothing. It is sent you free with the magazine as soon as your subscription is received at the special price of 30 Cents, and another of as great value and beauty will be sent you each month. It is only by contracting for several millions of these pictures that we are able to furnish them at all.

You are therefore advised not to delay, but to send at once and mail your subscription to take effect with the initial appearance of

**THE MAGAZINE WHICH IS GOING TO MAKE THE SENSATION OF THE CENTURY.**

Be sure to send your letter, with 30 cents in any form you wish in a good envelope, to

**THE GRAPHIC MAGAZINE, 14 Warren Street, New York.**

P.S. Owing to the great expense of producing the pictures and the costliness of the magazine itself no free or sample copies will be sent to anyone, nor any further information given by correspondence. Just send in your subscription, and if you are not entirely satisfied, your money will be cheerfully refunded.

## Business Chances Abroad

IN A REPORT on Japan, recently issued by the British Foreign Office, it is stated that in 1901 six American locomotives were ordered for the Hokkaido government railways, and others for the main island and Kiusiu. The government railway bureau for the main island had specified for British locomotives only, for some years past, but the last tenders, opened about the end of 1901, included one American maker, the Schenectady Locomotive Works, and four British makers. The order went to the United States, the cheapest British price for all thirty locomotives being \$433,975, while the amount for which the contract went was \$387,210. This was the first time that the Japanese government had placed British and American makers in competition on the same specification. The makers were given a free hand as regards design, and, with the exception of the tires, they were not bound to any particular manufacturer for the material. The specification was just such a one as British makers had been asking for, yet they were beaten in the contest.

There appears to be a large and rich field for patent medicines, as well as many other articles of American manufacture, in the region about the port of Samshui, China, according to consular reports from that locality. The people are fond of doctoring themselves, it is said, and dealers in many kinds of patent medicines would probably find the Chinese excellent customers. The native farmers are fully alive to the necessity of renewing the productive powers of the soil, and an immense quantity of bean cake and other things is consumed for fertilizing purposes. It is therefore not unlikely that a market might be found also for cheap artificial manures. The increasing use of foreign nails is specially noteworthy, and from this it is not unreasonable to infer that plowshares, the iron parts of spades, rakes, axes, hammers, and tools of all kinds of native pattern might also meet with a demand. The study of foreign languages, which seems likely to be undertaken on a large scale, must also create a demand for foreign paper, ink, pens, note-books, and such things. One consul writes that he is convinced, in spite of the opposite opinion entertained by many, that much might be done in opening up new branches of trade by men possessed of the necessary knowledge and qualifications, who would deal direct with the Chinese, using at the same time native agents, whose work they could personally direct and control.

The outlook for American trade with Malta never was so promising as it is today, if we may judge from the reports submitted by Consul Grout at Valetta. In his opinion the local demand for American goods will almost double within the present year. One reason for this increase is that the Mediterranean and New York Steamship Company, which established a line of steamers between New York and Malta a little over two years ago and provided the island with the first direct trade relations with the United States it had enjoyed for years, has increased the number of its sailings. The second reason is that on account of the improved facilities mentioned, merchants at Malta who have never dealt in American goods, but have always traded with English, French, and German houses, are now turning their attention to the United States; and Consul Grout has been kept busy for months past giving them information as to various lines of American products and placing them in correspondence with American manufacturers. Among the products in demand in Malta are American carriages, American flour, heating stoves, and agricultural implements. Mr. Grout suggests that the best way to secure trade in Malta is for American dealers to send personal representatives there. This applies to all lines of goods. The representative possessing the necessary technical knowledge, equipped with a line of samples, and prepared to book orders, can secure more business than can be obtained through any number of catalogues and price-lists.

During the past six or eight months there has been a growing demand in Holland for American shoes—for men as well as for women. In writing of this matter our consul at Amsterdam, Mr. Hill, says that there is no prejudice whatever against American shoes. It is advisable, the consul says, to duplicate the German lasts, for the Ameri-

can lasts are not, as a rule, suited to Dutch feet. Germany and Austria furnish the largest supply of shoes to Holland. The American shoe is far superior, but it is also much more costly. One great drawback to American trade has been the long delay in filling small orders, sent to complete numbers which were sold out. The only remedy for this would be the establishment in Holland of a wholesale distributing station, which would also largely develop the sale of the American shoe.

## Hints to Money-makers.

Continued from preceding page.

"B." Montreal: Four dollars received. You are on my preferred list for one year. Will be glad to answer specific inquiries at any time.

"P." Minneapolis: (1) The surplus earnings of the Minneapolis, St. Paul and Sault Ste. Marie are estimated to be equivalent to 7 per cent. on the preferred and 8 per cent. on the common shares. The large ownership of the Canadian Pacific in 800 stock has led to the belief that the former will some day absorb the latter on a basis favorable to 800 stockholders, but the shares must be regarded as speculative. (2) Texas Pacific looks pretty high for a non-dividend-paying stock, showing only about 3 per cent. earned last year, but there are many who believe that it will be a gainer by the proposed Gould combination, provided, of course, that the market does not break. On a break it is good to buy and to hold.

"M." Mobile: Investment bonds yielding over 4 per cent. and recommended by Spencer Trask & Co., bankers, 27 Pine Street, New York, include the Montgomery Division First Mortgage 5 per cent. of the Mobile and Ohio Railroad, which, at 117, net 4.15 per cent.; the New Orleans and Mobile Division First Sixes, at 131, netting 4.12; Nashville, Chattanooga and St. Louis First Fives, at 115, netting 4.05; the Improvement and Extension Mortgage Sixes of the Norfolk and Western Railroad, at 134, netting 4.05, and the New River Division First Sixes, of the same road, also netting 4.05. A cheaper bond, also recommended by Spencer Trask & Co., is the 4 per cent. debenture, Series C, of the Atchafalaya Railway, which, at 98, nets 4.03.

"N." Chicago: (1) No statement of the earnings of the National Biscuit Company was given out at the recent quarterly meeting. It was only declared that the earnings were somewhat larger and the profits satisfactory. A law compelling industrial corporations to publish at least quarterly statements would be justified. (2) It is claimed that the Colorado Southern preferred is now on a 4 per cent. basis. A large amount of the stock, I am told, has been disposed of by insiders. (3) The rise in National Lead, which was promised some time ago, as I reported, is engineered by a small crowd of speculators, who have for some time been promising to organize the greatest lead combination in the country. Whenever there is a good profit on this rise, I would get out of the common shares.

"Inquirer." Grand Island, Neb.: (1) It would be safer to buy the Wabash Debenture B bonds. The interest on these bonds must be paid before anything can be set aside for dividends on either the preferred or common. Both these stocks have had a very decided advance. The common sold last year as low as 11 or 12, and the preferred at about 24. (2) Southern Pacific, as I have repeatedly said, is in the hands of skillful manipulators who bought it around 40 and are determined to advance the price while they are unloading. How high they will put it depends upon business conditions and the state of the money market. (3) The firm has been sued on several occasions by clients. (4) Brooklyn Rapid Transit is a speculative property, not earning 1 per cent. on its shares, but the possibilities of a combination of local traction interests gives it a fictitious value.

"E. A. H." New York: (1) The control of Southern Pacific was bought from the Huntington at about \$40 a share and is vested in the Union Pacific Railway. We have been promised an advance in this stock for a long time past and have been told that it was earning at the rate of 6 per cent. per annum. Nevertheless it is now proposed to issue \$100,000,000 in bonds for its improvement. If insiders should decide to put it on a dividend basis the shares would advance, but in the present situation they are high enough and one who purchases them must expect to gamble with those who have loaded dice. (2) Consolidated Tobacco bonds are not regarded as an investment. They have speculative possibilities. (3) United States Rubber common is now one of the cheap speculative industrials, mostly representing water. I am not advising purchases of anything excepting on reactions, until the money market is easier.

"A." Jacksonville, Fla.: (1) The cause of the slump in American Ice is charged directly to a leading officer, whose indorsement had always been furnished the company when funds were needed. It is said that he sold out his large holdings at the best prices, and then, when the company's paper had to be renewed to make the ordinary heavy winter expenditures for the ice crop, he declined to indorse it, and thus precipitated an unexpected crisis. It is said that at the low prices he has been accumulating the stock again. Of course it is impossible to verify this statement, but it bears the earmarks of truth. You did wisely in evening up your shares at the lower prices. The company's earnings ought to be large enough to pay the dividends on the preferred, and I am told that a surplus is to be accumulated to meet future emergencies. (2) The danger of dealing in Mexican securities is shown by the fact that the business interests of Mexico are now clamoring for the establishment of the gold basis, because of the depreciation of values with the depreciation of silver. This situation jeopardizes the property of the country.

"Inquirer." Baltimore: (1) The market itself has answered your question. I advised the purchase of Toledo, St. Louis and Western when it was selling at 19. (2) I have advised regarding this so often that I am surprised at your inquiry, if you have read my column. Chicago Great Western common is speculative and its future hopes are based mainly on the strategic value of the road, which may compel its absorption or purchase by some of its great competitors. (3) Impossible to say when any stock has reached its limit, in view of the fact that manipulating cliques may decide at any time to make a new plunge in a new direction. (4) Much depends upon the general outlook of the iron business. The notable decline in the domestic iron output just reported may have some significance. Republic Steel common represents nothing but water and is therefore only speculation. (5) I said long ago that the Seaboard was in the hands of masters of the art of manipulation, who will get all there is out of the stock. (6) Having advised the purchase of Texas Pacific from 16 up, I feel that it is pretty high around 50. On reactions it is a good speculation, however, as long as the activity in the market continues.

## Hints to Money-makers.

Continued from preceding page.

"B." Pittsburg: Answered by letter.  
"S." Fall River: Consult a local banker.  
"B." Brooklyn, N. Y.: Not given any rating.  
"E. M. L." Minneapolis: Nothing is known of it on Wall Street.  
"F. M. L." Battleboro, Vt.: I doubt if it has any value. Nothing is known of it on Wall Street.  
"Artemus." Piedmont, Ala.: I am unable to tell you. You should hold your lawyer responsible.  
"S. R." New York: I would sell it at the first favorable opportunity. You ought to get what

you paid for it, unless the market breaks suddenly and sharply.  
"Sunbury." Erie, Penn.: Write Samuel Ben, president of the Philadelphia and Erie, Philadelphia, Penn.

"G." Boston: I advised the purchase of United States Express when it sold around 90. It has reached 136 lately. Keep it for the present.  
"E. B." Maryland: I do not advise the purchase of Consolidated Wireless Telegraph stock as an investment. The government is experimenting with its own system.

"K." Minneapolis: (1) Official notice has not reached me. I am only expressing my honest opinion. No one is infallible, but in the light of history, after three years of a bull market, the chances for a decline are far greater than for a rise; that is common sense.

"F." Buffalo: Many believe that the Vanderbilt interests will some time acquire the independent lines of the Pere Marquette, which has connections extending throughout the best part of Michigan. The road is not earning more than 1 per cent. on the common, but a large part of its earnings is being applied to the improvement of its physical condition. Speculatively it has value.

"E." Hedgesville, N. Y.: (1) I have little faith in the plantation bonds either of the Cuba or the Japanese company. It is a curious circumstance that distance not only "lends enchantment to our view," but also an enchantment to our investments. My own experience shows that the nearer home you place your investments, the safer you are. (2) Greatly overcapitalized. (3) Advice regarding both are not favorable to them, from the investment standpoint.

"H. E." New York: Four dollars received. You are on my preferred list for one year. (1) St. Joe and Grand Island second preferred sold last year as low as 17 and as high as 38. You ought to get a profit on the stock, and I am advising every one to take a profit in this market, and be satisfied to await lower prices. (2) I do not believe in the scheme of the Federal Securities Company, or any other which offers returns of 5 per cent. a month. Avoid the get-rich-quick concerns. (3) Only speculative.

"I." Brooklyn: Southern Railway preferred pays 24 per cent. semi-annually, or 5 per cent. a year, and at prevailing prices, if it is able to continue these payments, is cheap, compared with other 5 per cent. stocks. You would be wiser, therefore, if you are looking for an investment, to keep it, rather than to exchange for the common, which pays no dividends. There has been talk of the retirement of the preferred, to the advantage of the common, but money market conditions would hardly seem to warrant such a move at present.

"B. D." Buffalo: Two dollars received. You are on my preferred list for six months. (1) The fact that the leaders in the copper market are talking in a rather bearish vein leads many to believe that they are trying to depress copper shares, so as to pick them up. I would not sacrifice my Atacanda. (2) The power of Chicago and Great Western to affect the earnings of its competitors is shown by the success with which it recently cut the rates on dressed meats. It is a thorn in the

side of the leading trunk lines, and some day they will have to take it in at a good price. This has given value to the common shares. Of course the value is largely speculative.

"H." Hartford: I answered a similar inquiry to "G." Fiskeville, R. I., recently. I said that the Hudson River Water Power five per cent. at par were not a strictly high-class investment. These bonds are being sold by E. H. Gay & Co., and an application to list them on the New York Stock Exchange will be made. I have looked over the data kindly sent me by Gay & Co., which shows that existing contracts of the water power company will produce a revenue far in excess of interest requirements. These statements are predicated to an extent on the expectations of the future, and explain why a bond netting nearly 5 per cent. is offered around par.

"F." Navarre, India: The introductory note at the head of this department explains the meaning of the "preferred list." (1) I have no doubt that there is plenty of real estate within the limits of New York City, but still in the unimproved outskirts, that, if purchased now, will increase many-fold in value within ten or twenty years. Some of our shrewdest investors are purchasing acreage plots within a dozen miles from the heart of New York, in the hope of leaving them as a legacy to their children and grandchildren, which may make some of the latter millionaires. (2) I understand he can. No government taxes are paid on real estate. Only the local taxes, such as city and State, for which bills are regularly rendered. (3) Prices of stocks are generally high. Note my recommendations from week to week. (4) I do not understand your inquiry. (5) Most of them are highly speculative and many of them purely so. (6) For the same reason that respectable men lend their names to such enterprises. (7) Not necessarily a loss. Some of these enterprises are successfully conducted. It would be well to await the outcome.

New York, August 21, 1902.

## The ZIM BOOK—\$2.00

A Collection of ZIM'S Best Black and White Pictures

**HANDSOMELY** printed on heavy book plate and bound in cloth, with illuminated title or side stamp. Size of book, 11 1/4 x 14 1/4.

PRICE, \$2.00

The admirers of Zim (who has been aptly characterized as the Mark Twain of picture-dom) have for a long time asked that his laughable black and white sketches be published in book form. The sketches which the present volume contains have been selected by Mr. Zimmerman himself as being "his best."

## "Caricature."

A compilation in book form of the best work of noted artists and humorists. Complete in one volume of over 250 pages. The book is beautifully bound in cloth, with title stamped in white, and with gold edges.

IT CONTAINS OVER 1,000 ILLUSTRATIONS

by the following best-known artists and caricaturists:

Hamilton Zim Stanlaw Fithian Flehr  
Griffin Gilliam Outenault "R. B." Baker  
Sydney Adamson  
T. N. Sullivan  
J. H. Smith  
Peter Newell  
F. Nankivel  
J. M. Flagg  
C. E. Schultze  
Greening  
Werner Dugay  
Am. 'rson  
Fredericks  
"Gus" Dirk and  
Art Young

ITS POEMS, STORIES AND WITTICISMS are by writers such as W. J. Lampton R. K. Munkittrick Tom Marston W. D. Nesbitt Edwin L. Sablin Henry Tyrrell Madeline S. Bridges and Carolyn Wells

"CARICATURE" is a book specially for the library and for the home circle, and generally for every lover of fun in picture and prose. PRICE, \$2.00 per copy. Sent by express, prepaid, to any address in the United States by the Publishers:

JUDGE COMPANY, 110 Fifth Avenue, NEW YORK

## PAY YOUR VACATION EXPENSES

# \$3,000 for PHOTOGRAPHS

The past quarter century has seen the greatest advancement in photography; it has also included the development of our photographic lenses and shutters until now their number runs into the millions, used in every land and clime. In order to bring together a representative collection of work from this vast array of photographers we have instituted a competition including every class of photography and from the simplest lens on the cheapest camera to the most expensive anastigmat.

## Bausch & Lomb Opt. Co.'s LENSES or SHUTTERS

must have been used to make the pictures. That is the only condition. The exhibits will be judged in classes such as Landscape, Portrait, Genre, Instantaneous, Hand Camera large and small, etc., and every one can have an opportunity to compete. It costs nothing to enter; and the most competent and impartial judges will make the awards. If you are buying an outfit, see that the lens and shutter are Bausch & Lomb's make.

Special Booklet tells about the Classes and Conditions

## Bausch & Lomb Optical Co.

Incorporated 1866

NEW YORK ROCHESTER, N. Y. CHICAGO

SEND ONE COUPON AND 10 CTS.  
FOR OUR DOLL.

## EAT COOK'S FLAKED RICE

DON'T COOK.

1. Pour the dry flakes from the package into a colander.
2. Put a liberal amount of salt into a little boiling water.
3. Pour the boiling salted water on the rice, through the colander.
4. Drain, shake slightly, and turn out on a hot dish; serve with sugar and milk. That is all—and the rice is perfectly prepared in less than a minute.

FOR BABY TOO.

NEW BORN INFANTS—One cup of Cook's Flaked Rice, one quart water, boil ten minutes, add a pint of milk, pinch of salt, and a very little sugar, and strain.

THREE MONTHS OLD CHILD—Use double the quantity of Cook's Flaked Rice (two cups) and do not strain.

**COOK'S FLAKED RICE CO.,**  
1 Union Square, New York.

## How Strikes Affect Politics.

LET THE Republican party beware of the effects of the coal strike in the congressional canvass of 1902. Strikes have an ugly habit of registering themselves in national politics, and they hit the party which is in power at the time. This has been the experience of the United States in all the great labor conflicts.

The first of these took place in 1877. That was the year of the great railroad strikes throughout the East and middle West, in which there was rioting in Pittsburgh, Chicago, and many other places. Hayes was then President, and the Republicans were the dominant party. In the congressional election of 1878, the first important canvass which came after the strike, the Republicans were beaten.

In the strike on the Gould system of railroads, in 1886, which lasted many weeks, and which was under the direction of Martin Irons, great destruction of property took place, and many cities, including St. Louis and Kansas City, were terrorized. That was during Cleveland's first term. Consequently it was the Democrats who were hit then. In the congressional election of that year the Republicans did not carry Congress, but they reduced the Democratic majority to comparatively small figures. Some of the Democrats afterward said that the strike of 1886 had something to do with Cleveland's defeat for re-election in 1888.

The experience of 1892 is near enough to be remembered by every voter. The Homestead strike of that year, affecting the Carnegie steel works, figured with decided prominence in the campaign which began just as the strike was ending. Cleveland was then running the third time and for his second term, and his opponent was President Harrison, who was seeking re-election. Several things were assigned by the Democrats after the canvass was over for Cleveland's brilliant victory in 1892, in which he gained a majority of 132 votes in the electoral college. The McKinley tariff of 1890 was one of these causes. The Sherman silver law of the same year was another. The Republicans themselves, however, lay the blame of their defeat to the Homestead strike.

When the coal-miners first and the employés of the Pullman company afterward began their strike in the early half of 1894, in Cleveland's second term, the political horizon suddenly darkened for the Democrats, who controlled Congress as well as the Presidency. The fate of the Republicans in the strike of 1892 was cited in 1894 as an omen of the things which were to come to the Democrats when the people went to the polls. Nor did the omens fail. The Republicans won Congress in 1894 by the most sweeping victory which any party ever gained in a contest for the national legislature.

In 1902 it is the Republicans who are in power during the year of a great labor conflict. Senator Scott, of West Virginia, a stalwart Republican, says that the strike may cost his party three congressmen in his State and several in Pennsylvania. With the drift, as it is, against the Republicans for other causes, the outlook for the dominant party is far from being rosy. The coal-miners' lock-out may register itself in politics in November with a decisiveness which may surprise the country and confound the Republican party.

## Railroads a Great Factor in Prosperity.

THERE IS not in the United States a more competent, able, and eloquent discusser on railroad matters than Mr. George H. Daniels, general passenger agent of the New York Central, whose utterances on any phase of the subject are always, as they should be, listened to by the public with interest and respect. In his recent address before the Chautauqua Assembly, at Chautauqua, N. Y., on "American Railroads and Our Commercial Development," Mr. Daniels convincingly upheld the proposition that "transportation underlies material prosperity in every department of commerce." Mr. Daniels maintained that "those states and nations are rich and powerful whose transportation facilities are best and most extended," and that "the dying nations are those with little or no transportation facilities."

Mr. Daniels spoke of the extensive railway mileage and the highly-advanced transportation methods of the United States, and attributed to these in a large degree the wonderful progress and prosperity of the country. He found in the example set by the railroads of doing

things well and quickly a great stimulus to the introduction of our products of every kind into foreign countries. He dwelt on the increasing demand for American goods in other lands, and showed how greatly this was dependent on this nation's facilities for cheap and rapid carriage of commodities. He also indicated the profound and favorable effect on the internal development of the Union of the increase of our railway mileage from 9,000 in 1851 to more than 200,000 in 1902. Railroad facilities, he declared, had been the making of the States of Kansas, Nebraska, Minnesota, North and South Dakota, Montana, Colorado, California, Oregon, and Washington. Without the iron roadways the rich mineral and agricultural resources of these commonwealths, which have added hundreds of millions to the wealth of the republic, could not have been adequately exploited, and they would to-day "still be the homes of savages."

Mr. Daniels does not much overestimate the benefits which the railroads have conferred on this country. Their service, in view of the strenuous competition now on for the world's markets, is growing yearly more valuable to the people, and they will prove a tremendous factor for good in the future efforts to enhance the productiveness and growth of this country.

The remarkable and instructive address of Mr. Daniels we take pleasure in printing in full in this issue.

## Possibilities of Agriculture.

THE POPULAR lecturer of the day who sometimes discourses on "acres of diamonds" might well use that term as a text for a lecture on the enormous fortunes made in modern times in fruit, berry, and vegetable culture. It is a demonstrable fact, attested by the latest census reports, that there is more money to be extracted from the ground on our farm and garden patches than in our mineral belts of gold and silver. Financial prospectuses that promise great dividends promise nothing in comparison with the dividends from the planting of a single seed, and this is the sort of speculation or investment that every owner of a few acres can make for himself. The total value of the wheat produced in this country in 1900 was over \$323,000,000 and of corn over \$751,000,000, whereas our gold product in the same period was a little over \$79,000,000 and our silver about \$74,000,000.

But large and impressive as are the figures showing the total of our agricultural products each year, it is a demonstrable fact that this volume of products might be increased from fifty to a hundred fold were the same amount of ingenuity, skill, energy, and business acumen applied to the farming industry that is applied to railroading, manufacturing, and other lines of human thought and endeavor. By an anomaly not easy of explanation the farmer's vocation, on which the world must now and always depend more than upon any other, the chief source of our national wealth and prosperity, is in the rear of all other great human industries so far as application of scientific principles and the best results of modern study and research are concerned. Methods or systems of procedure which in a modern counting-room or in any learned profession would be regarded as antiquated, wasteful, and fatal to success, are still followed in the business of farming with the natural result of bringing that occupation into undeserved disrepute as yielding less profit for a given amount of work than almost any other.

Nothing is more common than the complaint even among the most fertile and productive farming districts of the country that the business is uncertain, that the money returns are small in proportion to the labor expended, and that farming life, on the whole, is dull and unpromising. It is certain that no class groans so much and so loudly about taxes, and oppose schemes for public improvement on that ground alone, as the farmers. This is illustrated by the bitter opposition usually offered by representatives of the farming interests to plans for highway improvement involving at the outset a slight increase in local taxes. Opposition based solely on such unwise and short-sighted considerations has for years kept New York State from the general adoption of a well-planned and wide-reaching scheme of road improvement.

As to what the soil may be made to produce under the most enlightened, progressive, and scientific methods, we have some interesting facts and figures presented in the work "Fields, Factories, and Workshops," by Prince Krapotkin, the Russian economist. The statements in this work are based chiefly on the results of intensive agriculture in parts of France, Italy, and Belgium, and the islands of the English Channel. It is shown, for example, that under these methods the soil of Belgium supplies with home-grown food no less than 490 inhabitants per square mile, with a large surplus for export, not less than \$5,000,000 worth of agricultural produce being sent to Great Britain every year. At this rate of production New York State alone would supply food for over 23,000,000 people and have a large surplus for export, and from the soil of Texas sufficient could be produced to sustain a population nearly double that of the United States.

Numerous instances are cited in this volume where eighteen tons of hay have been gathered from a single acre, and others where the same area has been made to yield from 1,500 to 2,000 bushels of potatoes, these crops being from six to ten times as large as the average yield of American farms. Still more astonishing are the results attained under glass-house culture, so extensively followed in Belgium and the Isle of Jersey, one crop succeeding another there the year around. By this method one acre of thirteen acres in Jersey is cited where the money returns obtained in a year were declared to be equivalent to what an ordinary farmer would obtain from 1,300 acres of land. Cultivation under glass, of course, involves a considerable extra expense for construction and maintenance, but

Krapotkin shows that this expense is not so great as many suppose, and that, in the end, market gardening by this method may be made enormously profitable.

It is demonstrated that by the careful selection of seeds, scientific tillage and fertilization one acre of land might be made to yield under open-air culture the amount now generally produced from eight or ten acres. It is contended, in brief, that the resources of the soil, even under the best methods, are yet only imperfectly understood and developed; that the possibilities in this direction are beyond anything we are now able to conceive. Taking the powers of man, the land, and the forces of nature, such as they are at the present day, and Krapotkin argues that from two to three inhabitants to each cultivable acre might be comfortably and abundantly provided with food. We hardly need say that on farm land generally in this country and elsewhere it usually requires from fifty to one hundred acres to afford a family of two or three a comfortable living.

We have cited these facts from Krapotkin's work, where they are amply verified, simply to show some of the results which may be expected when agriculture is pursued according to intelligent and scientific methods. We believe that the time is not distant when such methods will be generally applied in American farming, to the end of adding immeasurably to our national wealth and to the happiness, contentment and prosperity of our farming population, constituting, as they do, the backbone of the nation.

## The Plain Truth.

THE SUGGESTION that the farmers of the country combine in a sort of trust or national co-operative exchange, with a capital of \$50,000,000, to buy, sell, and deal in grain, provision, live stock, and produce, build elevators, and do a banking business, shows how strong a hold the trust idea has taken on the public mind. It will be an interesting experiment, if carried out, and everybody will hope that the scheme will be of value to the farmers who undertake it. For, as that observant journalist, James H. Potts, of the Troy Times, says, "Whatever helps the farmer helps the country in the long run."

IT IS about time that some of our public men began to discuss the trust question from a more intelligent standpoint than has usually been accorded to it. No one has ever questioned the independence and courage of Governor Odell, and his career as Governor shows that while he makes up his mind slowly he keeps his word and fulfills his obligations. The pertinacity with which he overcame all obstacles, in and out of his party, in his effort to equalize the levying of taxes, to relieve the burdens of the masses and to place a proper proportion of them on corporations, and his equally active and successful campaign in behalf of closer economies in the State administration, indicate the character of the man better than anything else could do. It is not surprising that in his recent forceful speech at a grangers' picnic, at the Thousand Islands Park, he discussed the question of corporate combinations from an intelligent standpoint. While conceding to corporations all their legal rights, and while urging fair play for combinations which "have for their subject a fair return, without injury to the great mass of people who make up our commonwealth," he declared that they should not be permitted "to monopolize certain products or oppress those who are dependent upon them for the necessities of life." There is a heap of common sense and philosophy, also, in this sententious utterance of the Governor, which may well be commended to the horde of spellbinders who are perpetually delivering their diatribes against every party, corporation, or individual who achieves success: "Nor is it right that envy, malice, and discontent should actuate us in our duties of citizenship, because contentment and happiness are the necessary adjuncts of a faithful people."

IT IS always to be regretted, when a public official is striving to do his plain duty, that he should unnecessarily be interfered with from any quarter. One of the most serious needs of every section of this city is an adequate system of street signs. The great lack of the latter in the metropolis has for years excited the disgust of its own citizens and the contempt of outsiders. Awake to this condition, President Cantor, of the Borough of Manhattan, has been making determined efforts to remedy it. Lately he awarded a contract for the erection of street signs of a certain design at the corners of the principal streets in his borough. Now the Municipal Art Society, objecting to this particular device, is moving to have the contract declared void. The society favors a different design—one which is declared by good judges to be inferior to the one approved by Mr. Cantor. Why, if the one contracted for will answer the purpose, any set of men should quibble over designs and endeavor to delay a much-needed improvement, is what puzzles the exasperated public. The street signs are wanted badly and at once, and we hope that Comptroller Grout, in whose power it lies to confirm or to throw out the contract, will heed the voice of the people rather than that of a coterie of finical artists. The attempt to block President Cantor in this matter is of a piece with the protests in some respectable quarters against the suspension of Edward F. Croker, chief of the fire department. Croker, who is a nephew of the 'squire of Wantage and a dyed-in-the-wool Tammanyite, has been relieved from duty by Fire Commissioner Sturgis, whose action is to be commended. If he can find grounds for ousting all the Tammany gang, decent citizens will rejoice. The fusionist movement for good government can never be completely fruitful so long as the hand of Tammany is still thrust into municipal affairs.

# PEOPLE TALKED ABOUT

NO ONE of the many colonial contingents of the British army in South Africa during the recent Boer war acquitted themselves more creditably than the regiments of the Canadian volunteers. They were in the field early in the contest and remained to the close, distinguishing themselves on many hard-fought fields. Among individual Canadians who have come in for special mention because of gallant deeds is Lieutenant Bruce Carruthers, of the Second Canadian Mounted Rifles. This company left Halifax for South Africa

LEUTENANT BRUCE CARRUTHERS.  
A Canadian volunteer in South Africa who has received signal honors.

in January, 1902, and on their arrival were immediately rushed to the front, and it was in the encounter with Delarey's forces at Hart's River that Carruthers distinguished himself. During the engagement he, with sixteen of his men, became separated from his regiment and was almost instantly surrounded by a force of over three hundred Boers. Upon being asked to surrender, Carruthers said that "Canadians never surrender," and then he and his men prepared to die, for that was what resistance against such an overwhelming force meant. They held off the Boers until Lieutenant Carruthers and three wounded men only were left, the others being dead, and then he was rushed and overpowered. Lord Kitchener, in his cable to the war office, went out of his way to describe this incident and added that "few instances of greater valor occurred during the war in South Africa." Lieutenant Carruthers resides in Kingston, Ontario.

THE DEMANDS of official etiquette in a court like that of England are so many, so varied and exacting, that it is not surprising to learn that even King Edward himself, schooled as he is by life-long training and exercise in these things, should occasionally be caught napping. Such a slip on the part of the King is said to have occurred recently on the occasion of a royal reception. When his Majesty made the rounds of the select circle he passed close to the Duke of Somerset, who made a careful obeisance. Either the King did not see him or he was preoccupied. However it was, the King, without acknowledging the obeisance, beckoned to some one almost directly behind the duke and asked him to come to the private royal supper. The person addressed happened to be nobody, as regards rank, so the Duke of Somerset, who is the fifteenth duke of that name, the title dating from 1540, was very wroth, and went home and wrote a letter, saying he regretted his sovereign saw fit to disregard him so publicly. The King's secretary answered the letter, saying it was all a mistake and would not occur again, and then the incident, so far as the public knows, was ended. The affair is an illustration of how important is a matter of etiquette where royalty is concerned.

ALTHOUGH THE recall of the present Chinese minister at Washington, the vivacious and outspoken, Wu Ting-fang, has caused no little regret throughout the United States, his successor bids fair to be fully as acceptable to our government and people. The newly appointed diplomat Sir Liang-Chen-Tung was prior to his promotion secretary of the Chinese embassy to the coronation of King Edward. He was educated in this country, being a graduate of Yale University, and is well informed regarding American institutions and conditions. He is about forty years of age and is a dignified, honest and able man. Sir Liang was formerly connected with the Chinese legation at Washington, and he has served on special missions to Europe and elsewhere. He obtained his knighthood as a reward for his services as secretary of the special mission which went to London to attend Queen Victoria's jubilee. He is a man of progressive ideas, and it is likely that the cordial relations now existing between the United States and China will be emphasized during his term as minister. The fact that his appointment pleases the Americans resident in Peking, is an assurance of his suitability for his new position. Before assuming his office at Washington, Sir Liang will make a visit to China, so that Minister Wu will remain at his post for four to six months longer.

SIR LIANG-CHEN-TUNG,  
Newly appointed Chinese minister to the United States.

THE BOAST of the Briton that life in his country is conducted so rationally that public and business men retain their vigor and working capacity until they are very

old, may easily be matched in other lands. The long and active lives of Gladstone, Montefiore, and many leading Englishmen besides these, are attributed to serenity of mind and a capacity for judiciously relaxing the strain of labor. But in this respect Englishmen are by no means singular. Even in nervous, hurrying America there are instances of men whose working power has endured into very ripe age. Recently at his home near Saratoga, there passed away a notable example of this type of men. Mr. Alanson Trask, father of the noted banker, Spencer Trask, made a fortune in trade and retired thirty-five years ago, but successfully and profitably managed a large farm thereafter, and served as a director in large corporations, until his death at the age of ninety-five. Mr. Russell Sage, the famous financier of this city, who has just celebrated his eighty-seventh birthday, is still deeply immersed in his business. The Hon. Martin I. Townsend, of Troy, N. Y., eminent as a lawyer and statesman, is, although a nonagenarian, practicing his profession with energy and zeal. United States Senator Pettus, of Alabama, eighty-one years old, aims at re-election in 1903 and is lively and ambitious. These men, and more who might be named, are hale and able to toil at an advanced age, because they have been strong and serene under the stress of life and have not sapped their vitality with worrying and fretting.

THE ENGAGEMENT of Reginald Vanderbilt and Miss Kathleen Gebhard Neilson was formerly announced at Newport recently, by cards sent out by Mrs. Cornelius Vanderbilt, mother of the young man, and by Mrs. Frederick Neilson, mother of the prospective bride. Reginald Vanderbilt was a member of the graduating class at Yale last June, although he has not taken a degree, and may return next year. His brother, Alfred G., married Miss Elsie French, and he has two sisters, Mrs. Harry Payne Whitney and Miss Gladys. Reginald recently became of age and Miss Neilson is twenty. On her mother's side she is connected with an old Baltimore family, the Gebhards.

MISS KATHLEEN NEILSON,  
Whose engagement to Reginald Vanderbilt is announced.

Frederick Gebhard. The young couple were brought up together in Newport and New York. The Neilsons have a house on Fifth Avenue, another at Lenox, and one in Newport.

NO ONE of the States or colonies making up the new and great Australian Commonwealth has attracted more attention in the outside world in recent years than New Zealand. This attention is due, in part, to the fact that the island has been the scene of some highly interesting legislative experiments and also some notable efforts in the way of promoting the mutual interests of capital and labor. New Zealand has, in fact, been represented by some enthusiastic writers as almost an ideal community in every respect. After allowing for exaggerations in this line it is doubtless true that the people of New Zealand are living under better and happier social, political, and industrial conditions than the people of any other part of the world.

Its public officials and other leading men seem to be of an unusual character so far as honesty, efficiency, and faithfulness to public duty are concerned. A man of this high type is the present premier of New Zealand, the Hon. Richard J. Seddon. Mr. Seddon is fifty-seven years of age, a mechanical engineer by trade, and a Lancashire man by birth. He emigrated from England at eighteen and entered the New Zealand Parliament at thirty-four. He represented New Zealand at the Victorian jubilee ceremonies in London some years ago, and was also in England during the recent coronation days. Mr. Seddon is a plain-spoken man, an ardent imperialist, with decided convictions in regard to such matters as the trade and tariff relations of the empire. It is his idea that the colonies are able to supply all the food-stuffs which the British empire requires, and that the English people ought to take advantage of that fact and learn to be a self-sustaining empire accordingly. As to imperial defense, he is strongly opposed to a paid standing army for the colonies, but he thinks that there ought to be a force ready for any emergency in any part of the empire, and that the returned troopers from South Africa would form a splendid nucleus for such a force.

HON. RICHARD J. SEDDON, P. C.,  
The progressive premier of New Zealand.

IT WAS not, perhaps, an unnatural mistake which one of the daily papers made the other day when it said that among President Roosevelt's callers at Oyster Bay was "Father Peter MacQueen." As Mr. MacQueen is a young Congregationalist clergyman the "fathering" was, of course, an error. In addition to pastoral work during the past few years in Charleston and Somerville, suburbs of Boston, Mr. MacQueen has rendered valuable

and distinguished service as a correspondent of LESLIE'S WEEKLY and of various American papers in China, South Africa, and the Philippines, his letters from these fields of activity being always spicy, instructive, and entertaining. Just after his call on President Roosevelt Mr. MacQueen started on an extended trip through the West Indies and will also go to Panama.

THE RESIGNATION of Justice Horace Gray, of the United States Supreme Court, on account of continued ill health, has given President Roosevelt an opportunity to make an ideal appointment. Justice Gray's selected successor is Chief Justice Oliver Wendell Holmes, of the Massachusetts Supreme Court. Justice Holmes is the only son of the late famous poet of same name, and he inherited much of his father's intellectual force and fine personal traits.

JUSTICE OLIVER WENDELL HOLMES,  
Who is to have a seat in the United States Supreme Court.

The new honor that awaits him will fulfill the fond sire's early prophecy that his baby would grow into a man of mark. Born in Boston sixty-one years ago, Justice Holmes enjoyed every educational and social advantage. He served in the Union army during the Civil War, was wounded several times, was promoted for gallantry, and when mustered out he was a brevet lieutenant-colonel. After the war he became noted as a lawyer, legal writer, and scientist, and was eventually raised to the bench of the State Supreme Court, on which he has sat for twenty years. His opinions have been scholarly and able, and he has expressed liberal views regarding capital and labor. Much interest is felt in the effect his appointment may have on the future attitude of the Federal Supreme Court on certain important questions. The decisions of that tribunal in the insular cases and against an income tax were made effective by a majority of only one. Should Justice Holmes's views on these subjects differ from those of Justice Gray, reversals of the court's conclusions would be possible. It is asserted, however, that the new justice is in line with his predecessor on these matters, and that his entrance into the court will in no wise endanger the decisions referred to.

NO ONE among the editors of religious weeklies in this country at the present time is better known and none is more popular in the fraternity than Major Marshall H. Bright, who has been chief editorial writer on *The Christian at Work* for nearly thirty years. Major Bright won his military title as a reward for gallant conduct in the Civil War, in which he was a member of the staff of General Thomas and saw much hard service in Kentucky and Tennessee. As a writer the major is noted for his incisive, vigorous style, his broad views, and conservative tendencies. His hobbies are bird study and the collection of Napoleons. He is a brilliant conversationalist, a capital raconteur, and a great favorite in social circles. The major is unmarried and lives at Tarrytown.

THE ANCIENT and honorable game of chess is one of the favorite diversions of Governor Odell, and while he is by no means a great expert in the game, he plays well enough to make it highly interesting for an opponent.

THE APPOINTMENT of Cardinal Gotti to succeed the late Cardinal Ledochowski as prefect of the Propaganda at Rome has revived the predictions that this eminent and illustrious prelate would be the next occupant of the pontifical chair, although the appointment mentioned by no means confirms these reports. There is no question but that Cardinal Gotti is fully qualified for the exalted position of the head of the Roman Catholic Church, and would make a worthy successor to the great and learned Leo XIII.

He is already well known throughout his church as a diplomatist and for his knowledge of canonical law. Cardinal Gotti was born in Genoa in 1834, and his father was a dock laborer. Through the efforts of his mother he was enabled to study at a Jesuit college. When he was sixteen years old he entered the cloister of St. Anne as a member of the Order of the Carmelites. He distinguished himself as a student by his power of clear exposition in recitation and the depth of his learning. After graduation he taught not only theology, but, by his own request, became an instructor in mathematics in the institute for naval cadets at Genoa. Many of his pupils now command vessels in the Italian navy. In 1870 he attended the council at the Vatican, and two years later became the general procurator of his order. In 1892 the Pope sent him as his special agent to Brazil for the purpose of reorganizing the church there. He spent three years in Brazil, and on his return to Rome was created a cardinal, taking for his title church St. Maria della Scala, which is the property of the Carmelite order.

CARDINAL GOTTI.  
The son of a dock laborer, who may be the next Pope.

# Have We Done Enough for Cuba?

By the Hon. Charles H. Grosvenor, M. C., the intimate friend of the late President McKinley.

ATHENS, OHIO, August 18th, 1902.

THE QUESTION suggested, "Have we not done enough for Cuba?" may be answered in the affirmative or in the negative, depending upon the point of view from which the question is examined.

If we look at the subject from the standpoint of any promise that we ever made, which was reduced to writing, and forms the stipulation between two parties, we have certainly done enough.

If we look at it from the point of view involved in moral obligation, sentimental consideration, or from the standpoint of selfish motives, we are not free, and have not done enough for Cuba.

In the first place, what have we done? We overthrew Spanish sovereignty in the island and drove the Spanish army away. We put an end to Spanish control. We lifted an intolerable burden from the property of the island in the form of unjust taxation. We dispersed the camps of the *reconcentrados*, and permitted the people to go home and pursue their ordinary vocations. We cleaned out the harbors of Cuba and made a gallant and successful battle with yellow fever. We established local self-government among the people of Cuba, and in the fullness of time approved of a popular constitution and placed a republican government in power in the island. We aided in establishing schools, and talked, if we did not enforce, the free exercise of religious privilege. We gave the right hand of fellowship to a new republic. We hoisted her flag and introduced her to the nations of the world, and we did much else that was of value to Cuba. But we have not done enough.

We made an unfortunate mistake in declaring to all the world that we would not annex Cuba, or acquire title to the island. There were reasons for the declaration. We did not know the attitude that Europe would assume in the matter of this North American uprising against Spanish authority. We were willing to go to war with Spain, but we did not want to whip the whole of Europe, even if we could have done so, which is probably not a doubtful question. A controversy over our interference with Cuba, even though we believed it our bounden duty, was not desirable. Therefore, as a suggestion that we aid in avoiding complication, and possibly with a little vainglorious feeling of generosity, and with a sort of patronizing air, we pledged ourselves to that which has embarrassed us since. But when the question came to us whether or not we were satisfied with the first draft of the Cuban constitution we asserted a demand upon Cuba, and did it in a peremptory and dictatorial manner. We demanded the adoption, as a part of their constitution, of the so-called "Platt amendment," and we said take this, without the letting of an "i" or the crossing of a "t," or we will not approve your constitution. It was a bitter dose for our Cuban friends, and the convention halted in the midst of its labors and sent a strong, wise, and patriotic commission to Washington.

That commission conferred with the President; with the Secretary of War; and with many of the statesmen of Congress and the Cabinet. They met a large number of gentlemen at a dinner given by the President, and the burden of their argument was this: "If we ratify the Platt amendment, and make it a part of our constitution, it will cripple our freedom of contract and trade-making, and unless the United States will treat us somewhat differently from the treatment extended to all foreign countries, we shall be harmed by American interference." It was admitted on all hands that the Platt amendment did circumscribe and limit the freedom of action in certain directions of the new republic. No written communications were made between this commission and our Government, so far as is publicly known, but verbal assurance was given to this Commission that the action of Cuba which was required by the United States would be met by generous concessions and helpful provisions of law on the part of the United States. What is the evidence of this? Not the declaration of any man who heard any promise made—not because such men were not plentiful, however, but because such a promise would not have been binding upon the United States, and probably ought not to have been acted upon by the new republic; but that commission returned to Cuba

HON. CHARLES H. GROSVENOR.

and made an official report to their convention, either in writing or orally, in which they stated that they had assurances, upon which it was safe to rely, that if they would adopt that amendment, trade concessions would be made by the United States.

These statements were published far and wide in the newspapers of the United States. They were not denied by any of the officials of the country, and we stood, by our silence, as affirming and acquiescing in these declarations, and that amendment was ratified.

Cuba, unless by our fault, will never stand to us as a strictly foreign country. Her location so near to us, and the facts of our relations to her during the past four years are of such a character that she will never stand to us as Germany stands, or as France stands, or as China stands. She is struggling for independence under our tutelage, and maintains the limitation of her sovereignty which we have imposed, and we must compensate her, at least, for the restrictions with which she finds herself surrounded. So I insist that we are under moral obligations to aid Cuba in every way we can, without positive detriment to our own people. We owe it to ourselves; we owe it to the position we occupy among the nations of the world. We have no right now to weigh, as in an apothecary's scales, what we have done and what Cuba has done, and strike a balance. The question is, How have we treated Cuba and what are her necessities, and what can we do for her without injustice to our own people?

We could have granted the little provision of the Cuban reciprocity bill as it was introduced in the House, and before the trick was played upon it by the Democrats and revolting Republicans, and no injury would have happened to us, and great benefit would have accrued to us. It was a small, unimportant performance. It was an assurance of our good faith. It was demanded by every principle of justice and honor, and would have been approved by ninety-five per cent. of the people of the United States. Its effect has been grossly magnified, and the plaudits that are being offered throughout the country by those who disturbed the peace by their opposition, signifies the unimportance to us and the great importance to Cuba. From a selfish standpoint alone we owe something yet to Cuba. Her import trade would

amount to one hundred millions of dollars per annum with fair treatment on our part to enable her to secure prosperity; and with that prosperity assured and promoted by us, and practically bestowed by us, her hundred million dollars of purchases would be made in the United States, and all our people would be benefited.

So, from every standpoint, except legal treaty application, we have not done enough for Cuba, and the people of this country will not cease their demands upon Congress until justice is done.

Senator Hanna, one of the wisest men in the United States to-day, in Congress, when this very question was under discussion, turning to one of the opponents of the Cuban reciprocity bill, said, "You will hear of your course before the coming campaign is over." The person to whom these remarks were addressed can testify to-day to the accuracy of Senator Hanna's prophetic words.

*Ch. H. Grosvenor*

## A Sure Way to End the Coal Strike.

THE LONG continuance of the big coal-miners' strike in the anthracite region of Pennsylvania, to the detriment of many industries from the scarcity and high price of coal, and to the great loss of the mine operators, the public, and the strikers themselves, has incited a loud call from many for the arbitration of the difficulty. Certainly this costly struggle between capital and labor, lasting for more than three months, would speedily have ended, or would never have been begun, had a proper spirit of conciliation prevailed on both sides. That this is so is proved by an important recent instance in this city. A strike for a nine-hour day and other concessions was threatened by the engineers and firemen of the Manhattan Elevated Railroad. Had the men gone out that system's extensive facilities for passenger transportation would have been suspended, causing untold inconvenience and hardship to hundreds of thousands of busy people. But an attempt was made at once to adjust matters and to ward off a bitter and damaging contest. Mr. Russell Sage and Mr. George Gould, the leading controllers of the railroad, manifested a commendable desire to do full justice to their employes, and Vice-President Skitt held an amicable conference with the grievance committee of the men. The result was a friendly compromise, the men carrying their demand for a nine-hour day and waiving their other claims. This was such a felicitous closing of the incident that it is suggested that it would be well if the settlement of the coal strike were confided to such sensible, large-minded, and conciliatory men as Messrs. Gould and Sage.

## Preacher's Children

SAME AS OTHERS.

THE wife of a prominent divine tried the food cure with her little daughter. She says, "I feel sure that our experience with Grape-Nuts food would be useful to many mothers. Our little daughter, eight years old, was subject to bowel trouble which we did not then understand and which the doctor's prescription failed to cure."

"We had been using different cereals for breakfast, and finally becoming discouraged I said, 'I will try an experiment: I will discard all other cereals and use only Grape-Nuts for breakfast.' The three children all like it better than anything else, and are so fond of it that I hardly let them have all they want. In a short time I could see an improvement in the bowel trouble."

"We began using Grape-Nuts five months ago, and now not only has the bowel trouble disappeared but the child has grown so plump and well—in fact was never so fleshy before—that all our friends notice and remark about it. We think we have an ideal breakfast, which consists of whole wheat bread with butter, Postum Cereal Coffee and Grape-Nuts. This is all we care for, and I think it would be hard to find many families so invariably healthy as is ours." Name given by Postum Co., Battle Creek, Mich.

# How To Get Garden Seeds Free

By Waldon Fawcett

THE CITIZEN of the United States, even though he reside in a locality too isolated to share the benefits of rural free delivery, has each year one opportunity to secure direct return for the money which he contributes as taxes to the support of the national government. This sole chance to secure gratis from Uncle Sam something tangible and of appreciable value comes at the time of the annual governmental seed distribution, and because every person who owns or rents a plot of ground or even a window ledge sufficient to provide a flower or vegetable garden may share in the bestowal of favors, there will naturally be exceptional interest in the fact that the United States government will this autumn inaugurate the largest seed distribution ever undertaken. Not only will there be a more lavish distribution of nature's hoarded treasures, but an improved system of dissemination will be introduced whereby the country will be divided into six districts and seeds and plants particularly adapted to each district will be distributed to the residents of that section much earlier in the season than ever before.

Still other improvements are planned for this year's seed distribution, which, as heretofore, will be conducted under the direction of the members of Congress. For instance, whereas there will be, as usual, a distribution of miscellaneous vegetable seeds, there will in addition be given out a limited number of packages of novelties—that is, seeds of varieties either new or little known and of peculiar merit—and matters will be so arranged that some of these novelties will find their way into every locality in the country.

The miscellaneous seeds will be put up five packets in a package, and each Senator, Representative, and delegate in Congress will have twelve thousand of these packages to distribute among his constituents. Each Congressman will also have for distribution five hundred packages containing novelties, each package being made up of five packets. Each bundle of the seeds that rank

as novelties will be accompanied by a circular describing the varieties and giving full instructions as to their culture and use. Finally, each one of the nation's lawmakers will have at his disposal five hundred packages of flower seeds, and these packets are this year being made up in such manner that those Congressmen who represent city constituents may, if they wish, secure seeds especially adapted for use in window boxes and small dooryards.

The figures given do not in all cases indicate accurately the stock of seeds at the disposition of a Congressman. Many of the members from city districts who have little or no use for vegetable seeds effect exchanges with Congressmen from the farming districts who have practically no call for flower seeds, and thus it comes about that many a legislator from the rural districts is enabled to give out anywhere from twenty-five thousand to fifty thousand packages of garden seeds, whereas the city Congressman who is an energetic barterer may manage to accumulate a stock of several thousand packages of flower seeds and thus make happy a proportionately larger number of his constituents. Each Senator and Representative will also have to his credit thirty bundles of lawn grass seed and a goodly collection of strawberry plants and grapevines, together with one hundred trees.

The great annual seed distribution is one of the least known governmental activities and few persons are aware of its magnitude. For conducting this novel enterprise Congress annually appropriates the sum of \$270,000, and the total distribution this year will amount to about forty million packages, which, it is estimated, will weigh more than one thousand tons. Besides the distribution by Congressmen great quantities of seeds are sent out by the Department of Agriculture to farmers in various parts of the country who agree to report as to the degree of success which attends their use.

In this connection it may be noted that much more

satisfactory results are likely to follow this year's seed distribution than attended any of its predecessors. This is due largely to the fact that Secretary Wilson, who is now at the head of the Agricultural Department, is a practical farmer, and, having given his personal attention to the seed distribution—which he, in reality, regards as a pet project—he is at last able to guarantee that the seeds sent out will grow. In former years the contract for the government's gifts was let to seedmen without regard to the character or quality of the goods, and the result was that many contractors put up in a haphazard manner packages containing any sort of seed without the slightest regard as to whether they would be adapted to the localities to which they were to be sent. Happily, this condition of affairs will exist no more, for beginning this year the government will cease dealing with contractors and will make purchases through its officials direct from the various seed markets of the country. All purchases will be made under the supervision of the government plant and seed bureau and all seeds will be subjected to a thorough test before they are accepted or paid for.

Of late years there has been a tremendous growth in the number of requests for the government's seed packets. Last year the Congressmen came nowhere near meeting the demand, but it is hoped that with the big increase in Uncle Sam's seed supply no person will have to be turned away. Likewise there has been found a remedy for the tardiness of former years, when innumerable complaints have been received that the free seeds arrived too late for use. Not only is the work of distribution to be started earlier this autumn, but the seeds will be packed by ingenious machines, each of which will fill and seal seventy envelopes a minute, a capacity equal to that of seven or eight of the girls who formerly performed this work. Finally, it has been decided that work shall be carried on day and night, in order that the task may be still further expedited.

THE ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION OF NEWSDEALERS, BOOKSELLERS, AND STATIONERS OF AMERICA.

GROUP OF THE DISTRIBUTORS OF CONTEMPORANEOUS LITERATURE TAKEN AT THEIR TWENTIETH ANNUAL MEETING, HELD RECENTLY IN BROOKLYN.—THOMAS MARTIN, PRESIDENT NEW YORK ASSOCIATION, ON THE RIGHT.—Detroit Photographic Co.

## The Plow-boy of the West.

ACROSS far-reaching, level fields  
Neath early autumn's sun,  
Changing a stubble of gold to brown,  
The plow-boy's course is run.

CHOCOLATE ribbons of earth behind,  
Long miles of toil before;  
Whistling to rival the morn's clear call  
Of larks that skyward soar:

PANTING in noontide's fervid heat;  
Facing the evening breeze—  
Every round of his shining share  
Means more than the plow-boy sees.

BEYOND the greening days to come,  
Beyond the rippling wheat,  
Fair harvests of a world's delight  
Wait on his sturdy feet.

BREAD and rest and happiness,  
Fond aspirations gained,  
Comforts sweet and treasures dear  
By longing hands attained—

ALL these, and more, are the wondrous gifts  
That roll from the shining share  
In ribbons brown where the plow-boy toils  
O'er the reaching acres bare.

CHARLES MORRIS HARGRE.

## Skill of British Naval Gunners.

IN THE issue of LESLIE'S WEEKLY of July 31st mention was made of the wonderfully accurate practice with the thirteen-inch guns in the turret of the United States battle-ship *Kearsarge*. It was stated that four shots were fired in six minutes at a target one mile away, and that the

mark was hit three times and grazed at the fourth discharge. This was declared to be a world's record for the calibre and distance. These statements have called forth an interesting letter from Mr. W. R. Shute, of Halifax, N. S., who is apparently familiar with matters of this sort. Mr. Shute concedes that the *Kearsarge's* guns may have made a world's record for thirteen-inchers, but he relates some other very notable feats of naval gunnery. Mr. Shute says:

"On board the British battle-ship *Empress of India*, five years ago, four rounds were fired from her 13.5-inch sixty-eight-ton guns in six minutes, with a projectile weighing 1,250 pounds, at 1,400 to 2,200 yards, while the ship was steaming at eight knots. Three hits on the target were scored. With hydraulic breech mechanism, the same calibre guns on the *Royal Sovereign* fired seven rounds in twelve minutes, making six hits on the target, at a distance of 2,200 yards, while the ship was steaming at eight to ten knots. The twelve-inch fifty-ton guns on the British ship *Illustration*, with an interval between two rounds of forty-nine seconds, fired six rounds in one minute and forty-seven seconds, and the pair of twelve-inch guns in one turret on the same ship fired eight rounds in two minutes and ten seconds. This, you will see, was an equally quick record."

These facts are certainly highly creditable to the British navy, showing that its war-ships are well equipped and that its gunners are expert. The publication of them should incite our own naval gunners to attain to even higher proficiency and skill.

## A Prince Insured for \$900,000.

THERE IS at least one royal personage in Europe who has thrown "an anchor to windward," so to speak, in view of a possible assassination. It is Prince Henry of Prussia, who has a policy of \$900,000, which sum is payable only in the event of his being taken off by a dynamitard or some other creature of that sort.

## For Torpid Liver.

HORSFORD'S ACID PHOSPHATE.

TAKE it when your complexion is sallow, and you are troubled with constipation, malaria and sick headache. It stimulates healthy liver activity and improves the general health.

## Baby's Diary.

A UNIQUE and handsome publication wherein to record the important events in baby's life has just been issued by Borden's Condensed Milk Co., 71 Hudson St., New York. It is not given away, but is sent on receipt of 10 cents.

TELEPHONE SERVICE is the twentieth-century means of communication. Rates for residence service in Manhattan from \$48 a year. New York Telephone Co., 15 Dey Street, 141 West 38th Street, 215 West 125th Street.

# Great Harvests of the Western Prairies

By C. M. Harger

THE WEST is more than a granary for the nation. It is a spectacle. It does things on a big scale and delights in astounding the world with its performances. In its production of crops it revels in this tendency to the utmost. Even the transcontinental trains are halted between stations that the passengers may view the remarkable pictures presented. The greatest of these is at harvest time, the garnering of the rich yields of wheat that have made the settlers rich. It is a panorama, beginning down on the edge of Texas in June and ending in the Dakotas in early September. Preceding it comes the report of bountiful crops printed in the newspapers. The whole nation knows that there is far more wheat than the West can harvest.

Then comes a migration of laborers. They pour out of the East on low-rate tickets sold by the railroads that the West may have the help it needs. Sometimes they capture a freight train, and despite the efforts of the crew ride free to the midst of the wheat country. The anxious farmers wait for them and almost force them into service. It is a time of need—the wheat must be harvested in two weeks and every farmer wants the help at the same time. What do these toilers discern as they ride from the town to the farms, ten or fifteen miles across level lands? Long reaches of yellow grain waving and dimpling in the sun. Twenty to thirty bushels to every acre; fifteen dollars' worth of grain to the acre as far as the eye can see—fortunes for son-of-a-bitch!

In the morning they begin the unaccustomed task. Two sorts of machines are before them. They are the modern reapers and "headers." The former, drawn by five horses, or perhaps by three, is the more common. It cuts the grain, binds it into bundles, and throws them off to be picked up by the laborers. The "header" is a purely Western product. It cuts the tops off the straws, carries them up an incline, and dumps them into a wagon driven alongside the machine. It is pushed ahead of the horses and the driver guides it with a tiller, "just like a yawl off Jersey," as one sea-going worker expressed it. It is an imposing sight to see a score of self-binders with their complement of workers cutting the golden grain, leaving the field bare or sprinkled with shocks, the reward of the year's waiting. Yet more beautiful are the long lines of stacks that have been made ready for the threshers, the prettiest scene in a Western landscape.

Night as well as day the harvest goes on. Two sets

whether or not the thresher boards himself. The thresher usually does board himself. Down under the shade of a tree or by the roadside hedge the cook shanty is presided over by his wife or the wife of one of the men. She has a helper and all the utensils needed. A long table is stretched down the middle of the house on wheels, and there is heaped three times a day a bountiful meal that, though plain, is very attractive to the men. They eat without napkins and in their shirt-sleeves. They are cheerful and joke the cook. She takes it good-naturedly and is glad to see them eat.

Women's part in the harvest is by no means unimportant. The actual work in the fields is seldom theirs. They are not needed except in some emergency, when a wife or daughter may drive a team or help in a minor way. But they are useful in managing the affairs of the farm while the men are at work. They go to town with the milk-cans, they look after the milking, they keep the

buy eighty acres of land. He lived in a sod house and lost everything in the hard times of the early 'nineties. Now he owns seven hundred and twenty acres of land, lives in a ten-room house, and has a bank account. A man named Harnady rented a farm in Seward County, that State, seven years ago; now he owns the farm and has \$3,000 in bank. J. S. Hollinger came to central Kansas poor; he raised wheat chiefly; he died a few months ago worth, with the accumulations of his family of boys, \$100,000. The Miller brothers rented land of the Ponca Indians in Oklahoma five years ago, and put in wheat and raised stock. They are making \$25,000 annually clear profit. Hundreds of instances might be mentioned of farms that have been paid for out of the crops of one or two years.

"There is a man who don't like me very well," remarked a young farmer as he sat in a Kansas editor's office the other day. He nodded toward a broker who loans a good deal of money for Eastern capitalists.

"Why, what have you done to him?"

"Well, I borrowed \$3,000 of him last year for five years. I got the privilege of paying it off when I pleased. I paid half of it last week out of my wheat crop, and will pay the rest next season. He was angry, but he will have to stand it." It was the young farmer's idea of a joke.

The present year has been a good crop season for the Western farmer. The wheat has not been a bumper crop, but "it is enough; 'twill do." The oats have been a fine crop, and the corn, watered by plentiful rains, has grown to towering abundance.

Its plumes wave over the broad plains, miles on miles of heavy-laden stalks, soon to yield up the yellow spikes of grain that will feed the cattle and horses through the winter months and bring more wealth to the farmer's purse. Alfalfa and hay; kaffir-corn and millet—everything has grown, because it rained. That, after all, is the secret of the Western harvest—moisture. When that fails, there is nothing but lamentation.

When it is considered that most of the crops of the prairies are produced on land that is worth less than \$40 an acre, the immensity of the profit is understood. Little wonder that writers grow enthusiastic in describing the products, or that marvelous changes take place in the condition of the people. For instance, here is the approximate yield in bushels of a half dozen Western States this year:

	Wheat	Corn	Oats
Missouri	63,700,000	200,000,000	40,000,000
Minnesota	90,000,000	225,000,000	20,000,000
Nebraska	24,000,000	175,000,000	35,000,000
South Dakota	35,000,000	50,000,000	15,000,000
Kansas	45,000,000	250,000,000	40,000,000
Oklahoma	15,000,000	60,000,000	14,000,000

Probably 200,000 settlers have moved into the West this season because of the splendid harvests that have been gathered in the past four years. They are from the well-informed classes of the East, and realize that there is money to be made by tilling the virgin soil. The methods are modern; the implements are of the latest designs; the crops are enormous. It is a lavish outpouring that Nature gives the prairies. The people who have toiled to conquer the plain deserve the largess that is bestowed. Men and women of sturdy mould are they, and as they add to their cabins the comforts of the East and

ride to town in rubber-tired buggies none will begrudge them the felicity they have so assuredly earned. The West has ceased to be an experiment. Its secrets are discovered and its possibilities known.

Strong and better men and women are those who use Abbott's, the Original Angostura Bitters. Druggists.

A "HEADING" OUTFIT IN OPERATION IN A GREAT WHEAT-FIELD IN KANSAS.

farm in order. If the farmer cannot get the thresher to board his own men there is a great kitchenful of men to feed and beds for their sleeping to be made. These are times of stress, and it is difficult to obtain kitchen help on the Western farm. I have seen the wives and daughters of men worth \$500,000 go out to the farm and help cook for harvesters, doffing their city clothes for a fortnight as a matter of necessity. The grain had to be saved.

From the threshing-machine the grain is hurried to the town near by and is ready for shipment. In good crop years there is usually a dearth of cars, and great heaps of yellowish red grain are piled on the open plain. Fifty thousand bushels make a very pretty sight. It is worth \$25,000, but there are no guards. Who could steal it?—and where would the thief take it? So the harvest goes on and the time comes when one may stand on a knoll and count twenty puffing engines taking out nature's gold from the straw.

Or one may see where a carelessly thrown match has started a fire in the dry stubble and the flames have swept over thousands of acres. One such fire in southern Kansas last summer destroyed the grain of 15,000 acres and burned many machines and farm-houses.

The laborers follow the harvest up to the great ranches of the Northwest, where a thousand acres are in one field and machines are run by the dozen instead of singly. There the harvest becomes a science, instead of the intensely human drama that it is where the

farmer comes close to his men. The big wheat farms of the Dakotas are being broken up into smaller holdings, and the conditions there are becoming like those of States farther south where the average size of a farm is 250 acres. Out of it all the farmer is growing independent. Five great crop years have just been ended on the plains. Beginning with the crop of 1897, the wheat has been good every year. Not always has it been a record-breaker in every community, but generally it has returned a great harvest. The farmer estimates the cost of his crop at \$7.50 an acre; if he gets thirty bushels an acre and sells it for fifty cents he has a profit of \$7.50 an acre. On one hundred acres it is \$750; on one thousand acres, \$7,500—and there are many hundred farmers with the latter acreage.

What have they done? A. Miner came to York County, Nebraska, ten years ago with just enough to

THE BIG THRESHING-MACHINE ABOUT TO MOVE, LIKE A RAILROAD TRAIN, TO ANOTHER RANCH.

of hands take part, and lanterns are hung on the hames of the horses' harness to light the way after dark. So still and dry are the prairie nights that this can be done in nearly every harvest. Threshing comes after the cutting has been put well under way. Indeed many fields have three operations in progress at the same time—the harvesters are cutting the grain, the threshers are separating it as wagons haul it to the machine, plows are turning the stubble of gold to brown, the preparation for the next year's crop. The threshers come with a caravan. The huge, noisy "traction engine" hauls the red separator, the water wagon, and the cook shanty. Sitting on the machine is the crew of a dozen men, enjoying the trip. Once at the farm, work is soon commenced. The automobile of the plains, the traction engine, places the other portions of the outfit and then starts the wheels whirling. The modern threshing-machine receives the sheaf, breaks the bands, takes out the grain, puts it in a wagon, weighs it, sends the straw to the top of the big stack—all without the touch of a hand. From 2,000 to 3,000 bushels may be threshed a day, and the farmer pays six or seven cents a bushel, depending on

## American Railroads and Our Commercial Development

A NOTABLE ADDRESS BY GEORGE H. DANIELS, BEFORE THE CHAUTAUQUA ASSEMBLY, AUGUST 11th

### AN AGE OF TRANSPORTATION.

BISHOP VINCENT, in his masterly sermon, yesterday, said: "This is an age of education."

One of our great writers has said that this is an age of transportation.

Transportation underlies material progress in every department of commerce. Without transportation, commerce would be impossible.

Those states and nations are rich, powerful, and enlightened whose transportation facilities are best and most extended. The dying nations are those with little or no transportation facilities.

### RICHEST COUNTRY ON THE GLOBE.

Mr. Mulhall, the British statistician, in his work on "The Wealth of Nations," said of the United States in 1895: "If we take a survey of mankind, in ancient or modern times, as regards the physical, mechanical, and intellectual force of nations, we find nothing to compare with the United States."

Mr. Mulhall proved by his statistics that the working power of a single person in the United States was twice that of a German or Frenchman, and more than three times that of an Austrian, and five times that of an Italian. He said the United States was then the richest country in the world, its wealth exceeding that of Great Britain by thirty-five per cent., and added that in the history of the human race no nation ever before possessed forty-one millions of instructed citizens.

Should Mr. Mulhall's figures be revised to-day, the difference would all be in favor of the United States, for in the past five years we have demonstrated the superiority of our manufactures in every direction, and our ability to cope successfully with questions which have heretofore been handled exclusively by the older nations is now recognized by all the world.

In an address before the New York Press Association about the time of the close of the war between Japan and China, I referred to the future of our export trade, as follows: "One of the inevitable results of this war will be the opening to the commerce of the world of fields heretofore unknown, perhaps the richest on the globe; and in urging the members of the New York Press Association to do everything in their power to assist in securing to the United States a portion of the great commerce to be developed between the western nations and these two old countries of the world, I asked these questions:

"Shall the grain in China and Japan be harvested by machines manufactured in the United States, or will the manufacturers of England and Germany supply them?"

"Shall the fires in Yokohama and Tien-Tsin be extinguished with engines built at Seneca Falls, or will France or England send their fire engines to Japan and China?"

"Will the locomotives to haul the fast mail trains between Yokohama and the interior of Japan and through the rich valleys of China be built at Schenectady, Philadelphia, or Dunkirk, or will our Oriental friends and neighbors in the Pacific buy them of our English cousins?"

I predicted that active efforts toward the extension of American commerce by commercial bodies, supported by a liberal and broad-minded policy on the part of our government in connection with the aggressive action of the transportation companies, would undoubtedly secure to the United States the blessings that come from a great and varied

commerce, and I said that the New York Press Association, and similar associations all over the country, could stimulate a public spirit that would insure the important results outlined.

At that time we had no idea that a war between one of the old nations of the earth and our young republic would be fought; at that time we had no idea that American manufacturers would be furnishing locomotives to the English railroads as well as to those of nearly every other country on the globe. No one thought five years ago that American bridge-builders would go into the open market and successfully compete for the building of great steel bridges in Egypt and in India, nor that in so brief a time American engineers would be building railroads into the interior of China from her most important seaports.

At that time no one supposed that the Trans-Siberian Railway would be laid with steel rails made in Pennsylvania, upon cross-ties from the forests of Oregon, and that its trains would be hauled by American locomotives; nor that this great railway, which reaches from St. Petersburg to Vladivostok and Port Arthur, a distance of more than 6,000 miles, would be completed in advance of the original expectation, as a result of the use of American construction tools and machinery.

But this is all true, and it is further true that the tools and machinery for the construction of the eastern portion of the Trans-Siberian Railway were supplied by American manufacturers, at a less price than Russia had been paying previously; and with this American machinery the Russians are able to do more and better work than they could perform with the machinery manufactured in other countries.

I recently received a map of the Trans-Siberian Railway from Prince Hilko, Imperial Minister of Railways of Russia; and just before leaving New York last Friday, I was advised by the American representative of the Trans-Siberian Railway that the road had been completed and that on the first day of September next, the first through train *de luxe*, will leave Port Arthur for Moscow, and that thereafter a similar train will leave Port Arthur, for the present, once a week; later on, the trains will run more frequently.

### AN EMPIRE EXPRESS IN THE ORIENT.

In a recent letter from a friend in Tokio, Japan, there was this significant sentence: "You will be interested in knowing that I have hanging on the wall of my office a framed picture of your 'Empire State Express,' and we expect in the near future to be hauling a Japanese 'Empire Express' with an American locomotive."

During the past ten years the Baldwin Locomotive Works have sent to Japan 255 locomotives; to China, 31; Russia, 379; England, 72; and to other foreign countries, 1,653.

The Rogers Locomotive Works have built 584 loco-

motives for foreign countries, including Canada, Mexico, South America, Panama, Costa Rica, Cuba, Jamaica, Spain, Australia, New Zealand, Japan, and China.

The American Locomotive Company has built locomotives for foreign countries as follows: 265 for Japan, 17 for England, 7 for China, 51 for Russia, and several hundred for the British Colonies, Mexico, and Central and South America.

In this connection it will be interesting to note in passing that the second American locomotive was built at the West Point Foundry, near Cold Spring, on the Hudson River, and was called the "Best Friend," and from that day to this the locomotive has been one of the best friends of this republic.

### OUR SUPERIOR RAILWAY EQUIPMENT.

But it is not alone our locomotives that have attracted the attention of foreigners who have visited our shores; our railway equipment, generally, has commanded admiration and is now receiving the highest compliment, namely, imitation by many of our sister nations.

Prince Michel Hilko, Imperial Minister of Railways of Russia, has, since his visit to the United States a few years ago, constructed a train on much the same lines as the "Limited Trans" of the New York Central and the Pennsylvania.

Only a short time ago, at the request of one of the Imperial Commissions of Germany, I sent to Berlin photographs of the interior and exterior of our finest cars and other data in relation to the operation of American railways. Several other countries have been asking for similar information, and there is a general waking up of foreign nations on the subject of transportation, brought about mainly by the wonderful achievements of American railways.

The demand for American locomotives from all parts of the world is attributable, in the first place, to the superior quality of our machinery, and in the second place, to the fact that the general passenger agents of the American railways have, through their advertising, made the marvelous results accomplished by our locomotives, household words in every country on the globe.

### A NAVAL OBJECT LESSON.

The admiration of foreign nations for us is not by any means confined to railways. One incident that startled the entire world, and directed the attention of thinking people everywhere to American achievements in machinery was that of the United States battle-ship *Oregon*, built at the Union Iron Works in San Francisco, and which steamed a distance of more than half round the globe, without loosening a bolt or starting a rivet, and arrived at her post off the Island of Cuba prepared to perform any service required of her; and then, having given a most satisfactory account of herself on that memorable third of July, 1898, off Santiago, she steamed back to the Pacific,

and without any unnecessary delay crossed that great ocean to join Admiral Dewey's fleet at Manila. On her arrival there the Secretary of the Navy received one of those condensed messages, for which the admiral—who has shed undying lustre upon the name of the American navy—is so noted, which read as follows:

"MANILA,

March 18th, 1899.

"The *Oregon* and *Iris* arrived to-day. The *Oregon* is in fit condition for any duty. Dewey."

These demon-

THE NEW YORK CENTRAL'S "EMPIRE STATE EXPRESS," THE MOST FAMOUS TRAIN IN THE WORLD.

ations of what American ship-builders can accomplish, created a desire on the part of every naval power in the world for ships of the character of the *Oregon*; and the logical conclusion of thinking people was that if we could build ships like the *Oregon*, anything else that we built must be of a superior quality, and the demand for American manufactures began to increase and is increasing with each day until thousands of our factories are now running night and day, and business in the United States was never in a more prosperous condition than it has been during the past five years.

#### TRADE AND THE FLAG.

It has been said by a great American writer that "trade follows the flag." Recent events have placed our flag upon the islands of the Pacific, directly in the natural track between the Pacific coast of the United States and Japan and China; and as we contemplate our growing commerce with these old nations we are reminded of the prophetic statement of that seer of his time, Hon. Thomas H. Benton, of Missouri, who while discussing the building of the Union and Central Pacific railroads said, pointing toward the Pacific Ocean, "There is the East; there is India."

Previous to the construction of this artery of commerce, the route to India had been by the way of our Atlantic seaports and Europe, but with the completion of our trans-continental system of railways the route was changed, and a better way was found by way of our Pacific seaports and the Pacific Ocean.

#### OUR COMMERCE IN THE ORIENT.

There are some who seem to think that we might get along without trade with China, and that it is a new-fangled idea that Chinese trade can especially benefit the United States.

Commerce with China began one hundred and twenty-eight years ago, the first vessel sailing from New York on Washington's Birthday in the year 1774. This vessel returned to New York May 11th, 1775. The success of the venture was such as to warrant its repetition, and from that day to this, trade between the United States and China has continued without material interruption until it is now greater in importance and value than that of any other nation trading with China, with the single exception of Great Britain. If we are to continue as one of the great nations of the world we can hardly afford to ignore a country that comprises one-twelfth of the land area and nearly one-fourth of the population of the globe.

One of the reasons for the introduction into other countries of our manufactures and products of all kinds, is that Americans have the ability to not only do things well but to do them *quickly*; and this practice, which is now general, has been greatly stimulated by the example set by the railroads.

If a New York business man makes up his mind to go to Chicago he wants to be there right away, and hence the demand for fast trains between commercial centres.

When the British government wanted a most important steel railway bridge built in India, no bridge builders in Europe would undertake to complete the work in the time required by the government, but an American bridge-building corporation—a trust, many would call it—was able to undertake the contract, in consequence of the fact that through the consolidation of a dozen small plants into one great corporation, and the further fact that under the system of rapid handling of materials by our unsurpassed transportation facilities, they were able to undertake and put through a gigantic work, which appalled less enterprising and enthusiastic manufacturers. The work was completed within the time specified, and is a monument to the skill and ability

THE UNITED STATES BATTLE-SHIP "OREGON," A NOTABLE EXAMPLE OF MODERN AMERICAN SHIP-BUILDING.

of American engineers, American mechanics, and American methods.

The great steel railway bridges in Egypt were built by Americans for the same reason; and these examples are all evidences of the truth of the statement that American transportation facilities underlie much of our wonderful prosperity.

There is another reason for our strength, our wealth, and our ability to do things, and it is covered by Mr. Mulhall's brief statement, previously quoted, that "in the history of the human race, no nation ever before possessed forty-one millions of instructed citizens."

These facts should encourage all educators, and especially Chautauqua, which in numerous ways stimulates not only the youth but the middle-aged of our country, to improve their opportunities for obtaining knowledge, and so increase the means of making themselves useful citizens of the freest as well as the richest country in the world.

As an illustration of the ability of Americans to send our products to foreign countries in competition with the whole world, and to show how general the use of American products and American methods has become in some of those foreign countries, let me read an item from a recent English publication.

"To-day many a foreigner sits down to his breakfast made up of a cereal manufactured at Niagara Falls, a beefsteak from Omaha, a slice of bacon from the Mohawk valley, and his bread, of course, from American wheat, ground at Minneapolis.

"On his way to his office, if he lives in London, he can ride in a car built in New York, propelled by electrical machinery manufactured at Schenectady, over a railway constructed by American engineers, and largely of American materials.

"On reaching his office and looking about him, he finds, if it is a modern, up-to-date establishment, this condition: He sits in a revolving chair made in Chicago; before a roll-top desk made in Buffalo; his letters are written on a typewriter made at Elton, New York; he signs them with a New York fountain-pen and dries them on a blotting sheet from New England; the letter copies are put away in files manufactured in Grand Rapids.

"Taking a day for pleasure, he attends the races, and sees the highest stakes won by an American horse, ridden by an American jockey. Looking over his evening paper, he reads of the placing in American shipyards of orders for American-style battle-ships for European as well as Asiatic nations, and learns that the scene of the coronation of the King of England is to be painted by an American artist, and that the forty thousand gold, silver and bronze medals, ordered by the command of the King, to commemorate his coronation, were made in Massachusetts; and that the yacht for the German Emperor was built almost within sight of the city hall of New York, and that a member of the royal family of Germany crossed the Atlantic to be present at the launching, and that it was christened by the daughter of an American President—and he wonders why it is that Americans are able to out-strip almost every other nation in all kinds of modern achievements, and this wonder grows with each succeeding month."

Only a short time ago one of the great ocean liners

brought Baron von Oppenheim, secretary of one of the German legations, who states that he is here for the purpose of learning why Americans do things so much better than any one else.

Since the Spanish-American war, we have had commissions of various characters and sizes sent here from almost every civilized country, the object of whose visit was the same as that of the German baron who is here to-day. Last winter, the entire board of management of a great English rail-

way came, six officers from the general manager to the engineer of docks, and spent several weeks in going over our railways and studying our methods. Returning to England, they have adopted many of the American methods and will adopt others, placing in service numerous kinds of American machinery, finding it better, more serviceable, and more economical than they build in England.

In all the ages of the world transportation has been, as it is to-day, associated directly with the advancement of the human race.

It began in the dawn of the world with human burden-bearers; then in certain countries, the dog, the burro or pack mule; in others the horse, the camel, and the elephant; the sailing vessel, the canal boat; the steamship; the stage coach, the horse car, and the railroad.

I think it will be agreed by all that the steam railroad is the highest type of transportation; and when I tell you that all the money in the world, gold, silver, and paper, would not buy one-third of its railroads, you will get some idea of the vastness of this industry.

Railroad mileage has steadily grown until now we have 200,000 miles of steam railway in the United States. These railroads employ over 1,000,000 men, whose wages amount to over \$600,000,000 annually. Their capital is over \$12,000,000,000, and their earnings last year exceeded \$1,500,000,000. They carried more than 600,000,000 passengers last year, and 1,100,000,000 tons of freight.

We are all impressed by the object lessons which are the essential element of the kindergarten system. I want to give you one object lesson in regard to American railways.

In 1851 the "American Railway Guide for the United States," published in New York, with branch offices in Boston, Springfield, Philadelphia, and many other cities, consisted of 144 pages, 5½ by 3½ inches. It contained the time tables and information regarding 149 railroads. This is the book.

The "Official Guide of the United States" for August, 1902, which I hold in my hand, contains the time tables and information regarding 957 railways, requiring over 900 pages 7½ by 10½ inches to show it.

In 1851 there were a little over 9,000 miles of railway open for traffic in the United States. In 1902 there are over 205,000 miles in operation.

In order that the German nation might have knowledge of the most advanced theories and practice in the construction and operation of railways, an imperial German commission was sent to the United States a short time ago, for the purpose of examining American railways and making such recommendations as their investigation should suggest.

In the report of this commission, which was recently published, one of the first sentences is as follows: "Lack of speed, lack of comfort, lack of cheap rates, are the charges brought against the German empire's railways, as compared with those of the United States." They recommend the adoption of many of our methods, explaining in their report that they were far superior, not only to those in vogue in Germany, but also superior to those of any other country.

#### INFLUENCE OF RAILROADS IN RUSSIA.

The annual budgets of the Russian empire disclose

TRAVELING IN 1820 BY PACKET-BOAT ON THE ERIE CANAL.

the almost incredible efforts in railway extension that the imperial government of the Czar is putting forth.

#### RAILROAD MEN IN THE CABINET OF THE CZAR.

It is a fact not generally known that the two men who are nearest to the Czar of Russia, and who, perhaps, have a greater influence than any of the others in shaping the commercial policy of the present government of that great empire, are M. de Witte, the Imperial Minister of Finance, who, sixteen years ago, was a station-agent at a small town on one of the railways of Russian Poland; the other is Prince Michel Hilkoff, who, when little more than a boy, left St. Petersburg to seek his fortune, learned mechanical engineering in the city of Philadelphia, and who is to-day the Imperial Minister of Railways of the Russian empire, and a member of the Cabinet of the Czar.

#### CHINA JOINS THE ARMY OF PROGRESS.

More than twenty years ago one of the Imperial Ministers of China, in a report to the Emperor and Empress, urged upon them the construction of a system of railways from their principal ports to the interior of the empire. In his report he used this significant sentence: "Japan, which is a mere speck upon the map, is building railways, and her people are being benefited thereby. Should not your Celestial Empire, which comprises one-twelfth of the land area, and one-quarter of the population of the globe, do as well as this handful of people among the islands of the sea?"

To-day this suggestion is being carried out, and railroads are being constructed in a dozen different directions in China.

#### RAILROADS SUPERSEDE CANALS.

One hundred years ago the Governor of the great State of New York advised his friends not to invest their money or waste their time in aiding to build railroads, expressing the opinion that, while it was possible that improved methods of construction and perfected machinery might, in the remote future, enable the people to move a car upon a railroad at the rate of five or six miles per hour, he did not believe that they could ever be made of material advantage, and that any attempt to transport passengers and freight by railroad, from one part of the country to another, must result in endless confusion and loss. The Governor died in the belief that the canal was the only means of conveyance for a great commerce.

Notwithstanding his prediction, the railroads have grown to such vast proportions that to-day there are in the United States more than 200,000 miles of steam railroads.

The building of the Erie Canal, extending from Buffalo to Albany, a distance of 363 miles, was commenced July 4, 1817. It was completed in 1825 at a cost of \$7,602,000.00. In 1896 the State of New York appropriated \$9,000,000.00 for enlarging and improving this canal, and a few figures from the State report on canals may be of interest in this connection:

Reliable statistics of its traffic are not obtainable for the earlier years of its operation, but in accordance with the annual report of the Superintendent of Public Works of the State of New York, we find that the tonnage of all the property carried on all the canals, in both directions, in 1837 was 1,171,296 tons, valued at \$55,809,288.00.

The tonnage and the value increased until 1872, when it amounted to 6,673,370 tons, valued at \$220,913,321.00.

From 1872 the tonnage and the value of the property carried decreased, until in 1897 there was only 3,617,804 tons carried, with a value of \$96,063,338.00.

This, in face of the fact that the receipts of grain and flour at Buffalo had increased from 1,184,685 bushels in 1837 to 242,140,306 bushels in 1897.

#### DECLINE IN CANAL TRAFFIC.

The greatest number of new boats registered as operating on the canals in a single year was in 1862, when there were 850 new boats. In the year 1897 there were only 16 new boats registered. You will wonder what has caused the abandonment of several canals in the State of New York, and the steady decline in the commerce passing through the Erie Canal.

There are three general causes for these results. The first is the great reduction in the rates of freight by the railroads in the United States, and notably in the State of New York. The second cause is the marvelous development of the motive power and rolling stock of the American railroads. Less than a quarter of a century ago, upon the average American railroad, the capacity of a freight car was twenty thousand pounds; the capacity of a freight engine was from twenty to thirty of such cars to the train.

To-day, on the New York Central, whose six tracks run alongside the Erie Canal for the entire distance from Buffalo to Albany, the capacity of the grain cars is from sixty to sixty-six thousand pounds, and a locomotive of the latest type will haul from seventy-five to ninety such cars loaded to their full capacity. It is not an infrequent occurrence for a single engine to haul through the Mohawk valley, beside the Erie Canal, eighty-five to ninety thousand bushels of grain in a single train. The same engine will haul from one hundred and ten to one hundred and twenty-five empty cars. When you consider that in the busy season there are from seventy-five to one hundred such trains a day passing over the New York Central alone, you will get some conception of the situation.

#### EXPORT TRADE REQUIRES FAST TIME.

The third cause of the failure of the canals is the general demand of the American public for quick time. A shipper

At that time Rochester's only means of transportation was the Erie Canal, and the difference between the insignificant village of Rochester in 1822 and the magnificent city of Rochester of to-day, is the difference in its transportation facilities; and this difference is graphically shown by a comparison of the canal packet towed by a mule at the rate of four miles an hour, and the Empire State Express thundering through the Genesee Valley at a speed of sixty miles an hour.

#### INFLUENCE OF RAILWAY ADVERTISING.

American railway management is always alert and ready to embrace every opportunity for extending the commerce of the country, and railway men are among the very first to seize upon each coin of vantage. Within a week from the day that the Paris peace commission adjourned, more than one American railway had ordered the re-engraving of its maps to include the West Indies, the Hawaiian Islands, and the Philippines. The description of the beauty of our American lakes and valleys, the magnificence of our rivers, the grandeur of our mountains, the fertility of our soil, the wealth of our mineral resources, and the superiority of our manufactures, with which our railroad advertising is filled, has been of incalculable value to the export trade of the United States. It has induced thousands of foreigners to visit every section of our country who otherwise would never have come here. It has been the means of the investment in the United States of untold millions of foreign capital. It has been one of the strongest aids to the expansion of American commerce in every direction.

#### A CENTURY OF MARVELS.

Henry Drummond said of the nineteenth century, that it had added more to the sum of human learning than all the centuries that have passed.

The twentieth century bids fair to keep pace with, if not surpass, the nineteenth.

A few examples of the achievements of American railroads in a little more than half a century, and many of them within the last twenty-five years, cannot be inappropriate.

Before the railroads were built it took a week to go from New York to Buffalo, nearly three weeks from New York to Chicago; and at that time no man would have thought of making a trip from New York to the Pacific coast, except a few of the hardiest pioneers; and when on such occasion the good-byes were said, it was expected on both sides that it would be forever. If to-morrow night you should place a letter on the Pacific and Oriental mail train which leaves Grand Central Station, New York, at

9.15, you may be sure that your correspondent in San Francisco will be reading it next Saturday night—four days from New York.

You can to-day take your luncheon in New York, leisurely pack your bag, and, taking the train at Grand Central Station at 2.45 p. m., be in Chicago at 9.45 the next morning, a distance of 980 miles in just twenty hours.

The framers of our Constitution would have considered a man beside himself who would have suggested such a possibility.

#### WHAT THE RAILROADS HAVE ACCOMPLISHED.

In 1875 the States east of the Missouri River were sending food and clothing to the starving people of Kansas.

Thanks to the facilities afforded by the railroads, they expect the corn crop of Kansas for 1902 to be a banner one; eight million acres have been planted, and at the previous average per acre would yield something over 300,000,000 bushels.

It seems a very few years since I made my first trip to Colorado, and stopped on my way at the home of Buffalo Bill, at North Platte, Neb., on the Union Pacific. At Ogallala, fifty-one miles west of North Platte, the Sioux Indians were roaming over the prairies and making more or less trouble for the settlers who ventured so far out of the beaten paths of civilization.

The Nebraska corn crop of 1902 covers nearly eight million acres, and is expected to yield forty bushels

A MODERN FREIGHT-TRAIN, LOADED WITH 80,000 BUSHELS OF AMERICAN WHEAT, ON ITS WAY DOWN THE HUDSON RIVER, FOR EXPORT AT NEW YORK.

THE NEW CENTRAL ATLANTIC TYPE LOCOMOTIVE HAULING THE THROUGH PASSENGER TRAINS OF THE NEW YORK CENTRAL.

having a hundred thousand barrels of flour, or a million bushels of grain for export, must move it from Buffalo to New York within a specified time, and he cannot risk the slow process of the canal.

A short time ago the lake steamer *Abyssinia* arrived in Buffalo on Friday evening with forty thousand bushels of grain, while the *Ceric* of the White Star Line was at her pier in New York about to sail with water for ballast unless she could get a cargo of grain. This grain from the *Abyssinia* was quickly transhipped at Buffalo to the cars of the New York Central, left Buffalo Saturday evening, and was in the hold of the *Ceric* shortly after noon on Monday. The dispatch with which this grain was handled makes a record that has never been equaled by rail, and of course could not be approached by canal.

#### RAILROADS ESSENTIAL TO PROGRESS.

In a recent address before the Chamber of Commerce of Rochester, N. Y., I cited this illustration of the difference between modern railway transportation and transportation by canal.

In 1822 Thurlow Weed, one of the great newspaper men of his day, wrote of what is now the city of Rochester, as follows:

"Rochester is a straggling village containing about half a hundred inhabitants, but it is a go-ahead place, and from its advantages is destined to become an important inland town."

to the acre, or in the neighborhood of 300,000,000 bushels.

In the banner year of 1896, Nebraska planted 7,700,000 acres of corn and produced 298,600,000 bushels, or about thirty-eight bushels per acre.

Previous to the construction of the Northern Pacific, the Great Northern, Northwestern, St. Paul, Burlington, Rock Island, and other railways that traverse that wonderful region known as the "wheat belt," there was nothing to be seen but prairie grass and an occasional band of untamed savages.

Minnesota and North and South Dakota in 1898 shipped 220,000,000 bushels of wheat. The prospects for the present season all point to a very large yield, although it is doubtful if it will exceed the crop of 1898.

#### DEVELOPMENT OF THE PACIFIC COAST.

In 1849 there came across the continent reports of the discovery of gold in California, but the only means of reaching its Golden Gate was by sea around Cape Horn, or the long and perilous journey, with ox teams, across the plains, including what was then styled in our geographies the American Desert, and through the hazardous mountain passes of the West.

The completion of the Pacific railroads changed all this, and opened new fields for all kinds of enterprises, in an unexplored territory stretching over more than two thousand miles to the west, northwest, and southwest of the Mississippi River, the products of which region were practically valueless until the means of transporting them were provided by the railroads.

The wheat crop of California in 1899 was 37,000,000 bushels. The largest crop ever produced in California was in 1880, when, owing to exceptionally favorable weather conditions, that State produced 63,000,000 bushels.

The mineral product of California for the year 1900 amounted to \$33,000,000.

The vineyards and orange groves of California would be of practically little value were it not for the fact that the railroads, by their trains of refrigerator and ventilated fruit cars, make it possible to transport the products of her fertile valleys to all sections of the country.

There were shipped from California alone in 1901 83,731 carloads of fruit, vegetables, wines, and brandy, by rail and sea.

California produced in 1901, 29,800,000 pounds of butter; 11,300,000 pounds of cheese; 69,000 tons of beet-sugar products, and 48,000 bales of hops.

California also produced 27,000,000 pounds of wool in 1901, and 608,000,000 feet of lumber.

It seems but yesterday that the railroads were completed into Portland, Ore., Tacoma and Seattle, Wash., and it is marvelous that for the year 1901 there was exported from the Columbia River valley 17,000,000 bushels of wheat, and from the Puget Sound region, 16,000,000 bushels.

Oregon and Washington form the northwest corner of the territory of the United States, south of the line of British Columbia, and directly on the route to our extreme northwest possession, Alaska.

The wheat crop of the States of Oregon and Washington for the year 1901 was 51,500,000 bushels.

Colorado, which, with its inexhaustible mines of gold, silver, lead, iron, and coal, forms almost an empire in itself, produced in 1901, of gold, \$28,000,000; of silver \$11,000,000; of lead, \$7,000,000, in addition to a magnificent crop of wheat, fruit, and vegetables.

Thanks to her railroad facilities Montana is to-day the richest mineral region of its size in the world.

The value of the precious metals won by the washing, milling, and smelting of the ores and gravel mined in Montana during the year 1899 was the largest in its history, and amounted to \$68,500,000.

The State of Montana produced in that year 23 1/2 per cent. of the copper product of the world, and 61 per cent. of the copper of the United States. It is said that mineral development in Montana is in its infancy, and that what

it has already produced is but a bagatelle of the output of the future.

I am indebted for the statistics regarding the great States referred to, to Mr. J. C. Stubbs, traffic director, and Mr. B. Campbell, assistant traffic director, of the Union and Southern Pacific Railroads; Mr. J. M. Hannaford, second Vice-President, Northern Pacific Railway; Mr. Thomas Miller, freight traffic manager, (Chicago, Burlington and Quincy Railway; Mr. Paul Morton, second Vice-President, Atchison, Topeka and Santa Fé Railway; and Mr. A. S. Hughes, general traffic manager, Denver and Rio Grande Railroad.

Without railroads, Kansas, Nebraska, Minnesota, North and South Dakota, Montana, Colorado, California, Oregon and Washington would still be the home of savages.

#### SERVICE OF AMERICAN RAILROADS.

It is beyond question that American railroads to-day furnish the best service in the world, at the lowest rates of fare, at the same time paying their employes very much higher wages than are paid for similar service in any other country on the globe.

In the United States the first-class passenger fares in 1898 averaged 1.98 cents per mile, although on some large railways the average was several mills less than two cents per mile; in England the first-class fare is four cents per mile; third-class fare for vastly inferior service is two cents per mile, but only on certain parliamentary trains.

In Prussia, the first-class fare is three cents per mile; in Austria, 3.05 cents per mile; and in France, 3.36 cents per mile.

THIS ILLUSTRATES ALL THERE WAS OF DWELLINGS, EDUCATIONAL INSTITUTIONS, MANUFACTURING ESTABLISHMENTS—IN A WORD, ALL THE INDUSTRIES OF THE GREAT PLAINS OF THE UNITED STATES, PREVIOUS TO THE ADVENT OF THE RAILROAD.

Our passenger cars excel those of foreign countries in all that goes to make up the comfort and convenience of a journey.

Our sleeping and parlor car system is vastly superior to theirs; our baggage system is infinitely better than theirs and arranged upon a much more liberal basis—American railroads carry 150 pounds of baggage free, while the German roads carry only 55 pounds free.

The lighting of our trains is superb, while the lighting of trains on most foreign lines is wretched.

#### SOME STRIKING EXAMPLES.

I may be pardoned for citing a few examples of what I mean by the unsurpassed passenger-train facilities of American railroads.

A single locomotive recently hauled a passenger train of sixteen cars, nine of which were sleeping and parlor cars, from New York to Albany, a distance of 143 miles, in three hours and fifteen minutes, which is 44 miles per hour, and is the regular schedule time of this train. The train weighed 1,832,000 pounds, and was 1,212 feet, or nearly a quarter of a mile, long.

The Empire State Express was placed in service October 26th, 1891, and since that day it has been the most famous train in the world.

For years this train has been making the run from New York to Buffalo, 440 miles, in eight hours and fifteen minutes, at an average speed of 53 1/2 miles an hour, including four stops—two of them for changing engines—and twenty-eight slow-downs, on account of running through incorporated towns and cities.

For more than 216 miles of the 440 miles it makes the run on every trip at an average speed of more than 60 miles per hour. For one stretch of ten miles the regular schedule time is 66.33 miles an hour.

The weight of this train is 608,000 pounds, and it has a seating capacity of 248 passengers.

On June 15th, 1902, the New York Central placed in service the Twentieth Century Limited, which now runs every day in the year between New York and Chicago, 980 miles in twenty hours, an average speed of 49 miles per hour including all stops and slow-downs, and saves the business man a day.

On June 30th, this train of five heavy cars ran a distance of 139 miles in 131 minutes on the Mohawk division of the New York Central; this is an average speed of 63.66 miles per hour.

Recently the Twentieth Century Limited on the Lake Shore covered the 134 miles between Brocton and Cleveland in 131 minutes. From Cleveland to Toledo the engineer pushed along over the 113 miles in 103 minutes, reaching a speed of 90 miles an hour at some points.

These are some of the achievements of American railroads in passenger service, and in my opinion it is achievements of this character that have made it possible for the United States to expand its commerce with such astounding rapidity.

The fact that American passenger service attracts the attention of people of every other country who visit our shores is demonstrated by the desire of all foreigners to ride on the Empire State Express and the Twentieth Century Limited—the fastest long-distance train in the world—and the further desire to examine the magnificent machines that haul our great trains.

#### EXTENT OF AMERICAN COMMERCE.

The extent of our commerce, both domestic and foreign, may well astonish the representatives of other lands who visit us for the first time, but the extent of the territory of the United States made possible by the negotiations of Admiral Dewey in May, 1898, supplemented by those of the peace commission at Paris, will surprise our own people, as well as our cousins from across the water.

We thought before the purchase of Alaska that our territory was large, but what vistas of commercial enterprise present themselves to us as we contemplate the fact that it is 3,144 miles from San Francisco to

St. Michael's, Alaska, where an empire in extent awaits development by American capital and energy; and that it is 7,729 miles from San Francisco to Manila, island of Luzon, and that this is only one of hundreds of rich islands that await similar development. In contemplating the extremes of our domains we should not overlook the Hawaiian and other islands which lie in our new ocean pathway.

You will be interested in knowing that the Manila and Dagupan Railroad on the island of Luzon, which is the principal one of our Philippine group, is laid upon mahogany ties, the road passing through forests of that valuable wood and over inexhaustible beds of coal and other rich minerals. Shall we wonder, then, that American railroads are seeking connections that will secure a portion of the commerce that must come from the development of this rich region, which has so recently been added to the territory of the United States?

#### TRADE FOLLOWS THE FLAG.

If it is true that "trade follows the flag," then with co-operation and reciprocity between the great transportation interests of the United States and the commercial and industrial interests of our republic, and with proper encouragement given to American shipping by the Congress of the United States, our commerce should be as diversified as are the products of our soil, our mines, and our mills; and our export trade should reach every mart on the earth, and should flourish on every sea and river where vessels ply; for since the almost miraculous events in Manila Bay and off Santiago, we may paraphrase the sentiment of Joaquin Miller in regard to Colorado and say of our flag, "it floats forever in the sun."

# The Haunted Housewife

By Elliott Flower

HE told the story himself, and it certainly has a truthfulness to it. In fact, it is difficult to believe that one could imagine so harrowing an experience.

His wife, he said, had a woman who came occasionally (when sent for) to do certain stunts of cleaning and washing, and this woman had an appetite. In that lay the origin of the trouble. On days when she was due she came early—not

to work, but to eat—and she stayed late—also not to work, but to eat. It took her an hour or more to begin to get ready to go to work, and another hour or more to begin to get ready to quit. She was there for breakfast, luncheon, and dinner. If there was only a half day's work to be done it made no difference. In one way

or another she would make it last over the three meals, and at each she would

"I thought you must have lost my address," she said, simply.

dispose of more than all the rest of the family put together, after which she would ask if she could not take the rest of the roast home. Now, in the course of time this system of collecting a full day's pay for a half-day's work, in order to acquire three meals, grew wearisome, and it naturally followed that there was trouble the night that the woman made and drank seven large cups of coffee. In the interests of economy, the members of the family had cut themselves down to coffee once a day—in the morning—and it certainly did seem as if the woman was overdoing the thing a little in disposing of seven at night.

"Never again," is what the housewife said in substance, although not in those words. Having paid the woman not only for her work, but also to wait for meals; having given from her own and her children's wardrobes at various times, and having in other ways endeavored to be charitable and considerate, she held that seven cups were something like six too many. So she said to the woman, "Nay, nay; here we part," and when next she wanted cleaning and washing done she advertised.

Here the plot thickens—oh, very much!

The woman appeared at the door with the advertisement in her hand, and she was the only one who did come.

"I thought you must have lost my address," she said, simply.

"Well, I hadn't," replied the housewife, pointedly.

"Oh!" said the woman, and she took off her bonnet and shawl and prepared to go to work.

Well, the work had to be done, and she was there, so the grocery and meat bills were allowed to make their customary jump. But a stop-order was put on the coffee. One cup was the limit for dinner. In other ways things went very much as before.

"Well," said the housewife to her husband that night, "I've learned one thing. I'll not advertise again. But I do want to get hold of a good woman to come here occasionally."

So the next time she left word at a neighboring intelligence office, where they made a specialty of furnishing women for that kind of work, and they promised to send her one.

They did. The woman of the seven cups appeared promptly.

"I think you might have sent to my house," she said, reproachfully, "but it's all right, any way."

"But I didn't want you," protested the housewife.

"Oh!" said the woman, as she removed her bonnet and shawl.

Of course it was too late to get another then, and the work had to be done, so the provisions bill had another boost.

"It seems so petty to limit her," said the housewife "and I wouldn't mind so much if she only did her work quickly and well, but it's a nuisance to have things dragged out so. Apparently, the only way to hurry her is to change the dinner-hour. If we could have dinner at three in the afternoon, now—"

"Why, then," interrupted her husband, "we would have to have a late supper, and she'd hang on for that."

"True," admitted the housewife, thoughtfully. "She simply will not do."

Here the plot gets very, very thick.

The housewife inquired among the neighbors and got a list of three women who "went out by the day." This she gave to her husband one evening.

"Get one of them," she said. "I meant to see about it this afternoon, but I was too tired. If none of them can come they'll surely be able to tell you of some one who can. But I don't want the seven-cup woman. Remember that!"

"You bet I will," he answered, earnestly.

As he was paying the bills, he had reason to be earnest. Then he sallied forth with his little list. The first woman he found was sorry, but she could not come. Her regular patrons occupied all her time.

"Do you know any one I could get?" he asked.

"Why, yes," she replied. "There's Mrs. Ballenson."

"Won't do," he returned, hastily, and journeyed on. Mrs. Ballenson was the seven-cup woman.

The next also was unable to come, and she also offered to get Mrs. Ballenson.

"Can we never lose that woman?" growled the man. "She seems to be the only one who hasn't plenty to do. Perhaps her appetite works with others as it does with us."

But with the third trial came success. This woman also was busy, but her sister-in-law would come.

"Is her name Ballenson?" asked the man.

"Heavens no!" replied the woman.

"Let me see her," said the man. Mrs. Ballenson might have married again in the last week, and he was taking no chances.

The man returned home jubilant.

"I've got one," he announced, "and it isn't the seven-cup woman."

"NOT TO WORK, BUT TO EAT."

"Are you sure?" asked the wife.

"Positive. I saw her myself, and it's not the same."

Well, the next morning the seven-cup woman appeared for breakfast. The woman who had been engaged had a child who was taken sick in the night.

"So she asked me to come in her place," said the seven-cup woman.

"But I wanted some one else," protested the housewife.

"Oh!" said the seven-cup woman.

man, as she removed her bonnet and shawl and prepared to go to work—at the breakfast.

"What shall we do?" asked the housewife, in despair, of her husband.

"Move," he replied promptly. "Perhaps then we can lose her."

"Was ever any one so haunted?" wailed the housewife, wearily.

This is not necessarily the end of the story, but it brings it up to the present time. The future alone can tell what the finish will be.

## High Prices for Authors' Manuscripts.

WHEN, IN 1859, Wilkie Collins penned the pages of undoubtedly recognized that he had finished a very notable work; but he could never have imagined that one year after his death the manuscript alone would fetch, when put up to auction, \$1,600, but such was the case. This sum, by the way, was \$45 more than was given two years ago for a couple of manuscripts written by Gilbert

White, of Selborne. One can hardly conceive of a more consummate irony of fate than for a young author to sell the copyright of a book for a sum which years later collectors of manuscripts were willing to multiply by nineteen in order to become the owners of the mere writing and paper. The instance we have in mind is reported to have been the fate of Lord Tennyson,

who is said to have sold the copyright of "The Poems of Two Brothers" to a Louth bookseller for \$125, while the original manuscript was sold at auction years afterward for the very considerable sum of \$2,400.

THE NEXT TIME SHE LEFT WORD AT A NEIGHBORING INTELLIGENCE OFFICE.

## Good Things To Come in The World of Books

By La Salle A. Maynard

IF I WERE asked what work of fiction promised for the coming season will be likely to have the most genuine merit and greatest interest for the discriminating reader, I would unhesitatingly say that it is the volume of stories by Thomas Bailey Aldrich, announced from the press of Houghton, Mifflin & Co. Mr. Aldrich has not been a voluminous writer; he has chosen to write well rather than to write much. He has never allowed hasty, crude, and unfinished work to go from his hand, but has always maintained the high standard which has given him a place along with Lowell, Emerson, Longfellow, Whittier, and others of the old and illustrious school of New England writers. His last work, a volume of poems, appeared in 1895. Of the volumes thus far issued in his name, five have been in verse and seven have been works of fiction. Mr. Aldrich is probably more widely known by his "Ballad of Babie Bell" than anything else he has written, although this was one of his first productions. In exquisite tenderness and pathetic sweetness we know of no poem in the English language excelling this ballad, and it is not strange that it should have sung itself into the hearts and homes of child-lovers over all Christendom. Among Mr. Aldrich's prose writings his "Story of a Bad Boy" and "Marjorie Daw and Other People" are perhaps the most popular, and are certainly heard of most frequently. Mr. Aldrich, though generally classed with a school of writers who have nearly all passed away, is only sixty-six years old and appears much younger. He has always led a quiet life in his Boston home, and since his retirement from the editorship of the *Atlantic Monthly* is seldom seen in public places.

THOMAS BAILEY ALDRICH.

IT IS now over twenty-five years since I used to meet occasionally in the streets of Albany the author of the "Adirondack Stories," a book much read about that time; and I can never forget the impression which the serene face and quiet, modest, unassuming manner of that gentleman made upon me. Mr. Philander Deming was then, and is yet for aught I know, an official stenographer in one of the higher State courts, and also acted, I believe, as legislative correspondent for a New York daily. He is brought to mind again by the announcement that Houghton, Mifflin & Co. are about to issue a new edition of the "Adirondack Stories" with a preface by the author. For the benefit of the new generation of readers unacquainted with Mr. Deming's work, I may say that these stories have not been surpassed by any work of the kind in more recent years, in freshness, vivacity, quiet humor, and genuine charm. They appeared first in the *Atlantic Monthly* during the editorship of William Dean Howells, and were afterward widely copied and had an immense and well-deserved popularity.

PHILANDER DEMING.

IT HAS often been stated that the present Emperor of Russia is a specially devoted father and that he spends many hours in the companionship of his little ones, of whom he has three, all girls. In fact, I have heard somewhere that the autocrat of all the Russias has been known to get himself down on the nursery floor in the guise of a horse for his babies. All this being the case we can more fully appreciate the significance of the opening statements in the following letter which Paul de Chailu wrote from St. Petersburg to his publishers, Harper & Brothers, a few weeks ago: "Will you kindly oblige me by sending here three sets of my juvenile books? Please select carefully the books, for one set is for the Emperor, and especially this one must be of the finest. The Emperor has received me in the most kind manner, and, now that I have some knowledge of the Russian language, I will soon begin my travels and explorations of this great empire, from the north to the south and from east to west. This will take me several years to accomplish, but I hope to come to America once or twice before the completion of my great task." This reminds me also that a new book for young folks by Du Chailu is now on the press of the Harpers, who will send it out soon. It is to be called "King Mombo," and will make its appearance in the autumn. King Mombo, it seems, was an African monarch whom the famous explorer had much to do with during his long sojourn in the woods, and the story has many of

Du Chailu's thrilling experiences in hunting elephants, crocodiles, gorillas, and a number of other wild beasts. It will be remembered that the largest and most comprehensive book on Scandinavia, "The Land of the Midnight Sun," is from Du Chailu's pen, who not only visited Norway, Sweden, and Lapland, but remained there seven years. From his name he is generally supposed to be a Frenchman, but he is really an American—the last remaining member of a Huguenot family that settled in South Carolina.

IT IS a current saying among country folk that there are at least two inevitable things in this life, and those are "death and taxes." If this observation were made to include happenings in the literary world, also, I would add as another "inevitable" a juvenile book by G. A. Henty. It would, indeed, be a colder year than this present one has been that did not witness at least one stirring tale of war and adventure from the omnipresent and irrepressible Henty, and this fall, the Messrs. Scribner inform me, they are to issue no less than three stories of this kind. This will bring Mr. Henty's record, according to my reckoning, up to about eighty-three historical stories for boys, besides ten novels for grown-ups and two histories for everybody who cares to read them. As Mr. Henty is now seventy years old this makes an average output of over one book each year, or three books for each of the thirty years in which he has been engaged in literary work, an average which leaves even the amazing productivity of the late Horatio Alger and Mrs. Southworth far in the rear. Mr. Henty's stories are faithful to historical fact, and, while exciting, they make wholesome and instructive reading for young people.

SIR WILLIAM LAIRD CLOWES, as he may now write his name, since the distribution of coronation honors, is best known in this country at present as the author of that monumental undertaking, a "History of the Royal Navy." Six volumes have already appeared, and Sir William Laird Clowes and his associates are at work on the seventh and final volume. It was in the sixth volume of this comprehensive history that President Roosevelt's chapters on "The War of 1812" appeared—a more critical and mature account of that Anglo-American conflict than that which he wrote and had published separately at the age of twenty-four. The American publishers of "The Royal Navy," Little, Brown & Co., endeavored to secure President Roosevelt's consent to the publication of this critical history of the War of 1812 separately, but he courteously refused.

IT IS TOO soon, no doubt, to expect an ideal biography of Bret Harte, but if the forthcoming work of that character announced by Dodd, Mead & Co. for fall publication is not of an entertaining quality it will not be for lack of first-class material nor of a skilled and sympathetic writer. The latter is to be Mr. T. Edgar Pemberton, who has commended himself to this service by some excellent biographies of theatrical people. Mr. Pemberton had known Mr. Harte for twenty years, and had been in close touch with him for seven. Recently they were collaborating on a work which it is understood Mr. Pemberton is to complete. The family and friends of Mr. Harte have assured his biographer of their co-operation in placing all available material at his disposal.

A LONG and attractive list of new books is announced by D. Appleton & Co. for fall publication. Among the more notable ones will be the letters of Charles Darwin, including many addressed to Charles Gray and other American scientists; a volume of Anglo-Egyptian stories by the author of "The Right of Way," who should now be addressed, if you please, as Sir Gilbert Parker; a new book of verse by Mr. Frank L. Stanton, under the title "Up From Georgia," and an illustrated volume on social New York in the period following the Knickerbocker days, by Miss Esther Singleton, a work doubtless which owes its origin to Miss Singleton's studies of "The Furniture of Our Forefathers." From this house also we shall have the American edition of a new and curious book of which we heard much during the past few months, "The Story of a Strange Career," which purports to be the autobiography of a convict edited by Stanley Waterloo. A new novel by Mr. H. G. Wells and another by Mrs. Craigie are also among the good things promised from this quarter.

ESTHER SINGLETON.

FROM WHAT I have learned about Henry James's new novel, "The Wings of the Dove," soon to appear from the press of Charles Scribner's Sons, the story will offer a refreshing contrast to some of Mr. James's latest novels. In it he is said to have escaped from his late manner of abstract and psychological evolution, a manner which has sorely taxed the patience of many of his readers. It is, also, said that the book has an understandable plot, which is another clear gain. It was a writer in the *London Spectator* who said of Mr. James that he "was not so much a novelist as an episodist," a new term but an apt one, it seems to me, in this connection. Certain other literary idiosyncrasies of Mr. James, as they appeared in his "Sacred Fount," were once hit off very cleverly by Carolyn Wells in *The Critic*, in critical verse which concluded as follows:

HENRY JAMES.

The mad gush of "The Sacred Fount" is ringing in my ear,  
Its dictatorial excitement is offending me, I fear.  
For its subtle fascination makes me read it, then, slack,  
I find I have the James-james, a very bad attack.

IT IS GRATIFYING to know that we are to have a biography of Nathaniel Hawthorne the coming season from the hand of Professor George E. Woodberry, whose life of Edgar Allan Poe is the most judicious and satisfying study of that remarkable genius ever written. Hawthorne led a quiet and uneventful career; but he was a man of such winning personality, a literary artist of such unexampled power and brilliancy, that a biographical study by a writer of Professor Woodberry's proved ability is certain to be full of interest.

WE ARE informed that a new volume of studies of bird life by Olive Thorne Miller is soon to appear from the press of her publishers, Houghton, Mifflin & Co. If it is up to the standard of her "In Nesting Time," "Little Brothers of the Air," and other volumes on this general subject, it will certainly be well worth reading. In her nature studies Mrs. Miller has confined herself almost wholly to birds; and her writings on this subject are full of the charm coming from a keen knowledge of bird life in all its varied and curious aspects, and a sympathetic interest in the welfare of the "little brothers" themselves. Mrs. Miller's home is in Brooklyn, but she spends her summers either on the coast of Maine or among the mountains of the far West, where she can pursue her inquiries among the people of the tree-top country to the best possible advantage.

OLIVE THORNE MILLER.

ANOTHER NOTABLE addition will soon be made to the nature books now in the hands of the public by a volume which the Century Company has in preparation. It will bear the title "Caterpillars and Their Moths," and will be the joint production of two women, Ida Mitchell Eliot and Caroline Gray Soule, who have made this line of study and research a specialty for the past twenty years. The finest products of photographic art will embellish the volume, the illustrations of caterpillars and moths being of life size.

### Don't Try Pressure.

TRUST TO INTELLIGENCE.

You cannot by process of law prevent any one from drugging themselves to death. We must meet the evil by appeal to the intelligence.

One of the drugs that do the most harm to Americans, because of its widespread use and its apparent innocence, is coffee. Ask any regular coffee drinker if he or she is perfectly well. At least one-half are not. Only those with extra vigor can keep well against the daily attack of caffeine (in coffee). The heart and pulse gradually lose strength; dyspepsia, kidney troubles, and nervous diseases of some sort set in, and the clearly marked effects of coffee poison are shown. These are facts and worthy any one's thought. The reasonable and sensible thing is to leave off, and shift to Postum Food Coffee. The poison that has been secretly killing is thus withdrawn, and a powerful rebuilding agent is put to work. The good effects will begin to show inside of ten days. If health and comfort are worth anything to you, try it.

A STAGE REHEARSAL ON A HOT AUGUST AFTERNOON—DANCE IN "SALLY IN OUR ALLEY," AT THE BROADWAY THEATRE.—Lucky.

THE REHEARSAL OF A SONG WITH THE CHORUS OF "A CHINESE HONEYMOON"—A LITTLE WORK THAT THE PUBLIC DOES NOT SEE.—Lucky.

JOHN DREW,  
Who, in "The Mummy and the Humming-bird," begins his twelfth season as a star.—Savoy.

MARGARET DALE,  
John Drew's new leading woman.—Savoy.

ALICE FISCHER,  
In the title rôle of "Mrs. Jack," at Wallack's.—Scholar.

JAMES LEE FINNEY,  
In the leading rôle of "The New Clown."—Savoy.

Press agents, I thought, should do better than that. Another tells of a real earl who is going to play on the American stage this season. His name is James Erskine and he is the Earl of Rosslyn, an Englishman who will appear in New York, in the Garrick Theatre, as one of the cast in the play, "There's Many a Slip." Americans at home, and particularly Americans abroad, have seen and have been sought after recently by so many of the titled aristocracy of Europe, that a title does not strike the awe that it once did, and even an earl on the stage is not the most sensational thing in the world. Europe will send many of its public entertainers to America. Among those from Britain who will this season pace the boards in New York are John Hare, Charles Wyndham, and Charles Hawtrey. Mrs. Patrick Campbell is announced with her London company, in a new play as the opening attraction at the Garden Theatre. Her

## The Dramatic Season Arrives

New Plays with Old Favorites, and Old Plays with New Favorites

By Tom Thorne

A CHILL is in the morning air; the ocean has a cold, forbidding look that makes one shrink; among the trees is seen now and then a yellow leaf; and we know that summer is dying. Last June there were many, undoubtedly, who felt that they would never care to see the city again. They were tired of its light and heat and din. They were sated with the theatre. They had sat through the last performance uninterested and bored. Yet only June, July, and August have passed, and these same people are already beginning to wonder what we will have at our play-houses this season. They find themselves looking forward eagerly, with a genuine relish, to the warmth and glow and music of the houses of the stage. The same old human curiosity, awakened by the advertisements of the clever managers, by the comments of the press, by the gossip of friends, is there to be satisfied; the same old senses, the love of beauty, of music and rhythm, of sentiment and of excitement, are there to be gratified. The same necessity for amusements, for entertainment is present; so back to the theatres go the public.

And while you have been thinking of bathing and boating, and yachts and hunting trips, and summer vacations, the managers and the actors have been at work—and it is hard work, too. During the broiling days of August, on the dark, stuffy stages of the theatres, rehearsals have been in progress day after day. Men and women, weary with the heat, have been driven, scolded, and cajoled by the petulant stage managers.

"Why are you so late?" growled a stage manager one afternoon to a singer tardy at a rehearsal.

"Oh, it was so hot to-day, I was sick, very sick, and so had to stay at a drug store for some medicine," wailed the singer.

"You had all day; why didn't you go to the drug store this morning?" said the manager.

But those things do not matter, and when the orchestra plays and the curtain lifts, it will all be very beautiful and the public will be delighted. Yet there is little strikingly new or unique in the vast volume of theatrical entertainment which is laid out for the season of 1902-03. There are the same stars (some of them in new surroundings), the same dramatization of novels which have had enormous sales, a little Shakespeare, and some new operas.

"Here is an interesting thing," said a press agent to me. "By George I" he added enthusiastically, "I'm glad I happened to think of it."

"What's that?" I asked, eagerly.

"Why," he replied, "here is a society girl of Boston who is going into the Rogers Brothers company in the chorus."

It struck me, however, that once before—perhaps a dozen times—I had heard of society girls who had suddenly gone on the stage. So even that wasn't new. On the contrary, the idea is a little dusty with age.

MARK TWAIN AND LEE ARTHUR,  
Who are at work on a dramatic version of Mr. Twain's "Huckleberry Finn."

engagement for this season is forty weeks. In January, behold the appearance of Mrs. Lillie Langtry. She will be at the Garrick Theatre in the drama, "Mlle. Mars." Mr. Hawtrey will produce two plays in New York. These are "The Man from Blankley's" and "The Message from Mars," which has been very successful in London and New York. And later in the season Marie Tempest will be here, playing this time in a comedy production. Hitherto she has been seen in America in musical compositions. The change will probably add interest to her performances. In England, it is said, she is very popular as a comedienne.

Italy contributes grand opera and one of its greatest actresses for the entertainment of the American public. Mascagni, the great composer and author of "Cavalleria Rusticana," with a company of 160 people in Italian grand opera is announced at the Metropolitan Opera House, the season beginning October 8th. The great Italian actress, Eleanora Duse—by many regarded as the greatest actress of her day—will be in New York November 3d for an engagement of two weeks at the Victoria Theatre. She will give her first performance this season in Boston at the Tremont Theatre, October 20th; and she will play "La Gioconda," "Città Morta," and "Francesca da Rimini." She has dates for Baltimore at Ford's Opera House, Washington at the Columbia Theatre, Philadelphia at the Garrick, and Chicago at the Grand Opera House.

There is just a touch of Shakespeare in the dramatic landscape. Those who believe that merit still lingers in the works of the Bard of Avon may be grateful to Maude Adams, Henrietta Crosman, and to Louis James and Frederick Ward, who will do their parts this winter that Shakespeare may not sink into oblivion. Miss Adams and Miss Crosman will each have a production of "As You Like It." Mr. James and Mr. Ward will play together in "The Tempest," Mr. James as Caliban, Mr. Ward as Prospero; and in the cast Ariel will be played by Miss Edith Fessett. Maude Adams will revive "L'Aiglon" and will return to "The Little Minister," the dramatic gem in which she was probably more delightful than in any of the parts in which she has since appeared. Miss Adams has been spending the summer in Switzerland and will return to New York in November. Miss Crosman, aside from the Shakespearean play, will be seen in a new play, "The Sword of the King."

The dramatization of the popular novels never ceases. Business policy dictates that good advertising should not be thrown away. Why should not the benefit of great sales be transferred from the publisher to the theatrical manager? Here is an interesting instance: For months the country was adorned with posters showing a gentle country "nag" drawing along a top buggy, beside a rural fence. The nag was guided by a person who seemed free from care. The poster suggested that the public should read a book called "Quincy Adams Sawyer." The suggestion was followed; the public did read the book to the extent of many thousands. Then the theatrical man assumed sway. The book was dramatized and again the country was adorned with the poster of the nag, the buggy, and the rural fence. This time it advertised a play. It is only reasonable to believe that those who knew the book would have curiosity to see the play. And nothing is lost in the transaction.

Gilbert Parker's "The Right of Way," one of the most widely circulated books of recent publication, has been transformed into a drama, too, and William Faversham will play the part of Charley Steele. Another book of wonderful popularity, which alone has made a fortune for its author, is "The Eternal City," by Hall Caine.

A FIELD OF FOURTEEN FAST TROTTERS STARTING IN A RACE AT THE BRIGHTON BEACH TRACK.

## In the World of Sports

"NOVELTY" TROTS ENCOURAGE FRAUD—FASHIONABLE WOMEN AND THE TURF—DANGERS OF AUTOMOBILING

**VICIOUS PRACTICES ON THE TROTTING TURF.**—While a firm believer in encouraging the breeding of the running horse, the trotter, and the pacer, and while realizing that harping on unfair practices on the track does the sport no good, at the same time I think it is necessary to call attention to reprehensible tricks in order that needed reform may be enacted. Though there must necessarily be more or less fraud where gambling exists openly, I never believed that crooked races were as numerous as many people assert they are. The purses and stakes offered to-day, on the running and trotting turf, are in themselves sufficient inducements to compel owners, trainers, jockeys, and drivers to do their best to win. When all are trying to win, there can be little fraud. The recent meeting at the Brighton Beach track gave New Yorkers their first chance of the season to see some first-class trotting contests. The meeting was a success, as the one to be held in September at the Empire City track promises to be also. The "Novelty" races introduced at Brighton, however, are not likely to be popular. There never has been a better system arranged for swindling the public. As soon as a horse wins a heat he retires, the second-heat winner also retiring, and the rest going in the last heat. The winner of the fastest heat gets the major portion of the purse. The temptation to "lay up" a heat when the odds do not suit the owner or driver was so apparent that the judges were kept busy watching the drivers. A horse at long odds who was badly beaten in one heat would suddenly become an odds-on favorite in the next heat for no other reason than that the "wise money" had been sent into the ring. When this happened the favorite invariably won. While Cresceus, the champion trotter of them all, did not appear at Brighton, strenuous efforts are being made to induce George H. Ketcham, his owner, to bring him to the Empire City track. Dan Patch did not succeed in cutting down the world's pacing record, 1.59½, held by Star Pointer, but he paced the mile in 2.00½ on a day too chilly and windy for record-breaking time, and later on he is reasonably sure to better this performance.

**FASHION AND THE RACE-COURSE.**—It is no new thing for women to conduct racing stables, though it must be admitted that they are seldom successful. The announcement that "Mr. Roslyn," which means Mrs. Harry

Payne Whitney and Mrs. H. B. Duryea, would put a racing stable in the field caused much comment; and some people seem to think that it means the flocking to the running turf of more women high up in the social scale. Mrs. Whitney and Mrs. Duryea are fond of the thoroughbred, and have at times shown good judgment in the selection of animals, both for speculation and for ownership. Their friends trust that they will be successful. Certainly nobody wishes such fair and wealthy women ill fortune. The meeting at Saratoga has been the most successful in the history of that famous track, which, fortunately, has passed out of the hands of the Walbaum-Guttenburg

can be no crowding that cannot be seen by the officials. Standard distances are run, and when a man wins the national five-mile championship race he is the national champion for that distance for the following year. The national champion, Frank L. Kramer, won his title by winning the majority of the points at the different distances. The amateur competition is conducted in the same way. Hurley found his most troublesome opponent in Root, of Boston. Those who follow the wheelmen would like to see Hurley among the professionals. Kramer and Taylor might beat him, and again they might not.

**THE WAHING BASEBALL LEAGUES.**—Real love of baseball trust that with the birth of another season the present warfare between the two major leagues will have been brought to an end. While the retirement of Andrew Freedman from the councils of the National League will be received with acclaim, his logical successor, John T. Brush, has not always acted with the best interests of the game at heart. Mr. Brush is a fighter when war is on, and in times of peace a diplomat. He does not weigh much more than a chest protector, but his hat-band is immense.

GEORGE E. STACKHOUSE.

### A Monster Fish.

**THE WORLD'S** record for black sea-bass was broken August 9th at Avalon, Catalina Island, by H. T. Kendall, of Pasadena, Cal., who brought to gaff after a fight lasting one hour and fifty-one minutes a monster "jew-fish," as the black sea bass is locally called, weighing 419 pounds.

The largest of these monsters caught last season weighed 384 pounds. The exploit is most remarkable when it is realized that the fish are taken with a mere thread of line of a thousand feet wound in the compass of a reel. The line is a twenty-four-thread Cuttyhunk with a lifting capacity of forty-eight pounds, about the size of wrapping twine used for tying up packages. The rod weighed sixteen ounces, and yet a fish weighing one-fifth of a ton was hauled in; not, however, without an exciting struggle. The accompanying photograph shows this record-breaker, and in the foreground the infant son of Dr. H. J. Macomber, also of Pasadena, who was with Mr. Kendall in the launch *Fortuna* when the haul was made.

EXPERTS PLAYING IN THE GOLF TOURNAMENT ON THE LINKS OF THE EKWANOK COUNTRY CLUB, MANCHESTER, VT.—Photograph by Smith.

From left to right—Findlay S. Douglass, James L. Taylor, Mrs. Taylor, Miss B. Anderson.

clique into those of true sportsmen. The raising of the price of admission again illustrated the undisputed fact that the man who must gamble seldom cavils at the price of the opportunity. While the crop of two-year-olds this season do not appear as sensational as those of last year, still there are some good ones, for many of them have been consistent, and the animals that are consistent are good, no matter what the critics say. Consistency and class go pretty close together.

**IGNORANCE AND DANGER ON AUTOMOBILES.**—Fatal accidents are inseparable from many sports of the thrilling sort when they are in their infancy. One hears much just now of the dangers of the automobile, and long screeds are written after each accident, which make those familiar with the subject groan in anguish at the unjust and untruthful alleged evidence dished up to the general public. The unfortunate death of Mr. and Mrs. Charles L. Fair abroad is a case in point. Singularly enough, most of the severe accidents which have happened at home and abroad during the last year took place when an amateur was at the lever of the machine. Most of the millionaire owners of automobiles quickly learn to send the machines along at a great speed without fear. It takes time, however, for a novice to learn how to think quickly in an emergency. Had a professional been at the lever at Evreux, when the Fairs were killed, the chances are that the machine would have been brought to a stop in a few yards and nobody would have been seriously injured. It is the quick thinker who excels in all sports. To keep cool and act promptly in an emergency comes naturally to some men, and can never be acquired by others. The element of danger is present in the most popular sports, but the percentage of fatalities grows consolingly less each year. Learned men have said that football is really more dangerous than prize-fighting, and it is, to an untrained man or boy.

**BICYCLE CHAMPIONSHIPS NICELY ARRANGED.**—There would be less grumbling over championships in general in the sporting world if the finals were arranged with the nicety and fairness which characterize the championships in the bicycle world this year. The races for professionals are run in heats until only two or three men are left in the final. This insures a chance to every man, as there

BLACK SEA-BASS WEIGHING FOUR HUNDRED AND NINETEEN POUNDS—LARGEST EVER CAUGHT.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *Leslie's Weekly*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *Leslie's Weekly* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, which entitles them, in emergencies, to answers by mail or telegraph. Address "Jasper," *Leslie's Weekly*, 110 Fifth Avenue, New York.

**WE TALK** about the "get-rich-quick" concerns, the bunco "advisory" syndicates, and all the other tricks of Wall Street sharpers, but are these any worse than some of the big quick money-making schemes of the Wall Street blood-suckers

who are recognized as among the millionaire leaders of finance in our day? What about the scheme to reorganize the Rock Island Railroad, an old and conservative system, by increasing its obligations nearly three times, solely for the purpose of enabling a few men who have quietly secured control of the stock at low prices, to unload a good part of their holdings, at a profit which will about pay them for the cost of the control of the property. There is nothing mysterious about a proposition like this. It is a little bit of financial legerdemain, or sleight of hand, which deceives nobody. It is ingenious; but is it fair? Is it honest? Is it right?

When conservative leaders of the Street entered their earnest protest against the Rock Island scheme, the promoters of the project hastened to declare that no syndicate, clique, or combination of underwriters was to profit by the plan of reorganization; that the stockholders were to enjoy all the rights offered, and each to have his pro-rata share. Yet when the announcement of the plan was printed, the audacious statement was made that nearly a million dollars' worth of the stock left unissued was to be disposed of "by the president as he shall determine, the proceeds to be used for corporate purposes, at the discretion of the board." Isn't this a large power to intrust to a president of any corporation? Suppose he determines to use the proceeds to help him manipulate the stock market and get the better of the other stockholders, at their expense? Can anybody stop him?

The whole abominable, dangerous Rock Island's reorganization scheme has for its single purpose the enrichment of a few at the expense of the many; and I hope every stockholder who is not in with the gang will unite not only to protest against it, but will unite to go into the courts and prevent a repetition of the same sort of tactics which a little over twenty years ago dealt a blow at Rock Island from which it did not recover for more than a dozen years. Then its capital stock was doubled by the declaration of a stock dividend of 100 per cent. In due time the stock tumbled from \$200 a share to less than \$50, and instead of paying 8 per cent. dividends, the road struggled to pay 2. There are many who see in this last grand-larceny Wall Street scheme the precursor of just such another financial crash as followed a few years after the doubling of the stock of Rock Island in 1880.

All the talk of bond-and-stock "rights," of which we hear so much nowadays, has behind it the single purpose to unload. Every man who has been carrying a heavy burden of stocks and bonds at high prices, and who realizes that his financial spree cannot be continued indefinitely, is willing to unload on the dear public by any means, foul or fair. The paid tipsters of the ringsters, in their financial columns, their circulars and sheets, continue to build rainbows of promise of a great bull movement. But every effort to lift the market fails, and on every advance a new batch of stocks and bonds is unloaded on the unwary. If the Rock Island's schemes can be put through, just as the Northern Securities concern was, and as the Southern Securities corporation, it is said, will be, we may look for a new lot of similar enterprises, as the last available resort of the big bull leaders who have found it difficult, by any of the ordinary rules of practice, to get the public to support the market. It is a good time for those who have profits to take them.

"L." Baltimore: Impossible. Personal letter.

"P." Detroit: Glad your evening up helped you out.

"T. H. M." Ashland: I do not recommend the proposition.

"Lake View," Milwaukee: You will have to be more definite in your inquiry.

"S." New York: Four dollars received. You are on my preferred list for one year.

"T." St. Louis: Am making inquiries regarding the Hamberger, Delamar Syndicate. (2) Change will be made.

"Investor," Centralia, Penn.: No reliable savings bank in New York City will pay you more than four per cent.

"S. E. J." Ruby, N. Y.: (1) He has no rating. (2) I do not consider the Mt. Shasta proposition very attractive. (3) You are probably right.

"D." Massillon, O.: The brewing company bonds are a local industrial investment, not dealt in on Wall Street. Their future depends on the economy and integrity of the management.

"T." Arden, Ga.: (1) Having advised the purchase of Toledo, St. Louis and Western around 19, I am not favorably disposed to it around 30. But if the market holds its strength it is still booked for advancement. (2) Fairly good rating.

"L." Meriden, Conn.: The opportunities offered you by W. H. Baldwin & Co., of Albany, and the Mining and Development Company, of New York, are not such as I would care to recom-

mend to an investor. Am making inquiries, however.

"S." Rome, N. Y.: Parties of some prominence are connected with the project, but it is the general impression that banking in New York does not require much further accommodation and that bank stocks for the most part are too high.

"T." West Mystic, Conn.: Some time ago I published the statement of a grain expert, to the effect that September corn would be a purchase. I simply published it because his opinion commanded much attention. I know nothing about corn myself.

"J. J. P." New York: Four dollars received. You are on my preferred list for one year. I am making inquiries about the Greater New York Home Oil Co. It is not traded in on the Exchange. As far as I am able to investigate, it does not look like an investment.

"S." New York: Pacific Coast was one of the favorites of speculation during the height of the boom. It sold last year as low as 52 and as high as 78. If the bull manipulators take it up it will not be difficult to advance it. I would then sell it and take my profit.

"Grant," Orange, Mass.: The combination of Alfred Grant & Co., which you inclose, do not appeal to me. If they can make money for you, why do they not make it for themselves? You are on the preferred list.

"W. W." Cohasset, N. Y.: I am told that the preferred stock of the United Box Board and Paper Company has merit, but I do not believe the statement that it has been very conservatively capitalized. It is an industrial proposition, and not a very strong one, for it does not control the situation by any means.

"C." Detroit: There are many evidences that American ice was picked up on the decline by insiders who had maneuvered to depress it. The earnings are sufficient for the resumption of dividends on the preferred, but dividends will not be declared until the manipulators are in possession of all the shares that they want.

"Dionthy," Chautauque, N. Y.: (1) As a rule, it is inadvisable to sell stocks after they have been depressed, as the copper shares all have been. The fact that we are producing copper more liberally than ever and are exporting less than a year ago leads many to believe that the price of the metal must decline. This might affect all copper shares unfavorably. I do not feel like advising you to sacrifice your holdings at present. (2) I think you can do better than to try an investment with the Corporation Trust Company.

"W. F. H." Wilmington, N. C.: (1) Republic Iron and Steel preferred, paying seven per cent, and selling around 76, is only a speculation. If it were an investment it would sell considerably higher. (2) Many believe that before the present manipulation of the stock market is concluded most of the common low-priced industrials will be given a sharp upward turn. The only question is as to how long the manipulators can continue their work. (3) It is obviously impossible to predict the future price of any particular stock, unless one has knowledge of some special influence that may be helpful to it. I do not know of anything that is particularly strengthening to Chesapeake and Ohio. (4) I regard the Virginia-Carolina Chemical stocks as too speculative to recommend.

"H." Des Moines, Ia.: (1) The corn crop, no matter what others may say, is not out of danger. A recent governmental crop bulletin said that "early corn over the northern portion of the corn belt will be safe from frost by September 1st to 15th, and the late crop from September 15th to October 1st, while over the southern portions of the corn belt some of the early corn is already matured, and the late will be safe by September 15th to 25th." (2) The report that outside distillers propose to organize a combination in opposition to the new whiskey trust shows the peril that all the industrials are constantly in, including the Steel Trust. The talk about Schwab's hope of effecting a combination of European iron and steel factors, to co-operate with the United States Steel Trust, is one of the wildest of the great batch of rumors which bull manipulators have been circulating on Wall Street. Mr. Schwab is a sick man, and he is out of business for a year, if not forever.

"Inquirer," Bennington, Vt.: (1) Many believe that United States Steel common is a good stock to speculate in, because of the hope that it will be manipulated for a rise and because of the belief that for two years at least it can continue to earn and pay its dividends. But if the money market should break down suddenly under the tremendous borrowing demand of the past two or three years, the entire market would naturally suffer. (2) Pacific Mail is controlled by Union Pacific interests. It is for them to move it up or down. The impression is that if conditions are good they will try to advance its price. (3) I still believe in Long Island

Railroad stock for a long pull and think the Kansas City Southern preferred, Toledo, St. Louis and Western preferred, and Pere Marquette have possibilities, but I am not advising speculation at this time. You may be right in the belief that the insiders will have to carry the market along for some time to come; but suppose the insiders are quietly getting out now? Who will "hold the bag"?

2222-2224-2226-2228-2230-2232-2234-2236-2238-2240-2242-2244-2246-2248-2250-2252-2254-2256-2258-2260-2262-2264-2266-2268-2270-2272-2274-2276-2278-2280-2282-2284-2286-2288-2290-2292-2294-2296-2298-2300-2302-2304-2306-2308-2310-2312-2314-2316-2318-2320-2322-2324-2326-2328-2330-2332-2334-2336-2338-2340-2342-2344-2346-2348-2350-2352-2354-2356-2358-2360-2362-2364-2366-2368-2370-2372-2374-2376-2378-2380-2382-2384-2386-2388-2390-2392-2394-2396-2398-2400-2402-2404-2406-2408-2410-2412-2414-2416-2418-2420-2422-2424-2426-2428-2430-2432-2434-2436-2438-2440-2442-2444-2446-2448-2450-2452-2454-2456-2458-2460-2462-2464-2466-2468-2470-2472-2474-2476-2478-2480-2482-2484-2486-2488-2490-2492-2494-2496-2498-2500-2502-2504-2506-2508-2510-2512-2514-2516-2518-2520-2522-2524-2526-2528-2530-2532-2534-2536-2538-2540-2542-2544-2546-2548-2550-2552-2554-2556-2

HANDSOME ARCH ERECTED BY AMERICANS AT JOHANNESBURG, SOUTH AFRICA, IN HONOR OF KING EDWARD'S CORONATION.

### Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be enclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

THE competition among the strong, old-line companies is such that, if they could safely reduce their insurance rates to the low level of the assessment concerns they would certainly do so. The fact that they do not is the best evidence that the low rates cannot be safely offered. There may be social advantages and temporary benefits arising from membership in a fraternal order, but any man who joins one of these solely for the insurance benefit and with an expectation of continuing this benefit for any length of time makes an egregious mistake. The same amount of money paid for an old-line policy would be in the nature of an investment, becoming more valuable from year to year, and never be attended with the risk of its entire loss.

"G." Sandusky, O.: (1) The policies are well-nigh identical in terms and results. (2) The estimate is not guaranteed, as you will see if you read the policy carefully. (3) The guaranteed amount is absolutely safe.

### OFFICIAL LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 22 to September 5, 1902, of the confirmation by the Board of Revision of Assessments, and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessments for LOCAL IMPROVEMENTS IN THE BOROUGH OF THE BRONX:

24TH WARD, SECTION 11, EAST 176TH STREET REGULATING GRADING, CURBING, FLAGGING, LAYING CROSSWALKS, PAVING, FENCING AND PLANTING TREES, from Jerome Avenue to Tremont Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 21, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 23 to September 6, 1902, of the Confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessments for LOCAL IMPROVEMENTS IN THE BOROUGH OF THE BRONX:

24TH WARD, SECTION 11, MARION AVENUE SEWER, from the existing sewer in East 180th Street to Kingsbridge Road. EAST 176TH STREET SEWER, from LaFontaine Avenue to Hughes Avenue; EAST 167TH STREET SEWER, from Valentine to Rye Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 22, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 9 to 21, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessments for LOCAL IMPROVEMENTS IN THE BOROUGH OF THE BRONX:

23D WARD, SECTION 10, MOTT AVENUE PAVING, from the north side of East One Hundred and Thirty-Eighth Street, to the south side of East One Hundred and Sixty-First Street.

23D WARD, SECTION 9, FENCING VACANT LOTS on south side of One Hundred and Sixty-Fourth Street, from 100 feet East of Boston Road to a point 300 feet east of Boston Road.

EDWARD M. GROUT, Comptroller.  
City of New York, August 8, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 11 to 14, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessments for OPENING AND ACQUIRING TITLE to the following named streets and avenues in the BOROUGH OF THE BRONX:

23D AND 24TH WARDS, SECTION 9, EAST 171ST STREET OPENING from Sedgwick Avenue to the United States bulkhead line of the Harlem River. Confirmed July 7, 1902; entered July 30, 1902.

23D AND 24TH WARDS, SECTIONS 9 AND 11, CROMWELL AVENUE OPENING, from Inwood Avenue to Macombs Dam Road or Highwood Avenue. Confirmed July 10, 1902; entered July 30, 1902.

23D AND 24TH WARDS, SECTION 11, EAST 171ST STREET OPENING, from Brook Avenue to Crotona Park. Confirmed July 13, 1902; entered July 30, 1902.

EDWARD M. GROUT, Comptroller.  
City of New York, July 30, 1902.

"P." Foothills, Wash.: The Union Central of Cincinnati is a company of years and standing, reporting a good business and issuing some very excellent policies. It is not one of the greatest companies, however.

"R. M. P." Clinton, Ia.: I do not advise you to take insurance in a new or untried company when you can get just as good propositions, far safer, from companies of long-established reputation and unquestioned security.

"L." Macon, Ga.: The accident policy of the Travelers of Hartford is as good as the best. The soundness of the company cannot be questioned. For that reason I prefer it to the policy in the somewhat untried concern which you speak of.

*The Hermit.*

### Hints to Money-makers.

Continued from page 235.

"S." Brooklyn, N. Y.: Of the three, the second one mentioned has the best standing. Alfred M. Lamar does a large business.

"W. R." Somerville, Mass.: I would not advise investment with any of the parties you name. They have nothing to offer that will do you any good.

"S." Chicago: (1) I am obtaining information about the Palms Park Co. (2) The price of the lots is rather high, but the managers of the property have a good reputation.

"Y. F." New York: You have a good profit in your Toledo, St. Louis and Western preferred, and a good profit is always advisable to take. At the same time, those who are most deeply interested in this stock promise higher prices for it. If there is no general break, it might therefore be advisable to hold.

"B." Lebanon, Penn.: (1) I think well of the Iron Mountain Refunding 4s as an investment pretty nearly, but not quite, gilt-edged. (2) I have long understood, from those who ought to know, that Manhattan Railway stock was selling at a fairly reasonable price. A bad break, arising from strained monetary or other conditions, might carry it down lower, but it seems to be on demand at every recession.

"W." Chicago: The announcement by the American Ice Co.'s directors, that they themselves have taken the balance of three or four million of the new issue of bonds unsubscribed for, is the first official statement regarding the affairs of this concern that has been made of late. The officers have repeatedly said that the earnings this summer were large, better than last year's, when dividends on both the preferred and common were paid.

"W." West Superior, Wis.: One dollar received. You are on my preferred list for three months. (1) I am inclined to agree with you, in view of information that has come to me from reliable sources in the West. The development by settlement and industrial growth of some sections of the West has been such as to justify higher prices for such stocks as the Soo, Pere Marquette, Wisconsin Central, and similar properties, but over-trading and over-speculation, and the heavy demands on banks and trust companies everywhere, make conservative financiers fearful of a sudden and unexpected collapse before the expiration of a year.

"Q." New Jersey: (1) The constant repetition of the report that the National Biscuit is to have decided opposition may make a purpose to depress the shares for purposes of manipulation. Biscuit common, however, represents water. While the earnings of the company are large and the hope of an increase in dividends would strengthen the stock, I do not regard it as an investment. Insiders only can advise as to whether it is a good speculation at prevailing figures. If your information comes from the inside, you could safely follow it. (2) Not while the money market conditions are so uncertain. (3) American Chile common and Union Pacific common sell higher than the preferred shares because the dividends of the latter are restricted, while on the former any amount earned can be paid. (4) The illness of Mr. Schwab may have some effect on United States Steel, but if anything should happen to Mr. Morgan a blow would be struck at this as well as all the other Morgan properties which he has exploited. It is the impression that an effort will be made to advance the steel shares. It might be advisable to wait a little longer.

"G. W." Milwaukee: The favorable advice you have regarding the National Enameling and Stamping Co., if you can confirm them from the inside, would justify the purchase of the common shares. The question is, can you get at the truth? Industrial properties sometimes sell below their real value. American Chile common, now 110, sold for a long time between 50 and 70, and I then advised its purchase. I did this because I knew, on the best authority, how well it was doing. (2) I think well of Ontario and Western for a long pull, but the market looks as if it ought to react.

"S. S." New York: The balance sheet of Central Foundry for the past fiscal year showed a credit balance of about \$57,000, which is a good way off from paying dividends on \$14,000,000 of capital stock. You must remember that there are about \$4,000,000 debenture bonds ahead of the stock and that the iron business, at almost any time, is liable to take a sudden change for the worse, as it did in the height of the last boom. Unless you have inside information not disclosed by the annual re-

INTERNATIONAL CORRESPONDENCE SCHOOLS, Box 1158, Scranton, Pa.

port, and more favorable than the latter, I would not advise the purchase from the investment standpoint. The new Distillers' preferred offers a better speculation at present.  
New York, August 28, 1902. JAMPER.

### Looking After Immigrants.

IN THEIR efforts to break up the gangs of miscreants who prey upon foreign sailors in the port of New York the Legal Aid Society of the metropolis will have the sympathy, and should have the practical support, of the entire community. The life of the sailor is, at the best, set about with many peculiar perils and temptations; his earnings are comparatively small and his opportunities for material advancement few, and it is shameful and outrageous that in a great civilized community like New York he should not have ample protection from the human vultures and hyenas who would despoil him even of the few good things he possesses.

Equally detestable, if not more so, are the creatures who, we are sorry to say, may sometimes be found in official guise taking advantage of the ignorance and helplessness of many newly arrived immigrants to swindle or rob them, and we are glad that Secretary Shaw and Immigration Commissioner Williams have instituted vigorous measures to stop these outrages so far as the officials of the immigration bureau are concerned. There is little or no doubt that one of the officials discharged at the Secretary's order has accumulated large wealth as the result of petty frauds practiced upon immigrants, and the pity is that the fellow should be allowed to get off free with his most ill of all ill-gotten gains.

Abuses of this character have been going on for years at the port of New York, and we hope the department having jurisdiction over this business will not stop until it has rooted out all the rascals and made an end of the thieving and swindling. While we are justly deploring the character of many of the immigrants coming here, on the

ground of their poverty and illiteracy, we surely shall not better the matter by allowing them to be cheated or robbed of the little they have when they set foot on our shores.

It would seem that if there was any one place where, more than any other, an excellent opportunity offered itself to impress a lesson in good citizenship and respect for law and order upon a newly arrived immigrant and prospective voter, it would be during the period when he is passing through the hands of our immigration officials. Too often, we fear, in the past, the impressions given have been quite the opposite of this. It is not at all surprising, when we think of it, that the large number of these aliens, who after their experiences in getting in the country have remained in New York to fall into the clutches of its Tammany rulers, with all their shameless and brutal exactions and tyrannies, should have, in time, taken up the same practices and gone to swell the ranks of bribe-givers and bribe-takers. The marvel is that so many of them, in such an atmosphere and with such examples before them, have turned out to be honest and reputable citizens.

### American Bicycles Abroad.

ENGLAND and Germany, it appears, have thus far practically monopolized the bicycle trade in Paraguay, but there is no apparent reason why American dealers in this article should not capture a good share of this business for themselves. Our consul at Asuncion, Mr. Ruffin, says that bicycles are being introduced there in considerable numbers, owing to the fact that the streets in the city are being paved and some of the suburban thoroughfares placed in good order. This is a new market for bicycles, those which are of medium weight being particularly desired, and their cost should be from \$16 to \$18. The importation of bicycles in Paraguay is free this year, but it is likely that next year a duty will be placed thereon.

## The Dramatic Season Arrives.

Continued from page 231.

From the story a drama has been constructed, and the production in New York is to have all the splendor and pomp of the author's descriptions. Viola Allen and E. M. Holland will head the company, Mr. Holland to impersonate *Pope Leo*, an impersonation which is said to be one of the most unique and striking in the history of the stage. Miss Allen will, of course, be *Roma*, and Edward J. Morgan, of the "Christian" company, will support her in the part of *David Rossi*, the patriot lover. The first performance will be given in Washington October 6th.

In the dramatization of popular books the coming season will present a slight variation. A play is to be constructed out of "Huckleberry Finn" by Mark Twain, and he and Lee Arthur have collaborated in making it ready for the stage. It will be seen first in Hartford in November with Arthur Dunn as the head of the company.

John Drew will open the Empire Theatre in New York; Miss Annie Russell will be the first attraction at the new Lyceum in "Mice and Men"; W. H. Crane will continue to play "David Harum." Miss Virginia Harned will be seen in "Iris," supported by Hilda Spong and Oscar Asche, at the Criterion; and following her at that theatre Miss Julia Marlowe will play a long engagement beginning with a new play, "La Reine Fiamette." William Gillette will again play "Sherlock Holmes" and will be in New York at the Knickerbocker for a month. Mrs. Leslie Carter is to open at Belasco's theatre on Forty-second Street, continuing "Du Barry." Harrison Grey Fiske will open his Manhattan Theatre early in September with a production of "Captain Molly," by George C. Hazelton; Miss Elizabeth Tyree, who plays the leading rôle, is to star afterward in a new play, "Gretna Green," by Elizabeth Furness. Mrs. Fiske will appear at the Manhattan later in a magnificent production of Herr Paul Heyse's "Mary of Magdala."

A new and splendid production which will open in Montreal and then fill engagements in the United States, will be "Salammbo,"

the story of Carthaginian splendor, in which Miss Blanche Walsh will appear. In January Miss Ethel Barrymore will be seen in the new comedy, "The Flirt," by Clyde Fitch, who, on account of illness, was unable to finish the work in time for its production at the beginning of this season. Nat Goodwin and Maxine Elliott produce a new drama, "The Altar of Friendship," at the Broadway Theatre this season. James K. Hackett will star in the "Crisis," opening at Wallack's. James O'Neill will have a new performance. Kyrle Bellew will tour the country in "A Gentleman of France," in which he was so popular in New York last season. Among the lighter things it is safe to predict success for "Sally in Our Alley" at the Broadway, New York. It has rhythmic music, dancing, and comedy, and besides, Jo Herbert, Marie Cahill, and Dan McAvoy are among those in its cast. The Rogers Brothers have a new comedy, "The Rogers Brothers in Harvard," and they will be at the Knickerbocker September 1st. Jerome Sykes and "The Billionaire" will be seen later. The elaborate productions of "Ben-Hur" and the "Sleeping Beauty and the Beast" will be on the road.

Mansfield and Sothorn will be here soon, the latter to appear in "Hamlet" and "If I Were King." The plays will go on the road, and will be at the Garden Theatre in December. Not that there is any connection or association, the public may be interested in knowing that "Tracy, the Outlaw," will not be permitted to rest in his grave in peace. On the contrary, he is to be resurrected and produced in mimic on the stage. It will be the "Sensational Melodrama, Tracy, the Outlaw, four great acts, nine wonderful scenes!"

So, after all, we shall not lack for entertainment.

## How to Get Rich in New York.

ALTHOUGH it was a novelist who said it, the following is worthy of the most astute financier: "The quickest way to grow rich in New York has long been by showing rich men new investments."

## Your money back

If you are not satisfied

DO YOU SUPPOSE that a company with a capital of \$500,000.00, paid in full, and the proud reputation of 26 years of continuous success, would make such an offer and not carry it out to the letter?

DO YOU SUPPOSE we would jeopardize our standing with the public and our chances of still greater success by failing to fulfill any promise we make?

DO YOU SUPPOSE we would make such an offer if we did not have the utmost confidence in the satisfying quality of our goods?

WE KNOW we can please you and save you money, for HAYNER WHISKEY goes direct from our distillery to you, with all its original richness and flavor, carrying a UNITED STATES REGISTERED DISTILLER'S GUARANTEE of PURITY and AGE and saving you the big profits of the dealers. That's why it's best for medicinal purposes. That's why it's preferred for other uses. That's why we are regularly supplying over a quarter of a million satisfied customers. That's why YOU should try it.

Direct from our distillery to YOU

Saves Dealers' Profits! Prevents Adulteration!

## HAYNER WHISKEY

PURE SEVEN-YEAR-OLD RYE

4 FULL QUARTS \$3.20 EXPRESS PREPAID

We will send you FOUR FULL QUARTS of HAYNER'S SEVEN-YEAR-OLD RYE for \$3.20, and we will pay the express charges. When you receive the whiskey, try it and if you don't find it all right and as good as you ever drank or can buy from any body else at any price, then send it back at our expense and your \$3.20 will be returned to you by next mail. How could an offer be fairer? We take all the risk and stand all the expense, if the goods do not please you. Won't you let us send you a trial order? We ship in a plain sealed case; no marks to show what's inside.

Orders for Ariz., Cal., Col., Idaho, Mont., Nev., N. Mex., Ore., Utah, Wash. or Wyo., must be on the basis of 4 Quarts for \$4.00 by Express Prepaid or 20 Quarts for \$16.00 by Freight Prepaid.

Write our nearest office and do it NOW.

THE HAYNER DISTILLING COMPANY

DAYTON, OHIO ST. LOUIS, MO. ST. PAUL, MINN.

24 DISTILLERY, TRAY, O. ESTABLISHED 1866.

The series comprises six of the latest and best examples of Stanlaws' work, beautifully printed in colors. The size of each picture, handsomely mounted, is 12 x 19 inches.

The Price of the Smartest Girl Series is \$2.00 per Set

## The Stanlaws Girl

is a girl by herself—an artistic creation. She defies analysis and beggars description as much as does the perfume of the rose. She is just what she is—the Stanlaws Girl, whose beauty changes and becomes more pronounced in every light that ripples in her diaphanous draperies.

Copyrighted, 1901, by Judge Company

## Stanlaws' Smartest Girl Drawings

A New Series of Water-color Proofs of Drawings of the Fascinating Stanlaws Girl.

## Miniatures in Water Color

of twelve sketches of

Heads of Beautiful Women

... BY ...

J. MONTGOMERY FLAGG

There has not only been a great demand for Mr. Flagg's series of (eight) Heads in the original form (viz., large size, 15 in. x 19 in.), announced on page 1, but also suggestions and requests have been made for the pictures in other sizes. The publishers have therefore added four more subjects to the original series and have issued the complete series of twelve as miniatures. These miniatures are beautifully water colored by hand, and can be had in groups of two, three and four subjects, as well as in single subjects.

### Cured Before You Pay.

**ASTHMA & HAY FEVER** I will send any sufferer a bottle of **LANE'S ASTHMA CURE, FREE**. If it cures you, send me \$1; if it does not, don't. Give express office. Address  
**D. J. LANE, Box 1, W., St. Marys, Kansas.**

You ought to keep a little good whiskey in the house. For accidents, fainting spells, exhaustion, and other emergency uses, it relieves and revives. But you must have good whiskey, pure whiskey, for poor whiskey, adulterated whiskey, is injurious. **HAYNER WHISKEY** is just what you need, for it goes direct from their distillery to you, with all its original strength, richness, and flavor, carries a **UNITED STATES REGISTERED DISTILLER'S GUARANTEE OF PURITY AND AGE**, and saves you the enormous profits of the dealers. Read the offer of The Hayner Distilling Company elsewhere in this paper. They are a reputable house, have a paid-up capital of half a million dollars, been in business over thirty-six years, and will do exactly as they say.

### Free Trade at Last.

IT IS too much to expect, of course, that Secretary Shaw's decision to admit cats of high pedigree to this country free of duty will either deeply interest or bring rare and unmixed joy to any large number of American people, since most of them have cats enough and to spare without importing any; but the decision will doubtless add to the popularity of the gentleman from Iowa in the upper circles of feminine society where long-haired Angoras and stumpy Abyssinians from over sea are always more or less in favor. On the face of the decision, it looks like a most undemocratic and dangerous discrimination in favor of foreign aristocracy, to use no harsher terms, but if the Messrs. Tillman, Bailey, the Nebraska free-silver howler, and other guardians of our sacred liberties are willing to let the matter pass, we will try to repress our own feelings on this point.

## BLOOD POISON

**Primary, Secondary, or Tertiary Blood Poison**  
Permanently Cured. You can be treated at home under water treatment. If you have taken mercury, iodine, potassium, and other heavy salts and poisons. Syphilis, Patches in Mouth, Sore Throat, Pimples, Copper-colored Spots, Ulcers on any part of the body, Hair or Eyebrows falling out, write  
**COOK REMEDY CO.**  
216 Madison Temple, Chicago, Ill., for proofs of cures. Capital, \$50,000. We solicit the most obstinate cases. We have cured the worst cases in 35 to 45 days. 100-page Book Free.

### Special Prizes for Amateur Photographers.

LESLIE'S WEEKLY offers a special prize of \$10 for its amateur contest in the Christmas number. Also for the Thanksgiving number, both contests to close November 1st. The pictures should, of course, be appropriate to the holiday and especially interesting to children, for Christmas is above all things the festival of childhood.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unavailable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not.

N. B.—Communications should be specifically addressed to "Leslie's Weekly," 110 Fifth Avenue. If the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

### Chaotic Warfare in South America.

NO ONE but a mental contortionist of the most expert sort would be able to follow the sinuosities of South American politics, and especially the rights and wrongs, the causes and results of the insurrections, revolutions, and other blood-letting affairs that pepper the history of these peppery republics, with any degree of success, and he would be likely to become dizzy with the effort. We made a brave attempt to keep tally of them during the present year, but between the revolution in Colombia, a threatened scrimmage between Chili and Peru, an uprising in Ecuador, the possibilities of a fight in Paraguay, and a few other minor affairs of the kind, we have lost our reckoning already, and have concluded to let the squabbling proceed without any advice from us. There are certain districts in South America where earthquakes, known locally as *tremoladores*, are felt almost every day. The same might be said of South American wars. As earthquakes are said to have a peculiar effect upon the nerves, perhaps there is a relation here of cause and effect.

## "Drink Beer"

When you get run down, your doctor says "drink beer." Or he prescribes a malt tonic—concentrated beer.

Weakness calls for food, and barley-malt is a food half digested. The digestion of other foods is aided by a little alcohol, and beer has 3½ per cent.

Weakness requires a tonic—that's hops.

And it's good for well people, too, if you get a *pure* beer. That's essential.

Even a touch of impurity makes beer unhealthy, because beer is saccharine. Impurities multiply in it.

And a "green beer"—insufficiently aged—causes biliousness. But a pure beer—well aged—is the beverage of health.

Schlitz beer costs twice what common beer costs in the brewing. One-half pays for the product; the other half for its purity.

One-half is spent in cleanliness, in filtering even the air that touches it, in filtering the beer, in sterilizing every bottle. And it pays the cost of aging the beer for months before we deliver it.

If you ask for Schlitz you get purity and age, yet pay no more than beer costs without them.

Ask for the Brewery Bottling.

### Curiosities of Pronunciation.

LORD BEACONSFIELD'S father wrote a book called "Curiosities of Literature," and it has inspired a lover of the quaint and queer with the idea of writing a history of the pronunciation of proper names, or why a name is often pronounced contrary to all rules of orthoepy. He will not make an exhaustive study in etymology, but will endeavor to trace the reasons for the arbitrary pronunciation of certain names. For instance, in some sections of the South the surname Tallaferra is pronounced Toliver, and several families reside in New York State who spell their name, which is of French origin, Beauchamp, and call it Beechum. The well-known Irish name O'Meara is pronounced O'Marr and the English Cholmondeley is curtailed to two syllables in Chumley. But these are easy to explain compared to that of a family who resided in Virginia, spelled their name Enroughty, and, by a process that defies phonetics, pronounced it Darby.

The history of this strange departure from all rules in pronunciation is interesting. During the war in England between the Roundheads and Cavaliers the Enroughty family zealously espoused the cause of the ill-fated Charles I., save one member, and he boldly went about the country addressing meetings in behalf of Oliver Cromwell's side. His action caused intense bitterness, and in derision the Enroughtys nicknamed him a "Darby," which means a kind of itinerant preacher. After the death of Cromwell the Enroughty who supported him emigrated to Virginia, and in order to show how proud he was of the part he had taken in defeating Charles I., he continued to call himself by the opprobrious term Darby, retaining the original spelling of his surname.

In Louisiana the author said he expected to find many names with curious pronunciations. A majority of these names, however, have been Anglicized from the French and Indian, but some retain the original pronunciation so difficult for a stranger to acquire, even after he has heard them rolled glibly from the tongue. Attakapas in southern Louisiana is called Attuckapaw; Tensas is easily changed to Tensaw; the town Natchitoches is locally abbreviated to Nackitush, and the Ouachita River is christened Washitaw. In New York, Houston is invariably pronounced House-ton, and in Texas, where Sam Houston lived and helped to make history, it is always Hew-ston. To those who do not understand Spanish many names of towns and things in New Mexico and California seem mispronounced in reading. The Gila reptile becomes Hela when spoken of by the natives; Geronimo less guttural in Heronimo, and the Mojave desert not less caloric by its three-syllabled Mohava. The humorous side of this study, which the author proposes to incorporate in his book, is the fact that some names are pronounced one way in the rural districts and quite different by a branch of the same family living in the city. A family has the name, say, of Mittel, in the country, and call it Mittle, but the aspiring young son who goes to the city and becomes wealthy gives certainly a more euphonious sound to it when he changes it to Mittell. It is the opinion of this deliver into the curious that, in time, phonetics will prevail and names will be spelled as they are pronounced.

### An Ancient Joke.

A NEW, if not a refreshing variation on the mother-in-law joke which we have been hearing since the days of Rameses appears in the statement that an Oxford professor while engaged in ethnological researches in Australia discovered that a mother-in-law was not allowed to come within a mile of the "mia-mia" (hut) of her married daughter. If she did so, the husband was authorized by the tribal law to use his club. Now that this mossy and venerable specimen of alleged humor has broken into the domain of ethnological science may it not be allowed to remain there along with other fossils?

I've had a lovely supper, and it was enlivened with a bottle of Gek's Imperial Extra Dry Champagne.

**Advice to Mothers:** Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

Among the very best pianos manufactured in this country is the Scherer. Possessing remarkable sweetness and purity of tone, these pianos are classed by professionals as being fully equal (and in some respects superior) to any made in the world. They are so perfectly and peculiarly constructed as to guarantee their reliability in any climate.

## The Peril of the Party.

IS THE incredible fatuity of the Democracy to be imitated by the Republican party? After the Democracy had tried a free-silver candidate and platform, in 1896, and been defeated, it was thought to be preposterous that four years later, in 1900, it would be so foolish as to go before the people with the same rejected platform and the same defeated candidate. But it did, though no sensible Democratic leader, unless he had a political axe to grind, believed that a new trial of the old experiment would lead to anything but a repetition of the old failure. It was not only a failure, it was a disaster, the worst the Democratic party had sustained since the ridiculous Greeley campaign. But political parties, like individuals, have their moods and fancies, their whims and idiosyncrasies, their successes and failures.

The country is prosperous. Out of the slough of despond of 1893 the protective tariff has raised our industries to the highest plane of success. The tariff may be, in some minor respects, inequitable and uneven, but on the whole it has wrought a good work, met public expectations, and fulfilled the predictions of its advocates. To agitate its revision at this juncture, when there is no urgent demand for it, and little need of it, would be to strike a heavy blow at all the manufacturing industries which have adjusted themselves to existing legislative conditions. It would mean an upset of capital and labor. For years the Democratic party has clamored for tariff revision all along the line, and free trade in certain directions. The working masses, representing both labor and capital, have been satisfied with things as they are, and the call for tariff reform has had no attractions for them.

Now the growing antagonism to the trusts, in part invited by the utter selfishness of some of our great speculative industrial combinations, has been greedily seized upon by Democratic leaders, to strengthen their demand for tariff revision. They are denouncing the tariff as the "mother of trusts," on the ground that it fosters monopolies. It is useless to conceal the obvious fact that this new Democratic war-cry is attracting a good deal of attention among the voting masses. Distrustful, as the latter are, of the Democratic party, they hesitate to follow its leadership in a national campaign, for they remember the story of the recent past. Is it not most unfortunate, therefore, that a great Republican State like Iowa bolsters up the Democratic contention by a declaration in favor of "any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly?"

When has the protective tariff ever sheltered a monopoly? When before has any Republican ever conceded that there was a possibility of such a thing? A party principle cannot mean one thing to-day and another to-morrow. The Republican party has upheld the policy of protection on the ground that it was necessary to give American workmen living wages and decent support. It has believed in taxing goods manufactured in competition with our own by cheap foreign labor in other lands. It has legislated both to keep out pauper labor and, to an extent at least, the products of that labor. The Republican party believes that a well-paid, well-nourished and properly educated citizen is essential to the well-being of the nation and to the development of its prosperity and glory. The Democratic party has labored to prove that protection gives no material advantage to labor, but that it bestows its favor upon capital, and fosters monopolies and trusts.

The folly of the declaration of the Iowa Republicans on this subject must therefore be obvious; and it is difficult to understand how the Secretary of the Treasury, even though his home be in Iowa, could, in his recent speech at Morrisville, Vt., say that this feature of the Iowa platform deserved approval. In the same speech Secretary Shaw repeatedly denied the Democratic declaration that "the tariff is the mother of trusts," and pointed out that if the demand for the abolition of the tariff on cattle and meat were granted, the result would be injurious not to the packers or the so-called "meat trust," but to the farmers and all the meat-producers of the United States. Holding to this view, how could Secretary Shaw, by any stretch of liberality, indorse the direct intimation of the Iowa platform that the tariff schedules shelter monopolies? And how does any refinement of expression justify Secretary

Shaw's amazing confirmation of the objectionable clause in his State platform, when he says, as he did in his recent speech, "The protective tariff is the parent of conditions that make it profitable for capital to combine, and congenial for labor to organize." Does he reconcile this with his repeated statements that protection is not the parent of trusts? We fear the public do not. There are times when, even for Cabinet officers and State conventions, silence is golden.

The Republican party cannot have two voices on this question, one for Iowa and the West, and the other for New York, Pennsylvania, New England, and the East. It is not pleasant to find a Republican candidate for Congress in a Minnesota district proclaiming on the stump that he is in favor of free lumber, an Iowa Republican State convention squinting at the notion that the tariff protects monopolies, and the Chairman of the Republican Congressional Committee undermining the foundations of protection on the ground that "it does not sufficiently protect the consumer."

Secretary Shaw is in error when he says that the tariff revision platform of Iowa has been criticised by Republicans. We all believe with the Republicans of Iowa, in "such changes in the tariff, from time to time, as become advisable through the progress of our industries and their changing relations to the commerce of the world." But what Republican leader believes in the intimation of the Iowa platform, that the tariff "shelters monopolies"? The administration certainly does not believe in this revamped accusation of the Democracy. The administration is pledged to do its utmost to make the trusts conform to the laws of the country and to pass all the required legislation to properly restrict trusts, if they antagonize public interests. But President Roosevelt, and every other Republican leader, has stood like a rock in opposition to the declaration that protection protects monopolies. As the New York Sun well says, "The method of trusts repression by tariff revision, as recommended by the Iowa platform, differs wholly from anything that Mr. Roosevelt has proposed; and if it were adopted as a Republican policy by the administration and the majority in Congress, then the administration and the Republican majority would simply be marching in a body on to Democratic ground."

Instead of defending this indefensible Iowa platform, Secretary Shaw should do what the able and intelligent expounder of Republican faith in the capital of his own State, the Des Moines Capital, does, when it confesses, bluntly and boldly, that the Republicans of Iowa "have simply made a foolish platform." This issue, not new in substance, but new in form, has been thrust to the front in the approaching campaign, and its prominence is not calculated to add to the hopes of our party leaders for the election of a round Republican majority in the next Congress.

## Opening of The Hague Court.

AN EVENT simple in itself, but of tremendous significance in its bearing upon the peace of the world, was the opening of the international court of arbitration at The Hague on September 1st. This is the permanent tribunal organized by the peace conference called at The Hague in 1899 by the Czar of Russia, and its first formal session. This international court, when fully constituted according to the provisions of The Hague convention, will consist of about eighty members, representative of the twenty-six nations entering into The Hague compact. Up to the present date twenty-one nations have appointed their representatives, making sixty-seven in all. Of the signatory governments only Luxemburg, Montenegro, Turkey, Persia, and China have not yet acted. The court, however, was declared open for business last April.

It is not intended that the tribunal shall assemble as a whole for the trial of any case, but out of the entire list of members or judges five are to be selected to constitute a trial court for the hearing and adjudication of any case referred to it, two to be selected by each of the nations who are parties to the dispute and these four to choose a fifth member. In the present case, which is a dispute between the United States and Mexico over what is known as the Pious Fund Claim, the United States has chosen Sir Edward Fry, of Great Britain, former Chief Justice of the Court of Appeals, and Professor de Martens, of Russia, the distinguished international jurist; Mexico has named Signor Guarnaschelli, first President of the Court of Cassation at Rome, and Dr. Lohman, formerly Netherlands Minister of the Interior. They will choose a fifth member whose name at this writing is not known, and the five will constitute the bench to try the question. Before them each of the governments will appear by its agent and counsel, and present the case. It is expected that the court will remain in session until November 1st. The decision rendered will be final.

The Pious Fund Claim is not in itself a matter of general or very grave importance, the chief interest in it for the present lying in the fact that it happens to be the first case referred to The Hague court, thus marking the beginning of what, it is confidently believed, will be a new and brighter era in the intercourse of nations. The so-called Pious Fund originated in the year 1687, when it was started to enable the Jesuit missionaries to carry on their work in what is now New Mexico and California. The Jesuits were the trustees of the fund, but when they were expelled from Spanish dominions in 1767 all their property, including this fund, was seized by the crown, which after that administered this fund, and the Franciscan friars were given charge of the missions. When Mexico won her independence from Spain the trust of the fund was transferred by Spain to the republic. When Upper California was ceded to the United States Mexico ceased to pay its proportion of the interest to

the church authorities. The latter made a claim for these arrears before a mixed commission organized by the convention of 1868. Sir Edward Thornton, the umpire of the commission, after hearing the case, rendered judgment against Mexico amounting in all to \$904,700. This included all sums due to May 30th, 1869, and Mexico paid it in full. Since then there have been no payments, and Archbishop Riordan is now before the international court at The Hague to claim the million that has piled up since the church authorities in California obtained their last contribution for the Pious Fund after Sir Edward Thornton's finding in their behalf.

While this will be the first case before the international court of arbitration, the controversy is only one of many to be settled by this method within the past few years. Few people, indeed, realize how far and wide has been the acceptance of the principle of arbitration in recent times in disputes between nations. The number of controversies settled by this means increased from three between 1810 and 1820 to more than sixty between 1890 and 1900; that is, more than six per year for the entire decade just past. The whole number of cases arbitrated during the century was just under two hundred, the great majority of which fell within the last thirty years. Thirty-seven countries, practically all the important nations of the globe, participated in these arbitrations, the United States and Great Britain taking the lead with some fifty cases each. What the governments have done through The Hague conference and the setting up of the permanent court has been simply to crystallize into general and permanent form the practice which had been in successful operation for a hundred years.

## The Plain Truth.

ONE THING to be noted regarding Mr. Balfour, now the British premier, is the friendliness of his repeated utterances toward the United States and his unreserved acceptance of the Monroe doctrine. Had Lord Salisbury possessed as clear a notion of both American and British opinion on this question it is unlikely that he would have taken the position he did in the correspondence which led to Mr. Cleveland's vigorous and effective message in the fall of 1895.

THE SINGULAR revelation is made by the well-informed Washington correspondent of the New York Tribune that the proposition to float a Cuban loan of about \$40,000,000 is only part of a scheme to get the republic involved in such a tangle of debt that its annexation to the United States will be compulsory. The Tribune says that in the last weeks of the military occupation of Cuba a strong effort was made to secure the approval of the United States for a Havana municipal loan of \$15,000,000 to provide for the sewerage and paving of the city and incidental purposes, and that a number of contractors and capitalists combined so as to make an unreasonable bid for the work, in consequence of which the bid was rejected; and before one could be accepted, at reasonable figures, and a municipal loan secured, American authority ended with the establishment of the republic. Thereupon the American syndicate contractors and schemers began to lay the basis for the Cuban republic loan, so as to saddle the island with a big national debt and involve its speedy financial embarrassment. Under such conditions, annexation would be the only outcome, and then the gang of American "financiers" will be ready to swoop down on the island and capture all the valuable franchises and contracts. President Roosevelt will keep a watchful eye on this interesting situation.

THERE IS no saying what the immigration returns for the year will be, but if the present average is kept up the year will show a full million of foreigners added to our population. Nearly 93,000 immigrants landed in New York during May alone, the majority of whom have since found a temporary abiding place among relatives or friends in widely separated sections of the country. This is the largest number admitted in any one month in the past twenty years. In 1893, 502,917 immigrants entered the United States, and since that year there has been a decline until within the last year or two. The recent increase is attributed to the persecution of the Jews in Europe, and the reports of the opportunities for the laboring man here which are extensively circulated in the Old World. Most of the new arrivals are from Austria-Hungary, Italy, and Russia, and they represent all classes and conditions. A large percentage crossed the ocean on money provided by friends or relatives who have already made homes here. Truth and justice compel it to be said that a majority of these recent arrivals are of no advantage to the country in any sense of the term, while many thousands who drop into the already congested tenement districts of our large cities, to fall an easy prey to scheming politicians or to swell our pauper and criminal population, are a positive and serious detriment. If our powers of assimilation were such that we could probably turn all this crude material into an intelligent and honorable body of citizens within the space of a generation or so, considerations of humanity might prompt us to accept it without question. But it has been demonstrated clearly that we have not that assimilative power; the social and political conditions in our large cities show that we have not. The instinct of self-preservation, therefore, to speak of no higher motive, demands that we should adopt some means to keep out this flood of Old-World pauperism and illiteracy until, at least, we have had a chance to digest some of the stuff of this sort which we have already swallowed. The amended immigration bill recently passed by the House of Representatives will help somewhat, but it is far from being enough, and we hope it will be made more drastic before it becomes a law.

# PEOPLE TALKED ABOUT

THE BENEFACCTIONS of the late Cecil Rhodes appear to have had even a broader scope than was indicated

THE COUNTESS OF WARWICK,  
To whom it is reported Cecil Rhodes left  
\$1,000,000.—*William*

by the early reports of the contents of his will. It is now reported that the "Colossus" bequeathed to the Countess of Warwick lands in South Africa which have been sold for \$1,000,000. The intimation is, however, that this was not a mere personal bequest. Mr. Rhodes evidently expected the proceeds of the property to be devoted to benevolent uses. The countess has been active in philanthropic work and is said to have been one of the few women who were able to interest Mr. Rhodes in their plans to benefit the world. Lady Warwick's specialty in altruistic work has been the aiding of institutions for the training of women. Brooke House, at Reading, Eng., was founded by her with this purpose in view. She added a colonial department to this establishment, in which women are taught cooking, housewifery, laundry work, and dressmaking. Shortly before Mr. Rhodes's death the countess publicly appealed to Mr. Carnegie for assistance in her undertaking of training girls for the Transvaal. It is probable that it was this feature of Lady Warwick's work which most deeply impressed Mr. Rhodes, who was always ready to support any project which, in his opinion, tended to help along South Africa. His legacy to Lady Warwick could be utilized in no better way than in preparing English women who expect to migrate to the Boer colonies to cope with the conditions of a new and strange land.

SECRETARY HAY is a devotee of the gentle art of angling and is quite as successful in the practice of it as he is in diplomacy. Fishing is his favorite recreation during the summer days, which he spends in New Hampshire, and few such days pass without witnessing a good catch of trout as the result of his prowess. As a fisherman his luck is said to be almost phenomenal.

ALTHOUGH SECRETARY ELIHU ROOT has gone to Europe for a well-earned six weeks' vacation, the affairs of the War Department are still being directed by a New Yorker, and in the most satisfactory manner.

COLONEL WILLIAM CAREY SANGER,  
Acting Secretary of War.

Colonel Sanger, who has made a record at Washington which has elicited the praise of all competent judges of his work. His technical knowledge of military matters, his experience in the duties of the soldier, his ability and his familiarity with public affairs make him invaluable in the department and entirely capable of managing it. Colonel Sanger was appointed Assistant Secretary of War by President McKinley in 1901. He was prior to that for many years concerned with military affairs in this State. He was sent abroad in 1900, under instructions from Governor Roosevelt and Secretary Root, to investigate the British auxiliary force system. Adjutant-General Tillinghast, of New York, detailed him to Chattanooga to report on the first mobilization of troops during the Spanish-American war.

Afterward Colonel Sanger was provost marshal at Camp Black, on Long Island. Colonel Sanger served for three terms in the Legislature, where he made a splendid reputation as a man of talent and the highest integrity.

A NUMBER of new and diverting anecdotes of the Prince of Wales, now King Edward relating to that gentleman's visit to the United States in 1890, are told by General Thomas L. James in the *Utica Observer*. One of them relates to a little incident which happened when the prince was visiting at Richmond, Va. Henry A. Wise was Governor of that State at the time, and his son John, afterward a member of Congress, was then a lad of fifteen. The pleasant duty fell to young Wise of showing the royal visitor the objects of interest around the Virginian capital. While engaged in this occupation they came to the public square in which stands an equestrian statue of the "Father of his Country." "That," said young Wise, "is General Washington." The prince at once removed his hat and stood uncovered before the statue of the first President. At this moment a "cornercracker," who had been idling around watching what was going on, came up and said to Wise: "Johnny, is that the Prince of Wales?" "Yes," said John, and then, turning to his royal Highness and pointing up at the statue, the native added: "Sonny, that's the man that threw your Uncle George." The prince laughed heartily and replied, "I guess that is true."

THE PERSONAL popularity of the leading generals of the former Boer army appears to have been increased rather than diminished by their defeat and surrender. Wherever they have gone in their own country since the war these exponents of the lost cause in South Africa have been enthusiastically welcomed by the people. At the town of Stellenbosch, for instance, Generals Botha and Delarey were given a great ovation. Each was drawn in a carriage by sixty students, amid a cheering crowd, to the town hall, where luncheon was served and where General Botha made a speech, which was well received, advising his hearers to stop bothering themselves with politics and to try to make themselves happy in South Africa, their only home. Another notable demonstration in honor of the Boer leaders occurred at the marriage of General De-

GENERALS BOTHA, DE WET, AND DELAREY,  
Who were lionized by their defeated people.

lary's daughter to his secretary, Ferreira. The crowd outside and the congregation within wildly cheered Generals Botha, De Wet, and Delarey, as they entered the church, and after the ceremony General De Wet was carried from the edifice on the shoulders of a number of hero-worshippers. This admiration for the unsuccessful generals, however, is not confined to the Boers. London recently greeted them effusively, and when Botha and Delarey arrive in the United States to collect funds for the Boer widows and orphans, they are likely to be treated as conquerors and to find their mission a grand success.

A LOST manuscript of Carmen Sylva, the Queen of Roumania, has been found by some fishermen in a boat near Venice. The subject was "Philosophic Thoughts About Woman's Destiny," which was much praised by Pierre Loti, to whom the Queen read several chapters one evening in Venice.

A TYPICAL American trio of self-made men was included in one of the parties entertained recently by President Roosevelt at his summer home in Oyster Bay, namely, Senator Pritchard of North Carolina, Congressman William Alden Smith of Michigan, and Hon. C. B. Williams, chairman of the Republican State Committee of Louisiana. Each of these was compelled, at an early age, to fight the battle for existence and to struggle for success. At twelve years Senator Pritchard was seeking a place on a farm where he could earn his bed and board. Subsequently he became a printer and a master of that art, a publisher, an editor, a political leader, and a Senator, and it is to him, more than to any other man, that the Republican party must now look for leadership in North Carolina. Congressman Smith, at the age of twelve, was a newsboy on the streets of Grand Rapids, Mch. He has lived to become a successful lawyer and the president of the Grand Rapids Herald Company, whose papers he formerly peddled on the streets. Chairman Williams, his father's fortune having been swept away in the Civil War, was glad as a boy to seek a place in the train service of a railroad, at the hardest kind of manual work. Mr. Williams is now one of the largest owners of cypress timber and of sugar properties in the United States. When he called to pay his respects to President Roosevelt at Washington,

some time ago, and when the President asked him what he wanted, Mr. Williams replied, "I am making about a thousand dollars a day and I don't think there is any job in your gift that would have inducements for me." The success achieved by these three distinguished Americans is but the repetition of the story of thousands of others.

THE RECENT marriage of the granddaughter of the late General U. S. Grant to a cousin of President

MISS VIVIAN MAY SARTORIS,  
Who married President Roosevelt's cousin,  
Gilbert.

Roosevelt was an event which interested millions of people. The bride was Miss Vivian May Sartoris, daughter of Mrs. Nellie Grant Sartoris, and the groom was Mr. Frederick Roosevelt Scovel. The ceremony took place in St. Peter's Protestant Episcopal Church, at Cobourg, Ont., and was followed by a reception at Claremont, the summer residence of the bride's mother. There was a large attendance at both functions, including Mrs. U. S. Grant and other prominent persons. The church was beautifully decorated, and the bride, who was given away by her mother, wore a gown of exquisite Mechlin lace over satin, and a tulle veil, in which there was a small cluster of orange blossoms, and carried a bouquet of white roses and lilies of the valley.

Miss Rosemond Sartoris acted as her sister's maid-of-honor and Mr. Scovel's best man was his uncle, Chevalier de Diaz Albertini. Mr. and Mrs. Scovel have sailed for Europe to visit the family of the bride's father and later they will be the guests of Mr. Scovel's family at Lake Como, Italy. The good wishes of the American people will go out to the young couple, whose union has drawn together two of America's most famous families.

MR. CHARLES T. YERKES, the well-known capitalist, has an opinion in regard to the so-called age-limit for men of business, which differs materially from that expressed in some quarters. He says that men are in their apprenticeship until they reach the age of forty, and that a business man is not ripe until he is ten years older than that. This opinion sounds revolutionary in these days when hustling young men are in demand and graybeards "need not apply." Perhaps Mr. Yerkes has been infected with the "new thought," which holds that no one need ever grow old.

PRINCE JONAH KALANIANA'OLE, heir presumptive to the Hawaiian throne, has suddenly appeared

as an American political leader in Hawaii. He is known generally as Prince Cupid. Cupid entered the Home Rule convention and fought with Robert W. Wilcox, the native royalist, who was elected to represent Hawaii in Congress, against bossism in the Home Rule party. When Wilcox failed to stand by a compromise which had been agreed upon between the two factions, the prince, with forty other delegates, walked out of the convention. Prince Cupid and his followers proceeded to organize a new party, which they have named Hui Kuokoa, or non-partisan party, and they have already begun a campaign for votes. Cupid is a graduate of San Mateo College, California, and pursued studies in the Royal Agricultural College of England, which he left on account of ill health. He has traveled all over the world, having seen some of the Transvaal war from British lines, and is an enthusiastic sportsman, having made good records in baseball, football, and cricket games in Hawaii.

# The Filipinos' Last Ditch

SURRENDER OF GUEVARRA ENDS THE WAR IN SAMAR.

By Captain Robert Alexander, Eleventh Infantry.

CARIGARA, LEYTE, PHILIPPINE ISLANDS, July 20th.  
**A**FTER THE capture, some time ago, of Lukban, the rebel commander-in-chief in Samar, the supreme command of the insurgent forces in that island fell into the hands of one Claro Guevarra, who had previously been colonel of the regiment into which the rebel troops were organized. He at once announced himself as general and commander-in-chief, in succession to Lukban; but, disheartened and dismayed, not only by the capture of his chief, but especially by the relentless campaign conducted against him by General Jacob H. Smith, U. S. A., and his subordinate officers—a campaign which, although conducted in the face of great obstacles, was so vigorous as to permit Guevarra and his troops rest neither by day nor night—he eventually entered into negotiations with General Smith looking toward a surrender.

These negotiations were bearing completion, despite the conditions first proposed by Guevarra, which from the American standpoint were preposterous, when General Smith was relieved from command of the brigade and ordered to Manila, preparatory to going to the States. The personal equation enters so largely into the composition of the native character that, although the command of the brigade fell temporarily into able and energetic hands, the Asiatic desire to procrastinate, and if possible deceive, cropped out with the withdrawal of the firm and steady hand which had subdued them; and the negotiations received a temporary check. Things were in this condition—the armistice, however, being still observed—when General F. D. Grant, ordered to command the Sixth Brigade in succession to General Smith, arrived recently at Calbayog, Samar, en route to join brigade headquarters at Tacloban, Leyte. Here the general received a letter from Guevarra which was anything but enthusiastic in tone when approaching the question of surrender, and which, in fact, so impressed the general with the necessity for prompt action that within an hour thereafter he was on his way for the mouth of the Gandara River, some twenty-five miles up which picturesque stream the insurgent camp was located. The general was accompanied by Lieutenant Knabenshue, Fifteenth

Infantry, A. D. C., and Captains Alexander and Longan, Eleventh Infantry.

The mouth of the Gandara was a Chinese puzzle of sand-bars and insurgent barriers and obstacles of various kinds, but Lieutenant Sayre, of the army gun-boat *Florida*, on which the general was embarked, got her through after several bumps, and the camp and stockade of Major Williams's battalion of the Twenty-sixth Infantry, some three miles below the insurgent camp, was reached about midnight. Here were met, in addition to Major Williams, Colonel Myer, Eleventh Infantry; Captain Ayer, Twelfth Infantry, Adjutant-General Sixth Brigade; Lieutenant-Commander J. C. Colwell, representing the navy, and Captain Traub, Fifth Cavalry, Adjutant-General, representing General Wade, the department commander. Early on the next morning the combined parties, accompanied by Guevarra's adjutant-general, proceeded up the river to the insurgent camp, where the general was received with all due form and ceremony, the insurgent troops lining the way from the boat landing to the place of conference, and presenting arms as the general and his party passed through their lines.

Guevarra seemed at first disposed to hold out, but after hearing all he had to say, the general, in that calm, dispassionate, deliberate, and absolutely immovable way of his (which can be very much so), speaking through the interpretation of Captain Traub, quietly informed him that he (Guevarra) would present himself, with all his troops and arms, one week from that day at Calbalogan for the purpose of unconditional surrender, or hostilities would be resumed. Making a virtue of necessity, Guevarra, after some demur, agreed to this, and the agreement was put into writing and signed by the respective parties. Guevarra's principal officers, Colonel Francisco Rafael, Lieutenant-Colonel Tomas Abuque, and Major Agapito Sebastian, were present at this conference—in fact, all were there, except the officers and men of the battalion of Major Eugenio Daza, operating in the south of the island from Basey to Quinapondan. Of the acceptance by these latter of the authority of Guevarra, and their acquiescence in his surrender, there was great doubt, even in the mind of Guevarra himself.

In compliance with the signed agreement, Guevarra and his command six days later came down the Gandara and to Calbalogan, and great was the relief of all when it was known that Daza's command was within a short distance of Calbalogan on its way to join the others, for his acquiescence brought in every known rifle in insurgent hands on the island of Samar. His command had a tragic interest for the Americans, in addition to the importance of its actual surrender, for this command took part in and was almost entirely armed with the rifles captured from Company C, Ninth Infantry, at Balangiga, on September 28th last.

The actual formal surrender took place with simple, though impressive ceremonies, the day following the arrival of the insurgents at Calbalogan. The band and two companies of the First Infantry, with a company of sailors from the small gun-boats, which by their efficient blockade of the island had done so much to bring about the desired result, formed line on one side of the plaza, and were reviewed by the general and his staff. The insurgent troops then formed in line on the opposite side of the square, facing the Americans; and while the two forces simultaneously presented arms, Guevarra, to the strains of the "Star-spangled Banner," advanced and presented his sword to General Grant. The insurgent line then advanced to within about twenty paces of the general, and at the command the men laid down their arms. Then each man raised his right hand, and, repeating after the general, through interpreters, swore to support the banner and government of the United States.

So ended the insurrection on the island of Samar, the last island of those involved in the insurrection of 1899 to offer organized armed resistance to the advance of American ideas and institutions. With a people largely semi-barbarous, and densely ignorant, it is not surprising that a clash of arms on her soil was productive of some harsh measures, necessitated by the dictates of self-protection against the universal, treacherous deceit encountered among the natives. It is to be hoped, for the good of all concerned, that her people now see the error of their ways, and will soon really appreciate the immense benefits to them of American rule.

## Remarkable Facts as to Inebriety.

**I**N VIEW of the perennial and world-wide interest in the subject of intemperance and all that pertains to it, the facts and figures presented in a paper on the causes, duration, and management of inebriety, contributed some time ago to the *Medical Record* by Dr. Charles L. Dana, of New York, are worthy of review in these columns for the benefit of non-professional readers. Dr. Dana has been a visiting physician at Bellevue Hospital for many years, and there and elsewhere has had a wide and varied experience in the treatment of alcoholic cases. In a single year he studied 350 such cases and his average for later years was even larger.

His evidence on the subject of heredity and alcoholism is startling. Among 350 patients whom he questioned on this topic he found that drinking habits existed in one or both parents in all but ten (97.5 per cent.). The father was usually the drinker. Among thirty periodical inebriates, two-thirds had the hereditary factor counting against them; in fourteen cases the father drank; in eight both parents drank. Notwithstanding these facts, Dr. Dana expresses the opinion that "drinking is largely a matter of habit and environment."

Classified as to occupations, Dr. Dana found that it was not the day laborers, the mechanics, artisans, and small tradesmen that furnished the largest proportion of alcoholic victims, indoor workers generally leading all others. In a total of 1,560 cases studied, the tradesmen numbered 387, clerks and salesmen 239, and professional men only 54.

The impression given out by some sensational writers that drunkenness has increased to an alarming extent among American women is not borne out by Dr. Dana's

investigations. In the total of admissions at Bellevue in the years 1887, 1888, 1889, and 1895, there were 10,479 men and 3,909 women, giving a proportion of thirty-seven per cent., or a little over one-third, women. In 1887 the percentage of women was thirty-two and in 1895, eight years later, it was thirty-four, an increase of only two points, an advance which can hardly be considered alarming although deplorable.

As to the age at which the drinking habit is generally formed, Dr. Dana has some suggestive figures to offer. Among thirty periodical inebriates, two-thirds began drinking before twenty and all began before thirty. The greater number of cases and of deaths from alcoholism were found between forty and fifty in men and between twenty and thirty in women.

More interesting and remarkable, perhaps, than any other disclosures made by Dr. Dana are those relating to the capacity of men for drink and the duration of life among habitual inebriates. On the latter point, the conclusions reached are that in serious cases the duration of life is about fifteen years—the maximum being over forty years. In general, it is said that hard drinking can rarely be carried on for more than twenty years, and it generally brings the victim to grief at about the age of forty. Referring to persons who drink most heavily and frequently, it is said that it takes ten or fifteen years to bring on dementia or insanity, during which time it may be estimated that each inebriate consumes about two thousand gallons of intoxicants. A man fifty-five years old confessed to Dr. Dana that he had been drunk twice a day for three years, making about two thousand intoxications; another man of forty had been drunk weekly for twenty years, and a third, aged forty-three, had been drunk a thousand times in fifteen years. Two thousand

"drunks" is set down as the maximum limit in any ordinary inebriate experience. The favorite combination for hard drinkers was found to be beer and whiskey, and beer alone came well up in the scale. Other beverages used by inebriates included cocoa wine, Jamaica ginger, tincture of soap, and a well-known proprietary "bitters." A remarkable absence of alcoholism was found in wine drinkers.

In the conclusion of his article Dr. Dana declares himself as opposed to prohibitory laws on the ground chiefly of their impracticability. But he would teach, he says, that "alcohol is always and absolutely a poison and a surely degenerating agent when used in excess, and that even when used in moderation it is equally pernicious to a rather large class of human beings."

## An "Expansive" Girl.

NOT NECESSARILY AN EXPENSIVE ONE.

A LITTLE Kansas girl is called an "expansionist" because her clothes require "letting out" so often. She lives mostly on Grape-Nuts since recovering from a sick spell caused by too much greasy food.

Almost all ailments of children (and grown folks as well) are traceable to the wrong kind of food, and the surest cure is to quit the old sort, the greasy, pasty, undercooked, or overdone things, that ruin the stomach and bowels.

Put the children and adults on the perfectly cooked food Grape-Nuts.

It is digested by the weakest stomach. Has the delicate sweet flavor of the Grape Sugar, and surely and quickly rebuilds the body, brain, and nerves.

There's a reason.

# The Newest Stage Success

BRANDON TYNAN, THE YOUNG PLAYWRIGHT, MAKES A HIT

BRANDON TYNAN.

TO SUCCEED is to accomplish that which one starts out to do. Mr. Brandon Tynan, a young Irish actor, has succeeded. He has written a drama on the story of the Irish patriot, Robert Emmet; in the production of the drama he plays the leading part; the Fourteenth Street Theatre, where the play is given, is packed every night; the young writer and actor is every night sincerely and vociferously applauded, and called before the curtain again and again. A reception like this in any New York theatre means fame and money for the hero of it. So it can well be said

that Mr. Tynan is a success. In the admiration and enthusiasm which are given to him there is an element which does not always enter into the success of an actor and playwright. To Mr. Tynan on the stage is given in abundance the love and loyalty which all Irishmen feel for the "ould sod."

The situation simply is this: Mr. Brandon Tynan, scarcely more than half-way through his twenties, hitherto unknown, has written a play into which is concentrated the wit and the sentiment of the Irish character; the play presents the dramatic and pathetic story of an Irish hero; it has at once made a deep impression on those whose blood is stirred through the channels of a common sympathy in the misfortunes of their race. This alone is enough to pack the theatre; and besides, Mr. Tynan is young and handsome, he is the hero in the play, and acts in a manner that wins friends. The consequence is a series of the most favorable "notices" in the dramatic columns of the newspapers, large box-office receipts, and a bright future.

In the story of the young Irish patriot are three very strong melodramatic circumstances: his loyalty to his

MR. TYNAN IN THE TRIAL SCENE OF "ROBERT EMMET." *Sarony.*

friends and his country; his love for a beautiful young woman; his betrayal and execution through the treachery of one whom he had trusted. Into his interpretation of the story the young dramatist has infused his own ardent spirit.

I was waiting for Mr. Tynan in his dressing-room after the first act, and it was gratifying to observe that the realization of his sudden prominence and success had stirred within him a feeling of gratitude.

"If I hadn't written the play myself," he said, "the managers would never have let me take the leading part. They would have said that I was too young and small. You see, an actor doesn't usually 'arrive' until he is older than I am. This is not only true of men, but of women also. But the audience doesn't seem to think that I am too small or too young."

"Wasn't Emmet supposed to be a very young man?" I suggested.

"Oh, yes," replied Mr. Tynan, "and he was a little fellow, too." Now Mr. Tynan is not what is usually called a "little fellow." He is about the medium height, graceful and well proportioned, with good regular features, a straight nose, high at the bridge, mouth well formed, a clean-cut chin, and hair that lies in a wave on his forehead. His voice is smooth, clear and musical, with a note of tenderness in it that suggests that under the high pressure of intense feeling the voice would quiver and break. He was born in Ireland, and is familiar with its legends and traditions. He was educated in the common schools in this country, and has been an actor six years, taking first a course in a dramatic school, then working as a "super" wherever he could, gradually getting into small parts in the cast. Last year he was a member of David Warfield's company in "The Auctioneer." For the fact that he is an actor he has no other explanation than that he was "stage struck," he supposes, "like all the rest of them."

"It would be affectation for me," he remarked, "to act as though I wasn't affected by the success of my play." "The house was jammed last night and it's just the same way to-night," Mr. Tynan was very happy. "Have I written any plays before this?" he repeated. "No; it's the first, and that is another thing that makes the success of it more surprising."

## Why the President Fosters Expert Gunnery

IT IS characteristic of the typical American to aim at a high degree of excellence and skill in doing those things in which he is vitally interested. This is a trait which has served to make our nation progressive and powerful. In the pursuits of peace its operation is generally manifest; it is also the cause of our successes in the art of war. On land and sea our victories over hostile forces have been largely due to the expert marksmanship of our soldiers and sailors, secured through arduous and intelligent practice. The sharpshooters of the army during the late civil war, and the well-trained gunners of our naval vessels during the Spanish-American conflict demonstrated the immense value of this kind of aptitude in a nation's defenders. These teachings of our own experience are strengthened by the instance of the Boers, who by superior shooting ability held so long at bay the overwhelming numbers of the British troops.

That, taking these facts into account, President Roosevelt, a man of vigorous frame and strenuous nature, a born soldier and himself a proficient marksman, should, as commander-in-chief, seek, as he is doing, to encourage the men in the military and the naval service to attain to greater expertness in the use of firearms, both large and small, was naturally to be expected. While he was Assistant Secretary of the Navy, his wise foresight incited that sedulous practice of gunnery aboard our warships which brought us easy triumphs at Manila Bay and Santiago. The lesson he taught with such magnificent results in his lesser office the President is not slow to enforce with the added emphasis of his supreme position. There is now, as was the case then, no war cloud on the national horizon. But the President is aware that the fleets and armies of other nations are, more earnestly than ever before, cultivating the art of gun-firing, and rightly he proposes that no contingency shall find this country napping.

As a specific step toward raising the standard of efficiency of the men behind the guns, the President recently offered a prize of \$25 for a target shoot to be participated in by the gun-crews of the *Mayflower*, the armed official yacht of the President of the United States. The President himself was an eager witness of the shooting, which in the main was highly creditable to the contestants and drew from him hearty commendation, coupled, however, with exhortations to acquire much greater skill. The prize was won by Gunner O'Donnell and the crew of No. 9 gun, whose score would not have shamed any body of gunners. The action of the President has had a salutary effect on the *Mayflower's* men, and it is certain to have a stimulating influence on the crews of every other vessel in the navy. His forceful remarks to the men, in particular, will arouse new ambition in the heart of many a "gun-pointer" and spur him to a more ardent devotion to duty.

President Roosevelt, in commenting on the *Mayflower* prize contest, recently, said to the writer, speaking with great earnestness, "I want to do everything I can

for the enlisted man in the army or navy who rises above his fellows. The gun-pointer has got to be born with a natural capacity for that sort of thing. Training won't give him this gift, but if he has it, and then has the training, he becomes a winner. It is so with the sportsman in the field. One man meets success as a hunter while another fails. Even a fisherman has the special gift of knowing how best to get a good string. This gift the American people have in rare degree, in many respects, and I want to see it cultivated all the while."

It is in the same spirit and with a like end in view that the President has promised to do all in his power to make a success of the international Olympian games of 1904, to which he will send bodies of soldiers and sailors to take part in shooting contests open to similar representatives of all other nations.

## The Status of Women.

IT IS RARELY that a more original, refreshing, and common-sense view of the much-discussed question of the proper status of women and of the marriage relation is presented than that contained in a recent address by Dr. Felix Adler, of New York, at a meeting in Carnegie Hall. He repudiated the theory maintained for so many ages that emphasized the difference between the sexes as fundamental, with the correlative idea of the mental inferiority of women. Equally false and untenable, in his opinion, is the other theory, the extreme of this, which came later, regarding sex as purely accidental and incidental and refusing to recognize any ground of difference. The truth, as he regarded it, is somewhere between these two extremes, a view of woman which emphasizes certain fundamental differences between the sexes without the assertion of inferiority along any line. It was useless, he declared, to make this assertion, since, in the nature of things, it was absolutely undemonstrable.

Dr. Adler predicted that a great change is coming about in the attitude of civilized society on this whole subject, its chief feature being an effort "to inspire and inform woman's life and take away the merely impulsive and empirical character of her acting." He attached a high value to domestic science and the study of child nature, as elements in the making of happy, healthy, and contented homes, for the great majority of women in the future, as in the past, must be home-keepers. "The home-keeper, however," concluded Dr. Adler, "must take part in the life of the world, not with an idea of merely getting away from home, from her tasks, that makes the gadabout woman, of whom we have enough examples to-day. But she will get out into society, into the life of the world, in order that she may improve and elevate her home life. The wise woman is still the inspiration, the object of reverence, and the counselor of her children when they are grown men and women."

Not all may be able to agree at every point with the opinions thus expressed by Dr. Adler, but all fair-minded persons will at least give him the credit of heaving very closely to the truth all along the line.

Drives away care, lends buoyancy to the spirits and strength to the body—Abbott's Angostura Bitters.

## The Antidote to the Greed for Wealth

PRESIDENT PATTON, of Princeton, declared before his recent resignation that our national conscience is in imminent danger on account of the great desire for luxury and wealth which is pervading this country to the detriment of all other ambitions. It cannot be denied that prosperity has its perils and that a dulling of the conscience as to the means and methods of gaining wealth is not the least among them. It is doubtless true that the mere published statements of the vast sums of money accumulated by certain individuals in these days and the still vaster amounts represented in the capitalization of certain trusts and "combinations," have the effect upon some minds of arousing discontent, inordinate desire, and reckless ambition. The corollary of all this would seem to be not to make an end of prosperity or even of large accumulations of wealth, since these things, on the whole, work for good rather than evil, but to press forward more strenuously than ever in the development of higher ideals among men, in the enforcement of sound morals and pure religion, by which men are taught that the highest and most enduring happiness comes not through riches, but through right living. If we are to fortify ourselves as a nation and a people against the insidious workings of that spirit of greed, selfishness, and sordid commercialism, springing out of the possession of wealth and its luxuries, it can only be by a still greater insistence upon those forms of education making for the development of the spiritual nature.

## An Old War.

PRETTY NEAR TIME TO STOP.

WOULDN'T it make your friend mad to tell her she was in reality a drunkard; but many women are drunkards unconsciously from the use of coffee, which wrecks their nervous system, and they seem unable to reform.

A lady in Philadelphia, Penn., was very badly affected by coffee, causing her to have nervous prostration, and she finally woke up to the fact that she was in reality a coffee drunkard. Her doctor had told her that she must give up coffee, but she seemed unable to do it.

One day she read an advertisement about Postum Food Coffee and thought she would give it a trial. She says:—"Coffee had such a strong hold on me, that at first I did not make it all Postum, but added a tablespoonful of coffee. After a while I quit putting coffee in at all, and soon found I felt much better. Continued use stopped my headaches and biliousness, and I soon noticed that my nervousness had evidently left me for good. Now I would not use anything else, and the smell of coffee makes me sick."

"I am using your Grape-Nuts also, and think it a wonderful food. I lately cured an attack of indigestion by eating nothing but Grape-Nuts and drinking Postum for two weeks, and now I can eat solid food and feel no distress." Name given by Postum Co., Battle Creek, Mich.

## The Billionaire Boat

A STEAMER WHOSE DAILY PASSENGERS ARE SCORES OF THE WEALTHIEST BUSINESS MEN OF NEW YORK

By Oliver Shedd

SO CONDENSED are the great moneyed interests of the country and so intimately associated are they with one another that a single steamship which runs daily between New York and Long Branch, N. J., has for its regular passengers the representatives of every giant industry of the United States. The greatest banks, the immense railroad systems, the steel trust, the Standard Oil trust, great gas combines, wholesale and retail mercantile concerns, manufacturers, mill-owners, are all represented by men who are presidents or some other officials, directors or heavy stockholders. The representatives are individually men of immense wealth, there being a score or more of multi-millionaires among them; so the boat which carries this precious cargo, the *Monmouth*, of the Sandy Hook line, has come to be called the "billionaire boat," for the private fortunes of its regular passengers amount in the aggregate to more than a billion dollars. The assets of the corporations of which these men are a part is a good share of the country's wealth. Here it is concentrated on the passenger list of one steamer. The fact is a striking illustration of the combination of great industrial interests; besides, it is interesting to observe the difference boat-load of common mortals.

The majority of the *Monmouth's* wealthy passengers are on the New York dock when the boat leaves for her afternoon trip, at 3:45 p. m. The voyage out through the conduct of a boat-load of multi-millionaires and a the bay and down the Jersey coast is a little more than an hour, and then the men who, taken together, are worth a billion, are distributed by train to their various palatial summer homes. They hurry from their offices in the financial centre of the city to catch the *Monmouth* at 3:45, for it never waits, not even for a multi-millionaire, and at stations near their summer homes in Jersey they are met by automobiles of all types and by sporty rigs and stylish turnouts. A popular impression that ease and riches go hand in hand, that wealth brings leisure and freedom from care, is promptly dispelled when one takes a trip with the millionaires on the billionaire boat. In personal appearance there is nothing unusual about these wealthy men. You rub elbows with men who could buy whole counties, county-seats and all, every month or so, if they chose, but you don't appreciate the difference. However, there is an air of earnestness about most of the men whom you see, and if you observe the faces of the older men, especially, you find the lines of care and responsibility. Occasionally you see knots of them in serious conversation, and serious they may well be, for quite likely the subject of these apparently informal talks is a business deal of magnitude involving great interests and large sums of money. A lot of business is transacted during that hour's trip of the millionaires. These men, many of them pressed with the cares of great institutions, cannot afford to waste a precious hour in idle dreaming as the boat cuts its way through the placid water of the bay. On the contrary, business conferences are held and plans of work mapped out. Besides, many of these wealthy passengers frequently take their stenog-

THE "STRENUOUS LIFE" WITH A VENGEANCE—A BUSINESS MAN DICTATING HIS LETTERS ON THE TOP DECK OF THE "BILLIONAIRE BOAT."—*Lucky.*

raphers with them on the boat. During the hour's trip from New York to the Jersey coast these business men are dictating letters. The stenographer remains at the employer's summer house during the night and accompanies him back to New York in the morning. In the meantime probably an additional lot of mail has reached the business man at his summer home and there are more letters to be dictated on the return trip in the morning, the hour's passage from the Jersey coast back to the beating heart of the city. In this way the busy man avoids two hours of confinement in an office. During a trip which I took recently on the *Monmouth* I saw on the top-most deck of the steamer a man earnestly dictating letters to his stenographer. There was nothing but space between him and the sky, and the wind whirled past him, ruffling the large pile of letters which he held in his lap. It was ozone and business at the same time—no nervous prostration for him! This is the "strenuous life" in earnest.

The billionaire boat illustrates another interesting thing, and that is that money won't buy everything, and that multi-millionaires have their discomforts along with the rest of humanity. Every state-room on the *Monmouth* has been engaged by the year for many years and there is a waiting list of applications of nearly two hundred. These state-rooms are not used for sleeping purposes, for the trip is only a little more than an hour, but they are important for business conferences and they are in demand because no other boat carries such an important passenger list. Some of the applications have been on file for fourteen years. There is rarely a vacancy excepting in case of death.

The billionaire boat is distinguished not only for the

millionaires who are its daily passengers, but for the prominent politicians who frequently meet other politicians and during the hour's ride hold important conferences. Senator M. A. Hanna has frequently been a passenger, being a guest of Colonel A. G. Payne. Ex-Governor David B. Hill also takes the trip frequently, on his way to Normandie-by-the-Sea, in New Jersey, where he is regularly the guest of General Earle. John C. Sheshan, the Democratic New York politician, and Jacob A. Cantor, president of the Borough of Manhattan, of New York, also frequently ride on the *Monmouth*. There are many men besides of national importance in business and politics. Among these is the Hon. Cornelius N. Bliss, who was a member of President McKinley's Cabinet, and is head of the great dry-goods house of Bliss, Fabry & Co., and president of the Union League Club. It will be interesting to look over the list and see who else are daily passengers on the billionaire boat. Among them are E. D. Adams, banker and railroad magnate; M. V. D. Borden, millionaire mill-owner; J. M. Schrymser, of the Telegraph Cable Company; Henry M. Wilson, of Wilson Brothers, bankers; Colonel J. J. McCook, prominent lawyer, who was offered the position of United States Attorney-General under President McKinley; Washington Connor, wealthy broker, at one time partner of Jay Gould; General Louis Fitzgerald, president of the Washington Trust Company; H. L. Horton, Wall Street banker; A. N. Brady, the modest but potential leader in the gas, electric light, and trolley world of finance; Isadore Wormser, banker; J. H. Rhoades, president Greenwich Savings Bank; John L. Ryker, importer; Samuel Brewster, dry-goods prince; William A. Street, broker; N. Straus, millionaire merchant; William E. Strong, banker; William A. Goadley, broker and banker; Oscar Straus, millionaire merchant, former minister to Turkey; Daniel O'Day, prominent in the Standard Oil Company; Walter Watson, banker; David Barnes, broker; William T. Shedd, dry goods; Stewart Duncan, millionaire sauce and pickle manufacturer; George F. Baker, steel trust, president First National Bank, president New York and Long Branch Railroad, heavy stockholder of the Jersey Central Railroad, the Delaware and Lackawanna, a director and heavy stockholder of other concerns, intimately associated with J. P. Morgan; H. C. Fahnstock, vice-president First National Bank and associated with George F. Baker in other interests; A. B. Prohl, of Consolidated Gas interests; P. Fisk, of Harvey, Fisk & Co., bankers; W. Billings, jeweler; Jacob H. Schiff, one of the brainiest men in Wall Street and a member of the firm of Kuhn, Loeb & Co., bankers; M. Loeb, of the same firm; John A. McCall, the popular president of the New York Life Insurance Company; Joseph Seligman, I. Seligman, Jesse Seligman, and Isaac Seligman, of J. Seligman's banking house; M. Guggenheim, of the Smelter Trust; Edward Shearson, banker and broker, and interested in the United States Steel Corporation; W. F. Havemeyer, sugar magnate; J. R. Williston, banker; H. G. Manning, machine supplies; Colonel William Barbour, head of the Barbour

# A Strategic Point in the West Indies

CULEBRA ISLAND, POSSIBLE SITE OF OUR NEW NAVAL STATION.

By Adam C. Haeselbarth.

NAVAL MEN who know the island of Culebra, and there are few others who do, seem to think that the naval maneuvers there by the North Atlantic Squadron in December next portend the selection of that little bit of Uncle Sam's territory as our West Indian naval station in preference to San Juan, Porto Rico, or to St. Thomas, should the Danish West Indies be acquired by purchase.

Culebra has long been looked upon covetously by Germany, and its value as a strategic point was recognized by Spain. In it the United States has a piece of property worth keeping. I have just had the pleasure of visiting the island, of riding over its trails and inspecting its coastline, taking advantage of opportunity to accompany Lieutenant B. B. McCormick, of the United States Steamer *Podowar*, on one of that vessel's runs from San Juan to Culebra.

Culebra is a fairly fertile and extremely picturesque island with two splendid bays, Great Harbor and Target Bay, respectively, and a number of smaller ones. It is a part of Porto Rico, although seventeen miles east of that island and nineteen miles west of St. Thomas. It is approximately eight miles long and three miles wide. Off its coast are Northeast and Southwest Islands, each a mile long, and Culebrita, of the same extent, 3½ miles east of the main land. On a bluff on Culebrita is a lighthouse, the fixed white light of which can be seen twenty-one miles at sea.

At present Culebra is in a somewhat primitive state of civilization. Of its 704 inhabitants the only Americans are in Camp Roosevelt, the marine camp on the bluff overlooking Great Harbor. These soldiers number a dozen and are commanded by Lieutenant Leon H. Harding, a hustler of good old Missouri stock. It is expected, however, that 400 marines will be stationed on Culebra before December. Three small guns and one five-inch gun have been mounted, and a large quantity of gun-cotton for explosives has been stored.

In event of trouble with a foreign Power, Culebra could be quickly and effectively fortified. It is a series of hills, ranging in height from 100 to 650 feet, the last-named being in the centre of the island and being called Signal Hill because Lieutenant Harding has erected there a signal-station from which Porto Rico, Vieque, and St. Thomas can be clearly seen. The station is connected by telephone with Camp Roosevelt, and instant notification

of the sighting of a fleet still thirty miles out at sea could be given.

The naval operations in December, in anticipation of which the Navy Department of the United States is expending a million dollars, and which will cost much more, will take place in Target Bay, on the south coast, and Great Harbor, the next bay to the eastward. Target Bay is a big, open roadstead with all sorts of good water, there being from six to twelve fathoms near shore. Great Harbor, which is partially landlocked, is entered through a deep channel past a coral reef, on which the surf is always pounding, but which is well marked by buoys. The average depth of water is from six to seven fathoms. At the head of Great Harbor stands Culebra village, with a population of 400, and made up of a collection of small frame houses and native shacks, with a few more pretentious structures. There are two tiny wooden school-houses and a little Catholic church, the sanctuary having been built by contributions from Porto Rican Catholics. The Governor's "palace," Casa Blanca, now occupied by Delegate Leopoldo Padrone, is a big two-story frame tenement near the wharf and has never been treated to a coat of paint; hence its name, "White House," is a trifle inappropriate. The wharf is a small structure of poles

and but one small stream of fresh water in the island. There are two good-sized lakes containing brackish water which the cattle drink, but which is unfit for human use. The people are supplied from the public cistern of stored rain-water in Culebra village and from a few private cisterns. The marines in Camp Roosevelt get fresh water from a water barge anchored in Great Harbor and holding ten thousand gallons. The naval vessels attend to the filling of this barge from their tanks.

At present Culebra's chief industry is the raising of cattle, the island producing exceptionally large, strong stock, which it ships to Porto Rico, Cuba, Vieque, and elsewhere. Some of the finest oxen in the world are grown in Culebra, and as there is plenty of land suited to grazing, some one ought to make big profits in the future growing cattle there. The latest census enumerates 2,315 head, valued at \$37,911, as follows: Bovine cattle, 1,355 head; horses, 231; asses, 4; sheep, 150; goats, 335; swine, 180. Any of the animals named thrive well and can be raised at a minimum of expense.

The usual tropical products are found in the island, but are not cultivated to any great extent. At present only eight acres are devoted to tobacco; 275 to minor products; 2,639 to pastures, and 894 acres are wood and brush land, making a total of 3,816 acres under "cultivation." Cotton was once raised quite extensively in Culebra, and much of the land is well adapted to its growth. Delegate Padrone presented me with several fine specimens which he grew during the past year. Corn, bananas, potatoes, sugar-cane, mangoes, melons and limes flourish with little attention, and tortoise-shells figure in the exports. There is buried pirate treasure, too, the natives say, and scores of holes on Pirate Cay, a little island in Great Harbor, attest the belief of searchers after the gold of the old West Indian buccanniers. No prospecting for minerals has ever been done, so far as can be ascertained. Coral formations abound, and in our rides through the woods we startled wild parrots and gay-plumaged birds. Wood ants build huge nests in the trees, and naturalists and other scientists can find much to interest them all over the island. The views from the heights are superb, and a gallop along the hard, white, sandy beaches, by a rolling surf, is a treat to the horseman who loves both the exercise and nature.

and stones, and is at the point where the large government dock and coal-sheds may yet be built.

What may prove to be a serious drawback to the colonization of Culebra is a lack of water. There are no

## THE DRAMA IN NEW YORK.

THE FALL SEASON OPENS AUSPICIOUSLY WITH NEW SUCCESSES AND THE RETURN OF SEVERAL OLD ONES.

HALL CAINE,  
The famous English novelist.

existence on bread and water, and take himself to a real *bona fide* castle. This lordly mansion is known as Greeba Castle, and it is situated on the Isle of Man, the scene of several of Mr. Caine's best stories. Here Mr. Caine works in a charming study between the hours of five and eight in the morning, for he is one of the few literary men who do not burn the midnight oil. His study is a very handsome apartment, commanding a fine view of the country-side. Curiously enough, there is no desk in it, for the author of "The Christian" never uses one. Instead he sits in a chair, and works with the paper on his knees. The chair he uses should be inspiring indeed, for it belonged to Dante Gabriel Rossetti, whose friend he was. Some idea of Mr. Caine's income from his writings may be gained from the fact that he received \$10,000 simply for the serial rights of "The Eternal City" in England alone and probably as much more from America. After that came his copyrights on the book itself, which amounted to a much larger sum. But it was not many years ago that Mr. Caine was earning a modest livelihood as reader for the English publishing firm of Bentley. It was while serving in this capacity that the manuscript of Miss Corelli's "Romance of Two Worlds" came under his scrutiny and he marked it "not good literature, but has good selling qualities." Miss Corelli has since declared that she took a "very natural antipathy to Hall Caine in consequence" and has since avoided reading his books on principle; another instance of the way of a woman scorned.

OUR NORTHERN neighbor, the "Lady of the Snows," has not produced a more illustrious man-of-letters than Charles G. D. Roberts, of whose latest book, "The Kindred of the Wild" (L. C. Page & Co.), we have recently had occasion to speak. Mr. Roberts was born near Fredericton, New Brunswick, and comes, on his father's side, of a long line of English college professors and men of scholarship and influence. His father, the Rev. G. Goodridge Roberts, M.A., is rector of the English church at Fredericton, and a canon of the cathedral there. His mother is a sister of Bliss Carman's mother and of kin to the mother of Emerson, so that his literary gifts may be accounted for in part by heredity. Mr. Roberts was graduated with honors in 1879, received the degree of M.A. in 1881, and, after some experience in teaching, went to Toronto in 1883, and there founded *The Week*, with the assistance of Professor Goldwin Smith. Later he served as professor of English and French literature in King's College, Nova Scotia, and after that was associate editor for a time of that excellent but short-lived New York periodical, *The Illustrated American*. Since that experience he has devoted himself wholly to literature. Professor Roberts is so versatile and has excelled in so many things that it is not easy to classify him. He has been called *par excellence* the poet of Canada, and as a novelist he has been likened to Hardy. He has also written a history of Canada which is regarded as an authority on that subject. And his latest book, "The Kindred of the Wild," shows that he is quite equal to the best of the nature story-writers of the day. We have Mr. Roberts's own word for it that after he has completed another romance which he has in hand he proposes to put the finishing touches on a lyrical drama on which he has been engaged for some years.

IN AN English periodical of current date is found a good anecdote of Thackeray which I do not remember to have seen before. It relates to the house in Kensington where the novelist set up housekeeping in 1846. In after years, when passing by this house with James T. Fields, the American publisher, Thackeray exclaimed, with mock gravity: "Down on your knees, you rogue, for here 'Vanity Fair' was penned, and I will go down with you, for I have a high opinion of the little production myself." This little story recalls another concerning the same book. One day a friend congratulated Thackeray on the touch in "Vanity Fair" where Becky admires her husband when he is giving Lord Steyn the chastisement which ruins her life. "Well," said the author, "when I wrote the sentence I slapped my fist on the table and said: 'That is a touch of genius!'" Kensington was always Thackeray's favorite neighborhood. At the old Greyhound, with its memories of Pope and Addison and Macaulay, Harry Esmond stayed so as to be near his "dear lady," Lady Castlewood, and the beautiful Beatrix, whose house was

## In the Sphere of Literature

By La Salle A Maynard

at the corner opposite. This house, where Thackeray made the Pretender hide, had been in the early years of the eighteenth century the residence of that Marquess of Powis who followed James II. into exile, and by him was created Duke of Powis. The house then had stabling and a cottage attached to it, and the cottage is the house in Young Street where Thackeray wrote "Vanity Fair" and "Pendennis."

ALL WHO are desirous of grasping the full scope and significance of the irrigation bill passed by Congress at its last session should obtain and read the work on "Irrigation in the United States," written by Frederick Haynes Newell, chief of the division of hydrography of the United States Geological Survey, and published by Funk & Wagnalls. The work has no direct reference to the bill, but it is devoted to a clear and comprehensive exposition of irrigation applied to the arid lands of the West, which are brought within the provisions of the measure in question. The work is based on the individual studies and investigations of Professor Newell, extending over a period of twelve years past, and it is illustrated and explained with a profusion of charts, tables, maps, and photographic plates. The subject considered is truly fascinating when considered from the standpoint of the agriculturist, the political economist, or from that of any citizen who is interested in the future development of the country and the making of happy, contented, and prosperous homes. Home-making is, in fact, as Professor Newell says, "the aim of this book," an aim apparent enough when one considers such statements as that made here, that "fully one-third of the whole United States, exclusive of Alaska and outlying possessions, consists of vacant public land," the greater part of which can only be made fertile and habitable by the processes of irrigation, such as are described in this book. It needs to be understood also that irrigation is applicable not only to arid and desert lands, but that its use on farm lands generally, especially in the dry seasons, would often be of immense advantage. Investigation and experiment show that we are only beginning to realize the value of water as a fertilizing agency. In his recent work on "Fields, Factories and Workshops," Prince Krapotkin points out the fact that by the irrigating process the productive capacity of farm lands in France, Italy, and Belgium has been increased four and five fold.

IF AUGUSTINE BIRRELL has not added much, if anything, to our knowledge of William Hazlitt as a figure in English literature by his recent biography of that individual, the latest addition to Macmillan's "English Men of Letters" series, he has widened our view of Hazlitt as a man among men. And Hazlitt was, on the whole, a curious compound, a man not measurable by ordinary standards, reminding us in some respects of Walter Savage Landor—not so profound, by any means, nor so brilliant, but akin to Landor in amazing energy, in disdain of current opinion, and a certain ruggedness of temper not always agreeable to those who stood nearest. He took the literature and the facts of life that he found nearest to him, assimilated them, and out of them shaped a world that he lived in. He may have been, probably was, as Mr. Birrell calls him, an incorrigible sentimentalist; he certainly was very little of a poet. He loved to handle solid facts; no matter how flowery his style became at times, he loved not mysticism in any shape; he thought his thought through relentlessly until it was sharp, clear-cut, strongly outlined in his head, and then he put it on paper in the plainest words he could find. In depicting a man of such a life and character Mr. Birrell is very much at home, and I know of no man living who could have done it so well.

IF ANY ONE should read the first and the last stories in Elizabeth G. Jordan's latest book "Tales of Destiny" (Harper & Brothers) we are sure that he would be impelled to read the seven or eight other short stories that lie between. The first tale, "The Voice in the World of Pain," is a picture of wifely love and devotion which could have been written only by a woman, and the last, "A Collaboration," is an equally striking picture of the depths and heights of a mother's affection set against the dark background of an erring life. There is an element of mysticism in the first story, which adds greatly to its interest, and in the last we have the ingenious device of the author, who begins the tale, and the secretary, to whom it is being dictated and who supplies the sequel, the latter, as it proves, being the unhappy victim to which the plot relates.

TWENTY-FIVE YEARS ago a brilliant lecturer on the battles of the Civil War asked a gallant division commander to attend his lecture, as the general's old division would be mentioned frequently and in a manner to elicit applause. The general promised to be present. As he walked away, the lecturer called him back and said: "Perhaps I ought to explain a little matter; in the engagements your division held the right of the line, but I have placed it on the left; it makes my lecture go so much better." Some of the new novels have tampered with historic facts quite as unscrupulously; others have gone further, and with blacking-pot and whitewash-brush have made unrecognizable nondescripts of some char-

acters that have long been distinct in the public eye. To destroy an actual character is a shameful method of saving a fiction-story.

A STUDY of Prose Fiction," by Bliss Perry, editor of the *Atlantic Monthly*, is announced for early publication by Messrs. Houghton, Mifflin & Co. The aim of this book is to discuss the outlines of the art of fiction—not to sketch the history of the English novel. In writing it, the author has followed his notes prepared a few years ago for a course of lectures on prose fiction at Princeton University. These lectures were repeated before several classes, and many teachers, who had occasion to examine the syllabus of the lectures and the topical work assigned in connection with them, have asked the author to publish them in a book which would be adapted to effective use in the class-room as well as of interest to the general reader. An appendix contains bibliographies, topics for study, plot analyses, review questions, suggestions to teachers, and other helps. Mr. Perry's experience as a writer, teacher, and editor has eminently fitted him for the task he has undertaken.

AMONG WRITERS who have two distinct literary personalities, W. J. Henderson, author of several books on musical topics, is prominent. He has done more than any other American writer to make great orchestral and operatic works intelligible to people who like music but lack education therein. Yet to thousands of men, some of whom are music-lovers, Mr. Henderson is known only as an interesting and trustworthy writer on yachts and yachting, ship construction, and marine affairs in general. His influence has reached the antipodes, for his musical works are universally text-books in Australia and his articles on the international yacht races last year were copied by Australian and East Indian newspapers.

THE CHARGE against Dickens, that in drawing Harold Skimpole, in "Bleak House," he perpetrated a libelous caricature of his friend Leigh Hunt, has been repudiated by Mr. Swinburne in his recent criticism of the novelist. Mr. Swinburne maintains that Skimpole was so unlike Leigh Hunt that the charge was absurd, but he blames Dickens for not having taken this high line, and denied the similarity outright. The *Westminster Gazette* lately recalled Dickens's semi-apology for Skimpole, which was to the effect that he made Skimpole talk like Leigh Hunt, but that in all other respects the character was imaginary.

GEORGE HENRY PAYNE, a young and popular New York journalist, has written a book that will interest all who follow the theatre either as a diversion or a business. "A Great Part" is a strong story of the mummer's world, and although Mr. Payne treats the actor in a satiric vein, his depiction of the foibles of the type he selects is none the less true. Mr. Payne is engaged on a second novel in conjunction with Augustus Thomas, the dramatist. Incidentally, he takes an interest in politics, and is named as the Republican candidate for the Assembly in the Thirty-first District, New York City. "A Great Part" is issued by the Continental Publishing Company, of this city.

### Books Worth Waiting For.

E. P. Dutton & Co. are to publish a translation of the new "Taine Letters," which have attracted a good deal of attention in France.

G. P. Putnam's Sons are planning the publication, in two volumes, of an "Anthology of Russian Literature," by Professor Leo Wiener.

Messrs. Houghton, Mifflin & Co. will publish this autumn a beautiful *édition-de-luxe* of the late John Fiske's works, which is the only complete and uniform edition to be had.

A reminder of the fact that all the dark places in Africa have by no means been brought into the light will appear in the book "The Uganda Protectorate," by Sir Harry Johnston, which Dodd, Mead & Co. will publish this fall.

Before his death Mr. John G. Nicolay, for many years marshal of the Supreme Court of the United States, and with John Hay author of the authorized life of Lincoln, made a condensation of the original ten-volume biography, upon which he and Mr. Hay spent so many years. This condensation the Century Company will soon issue.

CHARLES G. D. ROBERTS,  
The eminent Canadian writer.

THE POWERFUL NEW UNITED STATES BATTLE-SHIP "MAINE."

SPEEDING AT THE RATE OF NEARLY EIGHTEEN KNOTS ON HER OFFICIAL TRIAL OFF THE NEW ENGLAND COAST.—Copyright, 1902, by William H. Rau.

# In the World of Sports

PERILS OF AUTOMOBILE SPEEDING—WILL CRESCUS BREAK THE TROTTING RECORD?—FARCICAL BASEBALL

**AUTO SPEEDING DANGEROUS, BUT THRILLING.**—The speed bug has never before buzzed so continuously in the ears of the sporting world as he is buzzing to-day. Owners of yachts no longer will tolerate a slow boat, no matter how much it cost, nor how handsome and comfortable its appointments. It must get there and back and do it quickly, or it will not be kept in commission. More millionaires are interested in fast moving thoroughbreds and trotters and pacers than ever before, and the present season is likely to witness more broken records than did any previous year. All bicycle records have gone by the board this year and many new ones will be made before the season is out. As for the automobile, there is no estimating at this time how fast these machines will be able to travel over specially prepared tracks and macadamized roads. With some of the machines their speed depends largely upon the nerve of their drivers and the condition of the road and track. But speeding of automobiles is dangerous work and it is no sport for the timid man or woman. One must have complete control of one's nerves and a quick brain and eye, to escape serious injury to self and machine, to say nothing of the general public. In possibly no other sport is the quick thinker so much needed. The recent meet at the Brighton Beach track, conducted by the Long Island Automobile Club, was a success in the face of many obstacles. Many of the owners and makers withdrew their machines at the last minute, but enough were left to furnish excellent sport. Not an accident of any sort marred the races, although there were two accidents at and near the track earlier in the day. Many of these speed trials, however, have to date not furnished the practical demonstration needed. It is all right to send automobiles for records, but the special machines made only for speed and scarcely resembling automobiles at all should be barred out of future contests. The Harvard University students with their steamer, made and run by themselves, deserve credit for their ingenuity, but such efforts do not serve to solve the automobile question by any means. Fast automobiles are desirable, but we have no place or patience with freak machines, such as the Cannon steamer or the Baker torpedo, which created such havoc upon the Staten Island roads not long ago. There is no reason why records made by freaks should be allowed except in a special class for machines of that sort. In open competition machines should also be classified by weight as well as by horse-power. The automobile clubs must sooner or later give attention to the status of the drivers. Open competition in which amateurs and professionals meet will have to be stopped. Such things as a professional mechanic and a young millionaire competing in a race would not be tolerated in any other sport. Still, automobilism is a new recreation and pastime, and these little differences will in time adjust themselves. The yams, however, that certain well-known millionaires will be declared professionals are all nonsense.

**CAN CRESCUS AND DAN PATCH DO IT?**—While the runners are attracting more attention than ever, it is pleasing to note that the trotters and pacers are attracting more people to their meets than ever before. There are people who claim that they have no use for a trotter, for they realize all the time that the animal might go faster by breaking and running the remainder of the distance. To the real enthusiast among the drivers the motion of the trotter of the Cresceus, The Abbot, Boralma, and Lord Derby type is the poetry of motion itself, and the gallop of a thoroughbred is as meaningless as science to a cud-chewing bovine. While the pacer will never hold the same place in the heart of the driver as the real trotter, still the pacer has come to the front in gallant fashion during the last few years. Dan Patch, who has just broken his own record, bringing the figures down to 1.59½, is expected to get them down to Star Pointer's record before many more weeks. Patch is one of the handsomest animals of the turf to-day, and his easy, graceful stride arouses enthusiasm wherever he appears. While the efforts of Cresceus, the king of trotters, to lower the record to two minutes have not been successful as yet, Ketchum,

his owner and driver, is confident that his noble stallion will accomplish the feat before the present season ends. Hot weather and a fast track are absolutely necessary for record breaking by both man and beast. There has been little scorching weather this year, but Old Sol will have his sway sooner or later, and when he does, look out for Cresceus, the gentlest and most noble trotter that ever wore harness.

**PRIZE FOR THE DOHERTYS.**—The visit of the Doherty brothers and Dr. Pin to this country has done much for lawn tennis and the enthusiasts are loud in their praises of the Englishmen, whose consistent work at the net in this country won them so many friends. The Englishmen are coming over again next year, and their reception and welcome will be even more hearty than it was this summer. They are sportsmen and clever tennis players, but whether they will be able to lift the International cup next year is a question. The recent tournaments have shown that Whitman is a remarkable player, and is in a class by himself, practically, when in condition. The experts are now looking and scheming for a suitable mate for Whitman for the doubles. If Davis could learn that steadiness shown so conspicuously by the Dohertys, a better team mate for Whitman could not be found. Still, several youngsters are coming to the front, and one or two of them may make the present champions take a back seat in another year.

MR. PERCY OWEN, AN ENTHUSIASTIC AUTOMOBILIST, "THE FOUNDER OF AMERICA."  
Jackson & Schmeitzel.

**PREPARING FOR FALL AND WINTER SPORTS.**—Already preparations are being made for fall and midwinter sports. The football players are beginning to train cauliflower-like bunches on top of their heads and to pay more attention to those golden rules of good physical condition, temperate diet, and early hours. Arrangements are being made for the opening of the hockey season, and there may also be some professional football seen this fall. This scheme was tried in 1894 and the six clubs composing the league lost a lot of money and caused some people to say that club and college sentiment

alone made football the great game that it is. Certainly success for professional football in this country is dubious. Still, there is no reason why it should not succeed. It is a robust game, however, and while a man will risk his neck for his club or college he might not be as indifferent when he receives a stipulated salary for playing the game. Bruises received under salary hurt much more than do the mishaps to long-haired college players.

**A BASEBALL FARCE.**—The present race of the National League is little short of a farce. Before the season opened it was predicted that the Pittsburg team was in a class by itself and that the other seven clubs had no possible chance. Pittsburg, strong in every department of the game, has played consistently right from the start. With the exception, occasionally, of a display of overconfidence, the Dreyfus contingent has played brilliant baseball throughout the season. Team work has played its usual important part in the success of the team. The American League race has been much closer and more uncertain, and it is no wonder that the younger organization has made all of the money this year. Still, the losses of the old clubs will not be as heavy as they were last season. Contract jumping must be stopped or the game will lose caste with the public. In no previous season have so many promising youngsters been brought to the front. It only needs that this good material be utilized in the right way.

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

**H. A. C., CHICAGO.**—Frank Ives was the champion when he died. He was a pupil of Schaefer, the present billiard champion.

**C. A. M., ST. LOUIS.**—The weight of the bat should be determined largely by your own strength. In youth a lighter bat is preferable.

**J. L. T., CHICAGO.**—Two balls are allowed in service. That is the reason why the player generally tries the troublesome twist on the first serve, knowing that he can lob over the last ball if his first goes out of bounds or into the net.

**M. A. A., BOSTON.**—Titus, the American rowing champion, calls New York his home at present, although he originally came from New Orleans. He weighs about 150 pounds in condition.

**W. H. S., MAINE.**—In a dispute over a poker game it is always best to abide by the house rules. Where the game is played regularly such rules always exist. You cannot change your bet after you have placed the chips on the table and announced your wager.

**G. T. M., INDIANAPOLIS.**—The general opinion of men who follow the doings of the prize ring closely is that the Fitzsimmons-Jeffries fight was not a "fake." Men do not pummel each other in prearranged matches as those two men did in California.

**L. C. H.**—The shooting season for small game in most of the Southern States opens about November 15th. The birds are slow flyers and undeveloped before that time. G. E. S.

## A Mischievous Church Scheme.

IT IS inconceivable that any sound and well-balanced leader or counselor of workingmen will approve the scheme announced from Indiana of a "Union Labor Church," to which only organized workingmen and their sympathizers shall be admitted, and from which rich men shall be excluded, and whose expenses shall be paid by assessments on the unions. Such a religious organization, if called into existence at all, could only have the effect of further widening the breach between capital and labor and giving new occasions for strife and bitterness. A religious body based on the "labor" issue would be more mischievous than a political party organized on the same lines, since religious prejudices and antagonisms always run deeper than any other and are more difficult to overcome.

# The Romance of the Mexican Nation

ITS VICISSITUDES FROM EARLIEST TIMES AND ITS SALVATION THROUGH THE DEVELOPMENT OF ITS MINERAL RESOURCES

By E. C. Rowe

NO NATION of the globe has a more romantic life story than the republic of Mexico. Into the past 10,000 years archaeologists have gone, and from mounds and inscriptions on deeply buried tablets of stone they have read the beginning of this romance of a long-lived people. They have concluded that human life on the western hemisphere first existed at the equatorial zone, while the vast territory which is now the land of the United States and Canada on the north and the republics of South America on the south was under a great blanket of ice. In the equatorial zone archaeologists believe the temperature was temperate ten thousand years ago, and that people thrived and civilization was far advanced. The first emigration from the tropical zone as the sheets of ice over the land receded toward the poles was into Mexico, and there a great nation was established, its people living in the luxuries of a fertile land, skilled in architecture and the arts, peaceful and prosperous. They built great temples and pyramids, established aqueducts and canals; and all these things are attested by ruins which have been unearthed.

Then came great terrestrial dislocations and upheavals, the first reverse to the antecedents of a people whose life has been through the ages a series of reverses from natural causes and from the ruthless attacks of conquerors. Following the great upheaval were famine, drought, and pestilence. Tribes fought their neighbors; the destruction begun by nature was continued by the victims themselves. The population gradually continued northward. Arizona and New Mexico continued to support thousands, who lived in comparative luxury, far advanced in the gentle arts of peace; but through the denudation of forests and the disappearance of surface waters through great rock fissures, the lands became arid, an agricultural people could no longer subsist, and the descendants of those who made the first civilization under the tropics continued northward over the plains, encountering tribes which had their origin in Asia and Europe and had reached the American continent from the north.

The peoples from the South and the tribes from the North had many conflicts. The land of the United States to-day is dotted with mounds, which are, according to this theory, the breastworks which these prehistoric people threw up for self-protection against the savage tribes which they encountered. Still, in the fertility of Mexico a nation lived in luxury. Its people dwelt in beautiful cities, surrounded by the comforts of their civilization, peaceful and happy, skilled in the arts, learned in the sciences of astronomy and metallurgy. And then, down swept upon this peaceful people, weakened by their own refinement, the Spaniards led by the redoubtable Cortez.

The story of the Spanish conquest, the defeat of the great forces of the Mexicans by Cortez and his ridiculously small body of men, is told in modern history and has become the subject of romantic story. Bewildered by the dash and daring of the Spaniards (for in those days the Spaniards were the greatest soldiers of the world, the highest type of rugged, physical development), the gentle Aztecs surrendered. It was the second conquest of a people doomed, as their traditions taught them, to be conquered. Although intelligent in some of the sciences and skilled in many of the highest arts, these people of the Montezumas were strangely superstitious, and they had taught themselves that this doom would come; and this teaching made their conquest more easy, as the conquered went into battle with the conviction that their surrender to the conqueror was in the inevitable course of fate. The ninth Montezuma gave himself up to the Spanish invader.

Among the arts which these gentle people had employed, although in a primitive way, was that of mining and the refinement of metals. Gold, silver, and copper were taken from the inexhaustible supply of the mountains, and constituted no small part of the wealth of the people. For the ransom of their King, who was a prisoner in the hands of the Spanish conqueror, the people carried from their rich hoards great quantities of these three precious metals and placed them in the hands of the triumphant Cortez. The ransom, it is said, was equal to \$6,300,000—a king's ransom, indeed! And thus did its mineral wealth begin to play an important part in the destiny of

Mexico at the opening of the era marked by the Spanish conquest. Dazed by the untold treasures of gold and silver, which lay at their hands, Cortez and his men worked with wild energy to gain even greater riches. They succeeded. Gold and silver they found in abundance. They mined and hoarded it greedily. Copper they did not heed. From tin, which the natives possessed, and from copper brought to him as ransom for Montezuma, the king, Cortez had several bronze cannon cast, and afterwards eight thousand copper arrow-heads made.

But the natives thought more of the copper metal than did the conqueror. From copper the Aztecs made implements of all sorts—axes, hoes, knives, trowels, chisels and even needles; the copper being used with alloys, which made it hard to a degree which cannot now be attained

under the iron heel of the Spanish conqueror; and then their land was drained of a part of its wealth of gold and silver. A fateful chain, it seemed, of misfortune.

But in the rush for sudden wealth from the resources of a conquered people, the invaders abandoned the copper mines, from which the natives had obtained large quantities of ore, and kept their attention always on the production of gold and silver. The consequence was that the vast copper deposits were not disturbed, and as generation followed generation, even the location of the copper mines came to be forgotten. And now Mexico has entered into another era of its national life, an era marked by improvement and rehabilitation and progress, under the administration of the remarkable soldier and statesman, President Diaz, and under the inspiration and influence of citizens of the United States, whom the great leader of Mexico loves to welcome into his country. And in this new life of the Mexican republic copper is destined to play an important part.

GENERAL PORFIRIO DIAZ,  
President of Mexico.

by any known method of tempering. Still the Spaniards under Cortez, the conqueror, increased their wealth from the fabulous hoards which the rocks of the new land held within tempting reach. Stories of this wealth floated back to the old world, and hearing of the ease with which riches were gained in the new world, young adventurous Spaniards of noble blood flocked to the land of the Montezumas, despoiling the natives of their wealth, so that the nation entered into the next era of its life, a nation of slaves, robbed of their wealth, their spirit and courage gone with their independence. Those who followed in the train of the conquerors obtained wealth which even in this day of enormous fortunes seems almost fabulous.

The names of many of those who sought and gained vast riches from the gold and silver mines of Mexico during the eighteenth century are still known, some of them still being associated with mining districts of the country. One of these was José Laborda, whose wealth obtained from the mines of gold and silver was \$50,000,000. Those who mined in Mexico during this period paid royalty to Spain. It is recorded that a company headed by one Antonio Obregon, paid royalties on \$223,000,000 of metal. Another mine produced \$100,000,000 worth of gold and silver.

The royalties on these mines enriched the coffers of the government of Spain so that it flourished in its prosperity. In 1702, the story is told of an attack in the Bay of Vigo on Spanish ships containing \$100,000,000 in gold, the payment of royalties of the mines of Mexico. The attack was made by English and Dutch ships. Nine Spanish ships were captured and sixteen sunk. And thus was Mexico drained and robbed. Its people suffered first from the great volcanic changes of the prehistoric period; they suf-

The wealth overlooked by the Spanish despoilers is destined to be one of the strong elements to restore the nation to the prosperous condition of centuries ago. It is copper, after all, that is going to save Mexico. In order to obtain it with facility it has been necessary to develop the other resources of the country, to build railroads for the transportation of the ore, to provide means of sustenance for those engaged in the mining of the metal. And the wealthiest men in America to-day are those who are engaged in the mining of copper. It is the "copper king" now, rather than the "gold king" or "silver king," who stands first among the men of enormous wealth.

The great deposits of Mexico have practically been untouched for centuries, until American enterprise has begun to develop means for releasing this mineral wealth. The Inguaran in Michoacan, owned by the Rothschilds, the Green Consolidated Mines at Cuauque, and the Santa Amelia and Donna Louisa in Michoacan, are among those which, when they are fully developed, will undoubtedly completely eclipse the United Verde, the Copper Queen, and the Calumet and Hecla mines, which have made the wealth of some of America's wealthiest men.

It is an interesting fact about copper mines that many of those which have produced the greatest amount of ore in the past seem to have practically an inexhaustible supply ahead. One of the greatest mines of Spain, the Rio Tinto, has been worked since before the Christian era and is still producing enormous quantities of fine ore. The principal copper mine of Sweden has been worked for more than seven hundred years and still produces in large quantities with no sign of failure of the deposit. The same is true of great American mines more recently become prominent. And in this fact is another great hope of Mexico. Its mineral wealth will continue to be a tremendous asset. One of its richest mining deposits is in the province of Michoacan, where the deposits are similar to those of the United Verde mine, owned by Senator William A. Clarke of Montana. Besides the wealth of deposit, the mining district of Michoacan is in the midst of a rich agricultural country, where the supply is abundant for those who are employed in the mining.

Besides, there is plenty of wood for fuel, water, and means of transportation. The Dona Louisa mines have been established there, and have begun to develop the natural mineral resources of the district. So wealthy has this mine been proven to be—and it is only one of the many mining districts of Mexico—that it is estimated that it will produce a net profit of more than a million dollars a year.

Appreciating the opportunity which is held out by such natural wealth as this, Americans have been quick and eager to take advantage of them. The Dona Louisa company, one of the most prominent in the field, is composed of prominent business men of New York and Newark, N. J., and has an office in New York, at No. 69 Wall Street. President Diaz offers every inducement for Americans to develop the resources of Mexico. He appreciates that while they may obtain great profit out of the resources of his country, in doing so they employ Mexican labor and make opportunity for Mexican enterprise.

# Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always include a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to

## OFFICIAL LEGAL NOTICES.

**ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 22 to September 5, 1902, of the confirmation by the Board of Revision of Assessments, and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessments for LOCAL IMPROVEMENTS IN THE BOROUGH OF THE BRONX:**

24TH WARD, SECTION 11, EAST 176TH STREET REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS, PAVING, FENCING AND PLANTING TREES, from Jerome Avenue to Tremont Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 21, 1902.

**ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD OF August 23 to September 6, 1902, of the confirmation by the Board of Assessors and the entering in the Bureau for the Collection of Assessments and Arrears, of Assessments for LOCAL IMPROVEMENTS IN THE BOROUGH OF THE BRONX:**

24TH WARD, SECTION 11, MARION AVENUE SEWER, from the existing sewer in East 189th Street to Kingsbridge Road. EAST 178TH STREET SEWER, from Lafontaine Avenue to Hughes Avenue; EAST 187TH STREET SEWER, from Valentine to River Avenue.

EDWARD M. GROUT, Comptroller.  
City of New York, August 22, 1902.

Notice to tax payers.  
Department of Finance,  
Bureau for the Collection of Taxes,  
New York, September 1st, 1902.

**TAXPAYERS WHO DESIRE TO OBTAIN** their bills promptly should make immediate written requisition (blank may be procured in the borough offices), stating their property by Section or Ward, Block and Lot or Map number, making copy of same from their bills of last year.

If a taxpayer is assessed for personal tax, the requisition should also request bill for such tax. Each requisition should be accompanied by an envelope bearing the proper address of the applicant and with return postage prepaid.

In case of any doubt in regard to Ward, Section, Block or Lot number, Taxpayers should take their deeds to the Department of Taxes and Assessment and have their property located on the maps of that Department, and forward to the Deputy Receiver of Taxes, with the requisition, a certified memorandum of their property, which will be furnished by the Department of Taxes and Assessment.

Taxpayers in this manner will receive their bills returned by mail at the earliest possible moment and avoid any delay caused by waiting on lines, as is required in case of personal application.

The requisition must be addressed and mailed to the Deputy Receiver of Taxes in whichever borough the property is located, as follows:

John J. McDonough, No. 57 Chambers Street, Borough of Manhattan, New York.

John B. Underhill, corner Third and Tremont Avenues, Borough of the Bronx, New York.

Jacob S. Van Wyk, Municipal Building, Borough of Brooklyn, N. Y.

Frederick W. Blackwell, corner Jackson Avenue and Fifth Street, Long Island City, Borough of Queens, New York.

John DeMorgan, Stapleton, New York.  
DAVID E. AUSTEN,  
Receiver of Taxes.

**THE CHAMPAGNE** spree on Wall Street continues. Some old-timers may recall the days when drinking men would begin with a cocktail spree, continue it with a whiskey drunk, and wind up with a champagne glorification. The stock market has been through all the phases of a spectacular dissipation and is now winding up its antics in such a way as must make the old, sober-faced operators stand aghast. Men who have sprung from the unknown into places of vast wealth and positions of great potentiality in stock speculation are leading the gambling craze now. They dash into the market, obtain control of some railroad or industrial corporation which possesses certain strategic advantages to its competitors, and then proceed to unload it upon the latter at a profit of several millions. These schemes have been uniformly successful, with possibly one exception. The Colorado Fuel and Iron concern, whose destination, had it fallen into the possession of Mr. Gates and his associates, was to have been, like that of Louisville and Nashville, Mr. J. P. Morgan's office, did not land there, or had not up to the latest advice. The cool-headed plungers of the Colorado prairies met Mr. Gates and his party with a lasso and landed them all. That this was done by juggling with the laws of the State and the by-laws of the company does not make the performance in any way more creditable.

But the Colorado owners of the Fuel and Iron Company no doubt justified themselves by the old adage that one must fight fire with fire. They took time by the forelock, and the buoyant Gates crowd, after having made public announcement of its control of the property and its proposition to enter into immediate possession found itself defeated at every point almost before the battle began, and did the only thing that remained to do, beat a hasty retreat. He who would sup with the devil must use a long spoon. This plunging in the stock market will continue until somebody or something calls a halt. Mr. Sage, perhaps the most eminent and experienced man on the Street, predicts that the enormous industrial combinations must inevitably lead to a serious disaster. A distinguished Japanese financier, after his recent visit to the United States, said that the financial situation of this country was most critical, and that our banking institutions were staggering under terrific burdens. And now Mr. Leroy-Beaulieu, a noted French writer, publishes in France a review of the world's business situation and predicts that in the course of a year or eighteen months there will be "a strong reaction in the United States, if not even a panic."

In answer to this, the bulls on Wall Street point to our phenomenal crops, meaning, I presume, the expected phenomenal corn crop, for it is by no means settled that the other crops will be of phenomenal size this year. And even the corn crop will not be out of danger for a week or two. But big crops are not always coincident with a bull market on Wall Street. We may have too much corn, as we have had in some years too much wheat. My readers recall the years when the farmers in the West had wheat and corn to burn, and burned it because they could not find a market at a satisfactory price. Fortunately, in the last year or two the foreign demand for American corn has shown a decided increase, largely because it is utilized as an adulterant for wheat and rye flour. But the depression abroad may minimize this foreign demand and there may be such a thing as a big corn crop that will yield the farmer no more than the small crop of last year.

We had splendid crops in 1882, but they did not strengthen the stock market, and, in my judgment, the condition of the money market will have more to do with the future situation than the outlook for the crops. We are heavy borrowers at home and abroad. The vast exploitation of new industries, the constant emission of new bonds of various kinds and descriptions and enormous amounts of stock by our railroads; the incredible capitalization of the steel trust, have all required vast,

I might almost say unlimited, amounts of money to finance them. When this money could not be borrowed in the United States it was borrowed abroad. Every dollar of it must be paid back, in coin, securities or merchandise, and just the moment our great banking institutions begin to feel uneasy over the speculative situation, the stock market will begin to suffer. Ever since the first of January a hardening tendency of money has been apparent, but we have been told, from month to month, that the situation would grow better, that Western banks were loaded with money, and that there were not enough stocks and bonds to go around. As the time approaches when the large annual disbursements for the movement of the crops must be made, we find the rates for money growing still higher. The Western and Southern banks, instead of being flush, are making earlier calls than usual on their reserves in Eastern cities.

The great manipulators on Wall Street understand this situation perfectly well, and no observant man doubts that all the skyrocket rises that have been recently engineered have been taken advantage of to unload stocks right and left, whenever the public could be brought into purchasing mood. Tips to buy specialties are heard on every hand, but how uncertain these are is significantly revealed by the course of the Colorado Fuel and Iron shares. The Gates crowd picked these up last spring, at low prices, and continued purchasing and advising their friends to purchase when the shares were selling around par. I have no doubt that a plan to unload the property, at a substantial profit, on the United States Steel Corporation, had been skillfully prepared. And yet, after the failure of the Gates crowd to secure control of the corporation at the recent election, the shares slumped in a few days almost twenty-five points, and many a man who bought around par on the assurance that the stock would sell much higher is criticizing the insiders, who honestly thought they had given out "a sure thing."

I have but one advice to give my readers, and that is to look out for storm signals all around the sky. It may be a thunder shower, with premonitory thunder and lightning sufficiently in advance to give all due warning of the storm's approach, and it may be, and it will be unless the plunging on Wall Street is controlled, a Western cyclone, which, without a moment's notice, will sweep everything before it.

"E," Troy, Ala.: One dollar received. You are on my preferred list for three months.

"A," Succasunna, N. J.: All such propositions in their very nature, are speculative.

"S," Hoboken, N. J.: The Toledo Street Railway shares were sold to a syndicate on the basis of about \$8, and were distributed by them on the basis of about \$14, and then to the public around \$22. I therefore regard them as highly speculative.

"Lookout Mountain," Tenn.: The prospectus of the proposed United States Bankers Corporation does not, on its face, win my favor. The fact that some good men are apparently identified with the concern does not impress me, because good names do not always guarantee the best results.

"R," Chasburg, Wis.: The prospectus of The Peabody-Vaughan Land Credit Co., which you inclose, makes a very good showing, but the success of all these bond and mortgage companies depends upon the continued integrity as well as the continued ability of their management, and the history of such concerns is strewn with many wrecks.

"J. J. P.," New York: I do not think you will find an investment in the shares of the Greater New York Home Oil Co. I understand that some of the stock has recently been offered for sale at less than par, but that a purchaser was not found. The recent increase of the capital stock from \$500,000 to \$2,000,000 hardly seems to be justified.

"Henry," Galesburg, Ill.: (1) Canadian Pacific earned about 8 per cent. on the common stock last year. The settlement of its vast areas of farming lands is rapidly increasing its business. (2) Of the Colorado and Southern stocks I should take the second preferred. (3) The earnings of Wheeling and Lake Erie and its close relationship to the Wabash give it favor in the eyes of many speculators. I would take a good profit whenever I could get it. (4) Hold your Twin City Rapid Transit. A further rise is promised and it pays well.

"W.," Chicago: I agree with you that, as a rule, when a stock, for any reason, has a severe break, it is a purchase, at least for a short and sharp turn, unless it has nothing behind it. The only question is, how far will the break extend? Colorado Fuel and Iron is in many respects a great and growing property. The fact that the United States Steel Trust wanted it is sufficient to show that it will take it in at the first opportunity. Perhaps the disappointed Gates crowd will hammer it down for this purpose, but they have apparently met their match in their Colorado opponents.

"S.," Butte, Mont.: (1) I have no doubt that the power of the State of Colorado would be utilized to prevent the absorption of Colorado Fuel by the United States Steel Trust, but, so far, the corporation have always found some method of evading obstructive statutes. (2) The reduction of the dividend on the first income bonds of the Central Railroad of Georgia to 3 per cent. was as unnecessary as it was unexpected. It is surmised that insiders will pick up these bonds if they can be depressed. I would not sacrifice my holdings.

"R.," Elmina, N. Y.: (1) The last year's fiscal

showing of the Southern Railway indicated about half of one per cent. earned on the common stock. On its earnings, therefore, it looks high. (2) The Buffalo, Rochester and Pittsburgh earned almost 12 per cent. on the common last year. It is regarded as a purchase on reactions. (3) The proposed pool to secure the control of the United Box Board and Paper stock makes the minimum selling price \$24 for the preferred and 40 for the common. I see no reason why you should go into the pool. Better take your profit on the outside.

"H.," Austin, Texas: (1) Dr. Forward, president of the Forward Reduction Company, recently filed a petition in bankruptcy, the schedule showing about half a million of debts and less than \$4,000 of assets. He was the principal stockholder and indorser of the Reduction company. The latter it is said, will now be reorganized. The end of another speculation! (2) I would not sell my Southern Pacific unless I had a profit. The proposed issue of new bonds is not fully explained by the management, but it is the general belief that it is preliminary to the declaration of dividends on the stock. Such a declaration would help not only Southern Pacific, but Union Pacific, which controls a majority of the Southern Pacific shares.

"B.," Auburndale, Mass.: (1) The absorption by the People's Gas Light Company, of Chicago, of its last competitor has strengthened the shares of the former. They sell low, as compared with other gas shares, because of the constant litigation and legislation in which they are involved. (2) The Consolidated Tobacco bonds are highly speculative, but it is said that an effort will shortly be made to advance them. I would therefore hold them for the present. (3) The postponement of the dividend on Southern preferred, so as to retain the road in the control of the voting trust, was not foreshadowed, and was another one of the numerous cases in which insiders had the better of the situation and took advantage of it. While the common stock was being advanced, I am told that much of it was unloaded.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of LESLIE'S WEEKLY. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," LESLIE'S WEEKLY, 110 Fifth Avenue, New York.]

A READER asks me whether the chances of making money for his family are not better if he were to speculate, in a reasonable way, in Wall Street, with his surplus funds, rather than to invest them in life insurance. I answer yes, if he wants to speculate on the future welfare of his family; if not, no. A recent examination of the surrogates' records of thirty-five counties in this State showed that out of ten thousand persons whose wills had been filed during the preceding quarter of a year, two-thirds left little to their families, and less than one-tenth left five thousand dollars or more. I presume that not one of these heads of families would have felt it very much if he had deprived himself of some little luxury each day or each week, and set aside a dollar or two a week, to pay the premium on a life-insurance policy. A young man, for less than a dollar a week, can get an absolutely safe life insurance to the amount of \$2,000 or more, or he can secure an endowment policy which will provide life insurance for his family, and give him a snug sum of money at the expiration of twenty or thirty years. And these are not fancy figures, because the books of any great insurance company will prove their truth.

"Trustee," Indianapolis: I should be inclined to accept the statement of your attorney. As I understand the case, he is right.

"R," Milwaukee, Wis.: (1) The facts were as stated. The insurance cost the gentleman \$1,508.40. It gave him a \$3,000 policy for twenty years, and at the end of that time over \$2,600 in

cash, or almost five per cent. interest on his premiums besides the insurance protection his family received. (2) The New York Life. "T," Xenia, O.: (1) Your \$10,000 would buy you an annuity of not quite \$1,000 a year. This would be paid to you annually, semi-annually, or quarterly, as you might desire. (2) Impossible. The guarantee is the best. "E," Denver: (1) The wealthiest men, and especially those in mercantile concerns, nearly all carry heavy life-insurance policies. A list of these is published occasionally. It is well worth your inspection. (2) Your circumstances warrant the taking out of a twenty-year endowment for \$5,000. This would not be too great a burden, if you are assured of the income you now have.

## The Hermit.

### Hints to Money-makers.

Continued from page 261.

"B," Portland, Me.: One dollar received. You are on my preferred list for three months. (1) I do not regard the shares in any sense as an investment. "J," Glenview, N. Y.: A new cottonseed oil combination, in opposition to the Virginia-Carolina Chemical Company, has just been organized in North Carolina. This is an industry in which not much capital is required to make a start. A monopoly is therefore almost impossible. "L," Altoona, Penn.: The suit against the Smelter Trust, brought by the Attorney-General of Colorado, reveals in its complaint some remarkable charges. One of these is that all the property owned by the Smelter Trust is not worth more than \$25,000,000, though capitalized at \$100,000,000. The forfeiture of its right to do business in Colorado is demanded. What the outcome of this litigation will be remains to be seen.

"A," Little Rock, Ark.: (1) It is said that the Kansas City Southern road is liable to be amalgamated with the Alton. Confirmation of this report is not found obtainable. That it will be absorbed by some strong line has long been in the air. On its earnings, I recommended its purchase when it sold at half its present price. (2) The Tripler Liquid Air Company's affairs are being investigated by the District Attorney of New York. The fact that a United States Senator and an ex-Senator were prominent in its exploitation makes the scandalous exposure of this rotten concern still more scandalous. (3) Mexican Railway earnings are not showing much of an improvement this year.

NEW YORK, September 4, 1902.

## Stanlaws Menu and Dinner Cards

BEAUTIFULLY PRINTED UPON HEAVY BOARD WITH BEVELED EDGES

No prettier novelty has been published than these Stanlaws cards. The subjects are all reproductions of copyrighted drawings by Stanlaws.

The cards come in three sizes, viz.:

Size 4 1/2 x 7 1/2, ten subjects to a set, 25 cents apiece or \$2.50 for a complete set, suitable for a dinner service for ten persons.

Size 4 1/2 x 7, twelve subjects to a set, 20 cents apiece or \$2.40 for a complete set.

Size 2 1/2 x 4 1/2, ten subjects to a set, 10 cents apiece or \$1.00 for a complete set. This last-mentioned size can be used either for a dinner card or for a presentation card to accompany a gift.

Any of the cards in the two larger sizes can be most appropriately used for Easter cards; and if hand-painted in water colors make beautiful gifts. We can furnish them colored by hand in aquarelle (if desired) at 50 cents apiece; or they can be hand-painted by the purchaser. The study of the art of water coloring has been extensively taken up by the fashionable world; and these cards furnish delightful subjects for practicing the art.

## THE STANLAWS TALLY CARDS

For Progressive Euchre and Whist

The Tally Cards come in either oblong or diamond shape and are printed in colors, each card bearing one of Stanlaws' unique designs. The Tally Cards are sold at 50 cents per dozen.

And there are others of the same sort among the passengers of the *Mormouth*. The steamer is the fastest in the service about New York, but it has no special accommodation for its millionaire guests. A little more pains is taken perhaps in the dining-room and in the general service. This state of things exists simply because the boat makes the quickest trip and at the most convenient time from the heart of New York City to the Jersey coast, where these millionaires have their summer homes, and being mortal, after all, they are glad for the opportunity offered.

## A Strategic Point in the West Indies

Continued from page 255.

American occupancy of Culebra, and especially the selection of the island for a naval station, may be expected to bring about some remarkable changes in a short time. No attempt was made to colonize Culebra until 1876, and not until a year later did a Spanish commission actually visit the island. In reality, colonization did not begin until February, 1881, when a town site commission was appointed. On May 18th, 1881, the Madrid government declared the port of Culebra free and appointed a commission to visit the island and report on the convenience of establishing a quarantine and naval station there. Two years later, Spain rescinded the order making Culebra port free, because the situation was favorable to smuggling and because of the damage that this would cause to the agricultural wealth and the improvement of the industries of Porto Rico. Under the first distribution of land there were a number of settlements.

Culebra proper has numerous harbors, but Target Bay and Great Harbor are the only ones suited for war-ships. The others are Mosquito Bay, on the south side; Swell Bay, Surf Bay, and Flamingo Bay, on the north side; and Mangrove Harbor, at the east end. For centuries Spanish and Porto Rican mariners have taken refuge in Great Harbor, called by them "Ensenada Honda." Its waters are as tranquil as those of a lake, and the biggest fleet in the world could assemble in them, the depth being safe and the bottom free from obstructions. At trifling expense a canal cut through a little neck of land would connect Target Bay and Great Harbor, and this work will doubtless be done.
